BILLING CODE 6210–01–P

FEDERAL TRADE COMMISSION

[File No. 001 0080]

Duke Energy Corporation, et al.; Analysis to Aid Public Comment

AGENCY: Federal Trade Commission.

ACTION: Proposed consent agreement.

SUMMARY: The consent agreement in this matter settles alleged violations of federal law prohibiting unfair or deceptive acts or practices or unfair methods of competition. The attached Analysis to Aid Public Comment describes both the allegations in the draft complaint that accompanies the consent agreement and the terms of the consent order—embodied in the consent agreement—that would settle these allegations.

DATES: Comments must be received on or before May 1, 2000.

ADDRESSES: Comments should be directed to: FTC/Office of the Secretary, Room 159, 600 Pennsylvania Ave., NW, Washington, D.C. 20580.

FOR FURTHER INFORMATION CONTACT: Kristin Malmberg or Gary Kennedy, Federal Trade Commission, Southwest Region, 1999 Bryan St., Suite 2150, Dallas, TX 75201. (214) 979–9381 or 979–9379.

SUPPLEMENTARY INFORMATION: Pursuant to Section 6(f) of the Federal Trade Commission Act, 38 Stat. 721, 15 U.S.C. 46 and Section 2.34 of the Commission's Rules of Practice (16 CFR 2.34), notice is hereby given that the above-captioned consent agreement containing a consent order to cease and desist, having been filed with the accepted, subject to final approval, by the Commission, has been placed on the public record for a period of thirty (30) days. The following Analysis to Aid Public Comment describes the terms of the consent agreement, and the allegations in the complaint. An electronic copy of the full text of the consent agreement package can be obtained from the FTC Home Page (for March 31, 2000), on the World Wide Web, at "http://www.ftc.gov/ftc/formal.htm." A paper copy can be obtained from the FTC Public Reference Room, Room H–130, 600 Pennsylvania Avenue, NW, Washington, D.C. 20580, either in person or by calling (202) 326–3627.

Public comment is invited. Comments should be directed to: FTC/Office of the Secretary, Room 159, 600 Pennsylvania Ave., NW, Washington, D.C. 20580. Two paper copies of each comment should be filed, and should be accompanied, if possible, by a 3½ inch diskette containing an electronic copy of the comment. Such comments or views will be considered by the Commission and will be available for inspection and copying at its principal office in accordance with Section 4.9(b)(6)(ii) of the Commission's Rules of Practice (16 CFR 4.9(b)(6)(ii)).

Analysis To Aid Public Comment on the Provisionally Accepted Consent Order

The Federal Trade Commission ("Commission") has accepted for public comment from Duke Energy Corporation ("Duke"), Phillips Petroleum Company ("Phillips"), and Duke Energy Field Services L.L.C. ("DEFS" an agreement containing Consent Order designed to remedy the anticompetitive effects resulting from: (1) Duke and Phillips' proposed merger of all of their natural gas gathering and processing businesses into DEFS; and (2) Duke's proposed acquisition of certain gas gathering and processing assets in central Oklahoma currently jointly owned by Conoco Inc. ("Conoco") and Mitchell Energy & Development Corporation ("Mitchell"). The Consent Order requires Duke to divest approximately 2780 miles of gas gathering pipeline in Kansas, Oklahoma, and Texas.

This agreement has been placed on the public record for thirty (30) days for the receipt of comments from interested persons. Comments received during this period will become part of the public record. After thirty (30) days, the Commission will again review the agreement and the comments received, and will decide whether it should withdraw from the agreement or make final the agreement's Order.

On December 16, 1999, Duke and Phillips signed a letter agreement to transfer their natural gas gathering and processing businesses to DEFS. Duke will be the majority owner of DEFS. The value of this transaction is approximately $6 billion. On December 21, 1999, Duke agreed to acquire Conoco and Mitchell's jointly held central Oklahoma gas gathering and processing assets. Gas gathering is the pipeline transportation of natural gas from a wellhead or central delivery point to a gas transmission pipeline or gas processing plant. The Commission found that the merger and acquisition may create competitive problems in counties in Kansas, Oklahoma, and Texas. The Commission's complaint alleges that Duke, Phillips, and DEFS' merger agreement and Duke's acquisition agreement with Conoco and Mitchell violate Section 5 of the Federal Trade Commission Act, as amended, 15 U.S.C. 45, and the merger and acquisition, if consummated, would violate Section 5 of the Federal Trade Commission Act and Section 7 of the Clayton Act, as amended, 15 U.S.C. 18.

Seven relevant markets were identified where gas producers could only turn to the parties or, at most, to one other gas gatherer, for gas gathering services. In these areas, the proposed merger and acquisition would reduce competition in the provision of gas gathering services and would likely lead to anticompetitive increases in gathering rates and an overall reduction in gas drilling and production. It is unlikely that the competition eliminated by the proposed merger and acquisition would be replaced by new entry into the gas gathering market in these areas.

The proposed Consent Order requires Duke to divest pipeline systems in these markets areas, eliminating any overlap between Duke's current holdings and what it will acquire from Phillips and the Conoco/Mitchell joint venture. The gas gathering assets to be divested are listed in Schedules A–J, with maps depicting the assets listed in Schedules C–J. Of the 2,780 miles to be divested under this Consent Order, 2,250 miles will be divested to Duke's joint venture partners for these assets. On February 28, 2000, Duke divested its interest in the Schedule A assets, 800 miles of pipe in the Westana area of Oklahoma, to Western, co-owner of the Westana Gathering Company. Duke has agreed to divest its interest in the Schedule B assets, 1,450 miles of pipe in the Austin Chalk area of Texas, to Mitchell, co-owner of Ferguson-Burleson County Gas Gathering System. The remaining 530 miles will be sold to Commission-approved buyers. The purposes of the divestitures are to ensure the continued use of the assets as gas gathering assets and to remedy the lessening of competition resulting from the acquisition.

Duke must divest the assets within 120 days of final acceptance of the Consent Order by the Commission. The Consent Order provides that if Duke fails to sell the 530 miles of pipe that currently does not have an identified buyer, it must offer additional assets for sale ("crown jewels"). If Duke fails to divest these assets, or if the sale of Mitchell is not completed, by the deadline, the Commission may appoint a trustee to sell the assets. Duke has entered into an Asset Maintenance Agreement, in which it has agreed to

maintain the assets that are being divested (as well as the "crown jewel" assets) in their current condition and provide gas gathering services on the same terms and conditions available to customers on March 1, 2000, until the assets are sold.

The purpose of this analysis is to invite public comment concerning the consent order. This analysis is not intended to constitute an official interpretation of the agreement and order or to modify their terms in any way.

By direction of the Commission.

Donald S. Clark,

Secretary.

BILLING CODE 6750–01–M

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Agency for Healthcare Research and Quality

Notice of Meeting

In accordance with section 10(d) of the Federal Advisory Committee Act (5 U.S.C., Appendix 2), announcement is made of a Special Emphasis Panel meeting.

A Special Emphasis panel (SEP) is a committee of a few experts selected to conduct scientific reviews of applications related to their areas of expertise. The committee members are drawn from a list of experts and designated to serve for particular individual meetings rather than for extended fixed terms of services.

Substantial segments of the upcoming SEP meeting listed below will be closed to the public in accordance with the Federal Advisory Committee Act, section 10(d) of 5 U.S.C., Appendix 2 and 5 U.S.C., 552b (c)(6). Grant applications are to be reviewed and discussed at this meeting. These discussions are likely to include personal information concerning individuals associated with the applications. This information is exempt from mandatory disclosure under the above-cited statutes.

Name of SEP: Understanding the Eliminating Minority Health Disparities.

Date: May 1–2, 2000 (Open from 8 a.m. to 8:15 a.m. and closed for remainder of the meeting).

Place: Doubletree Hotel, 1750 Rockville Pike, Conference TBD, Rockville, Maryland 20852.

Contact Person: Anyone wishing to obtain a roster of members or minutes of the meeting should contact Ms. Jenny Griffith, Committee management Officer, Office of Research Review, Education and Policy, AHRQ, 2101 East Jefferson Street, Suite 400, Rockville, Maryland 20852, Telephone (301) 594–1847.

Agenda items for this meeting are subject to change as priorities dictate.

Dated: March 29, 2000.

John M. Eisenberg,

Director.

BILLING CODE 4160–90–M

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. 99P–4848]

Determination That Carbinoxamine Maleate 4 Milligrams per 5 Cubic Centimeters Elixir Was Not Withdrawn From Sale for Reasons of Safety or Effectiveness

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) has determined that carbinoxamine maleate (Clistin) 4 milligrams (mg) per 5 cubic centimeters (cc) elixir was not withdrawn from sale for reasons of safety or effectiveness. This determination will allow FDA to approve abbreviated new drug applications (ANDA's) for carbinoxamine maleate 4 mg per 5 cc elixir.

FOR FURTHER INFORMATION CONTACT: Mary E. Catchings, Center for Drug Evaluation and Research (HFD–7), Food and Drug Administration, 5600 Fishers Lane, Rockville, MD 20855, 301–594–2041.

SUPPLEMENTARY INFORMATION: In 1984, Congress enacted the Drug Price Competition and Patent Term Restoration Act of 1984 (Public Law 98–417) (the 1984 amendments), which authorized the approval of duplicate versions of drug products approved under an ANDA procedure. ANDA sponsors must, with certain exceptions, show that the drug for which they are seeking approval contains the same active ingredient in the same strength and dosage form as the "listed drug," which is a version of the drug that was previously approved. Sponsors of ANDA's do not have to repeat the extensive clinical testing otherwise necessary to gain approval of a new drug application (NDA). The only clinical data required in an ANDA are data to show that the drug that is the subject of the ANDA is bioequivalent to the listed drug.

The 1984 amendments included what is now section 505(j)(6) of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 355(j)(6)), which requires FDA to publish a list of all approved drugs. FDA publishes this list as part of the "Approved Drug Products with Therapeutic Equivalence Evaluations," generally known as the "Orange Book." Under FDA regulations, drugs are withdrawn from the list if the agency withdraws or suspends approval of the drug's NDA or ANDA for reasons of safety or effectiveness, or if FDA determines that the listed drug was withdrawn from sale for reasons of safety or effectiveness (21 CFR 314.162). Under § 314.161(a)(1) (21 CFR 314.161(a)(1)) the agency must make a determination as to whether a listed drug was withdrawn from sale for reasons of safety or effectiveness before an ANDA that refers to that listed drug may be approved. FDA may not approve an ANDA that does not refer to a listed drug.

In a citizen petition dated October 8, 1999 (Docket No. 99P–4848/CP1), submitted under 21 CFR 314.122, Mikart, Inc., requested that the agency determine whether carbinoxamine maleate (Clistin) 4 mg per 5 cc elixir was withdrawn from sale for reasons of safety or effectiveness. Carbinoxamine maleate (Clistin) 4 mg per 5 cc elixir was the subject of approved NDA 8–955. In the **Federal Register** of April 5, 1985 (50 FR 13661), FDA withdrew approval of NDA 8–955 for Clistin Elixir after McNeil Pharmaceutical notified the agency that Clistin Elixir was no longer being marketed under NDA 8–955 and requested the withdrawal of that application.

FDA has reviewed its records and, under § 314.161, has determined that carbinoxamine maleate 4 mg per 5 cc elixir was not withdrawn from sale for reasons of safety or effectiveness. Accordingly, the agency will list carbinoxamine maleate 4 mg per 5 cc elixir in the "Discontinued Drug Product List" section of the Orange Book. The "Discontinued Drug Product List" identifies, among other items, drug products that have been discontinued from marketing for reasons other than safety or effectiveness. ANDA's that refer to carbinoxamine maleate 4 mg per 5 cc elixir as the listed drug may be approved by the agency.

Dated: April 3, 2000.

Margaret M. Dotzel,

Acting Associate Commissioner for Policy.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Health Care Financing Administration

[HCFA–2893–N]

Medicare Program; Deductible Amount for Medigap High Deductible Options for Calendar Year 2000

AGENCY: Health Care Financing Administration (HCFA), HHS.

ACTION: Notice.

SUMMARY: This notice announces the annual deductible amount of $1,530.00 for the Medicare supplemental health insurance (Medigap) high deductible options for 2000. High deductible options are those with benefit packages classified as F or J that have a high deductible feature. The deductible amount represents the annual out-of-pocket expenses (not including premiums) that a beneficiary who chooses one of these options must pay before the policy begins paying benefits.

EFFECTIVE DATE: January 1, 2000.

FOR FURTHER INFORMATION CONTACT: Kathryn McCann, (410) 786–7623.

SUPPLEMENTARY INFORMATION:

I. Background

Medicare Supplemental Insurance

A Medicare supplemental, or Medigap, policy is the principal type of private health insurance that a beneficiary may purchase to cover costs that Medicare does not cover. Medicare beneficiaries are responsible for certain deductibles and coinsurance amounts for both Part A (hospital insurance) and Part B (supplementary medical insurance) of the Medicare program. In addition, Medicare generally does not cover custodial nursing home care, eyeglasses, dental care, and most outpatient prescription drugs. Beneficiaries must either pay the full cost of these services themselves, or they may purchase additional private health insurance to help pay these costs. Medigap policies offer coverage for some or all of the deductibles and coinsurance amounts required by Medicare. Additionally, Medigap policies may provide coverage for some services that are not covered under Medicare.

Section 1882 of the Social Security Act (the Act) establishes, among other things, standards for Medigap policies. This section of the Act states that no Medigap policy may be issued in a State unless the policy meets the following criteria: (a) It has been approved by the Health Care Financing Administration as meeting federal standards, or (b) it complies with State laws established in accordance with section 1882(b)(1) of the Act.

The Omnibus Budget Reconciliation Act of 1990 (OBRA 90) amended the Act by standardizing Medigap benefits and requiring that no more than ten Medigap benefit packages, Plans A through J, be offered nationwide. [1] Plan A is the basic benefit package. It includes Medicare Part A hospital coinsurance plus coverage for 365 additional days over the beneficiary's lifetime, Medicare Part B coinsurance (generally 20% of Medicare-approved expenses), and coverage for the first 3 pints of blood per year. Medigap Plans B through J contain this basic benefit package, as well as different combinations of coverage for some or all of the following benefits: Medicare Part A inpatient hospital deductibles, skilled-nursing facility coinsurance, foreign travel health emergencies, at home recovery, preventive care, some prescription drug coverage, and Medicare Part B excess charges protection.

B. High Deductible Medigap Standard Policies

Section 4031(c) of the Balanced Budget Act of 1997 (BBA) added high deductible versions of two of the standard Medigap policies, or their counterparts in the waivered states. [2] Unlike the regular versions of Plans F and J, however, the high deductible versions of these policies will not begin paying benefits until the deductible amount is met. Amounts included in this deductible are the expenses that would ordinarily be paid by the regular version of the policy, including Medicare deductibles for Parts A and B. The Plan F deductible does not include the separate foreign travel emergency deductible of $250. The Plan J deductible does not include the plan's separate $250 prescription drug deductible or the plan's separate $250 deductible for foreign travel emergencies.

II. Provisions of This Notice

In 1998 and 1999, the high deductible amount was statutorily defined as $1,500.00 in section 1882(p)(11)(C)(i) of the Act. For 2000, the high deductible amount is increased by the percent increase in the Consumer Price Index (CPI) for all urban consumers (all items, U.S. city average) for the 12-month period ending with August of the preceding year. The percent increase in the CPI for all urban consumers (all items, U.S. city average) for the 12-month period ending in August 1999 was 2.26%, according to the Division of Labor Statistics, Department of Labor. A 2.26% increase in $1,500.00 is $1,533.90. Section 1882(p)(11)(C)(ii) of the Act stipulates that this amount ($1,533.90) be rounded to the nearest multiple of $10 to find the high deductible amount for the subsequent year. Rounding $1,533.90 to the nearest $10 multiple, the 2000 deductible for the Medigap high deductible options is $1,530.00.

This figure can also be found by dividing the August 1999 CPI (167.1) by the August 1998 CPI (163.4), which equals 1.022643819. Multiplying this number by the 1998/1999 deductible ($1,500.00) equals $1,533.97 which, rounded to the nearest $10 multiple, is $1,530.00.

III. Unfunded Mandates and Executive Orders

Section 202 of the Unfunded Mandates Reform Act of 1995 requires that agencies assess anticipated costs and benefits before issuing any rule that may result in an expenditure by State, local, or tribal governments, in the aggregate, or by the private sector, of $100 million in any one year. This notice will not have an effect on the governments mentioned, and the private sector costs will not be greater than the $100 threshold.

In accordance with the provisions of Executive Order 12866, this notice was reviewed by the Office of Management and Budget.

We have reviewed this notice under the threshold criteria of Executive Order 13132 of August 4, 1999, Federalism, published in the **Federal Register** on August 10, 1999 (64 FR 43255). The Executive Order is effective November 2, 1999, which is 90 days after the date of this Order. We have determined that the notice does not significantly affect the rights, roles, and responsibilities of States.

Authority: Section 1882 of the Social Security Act.

(Catalog of Federal Domestic Assistance Program No. 93.773, Medicare—Hospital Insurance, and Program No. 93.774, Medicare—Supplementary Medical Insurance Program)

---

[1] Three states (Wisconsin, Minnesota, and Massachusetts) experimented with standardizing benefits prior to enactment of federal standards. These states were granted a waiver and permitted to keep their alternative forms of Medigap standardization.

[2] In the three waivered states, high deductible versions of the plans that most closely approximate the benefits contained in Plans F and J are authorized by the Balanced Budget Act.

Dated: March 1, 2000.

Nancy-Ann Min DeParle,

Administrator, Health Care Financing Administration.

RIN 0938–AJ90

Medicare Program; Sustainable Growth Rate for the Year 2000

AGENCY: Health Care Financing Administration (HCFA), HHS.

ACTION: Final notice.

SUMMARY: This final notice implements section 211(a)(2)(C) of the Public Law 106–113, the Medicare, Medicaid, and State Childrens Health Insurance Program Balanced Budget Refinement Act of 1999 (BBRA), that requires us to publish a notice in the **Federal Register** not later than 90 days after the date of enactment. This notice includes, based on the best available data, our determination of (1) allowed expenditures for physicians' services under the Medicare Supplementary Medical Insurance program (Part B) for both the 9-month period of April 1, 1999 through December 31, 1999, and for calendar year 1999, (2) estimated actual expenditures for Part B physicians' services in 1999, and (3) the sustainable growth rate (SGR) for calendar year 2000.

This notice also discusses our plans for making available to the Medicare Payment Advisory Commission and the public, by March 1 of each year beginning with 2000, an estimate of the sustainable growth rate and the conversion factor for the next year and the data used in making this estimate, as required in section 211(a)(2)(A) of the BBRA.

EFFECTIVE DATE: The provisions of this notice are effective April 10, 2000.

FOR FURTHER INFORMATION CONTACT: Marc Hartstein, (410) 786–4539.

SUPPLEMENTARY INFORMATION:

I. Background

A. Medicare Sustainable Growth Rate

Section 1848(f) of the Social Security Act (the Act), as amended by section 4503 of the Balanced Budget Act of 1997 (BBA) (Pub. L. 105–33), enacted on August 5, 1997, replaced the Medicare Volume Performance Standard (MVPS) with a Sustainable Growth Rate (SGR). Section 1848(f)(2) of the Act specifies the formula for establishing yearly SGR targets for physicians' services under Medicare. The use of SGR targets is intended to control the actual growth in aggregate Medicare expenditures for physicians' services.

The SGR targets are not limits on expenditures. Payments for services are not withheld if the SGR target is exceeded by actual expenditures. Rather, the appropriate fee schedule update, as specified in section 1848(d)(3) of the Act, is adjusted to reflect the success or failure in meeting the SGR target. If expenditures exceed the target, the update is reduced. If expenditures are less than the target the update is increased.

As with the MVPS, the statute specifies a formula to calculate the SGR based on our estimate of the change in each of four factors. The four factors for calculating the SGR are as follows:

(1) The estimated change in fees for physicians' services.

(2) The estimated change in the average number of Medicare fee-for-service beneficiaries.

(3) The estimated projected growth in real gross domestic product (GDP) per capita.

(4) The estimated change in expenditures due to changes in law or regulations.

Section 211 of the BBRA amended sections 1848(d) and 1848(f) of the Act with respect to the physician fee schedule update and the SGR. Section 211(b) of the BBRA maintains the formula for calculating the SGR, but amends section 1848(f)(2) of the Act to apply the SGR on a calendar year (CY) basis beginning with 2000 while maintaining the SGR on a fiscal year (FY) basis for FY 1998 through FY 2000. Specifically, section 1848(f)(2) of the Act, as amended by section 211(b) of the BBRA, states that— "* * * [t]he sustainable growth rate for all physicians' services for a fiscal year (beginning with fiscal 1998 and ending with fiscal year 2000) and a year beginning with 2000 shall be equal to the product of—

(A) 1 plus the Secretary's estimate of the weighted average percentage increase (divided by 100) in the fees for all physicians' services in the applicable period involved,

(B) 1 plus the Secretary's estimate of the percentage change (divided by 100) in the average number of individuals enrolled under this part (other than Medicare + Choice plan enrollees) from the previous applicable period to the applicable period involved,

(C) 1 plus the Secretary's estimate of the projected percentage growth in real gross domestic product per capita (divided by 100) from the previous applicable period to the applicable period involved; and

(D) 1 plus the Secretary's estimate of the percentage change (divided by 100) in expenditures for all physicians' services in the applicable period (compared with the previous applicable period) which will result from changes in law and regulations, determined without taking into account estimated changes in expenditures resulting from the update adjustment factor determined under section 1834 (d)(3)(B) or (d)(4)(B) of the Act, as the case may be, minus 1 and multiplied by 100."

Under section 1848(f)(4)(C) of the Act, as added by section 211(b)(3)) of the BBRA, the term "applicable period" means—(1) a FY, in the case of FY 1998, FY 1999 and FY 2000, and (2) a CY with respect to a year beginning with 2000.

To make the transition from a FY SGR to a CY SGR in 1999 using the FY 2000 SGR, sections 211(b)(2) and (3) of the BBRA require us to calculate SGRs for both FY and CY 2000. Section 1848(d)(4)(C) of the Act, as modified by section 211(a)(1)(B) of the BBRA, requires us to determine the allowed expenditures for both the 9-month period beginning April 1, 1999 and for CY 1999. The SGR for CY 2000 is then applied to allowed expenditures for CY 1999.

In making the transition to a CY SGR system, the law essentially requires us to use the 2000 SGR twice (both FY and CY) twice to determine 2000 allowed expenditures. The FY 2000 SGR is used to determine allowed expenditures for the April 1, 1999 to December 31, 1999 period and the CY 2000 SGR is used to determine CY 2000 allowed expenditures. Since we are using the FY 2000 SGR to determine allowed expenditures for the April 1, 1999 to December 31, 1999 period, allowed expenditures have been increased for components of the SGR that may not be reflective of the increase that actually occurs over that period. For instance, the FY 2000 SGR includes a portion of the full year effect of the new prostate screening benefit that did not become effective until January 1, 2000. Similarly, other components of the SGR (that is, the increase in physician fees, fee-for-service enrollment, real per capita GDP, and legislative factors other than prostate screening benefit) may have a different rate of increase in the FY 2000 SGR than occurred in the April 1, 1999 to December 31, 1999 period.

The issue described above occurs because the law required mismatched

time periods (that is, allowed expenditures determined on the basis of an April 1 through March 30 period increased by an SGR determined on the basis of a October 1 to September 30 federal FY) to be used to determine allowed expenditures from April 1, 1997 until December 31, 1999. Another contributing factor is use of 2000 data twice (both FY and CY) in making the transition to a CY SGR system. We have analyzed the impact on allowed expenditures of the BBA and BBRA relative to a system that requires use of matched time periods in establishing the SGR from April 1, 1997 until December 31, 1999. Based on current estimates, the impact of the BBA and BBRA requirements will increase allowed expenditures in CY 2000 by 1 to 2 percent relative to a system that required use of matched time periods. This results in a permanent 1 to 2 percent increase in the physician fee schedule conversion factor.

It is important to note that the FY 2000 SGR is required to be revised based on more recent data, but, as explained below, the BBRA does not provide for revision of either the FY 1998 or the FY 1999 SGR. This means that, for the transition to a calender year SGR system, allowed expenditures for the period April 1, 1999 through December 31, 1999 (determined by applying the FY 2000 SGR to allowed expenditures for the 12-month period ending March 31, 1999) are subject to change based on revision of the FY 2000 SGR; allowed expenditures for the period January 1, 1999 through March 31, 1999 (determined using the FY 1999 SGR) are not subject to revision.

As we indicated in the **Federal Register** notice published on October 1, 1999 (64 FR 53396) before the November 29, 1999 enactment of the BBRA, the statute clearly requires that estimated values be used and there is no provision for revising estimates to reflect later data. Our actuaries estimate the elements of the SGR based on the best available data at the time the estimate is made. However, despite their best efforts there may be differences between the actuarial estimate and actual data on the rate of change in a component factor of the SGR. Our actuary's estimate of the percent change in a component of the SGR may be equal to, or higher or lower than, the actual percent change in that component, as determined based on later known information. For example, our actuaries have estimated the percent change in Medicare fee-for-service enrollees for each year under both the MVPS and the SGR. For the FY 1998 SGR, our actuarial estimate was equal to the percent change in Medicare fee for service enrollment that actually occurred. Under the MVPS, for each of FYs 1994, 1995, 1996, and 1997, our actuarial estimate of the percent change in the Medicare fee-for-service population was higher than the actual percent change, based on later known information. These differences largely resulted from more beneficiaries selecting a managed care plan and fewer beneficiaries remaining in the fee-for-service program than our actuaries estimated at the time each MVPS was published. For FY 1999, our actuarial estimate of the percent change in fee-for-service population used in the SGR notice published on November 2, 1998 (63 FR 59188) was lower than the actual percent change. (This is largely due to fewer beneficiaries selecting a managed care plan than we earlier estimated). While there are differences between the MVPS and the SGR, they have the same long term impact on payment levels due to differences between estimated and actual data. Differences between estimated and actual changes in the Medicare fee-for-service population under the MVPS resulted in a higher physician fee schedule conversion factor than would have occurred if either the estimate were what actually happened or if the MVPS had been revised based on later data. The opposite is the case for differences between estimated and actual changes in the Medicare fee-for-service population under the FY 1999 SGR.

The BBRA, however, explicitly requires revisions based on later known information, beginning with the FY 2000 SGR. In section 1848(f)(3) of the Act, as added by section 211(b)(5) of the BBRA, the first sentence following subparagraph (c) states: "Nothing in this paragraph shall be construed as affecting the sustainable growth rates established for fiscal year 1998 or fiscal year 1999." Since the BBRA does not include provisions for revising any SGR or MVPS before the FY 2000 SGR, we are not revising the MVPS or SGR (before the FY 2000 SGR) based on later known information that indicated the actual increase in a component of the SGR or MVPS was different from the earlier published estimate.

In general, the BBRA requires us to publish SGRs for 3 different time periods, no later than November 1 of each year, using the best data available as of September 1 of each year. Under section 1848(f)(3)(C)(i) of the Act, as added by section 211(b)(5) of the BBRA, the SGR is estimated and subsequently revised twice (beginning with the FY and CY 2000 SGRs) based on later data. Under section 1848(f)(3)(C)(ii) of the Act, there are no further revisions to the SGR once it has been estimated and subsequently revised in each of the 2 years following the initial estimate.

The requirement of revisions to the SGR based on later data means that we will estimate and publish an SGR for the upcoming year, the contemporaneous year, and the preceding year by not later than November 1 of each year. For example, by not later than November 1, 2002, we will publish an estimate of the SGR for CY 2003, a revision of the CY 2002 SGR estimated in the previous year, and a revision of the CY 2001 SGR first estimated two years earlier and first revised in the previous year. Under section 1848(f)(3)(C)(ii) of the Act, this would be the final revision to the CY 2001 SGR.

Sections 1848(f)(3)(A) and (B) of the Act, as added by section 211(b)(5) of the BBRA, specify special rules with respect to the SGR and the CY 2001 and CY 2002 updates. Section 1848(f)(3)(A) of the Act requires us, no later than November 1, 2000, to revise the SGRs for FY 2000 and CY 2000 and establish the SGR for CY 2001, based on the best data available, as of September 1, 2000. Section 1848(f)(3)(B) of the Act requires us, by no later than November 1, 2001, to revise the SGRs for FY 2000 and CYs 2000 and 2001 and establish the SGR for CY 2002, based on the best data available as of September 1, 2001. In accordance with section 1848(f)(3)(C)(ii) of the Act, there will be no further revisions to the FY 2000 and CY 2000 SGRs after its revision in the 2001 notice.

B. Physicians' Services

Section 1848(f)(4)(A) of the Act defines the scope of physicians' services covered by the SGR. The BBRA made no changes to this definition that was also used for the MVPS. For this reason, we are continuing to use the same definition of physicians' services for the SGR in this notice as we did in prior SGR notices and for the MVPS published in the **Federal Register** (61 FR 59717) on November 22, 1996.

II. Provisions of This Notice

This final notice implements section 211(a)(2)(C) of the BBRA that requires us to publish a one-time notice in the **Federal Register**, not later than 90 days after the date of enactment, containing—(1) Allowed expenditures for physicians' services under the Part B program for both the 9-month period of April 1, 1999 through December 31, 1999, and for CY 1999, (2) estimated actual expenditures for physicians' services in 1999, and (3) the sustainable growth rate for CY 2000.

In general, the update for a year is based on the Medicare Economic Index (MEI) as adjusted, within bounds, by the amount of actual expenditures for physicians' services compared to allowed (that is, growth target) expenditures. A key difference between the MVPS and the SGR is that the comparison of actual and allowed expenditures is made on a cumulative basis under the SGR while it was made on an annual basis under the MVPS. The "adjustment factor" in section 1848(d)(4)(B) of the Act that reflects actual expenditures compared to target expenditures is the adjustment to the MEI to reflect performance.

Section 1848(d)(3)(C) of the Act, as modified by the BBA, defines allowed expenditures for the 12-month period ending March 31, 1997 as equal to actual expenditures for physicians' services during that period (that is, April 1, 1996 through March 31, 1997), as we have estimated. Section 1848(d)(3)(C) of the Act defines allowed expenditures for subsequent 12-month periods to be equal to allowed expenditures for physicians' services for the previous year increased by the SGR for the FY which begins during the 12-month period. For example, allowed expenditures for the 12-month period April 1, 1997 through March 31, 1998 are equal to allowed expenditures for the 12-months ending March 31, 1997, increased by the SGR for FY 1998.

Table 1 shows annual and cumulative allowed expenditures for physicians' services for each of the 12-month periods between April 1, 1996 and March 31, 2000.

TABLE 1

Period	Annual allowed expenditures (in billions)	Cumulative allowed expenditures (in billions)	FY SGR
4/96–3/97	$48.9	$48.9	
4/97–3/98	49.6	98.5	FY 1998=1.5%.
4/98–3/99	49.4	147.9	FY 1999=−0.3%.
4/99–3/00	52.3	200.2	FY 2000=5.7%.

In Table 1, for the period April 1996 through March 1997, annual allowed expenditures are equal to actual expenditures for the period. Annual allowed expenditures for each subsequent year are equal to the figure from the prior April 1 through March 31 12-month period (shown in the annual allowed expenditure column) multiplied by the SGR figure one row down in the right hand column. For example, allowed expenditures from April 1997 through March 1998 are equal to $48.9 multiplied by 1.015. Cumulative allowed expenditures in a year are equal to the sum of the annual allowed expenditures figure in the same row and annual allowed expenditures for all prior years. Our current estimate of the FY 2000 SGR of 5.7 percent (2.1 percent for factor 1, -0.4 percent for factor 2, 2.7 percent for factor 3, and 1.2 percent for factor 4) reflects more recent information and correction an error made in calculation of the published FY 2000 SGR as discussed in section D below.

A. Allowed Expenditures for April 1, 1999 Through December 31, 1999

As indicated above, section 211(b) of the BBRA amended section 1848(f) of the Act to require us to calculate the SGR in future years on the basis of a CY. Section 211(a) of the BBRA similarly amends section 1848(d) of the Act to require that allowed expenditures be determined on a CY basis. Section 1848(d)(4)(C) of the Act, as amended by section 211(a)(1)(B) of the BBRA, establishes a transition to a CY allowed expenditures system in 1999.

Section 1848(d)(4)(C)(ii)(I) of the Act, as added by section 211(a)(1)(B) of the BBRA, specifies that allowed expenditures for the 9-month period beginning April 1, 1999 must be our estimate of the amount of the allowed expenditures that would be permitted for that period under section 1848(d)(3)(C) of the Act. That is, allowed expenditures for the period April 1, 1999 through December 31, 1999 are equal to a portion of the allowed expenditures for the period April 1, 1999 through March 31, 2000, that are themselves determined by applying the FY 2000 SGR to allowed expenditures for the 12-months ending March 31, 1999.

As indicated in Table 1, annual allowed expenditures for the period April 1, 1999 through March 31, 2000 are $52.3 billion. Our actuarial estimate of allowed expenditures for the 9-month period April 1, 1999 through December 31, 1999 is $39.1 billion. We determined this figure by increasing quarterly allowed expenditures from the base period by the applicable SGR and adding them to get an annual figure. For instance, we increased actual quarterly expenditures from the base period (April 1, 1996 through March 31, 1996, July 1, 1996 through September 30, 1996, and October 1, 1996 through December 31, 1996) by the SGRs for FY 1998, FY 1999, and FY 2000 to determine quarterly allowed expenditures for each respective quarter included in the April 1, 1999 through December 31, 1999 period and added together these quarterly allowed expenditures to determine the $39.1 billion annual figure. We increased quarterly base expenditures rather than annual base expenditures because it better accounts for seasonality in expenditures.

Allowed expenditures for the April 1, 1999 through the December 31, 1999 period are based on the FY 2000 SGR. As previously discussed, section 1848(f)(3) of the Act requires two revisions to the FY 2000 SGR. The first revision must be made not later than November 1, 2000 based on the best data available as of September 1, 2000; the second revision must be made not later than November 1, 2001, based on the best data available as of September 1, 2001.

B. Allowed Expenditures for Calendar Year 1999

Section 1848(d)(4)(C)(ii)(II) of the Act, as added by section 211(a)(1)(B) of the BBRA, specifies that allowed expenditures for the year of 1999 must be our estimate of the amount of the allowed expenditures that would be permitted under section 1848(d)(3)(C) of the Act for that year. We are, therefore, calculating allowed expenditures for CY 1999 as the sum of allowed expenditures for—(1) The January 1, 1999 through March 31, 1999 period; and (2) allowed expenditures for the April 1, 1999 through December 31, 1999 period.

Annual allowed expenditures for the period April 1, 1998 through March 31, 1999 are $49.4 billion. Our actuarial

estimate of allowed expenditures for the 3-month period January 1, 1999 through March 31, 1999 is $12.5 billion that was determined by updating quarterly allowed expenditures included in the January 1, 1997 through March 31, 1997 period by the SGRs for FY 1998, FY 1999 and FY 2000. Adding this figure to the $39.1 billion figure for April 1, 1999 through December 31, 1999 equals allowed expenditures for 1999 of $51.6 billion. (Due to rounding, the figures may not add precisely to the total for 2000.) Allowed expenditures for the period April 1, 1998 through March 30, 1999 are equal to allowed expenditures for the previous 12-month period increased by the FY 1999 SGR. In the **Federal Register** published on October 1, 1999 (64 FR 53396), we stated that the statute clearly requires that we use estimated values and that there is no provision for revising estimates once the applicable SGR is determined. Although section 211 of the BBRA amends the Act to require revisions to previously determined SGRs based on later data (unavailable to us at the time the SGR is initially determined), this system of revision applies prospectively, beginning with the FY 2000 SGR. As added by section 211(b)(5) of the BBRA, the flush sentence following subparagraph (C) of section 1848(f)(3) states: "Nothing in this paragraph shall be construed as affecting the sustainable growth rates established for fiscal year 1998 or fiscal year 1999."

Because there is no provision in the Act for revising the FY 1999 SGR or, consequently, the allowed expenditures for the April 1, 1998 through March 31, 1999 period, we will not revise the January 1, 1999 through March 31, 1999 portion of allowed expenditures included in the 1999 allowed expenditures. However, as indicated above, when we revise the FY 2000 SGR, allowed expenditures for April 1, 1999 through December 31, 1999 are subject to change.

C. Actual Expenditures for CY 1999

We currently estimate actual expenditures for CY 1999 to be $50.7 billion. This estimate is based on actual claims data for services furnished during CY 1999 that were received through September 30, 1999, and an estimate of expenditures for the year based on claims information received in prior years. Expenditure data for claims received after September 30, 1999 were unavailable to us at the time we made this estimate. As described in more detail below, we are making SGR data available through our web site (www.hcfa.Gov/pubforms/actuary). We will be providing quarterly expenditures under the SGR as data become available. Our estimate of actual expenditures for CY 1999 furnished in this notice will be revised as more complete claims information on 1999 expenditures becomes available to us and will be included in our web site information.

D. Sustainable Growth Rate for CY 2000

According to sections 1848(f)(2)(A) through (D) of the Act, as amended by section 211(b) of the BBRA, we have determined the CY 2000 SGR to be 5.8 percent. Our determination is based on estimates of the following four statutory factors as indicated in table 2 below:

TABLE 2

Statutory factors	Percent change
Fees	2.1
Enrollment	−0.6
Increase in Gross Domestic Product	2.5
Legislation	1.7
Total	5.8

Note: Consistent with section 1848(f)(2), the statutory factors are multiplied, not added, to produce the total (that is, 1.021 × (1 − 0.006) × 1.025 × 1.017 = 1.058.)

III. Calculation of the CY 2000 Sustainable Growth Rate

A more detailed discussion of our estimates of the four elements of the SGR follows.

Factor 1—Changes in Fees for Physicians' Services (Before Applying Legislative Adjustments) for CY 2000

This factor was calculated as a weighted average of the CY 2000 fee increases that apply for physicians' and laboratory services that are the different types of services included in the definition of physicians' services for the SGR.

Physicians' services represent approximately 89 percent of allowed charges for physicians' services under the SGR. As announced in the November 2, 1999 **Federal Register** (64 FR 59429), the physician fee schedule update (before applying the performance adjustment factor) for CY 2000 is 2.4 percent. The BBA provided for a 0.0 percent update for CY 2000 for laboratory services, which represents about approximately 11 percent of the Medicare allowed charges for physicians' services under the SGR. Table 3 shows both the physicians' and laboratory service updates that were used to determine the percentage increase in physicians' fees for CY 2000.

TABLE 3.—PHYSICIANS' AND LABORATORY SERVICE UPDATE FOR CALENDAR YEAR 2000

	2000	Weight
Physicians' Services	2.4%	.89
Laboratory Service ...	0.0%	.11

After taking into account the elements described in Table 3, we estimate that the weighted-average increase in fees for CY 2000 for physicians' services under the SGR (before applying any legislative adjustments) will be 2.1 percent.

Factor 2—The Percentage Change in the Average Number of Part B Enrollees From CY 1999 to CY 2000

This factor is our estimate of the percent change in the average number of fee-for-service enrollees for CY 2000 as compared to CY 1999. Medicare+Choice (M+C) plan enrollees, whose Medicare-covered medical care is outside the scope of the SGR, are excluded from this estimate. Our actuaries estimate that the average number of Medicare Part B fee-for-service enrollees (excluding beneficiaries enrolled in M+C plans) will decrease by 0.6 percent in calendar year 2000. This estimate was derived by subtracting estimated M+C enrollment from estimated overall Medicare enrollment as described in table 4 below.

TABLE 4

Year	Average Medicare Part B Enrollment (in millions)		
	Overall Part B	Medicare+Choice	Overall Part B, excluding Medicare+Choice
1999	37.010	6.194	30.816
2000	37.374	6.746	30.628

TABLE 4—Continued

Year	Average Medicare Part B Enrollment (in millions)		
	Overall Part B	Medicare+Choice	Overall Part B, excluding Medicare+Choice
Percent change			−0.6

Our actuaries estimate of the percent change in the average number of fee-for-service enrollees for CY 2000 compared to CY 1999 of −0.6 percent is less of a decrease than the estimate of this factor for FY 2000 because—(1) The historical base from which our actuarial estimate is made has changed (that is, we have more information on enrollment from CY 1999 that affects our estimates for future years), and (2) the applicable time period has changed from the FY to CY.

Factor 3—Estimated Real Gross Domestic Product Per Capita Growth in CY 2000

Section 1848(f)(2)(C) of the Act, as amended by section 211 of the BBRA, requires us to estimate growth in real GDP per capita. This factor is applied on a CY basis beginning with the CY 2000 SGR. We estimate that the growth in real GDP will be 2.5 percent in CY 2000.

In the FY 2000 SGR notice published on October 1, 1999 (64 FR 53396), we estimated that real GDP growth per capita for FY 2000 would be 1.8 percent. We are now estimating that real GDP growth per capita for CY 2000 to be 2.5 percent. The higher estimate is due in part to Bureau of Economic Analysis (BEA) revisions to the historical National Income and Product Accounts (NIPA) and in part due to a change in the outlook for growth in 2000. The historical revisions, released by BEA on October 29, 1999, raised historical real GDP per capita growth by 0.2 percentage points on average between 1959 through 1998, with larger differences in recent years. (For a detailed description of changes to NIPA, see Brent R. Moulton, Robert P. Parker, and Eugene P. Seskin, "A Preview of the 199 Comprehensive Revision of the National Income and Product Accounts," Survey of Current Business (August, 1999): 7–20.) Subsequently, the projections of growth in real GDP per capita for 2000 have been revised upwards to reflect these revisions. Also since the October 1, 1999 SGR notice, projections of real GDP per capita in 2000 have been revised upward to reflect stronger than expected stock market performance and less than expected buildup of inventories in preparation for Y2K in 1999. Also, the GDP growth figure in this notice is calculated on a calendar rather than a fiscal year basis. (Moving from a FY 2000 to a CY 2000 estimate of GDP results in a −0.2 percent change from 2.7 percent to 2.5 percent.)

These same methodological changes in GDP measurement also have the effect of reducing the MEI. If we were to recalculate the MEI for CY 2000, based on the GDP measurement changes, it would be 2.0 percent rather than the 2.4 percent calculated and used for the 2000 physician fee schedule update. However, since such an MEI would not be the one used in establishing the 2000 update, and since the price factor in the SGR is the "Secretary's estimate of the weighted average percentage increase in physician fees" for all physicians' services, we are using the 2.4 percent increase for the fee component of the CY 2000 SGR. Consistent with the law, we are using the 2.4 percent increase in physician fees used for the CY 2000 physician fee schedule update.

Factor 4—Percentage Change in Expenditures for Physicians' Services Resulting From Changes in Law or Regulations in CY 2000 Compared With CY 1999

Legislative changes contained in the BBA and the BBRA will have an impact on expenditures for physicians' services under the SGR in CY 2000. Section 4103 of the BBA mandates a new prostate screening benefit effective January 1, 2000. This provision is estimated to increase expenditures in CY 2000 relative to CY 1999 by 1.8 percent. Additionally, effective January 1, 2000, section 4513 of the BBA removes the requirement that a subluxation of the spine be demonstrated by an x-ray before a beneficiary can receive Medicare coverage for chiropractic services. This provision will also result in a small increase in expenditures in CY 2000. The impact of BBA Medicare Secondary Payer provisions will have small marginal impact on reducing expenditures in CY 2000.

Certain BBRA provisions will also have a small impact on expenditures in CY 2000. Section 224 of the BBRA increases payments for pap smears and will slightly increase expenditures in CY 2000. Section 221 of the BBRA postponed the implementation of payment caps on physical and occupational therapy and speech-language pathology services. The effect of this provision on physicians and independent practitioners will result in a small increase in the CY 2000 SGR.

After taking into account these provisions, the percentage change in expenditures for physicians' services resulting from changes in law or regulations is estimated to be 1.7 percent for 2000.

After it was enacted in 1997, our actuaries estimated the effect of changes in expenditures resulting from the BBA. Their estimates took into account the effect of the prostate screening benefit (effective beginning with January 1, 2000). However, we inadvertently neglected to include it as part of our estimate of factor 4 for FY 2000. Had we included the effect of this in our estimate of the changes in law or regulations, our estimate of factor 4 for FY 2000 would have been 1.5 percentage points higher and the overall FY 2000 SGR would have been 3.5 percent instead of 2.1 percent. We will incorporate the effect of the prostate screening benefit in revisions we will make to the FY 2000 SGR no later than November 1, 2000.

IV. Publication and Dissemination of Information

Section 211 of the BBRA amends section 1848(d)(1)(E) of the Act to require publication and dissemination of information related to the physician fee schedule update and SGR at two points during a year. Specifically, we must publish in the **Federal Register** not later than November 1 of each year (beginning with 2000) the conversion factor that will apply to physicians' services for the succeeding year, the update determined (under section 1848(d)(4) of the Act) for the succeeding year, and the allowed expenditures (under section 1848(d)(4) of the Act) for such succeeding year. Thus, 60 days before the conversion factor is actually implemented, we are required to publish the conversion factor that will apply for the following calendar year, as

well as the percentage update for that year and the allowed expenditures for that year. We plan to implement this provision as part of the physician fee schedule final rule that we publish by November 1 of the year before it is applicable.

In addition to this November 1 publication requirement, the BBRA amended section 1848(d)(1)(E)(ii) of the Act to require that we make available to the Medicare Payment Advisory Commission [MedPAC] and the public by March 1 of each year (beginning with 2000) an estimate of the sustainable growth rate and of the conversion factor that will apply to physicians' services for the succeeding year and the data used in making this estimate. While the statute requires dissemination of information to the MedPAC and the public, it does not require publication of this information in the **Federal Register**. In this notice, we provide information on how we intend to disseminate the information required by section 1848(d)(1)(E)(ii) of the Act and we describe the limitations of the data we plan to make available.

The statute requires that we make available the following items by March 1st of each year:

- An estimate of the SGR for the following year.
- An estimate of the physician fee schedule conversion factor for the next year and the data used in making these estimates.

We plan to make all of this information available on the HCFA web site (www.hcfa.gov/pubforms/actuary).

The March 1 estimate will not necessarily be a good predictor of the SGR that we specify by November 1 of each year. While it is the best estimate at the time, a figure specified later in the year is likely to differ from it for several different reasons.

We will have more current data on the four factors that comprise the SGR formula as of September 1 of a year for publication in the November 1st notice, than will be available by March 1. For example, for the March 1 estimate, we will need to estimate the percent change in fee-for-service enrollment for the following year although we have little information on the change in fee-for-service enrollment for the current year. Similarly, an estimate of the percent change in real GDP per capita for the subsequent year made by November 1 is likely to be better than an estimate made by March 1 of that year. In addition, an estimate of the changes in law and regulation affecting expenditures for physicians' services for the subsequent year would require an estimate of the financial impact of policy changes several months before the physician fee schedule proposed rule is published.

We also point out that there may be differences between an SGR for a year specified by November 1 and the SGR for the same year as subsequently revised based on later data. Specifically, the BBRA required the revision of the SGR for a year beginning with the FY 2000 SGR, in each of the 2 years after it is initially specified, based on more current data. Given the required revisions of the November 1 estimate, and the previously discussed limitations of the March 1 estimate, we anticipate that the March 1 estimate will not necessarily be an accurate predictor of the November 1 SGR.

The second item we are required to make available by March 1 is an estimate of the conversion factor for the following year. This factor may be even more difficult to estimate by March 1 than the SGR for the following year. The conversion factor for a year is equal to the conversion factor for the previous year updated by the physician fee schedule update. As with the MVPS, the update is equal to the MEI, adjusted (up or down) by the performance of actual expenditures compared to target expenditures (called allowed expenditures in the statute). For example, the CY 2000 update of 5.5 percent was based on an MEI of 2.4 percent and a performance adjustment of 3.0 percentage points. (These figures are multiplied, not added. The update of 5.5 percent is determined by multiplying the MEI of 2.4 percent, or 1.024, by the performance adjustment factor of 3.0 percent, or 1.030: $1.024 \times 1.03 = 1.05472$). Beginning with CY 2001, the performance adjustment compares actual expenditures from March 1, 1996 through the end of a year (2000 for the 2001 update) adjusted by the SGR for the following year (2001 for the 2001 update) to allowed expenditures from March 1, 1996 through the end of that next year (2001 for the 2001 update). (We will provide more detail on the precise formula for determining the physician fee schedule in the update notice that will be published not later than November 1, 2000.)

By March 1 of each year, however, we will have no actual data on key elements that comprise the formula for updating the conversion factor for the next year. For example, by March 1, 2000, we will have no data on actual expenditures for physicians' services under the SGR for CY 2000 since we receive expenditure information on a quarterly basis during the year, with a lag time after the quarter closes. By March 1, the first quarter of the calendar year will not even be complete.

Similarly, we are unlikely to have reasonably complete expenditure data on the last quarter of 1999. Finally, the SGR for a year also affects allowed expenditures through the end of the next year. We have already discussed why the March 1 SGR estimate is likely to change. Therefore, by March 1 of each year, we will have only estimates of the three data elements required to determine the performance adjustment to the MEI (actual expenditures for physicians' services for the current year, allowed expenditures through the end of the next year, and the SGR for the next year). We provide the above discussion to caution that the March 1 estimate of the conversion factor update for the next year is not likely to be a good predictor of the update for the year specified by November 1. It is only an estimate and will likely change based on more current information. We will make our estimate of the physician fee schedule conversion factor available on the HCFA web site (www.hcfa.gov/pubforms/actuary).

By March 1, we will also make available on the HCFA web site data used in making the estimate of the SGR and conversion factor update. Because we will not have any data on actual CY 2000 expenditures and because many elements of the SGR will probably change during the year, there are limits on the data we can provide. To provide data that will be useful, we plan, on a quarterly basis, to post on the HCFA web page quarterly expenditures for services covered by the SGR. The estimates would update prior quarters where later data were available for that quarter. Data would be posted approximately 6 months after the end of the quarter (when data for the quarter are reasonably complete).

Finally, we also point out that the two SGR elements for which there has been the largest difference between our actuaries' estimates and the actual amounts have been the fee-for-service enrollment numbers and real gross domestic product per capita. We note that more recent data on these two elements are available during a year on several web sites. Actual real GDP for a quarter is available from the home page for the Bureau of Economic Analysis of the Department of Commerce (www.bea.doc.gov). Population figures are available from the home page for the Census Bureau (www.census.gov). Real GDP per capita can be calculated from these figures. In addition, monthly M+C enrollments are currently available on the HCFA Home page (www.hcfa.gov/stats.mmcc.htm). In April of each year,

when our Office of the Actuary puts the Trustees Report on the HCFA Home page, we will also post the projections of total Medicare Part B enrollment for the current and subsequent calendar years, as well as for the preceding calendar year, consistent with the Trustees Report. Thus, the Medicare fee-for-service enrollment could be determined. With these data, during the year after March 1, the public can make estimates of actual expenditures relative to the SGR and the performance adjustment to the update for a year.

V. Waiver of Proposed Rulemaking and 30–Day-Delay in Effective Date

We ordinarily publish a notice of proposed rulemaking in the **Federal Register** and invite prior public comment on proposed rules. The notice of proposed rulemaking includes a reference to the legal authority under which the rule is proposed, and the terms and substances of the proposed rule or a description of the subjects and issues involved. This procedure can be waived, however, if an agency finds good cause that a notice-and-comment procedure is impracticable, unnecessary, or contrary to the public interest and incorporates a statement of the finding and its reasons in the rule issued.

We believe that engaging in proposed rulemaking in the context of this document is impracticable because section 211 of the BBRA requires that this final notice be published in the **Federal Register** not later than 90 days after enactment of this section on November 29, 1999. Moreover, in accordance with section 1871(b)(2) of the Act, notice and comment provisions do not apply where the law establishes a specific deadline for the implementation of a provision and the deadline is less than 150 days after the date of the enactment of the statute in which the deadline is contained. We also believe that it is unnecessary to publish a proposed notice for public comment because we have no discretion with respect to the provisions of this notice. We are implementing the statute as required by the BBRA.

Therefore, we find that notice and comment provisions are not applicable here and we are issuing this notice in final form. We also find that for the above reasons it is prudent to waive the 30 day delay in effective date.

VI. Collection of Information Requirements

This document does not impose information collection and recordkeeping requirements. Consequently, it need not be reviewed by the Office of Management and Budget under the authority of the Paperwork Reduction Act of 1995.

VII. Regulatory Impact Statement

Consistent with the Regulatory Flexibility Act (RFA) (5 U.S.C. 601 through 612), we prepare a regulatory flexibility analysis unless we certify that a notice will not have a significant economic impact on a substantial number of small entities. For purposes of the RFA, we treat all physicians and suppliers as small entities. Individuals and States are not included in the definition of a small entity.

Section 1102(b) of the Act requires us to prepare a regulatory impact analysis if a notice may have a significant impact on the operations of a substantial number of small rural hospitals. That analysis must conform to the provisions of section 604 of the RFA. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of a Metropolitan Statistical Area and has fewer than 50 beds.

Section 202 of the Unfunded Mandates Reform Act of 1995 also requires that agencies assess anticipated costs and benefits before issuing any rule that may result in an annual expenditure by State, local, or tribal governments, in the aggregate, or by the private sector, of $100 million.

This notice announces only a SGR rate of increase for CY 2000 and does not affect physician expenditures in CY 2000. The SGR announced in this notice will be revised later this year. It is the revised SGR that will affect allowed expenditures for physicians' services through CY 2000 and that will be part of a formula for determining the physician fee schedule update and conversion factor for CY 2001. As indicated above, we will publish the physician fee schedule update for CY 2001 by no later than November 1, 2000. It is that update which will affect expenditures for physicians' services in CY 2001.

We are not preparing an analysis for either the RFA or section 1102(b) of the Act because we have determined, and the Secretary certifies, that this notice will not have a significant economic impact on a substantial number of small entities or on the operations of a substantial number of small rural hospitals.

In accordance with the provisions of Executive Order 12866, this notice was reviewed by the Office of Management and Budget

VIII. Federalism

We have reviewed this final notice under the threshold criteria of Executive Order 13132 and have determined that it does not significantly affect the rights, roles, and responsibilities of States.

(Sections 1848(d) and (f) of the Social Security Act) (42 U.S.C. 1395w–4(d) and (f))

(Catalog of Federal Domestic Assistance Program No. 93.774, Medicare—Supplementary Medical Insurance Program)

Dated: February 24, 2000.

Nancy-Ann Min DeParle,

Administrator, Health Care Financing Administration.

Approved: March 24, 2000.

Donna E. Shalala,

Secretary.

[FR Doc. 00–8708 Filed 4–4–00; 3:42 pm]

BILLING CODE 4120–03–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Office of Inspector General

Program Exclusions: March 2000

AGENCY: Office of Inspector General, HHS

ACTION: Notice of program exclusions.

During the month of March 2000, the HHS Office of Inspector General imposed exclusions in the cases set forth below. When an exclusion is imposed, no program payment is made to anyone for any items or services (other than an emergency item or service not provided in a hospital emergency room) furnished, ordered or prescribed by an excluded party under the Medicare, Medicaid, and all Federal Health Care programs. In addition, no program payment is made to any business or facility, e.g., a hospital, that submits bills for payment for items or services provided by an excluded party. Program beneficiaries remain free to decide for themselves whether they will continue to use the services of an excluded party even though no program payments will be made for items and services provided by that excluded party. The exclusions have national effect and also apply to all Executive Branch procurement and non-procurement programs and activities.

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR–4561–N–23]

Notice of Submission of Proposed Information Collection to OMB; Certification Regarding Adjustment for Damage or Neglect

AGENCY: Office of the Chief Information Officer, HUD.

ACTION: Notice.

SUMMARY: The proposed information collection requirement described below has been submitted to the Office of Management and Budget (OMB) for review, as required by the Paperwork Reduction Act. The Department is soliciting public comments on the subject proposal.

DATES: *Comments Due Date:* May 10, 2000.

ADDRESSES: Interested persons are invited to submit comments regarding this proposal. Comments should refer to the proposal by name and/or OMB approval number (2502–0349) and should be sent to: Joseph F. Lackey, Jr., OMB Desk Officer, Office of Management and Budget, Room 10235, New Executive Office Building, Washington, DC 20503.

FOR FURTHER INFORMATION CONTACT: Wayne Eddins, Reports Management Officer, Q, Department of Housing and Urban Development, 451 Seventh Street, Southwest, Washington, DC 20410; e-mail Wayne__Eddins@HUD.gov; telephone (202) 708–2374. This is not a toll-free number. Copies of the proposed forms and other available documents submitted to OMB may be obtained from Mr. Eddins.

SUPPLEMENTARY INFORMATION: The Department has submitted the proposal for the collection of information, as described below, to OMB for review, as required by the Paperwork Reduction Act (44 U.S.C. Chapter 35). The Notice lists the following information: (1) The title of the information collection proposal; (2) the office of the agency to collect the information; (3) the OMB approval number, if applicable; (4) the description of the need for the information and its proposed use; (5) the agency form number, if applicable; (6) what members of the public will be affected by the proposal; (7) how frequently information submissions will be required; (8) an estimate of the total number of hours needed to prepare the information submission including number of respondents, frequency of response, and hours of response; (9) whether the proposal is new, an extension, reinstatement, or revision of an information collection requirement; and (10) the name and telephone number of an agency official familiar with the proposal and of the OMB Desk Officer for the Department.

This Notice also lists the following information:

Title of Proposal: Certification Regarding Adjustment for Damage or Neglect.

OMB Approval Number: 2502–0349.

Form Numbers: None.

Description of the Need for the Information and its Proposed Use: OMB approval will permit a one-time certification by mortgagees that they have acquired hazard insurance acceptable to HUD at a reasonable rate and that the mortgagee may convey fire damaged properties without a surcharge to the claim.

Respondents: Business or other for-profit.

Frequency of Submission: On Occasion.

Reporting Burden:

Number of respondents	×	Frequency of response	×	Hours per response	=	Burden hours
280		1		.50		140.

Total Estimated Burden Hours: 140.
Status: Reinstatement, with change.

Authority: Section 3507 of the Paperwork Reduction Act of 1995, 44 U.S.C. 35, as amended.

Dated: April 4, 2000.

Wayne Eddins,

Departmental Reports Management Officer, Office of the Chief Information Officer.

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

Notice of Availability of Draft Comprehensive Conservation Plan and Environmental Assessment for Arthur R. Marshall Loxahatchee National Wildlife Refuge in Palm Beach County, FL, and Notice of Meeting To Seek Public Comments on These Documents

SUMMARY: This notice advises the public that the U.S. Fish and Wildlife Service, Southeast Region, has made available for public review a Draft Comprehensive Conservation Plan and Environmental Assessment for Arthur R. Marshall Loxahatchee National Wildlife Refuge in Palm Beach County, Florida, and plans to hold a public meeting in the vicinity of the refuge to solicit public comments on these documents. The Service is furnishing this notice in compliance with Service comprehensive planning policy, the National Environmental Policy Act, and implementing regulations to achieve the following:

(1) Advise other agencies and the public of our intentions, and

(2) Obtain comments on the proposed plan and the other alternatives considered in the planning policy.

DATES: The Service will hold the public meeting at 6:30 p.m. on April 26, 2000, at the South County Civic Center, 16700 Jog Road, Delray Beach, Florida. The draft plan will be made available for review and comment. Written comments should be submitted no later than May 22, 2000, to the address below.

ADDRESSES: Comments and requests for copies of the draft plan and environmental assessment should be addressed to Mr. Mark J. Musaus, Refuge Manager, ARM Loxahatchee National Wildlife Refuge, 10216 Lee

Road, Boynton Beach, Florida 33437–4796, or by calling 561/732–3684.

If you wish to comment, you may submit your comments by any one of several methods. You may mail comments to the above address. You may also comment via the Internet to the following address: Mark_Musaus@fws.gov. Please submit Internet comments as an ASCII file avoiding the use of special characters and any form of encryption. Please also include your name and return address in your Internet message. If you do not receive a confirmation from the system that we have received your Internet message, contact us directly at ARM Loxahatchee National Wildlife Refuge, at the above address. Finally, you may hand-deliver comments to the Refuge headquarters office at the above address. Our practice is to make comments, including names and home addresses of respondents, available for public review during regular business hours. Individual respondents may request that we withhold their home address from the rulemaking record, which we will honor to the extent allowable by law. There also may be circumstances in which we would withhold from the rulemaking record a respondent's identity, as allowable by law. If you wish us to withhold your name and/or address, you must state this prominently at the beginning of your comment. However, we will not consider anonymous comments. We will make all submissions from organizations or businesses, and from individuals identifying themselves as representatives or officials of organizations or businesses, available for public inspection in their entirety.

SUPPLEMENTARY INFORMATION: Arthur R. Marshall Loxahatchee National Wildlife Refuge, located 15 miles southwest of West Palm Beach, Florida, consists of 221 square miles of the remaining northern Everglades. The refuge is one of three large freshwater storage areas surrounded by levees and canals. These storage areas, built by the Army Corps of Engineers, were later placed under the jurisdiction of the South Florida Water Management District. The primary objectives of the refuge, established through an agreement between the Service and the South Florida Water Management District, is to maintain suitable habitat for a variety of wildlife native to the northern Everglades. By implementing the proposed comprehensive conservation plan, the refuge seeks to achieve the following four goals:

(1) Restore and conserve the natural diversity, abundance and ecological function of refuge flora and fauna;

(2) Conserve natural and cultural resources through partnerships, protection and acquisition from willing sellers;

(3) Develop and implement compatible wildlife-dependent recreation and environmental education programs that lead to enjoyable experiences and greater understanding of the Everglades; and

(4) Continue a partnership with the South Florida Water Management District through a new license agreement.

The Draft Comprehensive Conservation Plan/Environmental Assessment evaluates the following four alternatives for managing the refuge over the next 15 years: maintain current management; ecosystem emphasis; biological emphasis; and public use emphasis. The Fish and Wildlife Service believes that ecosystem emphasis is the best alternative to guide the refuge's future direction. In essence, this alternative will:

- Restore and maintain healthy water regimes;
- Reduce exotic and invasive plants;
- Expand the inventory and mapping of wildlife species and habitats;
- Enhance wildlife habitat for migratory and resident song birds; and
- Expand wildlife-dependent and other compatible recreation opportunities.

Dated: April 4, 2000.

Judy L. Jones,

Acting Regional Director.

BILLING CODE 4310–55–M

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[ID–070–1020–XQ]

Resource Advisory Council Meeting Locations and Times

AGENCY: Bureau of Land Management, Interior.

SUMMARY: In accordance with the Federal Land Policy and Management Act and the Federal Advisory Committee Act of 1972 (FACA), 5 U.S.C., the Department of the Interior, Bureau of Land Management (BLM) council meeting of the Upper Snake River District Resource Advisory Council (RAC) will be held as indicated below. The agenda for this two-day meeting will include a field trip for members on the first day to recreation sites along the South Fork of the Snake River, and discussions on Standards and Guides Monitoring on the second day. The RAC will also hear a presentation from the staff of the Interior Columbia Basin Ecosystem Management Plan (ICBEMP) project. Other agenda items may be added between publication of this notice and the meeting. All meetings are open to the public. The public may present written or oral comments to the council. Each formal council meeting will have a time allocated for hearing public comments. The public comment period for the council meetings is listed below. Depending on the number of persons wishing to comment, and the time available, the time for individual oral comments may be limited. Individuals who plan to attend and need further information about the meetings, or need special assistance such as sign language interpretation or other reasonable accommodations should contact David Howell at the Upper Snake River District Office, 1405 Hollipark Dr., Idaho Falls, ID 83401, or telephone (208) 524–7559.

DATES AND TIMES: The next meeting will be held May 4–5, 2000 at the BLM's Idaho Falls Field Office, 1405 Hollipark Drive in Idaho Falls, Idaho. The Field Trip to the recreational sites will begin at 1 p.m. on May 4. The RAC meeting will start at 8:30 a.m. on May 5, with public comments scheduled from 8:40–9:10 a.m.

SUPPLEMENTARY INFORMATION: The purpose of the Resource Advisory Council is to advise the Secretary of the Interior, through the BLM, on a variety of planning and management issues associated with the management of the of the public lands.

FOR FURTHER INFORMATION CONTACT: David Howell, Upper Snake River District, 1405 Hollipark Dr., Idaho Falls, ID 83401, (208) 524–7559.

Dated: March 30, 2000.

Joe Kraayenbrink,

Idaho Falls Field Manager.

BILLING CODE 4310–GG–P

INTERNATIONAL TRADE COMMISSION

[Investigation No. 731–TA–377 (Review)]

Internal Combustion Industrial Forklift Trucks From Japan

Determination

On the basis of the record [1] developed in the subject five-year review, the United States International Trade Commission determines,[2] pursuant to section 751(c) of the Tariff Act of 1930 (19 U.S.C. 1675(c)) (the Act), that revocation of the antidumping duty order on internal combustion industrial forklift trucks from Japan would be likely to lead to continuation or recurrence of material injury to an industry in the United States within a reasonably foreseeable time.

Background

The Commission instituted this review on April 1, 1999 (64 FR 15786) and determined on July 2, 1999, that it would conduct a full review (64 FR 38475, July 16, 1999). Notice of the scheduling of the Commission's review and of a public hearing to be held in connection therewith was given by posting copies of the notice in the Office of the Secretary, U.S. International Trade Commission, Washington, DC, and by publishing the notice in the **Federal Register** on August 27, 1999 (64 F.R. 46952). The hearing, scheduled to be held in Washington, DC, on January 25, 2000, was cancelled as a result of a Federal Government closure in Washington, DC due to inclement weather on January 25 and 26, 2000. On January 28, 2000, the schedule was revised (65 FR 5660, February 4, 2000) and all persons who requested the opportunity to be heard at the original hearing were permitted to submit written testimony to the Commission in lieu of the public hearing.

The Commission transmitted its determination in this review to the Secretary of Commerce on April 4, 2000. The views of the Commission are contained in USITC Publication 3287 (April 2000), entitled Internal Combustion Industrial Forklift Trucks from Japan: Investigation No. 731–TA–377 (Review).

Issued: April 5, 2000.

By order of the Commission.

Donna R. Koehnke,

Secretary.

INTERNATIONAL TRADE COMMISSION

[Investigation No. 731–TA–429 (Review)]

Mechanical Transfer Presses From Japan; Notice of Commission Determination to Conduct a Portion of the Hearing In Camera

AGENCY: U.S. International Trade Commission.

ACTION: Closure of a portion of a Commission hearing.

SUMMARY: Upon request of respondent Komatsu Ltd., the Commission has determined to conduct a portion of its hearing in the above-captioned investigation scheduled for April 4, 2000, in camera. See Commission rules 207.24(d), 201.13(m) and 201.36(b)(4) (19 CFR 207.24(d), 201.13(m) and 201.36(b)(4)). The remainder of the hearing will be open to the public. The Commission has determined that the seven-day advance notice of the change to a meeting was not possible. See Commission rule 201.35(a), (c)(1) (19 CFR 201.35(a), (c)(1)).

FOR FURTHER INFORMATION CONTACT: Donnette Rimmer, Office of the General Counsel, U.S. International Trade Commission, telephone 202–205–0663, e-mail drimmer@usitc.gov. Hearing-impaired individuals are advised that information on this matter may be obtained by contacting the Commission's TDD terminal on 202–205–3105.

SUPPLEMENTARY INFORMATION: The Commission believes that Komatsu, Ltd. has justified the need for a closed session. Komatsu, Ltd. seeks a closed session to allow for a discussion of the U.S. industry's performance and the consequences of the antidumping order. In making this decision, the Commission nevertheless reaffirms its belief that whenever possible its business should be conducted in public.

The hearing will begin with public presentations by those supporting continuation of the order and those supporting revocation of the order, with questions from the Commission. In addition, the hearing will include a 30-minute in camera session for a confidential presentation by Komatsu Ltd. and for questions from the Commission relating to the business proprietary information ("BPI"), followed by a 30-minute in camera rebuttal presentation by those supporting continuation of the order. For any in camera session the room will be cleared of all persons except those who have been granted access to BPI under a Commission administrative protective order (APO) and are included on the Commission's APO service list in this investigation. See 19 CFR 201.35(b)(1), (2). The time for the parties' presentations and rebuttals in the in camera session will be taken from their respective overall allotments for the hearing. All persons planning to attend the in camera portions of the hearing should be prepared to present proper identification.

Authority: The General Counsel has certified, pursuant to Commission Rule 201.39 (19 CFR 201.39) that, in her opinion, a portion of the Commission's hearing in Mechanical Transfer Presses from Japan, Inv. No. 731–TA–429 (Review), may be closed to the public to prevent the disclosure of BPI.

Issued: April 3, 2000.

By order of the Commission.

Donna R. Koehnke

Secretary.

[FR Doc. 00–8778 Filed 3–7–00; 8:45 am]

BILLING CODE 7020–02–P

DEPARTMENT OF LABOR

Bureau of Labor Statistics

Proposed Collection; Comment Request

ACTION: Notice.

SUMMARY: The Department of Labor, as part of its continuing effort to reduce paperwork and respondent burden, conducts a pre-clearance consultation program to provide the general public and Federal agencies an opportunity to comment on proposed and/or continuing collections of information in accordance with the Paperwork Reduction Act of 1995 (PRA95) [44 U.S.C. 3506(c)(2)(A)]. This program helps to ensure that requested data can be provided in the desired format, reporting burden (time and financial resources) is minimized, collection instruments are clearly understood, and the impact of collection requirements on respondents can be properly assessed. The Bureau of Labor Statistics (BLS) is soliciting comments concerning the proposed revision of the Consumer Expenditure Surveys (CES). A copy of the proposed information collection request (ICR) can be obtained by contacting the individual listed in the **ADDRESSES** section of this notice.

DATES: Written comments must be submitted to the office listed in the **ADDRESSES** section of this notice on or before June 9, 2000.

ADDRESSES: Send comments to Sytrina D. Toon, BLS Clearance Officer, Division of Management Systems, Bureau of Labor Statistics, Room 3255, 2 Massachusetts Avenue, N.E., Washington, DC 20212, telephone number 202–691–7628 (this is not a toll free number).

FOR FURTHER INFORMATION CONTACT: Sytrina D. Toon, BLS Clearance Officer, telephone number 202–691–7628. (See **ADDRESSES** section.)

SUPPLEMENTARY INFORMATION:

I. Background

The Consumer Expenditure (CE) Surveys collect data on consumer expenditures, demographic information, and related data needed by the Consumer Price Index (CPI) and other public and private data users. The continuing surveys provide a constant measurement of changes in consumer expenditure patterns for economic analysis and for future CPI revisions. The CE Surveys have been ongoing since 1979.

The data from the CE Surveys are used (1) for CPI revisions; (2) to provide a continuous flow of data on income and expenditure patterns for use in economic analysis and policy formulation; and (3) to provide a flexible consumer survey vehicle that is available for use by other Federal Government agencies. Public and private users of price statistics, including Congress and the economic policymaking agencies of the Executive Branch, rely on data collected in the CPI in their day-to-day activities. If the CE Surveys were not conducted on a continuing basis, current information necessary for more timely as well as more accurate updating of the CPI would not be available. In addition, data would not be available to respond to the continuing demand—from the public and private sectors—for current information on consumer spending.

In the Quarterly Interview Survey, each consumer unit (CU) in the sample is interviewed every three months over five calendar quarters. The sample for each quarter is divided into three panels, with CU's being interviewed every three months in the same panel of every quarter. The Quarterly Interview Survey is designed to collect data on the types of expenditures that respondents can be expected to recall for a period of three months or longer. In general the expenses reported in the Interview Survey either are relatively large, such as property, automobiles, or major appliances, or are expenses which occur on a fairly regular basis, such as rent, utility bills or insurance premiums.

The Diary (or record keeping) Survey is completed at home by the respondent family for two consecutive one-week periods. The primary objective of the Diary Survey is to obtain expenditure data on small, frequently purchased items which normally are difficult to recall over longer periods of time.

II. Desired Focus of Comments

The Bureau of Labor Statistics is particularly interested in comments which:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.*, permitting electronic submissions of responses.

III. Current Action

The Quarterly Interview Survey is being updated for implementation in April of 2001. The changes made to the forms fall into three categories: (1) Expenditures of new items in the marketplace were added for use in the Consumer Price Index and in CE publications. These include such items as DSL and ISDN services and shopping warehouse clubs. (2) Similar questions were consolidated to make the survey easier and more organized for the respondent. (3) Bracketed categories of responses were added to the income sections to decrease non-response through decreasing respondent burden.

The Consumer Expenditure Surveys continuously make efforts to reduce respondent burden per case by streamlining the questionnaire. Efforts were made in this forms redesign, as follows:

- In several areas field representative instructions were added to make the forms easier to understand for the field representative and the respondent.
- The questionnaire flow was improved by moving similar questions into concise and consolidated sections.
- Wording was changed to use more current terminology.

Once the forms have been in the field the BLS will perform timing tests to determine what impact these changes have had on burden. The Consumer Expenditure Surveys continue to investigate ways to reduce respondent burden, and have plans implement further changes aimed at reducing respondent burden when computer assisted personal interviewing is implemented in 2003.

Type of Review: Revision.
Agency: Bureau of Labor Statistics.
Title: Consumer Expenditure Surveys.
OMB Number: 1220–0050.
Affected Public: Individuals or households.
Total Respondents: 18,216.
Frequency: Quarterly Interview Survey respondents are interviewed quarterly for five consecutive quarters (four time in any one year). Diary Survey respondents complete two consecutive weekly reports.
Total Responses: 68,194.
Average Time Per Response: 87.83 minutes.
Estimated Total Burden Hours: 99,820 hours.
Total Burden Cost (capital/startup): $0.
Total Burden Cost (operating/maintenance): $0.

Comments submitted in response to this notice will be summarized and/or included in the request for Office of Management and Budget approval of the information collection request; they also will become a matter of public record.

Dated: Signed at Washington, D.C., this 4th day of April 2000.

W. Stuart Rust, Jr.,

Chief, Division of Management Systems, Bureau of Labor Statistics.

BILLING CODE 4510–24–M

DEPARTMENT OF LABOR

Occupational Safety and Health Administration

[Docket No. NRTL–1–87]

Applied Research Laboratories, Inc., Expansion of Recognition

AGENCY: Occupational Safety and Health Administration (OSHA), Labor.

ACTION: Notice.

SUMMARY: This notice announces the Agency's final decision on the application of Applied Research

Laboratories, Inc. (ARL), for expansion of its recognition as a Nationally Recognized Testing Laboratory (NRTL) under 29 CFR 1910.7.

EFFECTIVE DATE: This recognition becomes effective on April 10, 2000 and, unless modified in accordance with 29 CFR 1910.7, continues in effect while ARL remains recognized by OSHA as an NRTL.

FOR FURTHER INFORMATION CONTACT: Bernard Pasquet, Office of Technical Programs and Coordination Activities, NRTL Program, Occupational Safety and Health Administration, U.S. Department of Labor, 200 Constitution Avenue, NW, Room N3653, Washington, D.C. 20210, or phone (202) 693–2110.

SUPPLEMENTARY INFORMATION:

Notice of Final Decision

The Occupational Safety and Health Administration (OSHA) hereby gives notice of the expansion of recognition of Applied Research Laboratories, Inc. (ARL), as a Nationally Recognized Testing Laboratory (NRTL). ARL's expansion covers the use of the additional test standards and the additional programs, listed below.

OSHA recognition of an NRTL signifies that the organization has met the legal requirements in § 1910.7 of Title 29, Code of Federal Regulations (29 CFR 1910.7). Recognition is an acknowledgment that the organization can perform independent safety testing and certification of the specific products covered within its scope of recognition and is not a delegation or grant of government authority. As a result of recognition, OSHA can accept products "properly certified" by the NRTL. OSHA processes applications related to an NRTL's recognition following requirements in Appendix A to 29 CFR 1910.7. This appendix requires that the Agency publish this public notice of its final decision on an application.

ARL submitted a request, dated January 22, 1998 (see Exhibit 6A), to expand its recognition as an NRTL for 181 additional test standards. After performing an initial review of this request, the NRTL Program staff informed ARL that only 93 of the test standards met the requirements of an "appropriate test standard" set forth in 29 CFR 1910.7. In further processing the expansion request, the staff performed an on-site review of ARL's testing facility on June 8–11, 1998, and summarized the results of their evaluation in the on-site review report (see Exhibit 7). Following the review, ARL amended its application in a letter dated July 10, 1998 (see Exhibit 6B) to reduce the number of test standards requested to the 47 listed below. In its July 10 request, ARL also requested recognition for the additional programs.

The NRTL Program staff temporarily withheld its consideration of ARL's requests pending resolution by the NRTL of discrepancies noted during an audit that the staff performed at ARL's facility. ARL responded to these discrepancies in March 1999 and, after additional review, the NRTL Program staff accepted resolution of the discrepancies in September 1999, permitting OSHA to resume processing ARL's expansion request.

OSHA published the required notice in the **Federal Register** (64 FR 68388, 12/7/1999) to announce ARL's expansion application. The notice included a preliminary finding that ARL could meet the requirements for expansion of its recognition, and OSHA invited public comment on the application by February 7, 2000. OSHA received no comments concerning this application.

The most recent prior notices published by OSHA for ARL's recognition covered its initial recognition as an NRTL, which OSHA announced on August 8, 1997 (62 FR 42827), and granted on November 21, 1997 (62 FR 62356).

You may obtain or review copies of all public documents pertaining to the application by contacting the Docket Office, Occupational Safety and Health Administration, U.S. Department of Labor, 200 Constitution Avenue, NW, Room N2625, Washington, D.C. 20210, telephone: (202) 693–2350. You should refer to Docket No. NRTL–1–97, the permanent record of public information on the ARL recognition.

The current address of the facility (site) that OSHA recognizes for ARL is: Applied Research Laboratories, Inc., 5371 N.W. 161st Street, Miami, Florida 33014

Final Decision and Order

The NRTL Program staff has examined the application, the on-site review report (see Exhibit 7), and other pertinent information. Based upon this examination and the staff's recommendation, OSHA finds that the Applied Research Laboratories, Inc., facility listed above has met the requirements of 29 CFR 1910.7 for expansion of its recognition to include the additional test standards, listed below, subject to the limitations and conditions listed below. Pursuant to the authority in 29 CFR 1910.7, OSHA hereby expands the recognition of ARL, subject to these limitations and conditions.

Limitations

OSHA hereby expands the recognition of ARL for testing and certification of products to demonstrate conformance to the following forty seven (47) additional test standards. However, OSHA plans to include certain limitations on the recognition of some standards.

The Agency's recognition of ARL, or any NRTL, is always limited to equipment or materials (products) for which OSHA standards require third party testing and certification before use in the workplace. As a result, OSHA's recognition of an NRTL for a test standard excludes any product(s), falling within the scope of the test standard, for which OSHA has no such requirements. OSHA has determined that each standard listed below meets the requirements for an appropriate test standard prescribed in 29 CFR 1910.7(c).

Test Standards

[1] ANSI/ASME A17.5 Elevators and Escalator Electrical Equipment
ANSI Z21.1 Household Cooking Gas Appliances
ANSI Z83.7 Gas-Fired Construction Heaters
ANSI Z83.12 Gas Food Service Equipment—Baking and Roasting Ovens
ANSI Z83.18 Direct Gas-Fired Industrial Air Heaters
ANSI/UL 65 Electric Wired Cabinets
ANSI/UL 67 Electric Panelboards
ANSI/UL 73 Electric-Motor-Operated Appliances
UL 104 Elevator Door Locking Devices and Contacts
ANSI/UL 174 Household Electric Storage-Tank Water Heaters
UL 181 Factory-Made Air Ducts and Air Connectors
ANSI/UL 197 Commercial Electric Cooking Appliances
ANSI/UL 231 Power Outlets
ANSI/UL 325 Door, Drapery, Gate, Louver and Window Operator and Systems
UL 416 Refrigerated Medical Equipment
ANSI/UL 471 Commercial Refrigerators and Freezers
ANSI/UL 474 Dehumidifiers
ANSI/UL 499 Electric Heating Appliances
ANSI/UL 506 Specialty Transformers
ANSI/UL 508 Electric Industrial Control Equipment
UL 544 Electric Medical and Dental Equipment
ANSI/UL 555 Fire Dampers (previously Fire Dampers and Ceiling Dampers)
ANSI/UL 563 Ice Makers

UL 664 Commercial (Class IV) Electric Dry-Cleaning Machines
ANSI/UL 676 Underwater Lighting Fixtures
ANSI/UL 710 Exhaust Hoods for Commercial Cooking Equipment
UL 733 Oil-Fired Air Heaters and Direct-Fired Heaters
ANSI/UL 749 Household Electric Dishwashers
ANSI/UL 778 Motor-Operated Water Pumps
UL 795 Commercial-Industrial Gas-Heating Equipment
ANSI/UL 834 Heating, Water Supply, and Power Boilers—Electric
ANSI/UL 845 Motor Control Centers
ANSI/UL 935 Fluorescent-Lamp Ballasts
[2]ANSI/UL 1004 Electric Motors
ANSI/UL 1026 Electric Household Cooking and Food-Serving Appliances
ANSI/UL 1029 High-Intensity Discharge Lamp Ballasts
ANSI/UL 1081 Electric Swimming Pool Pumps, Filters and Chlorinators
[3]ANSI/UL 1262 Laboratory Equipment
ANSI/UL 1450 Motor-Operated Air Compressors, Vacuum Pumps and Painting Equipment
ANSI/UL 1570 Fluorescent Lighting Fixtures
ANSI/UL 1571 Incandescent Lighting Fixtures
ANSI/UL 1572 High Intensity Discharge Lighting Fixtures
ANSI/UL 1585 Class 2 and Class 3 Transformers
ANSI/UL 1996 Duct Heaters
UL 2021 Fixed and Location-Dedicated Electric Room Heaters
ANSI/UL 2157 Electric Clothes Washing Machines and Extractors
ANSI/UL 2158 Electric Clothes Dryers

[1]Recognition under ANSI/ASME A17.5 is limited to cab construction and associated electrical equipment.

[2] Recognition under ANSI/UL 1004 is limited to 10HP maximum electric motors.

[3] Recognition under ANSI/UL 1262 is limited to sample processing equipment.

The designations and titles of the above test standards were current at the time of the preparation of the preliminary notice, which announced ARL's application for expansion.

Programs and Procedures

OSHA is granting the request by ARL to use the two (2) supplemental programs, listed below, based upon the criteria detailed in the March 9, 1995 **Federal Register** notice (60 FR 12980, 3/9/95). This notice lists nine (9) programs and procedures (collectively, programs), eight of which an NRTL may use to control and audit, but not actually to generate, the data relied upon for product certification. An NRTL's initial recognition will always include the first or basic program, which requires that all product testing and evaluation be performed in-house by the NRTL that will certify the product. For ARL, the initial recognition also included use of Program 4 (Acceptance of witnessed testing data). The on-site review report indicates that ARL meets the criteria for use of the following additional supplemental programs:

Program 2: Acceptance of testing data from independent organizations, other than NRTLs.
Program 9: Acceptance of services other than testing or evaluation performed by subcontractors or agents.

OSHA developed the program descriptions to limit how an NRTL may perform certain aspects of its work and to permit the activities covered under a program only when the NRTL meets certain criteria. In this sense, they are special conditions that the Agency places on an NRTL's recognition. OSHA does not consider these programs in determining whether an NRTL meets the requirements for recognition under 29 CFR 1910.7. However, OSHA does treat these programs as one of the three elements that defines an NRTL's scope of recognition.

Under Appendix A to 1910.7, the Agency has no obligation to provide notice of recognition for these programs. However, The NRTL Program staff has typically included such recognition in a notice when the NRTL has requested it in conjunction with a regular application. When processing an NRTL's request solely to use one or more supplemental programs, the NRTL Program staff informs the NRTL of the decision to grant or deny the request by letter only. If granted, the staff includes the additional program(s) in OSHA's web page for each NRTL.

Conditions

Applied Research Laboratories, Inc., must also abide by the following conditions of the recognition, in addition to those already required by 29 CFR 1910.7:

OSHA must be allowed access to ARL's facilities and records for purposes of ascertaining continuing compliance with the terms of its recognition and to investigate as OSHA deems necessary;

If ARL has reason to doubt the efficacy of any test standard it is using under this program, it must promptly inform the organization that developed the test standard of this fact and provide that organization with appropriate relevant information upon which its concerns are based;

ARL must not engage in or permit others to engage in any misrepresentation of the scope or conditions of its recognition. As part of this condition, ARL agrees that it will allow no representation that it is either a recognized or an accredited Nationally Recognized Testing Laboratory (NRTL) without clearly indicating the specific equipment or material to which this recognition is tied, or that its recognition is limited to certain products;

ARL must inform OSHA as soon as possible, in writing, of any change of ownership, facilities, or key personnel, and of any major changes in its operations as an NRTL, including details;

ARL will continue to meet all the terms of its recognition and will always comply with all OSHA policies pertaining to this recognition;

ARL will continue to meet the requirements for recognition in all areas where it has been recognized; and

ARL will always cooperate with OSHA to assure compliance with the spirit as well as the letter of its recognition and 29 CFR 1910.7.

Signed at Washington, D.C. this 3rd day of April, 2000.

Charles N. Jeffress,

Assistant Secretary.

[FR Doc. 00–8775 Filed 4–7–00; 8:45 am]

BILLING CODE 4510–26–P

LIBRARY OF CONGRESS

Copyright Office

[Docket No. 99–3 CARP DD 95–98]

Distribution of 1995, 1996, 1997, and 1998 Digital Audio Recording Technology Royalties

AGENCY: Copyright Office, Library of Congress.

ACTION: Initiation of arbitration.

SUMMARY: The Copyright Office of the Library of Congress is announcing initiation of the 180-day arbitration period for the distribution of the1995–98 digital audio recording technology ("DART") royalties in the Musical Works Funds.

EFFECTIVE DATE: April 10, 2000.

ADDRESSES: All hearings and meetings for the 1995–98 DART distribution proceeding shall take place in the James Madison Memorial Building, Room LM–414, First and Independence Avenue, SE, Washington, DC 20540.

FOR FURTHER INFORMATION CONTACT: David O. Carson, General Counsel, or Tanya M. Sandros, Senior Attorney, Copyright Arbitration Royalty Panel ("CARP"), P.O. Box 70977, Southwest Station, Washington, DC 20024. Telephone: (202) 707–8380. Telefax: (202) 252–3423.

SUPPLEMENTARY INFORMATION:

Background

Section 251.72 of 37 CFR provides:

> If the Librarian determines that a controversy exists among claimants to either cable, satellite carrier, or digital audio recording devices and media royalties, the Librarian shall publish in the **Federal Register** a declaration of controversy along with a notice of initiation of an arbitration proceeding. Such notice shall, to the extent feasible, describe the nature, general structure and schedule of the proceeding.

The notice published today fulfills the requirements of § 251.72 for the distribution of DART royalties in the Musical Works Funds for the years 1995, 1996, 1997, and 1998.

On May 4, 1999, the Copyright Office published a notice in the **Federal Register** requesting comment as to the existence of a controversy concerning the distribution of the 1995, 1996, 1997, and 1998 DART royalty fees in the Musical Works Funds and consolidating the consideration of the distribution of the 1995–98 Musical Works Funds into a single proceeding. 64 FR 23875 (May 4, 1999). The following parties filed comments and Notices of Intent to Participate: Carl DeMonbrun/ Polyphonic Music, Inc. ("DeMonbrun"); Broadcast Music, Inc. ("BMI"), the American Society of Composers, Authors and Publishers ("ASCAP"), SESAC, Inc. ("SESAC"), the Harry Fox Agency ("HFA"), the Songwriters Guild of America ("SGA"), and Copyright Management, Inc. ("CMI") (collectively the "Settling Parties"); James Cannings/ Can Can Music ("Cannings"); Alicia Carolyn Evelyn ("Evelyn"); and Eugene "Lambchops" Curry/ TaJai Music, Inc. ("Curry").

On September 21, 1999, the Office issued an Order announcing the precontroversy discovery schedule for the proceeding, beginning on November 15, 1999. See Order in Docket No. 99–3 CARP DD 95–98 (September 21, 1999). Prior to commencement of the 45-day precontroversy discovery period, the Office was notified that Cannings and DeMonbrun had settled their respective controversies with the Settling Parties. Thus, the parties who will appear before the CARP in the current proceeding are the Settling Parties, Evelyn, and Curry.

On November 15, 1999, the Settling Parties filed a motion requesting that the controversy be decided on the basis of written pleadings. The Office designated to the CARP the issue of whether to suspend formal hearings and decide the case on the written pleadings. See Order in Docket No. 99–3 CARP DD 95–98 (December 22, 1999).

The September 21, 1999, Order also set the initiation of the arbitration for February 28, 2000. However, the Office's duty to publish every two years a new list of arbitrators eligible to serve on a CARP rendered the February 28 initiation date unworkable. See 37 CFR 251.3. On January 14, 2000, in accordance with § 251.3(b), the Office published the list of arbitrators eligible to serve on a CARP initiated during 2000 and 2001. 65 FR 2439 (January 14, 2000). Because the time period between the publication of the arbitrator list and the February 28 initiation date was not sufficient to complete the selection of arbitrators for this proceeding, the Office reset the initiation of the arbitration to April 10, 2000. See Order in Docket No. 99–3 CARP DD 95–98 (March 14, 2000).

Selection of Arbitrators

Section 802(b) of the Copyright Act instructs the Librarian to select two arbitrators within 10 days of initiation of the proceeding. The Librarian has already completed this task, and the two arbitrators are:

The Honorable John B. Farmakides

The Honorable Harold E. Himmelman

The third arbitrator, who shall serve as Chairperson, will be selected in accordance with section 802(b).

Initiation of Proceeding

Pursuant to § 251.72 of 37 CFR, the Copyright Office of the Library of Congress is formally announcing the existence of controversies in the distribution of digital audio recording technology royalties in the Musical Works Funds for the years 1995, 1996, 1997, and 1998, and is initiating an arbitration proceeding under chapter 8 of title 17 of the United States Code to resolve distribution of these funds. The arbitration proceeding commences on April 10, 2000, and runs for a period of 180 days. The arbitrators shall file their written report with the Librarian of Congress by October 10, 2000, in accordance with § 251.53 of 37 CFR.

Scheduling of the 1995–98 DART royalty distribution proceeding is within the discretion of the CARP. The Library will publish the schedule of the proceedings, as required by 37 CFR 251.11(b), as soon as it is available.

Dated: April 4, 2000.

David O. Carson,

General Counsel.

[FR Doc. 00–8783 Filed 4–7–00; 8:45 am]

BILLING CODE 1410–33–P

NATIONAL ARCHIVES AND RECORDS ADMINISTRATION

Records Schedules; Availability and Request for Comments

AGENCY: National Archives and Records Administration (NARA).

ACTION: Notice of availability of proposed records schedules; request for comments.

SUMMARY: The National Archives and Records Administration (NARA) publishes notice at least once monthly of certain Federal agency requests for records disposition authority (records schedules). Once approved by NARA, records schedules provide mandatory instructions on what happens to records when no longer needed for current Government business. They authorize the preservation of records of continuing value in the National Archives of the United States and the destruction, after a specified period, of records lacking administrative, legal, research, or other value. Notice is published for records schedules in which agencies propose to destroy records not previously authorized for disposal or reduce the retention period of records already authorized for disposal. NARA invites public comments on such records schedules, as required by 44 U.S.C. 3303a(a).

DATES: Requests for copies must be received in writing on or before May 25, 2000. Once the appraisal of the records is completed, NARA will send a copy of the schedule. NARA staff usually prepare appraisal memorandums that contain additional information concerning the records covered by a proposed schedule. These, too, may be requested and will be provided once the appraisal is completed. Requesters will be given 30 days to submit comments.

ADDRESSES: To request a copy of any records schedule identified in this notice, write to the Life Cycle Management Division (NWML), National Archives and Records Administration (NARA), 8601 Adelphi Road, College Park, MD 20740–6001. Requests also may be transmitted by FAX to 301–713–6852 or by e-mail to records.mgt@arch2.nara.gov. Requesters must cite the control number, which appears in parentheses after the name of the agency which submitted the

schedule, and must provide a mailing address. Those who desire appraisal reports should so indicate in their request.

FOR FURTHER INFORMATION CONTACT: Marie Allen, Director, Life Cycle Management Division (NWML), National Archives and Records Administration, 8601 Adelphi Road, College Park, MD 20740–6001. Telephone: (301)713–7110. E-mail: records.mgt@arch2.nara.gov.

SUPPLEMENTARY INFORMATION: Each year Federal agencies create billions of records on paper, film, magnetic tape, and other media. To control this accumulation, agency records managers prepare schedules proposing retention periods for records and submit these schedules for NARA's approval, using the Standard Form (SF) 115, Request for Records Disposition Authority. These schedules provide for the timely transfer into the National Archives of historically valuable records and authorize the disposal of all other records after the agency no longer needs them to conduct its business. Some schedules are comprehensive and cover all the records of an agency or one of its major subdivisions. Most schedules, however, cover records of only one office or program or a few series of records. Many of these update previously approved schedules, and some include records proposed as permanent.

No Federal records are authorized for destruction without the approval of the Archivist of the United States. This approval is granted only after a thorough consideration of their administrative use by the agency of origin, the rights of the Government and of private persons directly affected by the Government's activities, and whether or not they have historical or other value.

Besides identifying the Federal agencies and any subdivisions requesting disposition authority, this public notice lists the organizational unit(s) accumulating the records or indicates agency-wide applicability in the case of schedules that cover records that may be accumulated throughout an agency. This notice provides the control number assigned to each schedule, the total number of schedule items, and the number of temporary items (the records proposed for destruction). It also includes a brief description of the temporary records. The records schedule itself contains a full description of the records at the file unit level as well as their disposition. If NARA staff has prepared an appraisal memorandum for the schedule, it too includes information about the records. Further information about the disposition process is available on request.

Schedules Pending

1. Department of the Army, Deputy Chief of Staff for Intelligence (N1–AU–99–12, 4 items, 4 temporary items). Records relating to Sensitive Compartmented Information (SCI) personnel matters, SCI contractor operations, SCI facility accreditations, and physical security. Files pertain to such subjects as personnel indoctrinations and debriefings, visit requests, periodic investigations, contract security classification specifications, facility assessments and risk analyses, and surveillance countermeasures inspections. Also included are electronic copies of records created using electronic mail and word processing. This schedule allows earlier disposal of recordkeeping copies of these files, which were previously approved for disposal.

2. Department of Commerce, Bureau of Export Administration (N1–476–00–1, 18 items, 18 temporary items). Administrative and operational records of the Information Technology Team that are used to support the processing of data declarations received from the U.S. chemical industry under the Chemical Weapons Convention. Records include chemical determinations, facility agreements, meeting minutes, administrative manuals, chronological files, working papers, and an information system containing data declarations from chemical facilities that have been imaged. Also included are electronic copies of records created using electronic mail and word processing.

3. Department of Health and Human Services, Centers for Disease Control (N1–442–99–2, 6 items, 4 temporary items). Input sources for the Longitudinal Study of Aging, 1984–1990, including interview questionnaire forms, electronic data extracted from Medicare and National Death Index databases, and software and computer manuals used to access and interpret the data. Proposed for permanent retention are the master data files and supporting documentation.

4. Department of the Interior, Bureau of Land Management (N1–49–99–1, 2 items, 2 temporary items). Electronic copies of records created using electronic mail and word processing that relate to mineral lease sale files. Also included are recordkeeping copies of files that relate to nominations for parcels that are unavailable for leasing. Recordkeeping copies of other mineral lease sale records were previously scheduled, including final reports and maps, which are scheduled for permanent retention.

5. Department of Justice, United States Marshals Service (N1–527–00–1, 2 items, 2 temporary items). Century Date Conversion (Y2K) records that pertain to Year 2000 efforts. Records relate to the development of plans and strategies, the review of computer systems and applications, remedial efforts, and program reviews. Included are plans, contracts, policy letters, and correspondence. Also included are electronic copies of documents created using electronic mail and word processing.

6. Department of Justice, Drug Enforcement Administration (N1–170–00–1, 9 items, 6 temporary items). Chronological files of the Administrator and Deputy Administrator and records pertaining to the activities of the Executive Assistant and Special Assistant to the Administrator. Also included are electronic copies of documents created using electronic mail and word processing that are associated with files accumulated in the Office of the Administrator. Proposed for permanent retention are the Administrator's subject files, briefing books, appointment schedules, and committee and conference records.

7. Department of Justice, Justice Management Division (N1–60–00–7, 2 items, 2 temporary items). Century Date Conversion (Y2K) records that pertain to Year 2000 efforts. Records relate to the development of plans and strategies, the review of computer systems and applications, remedial efforts, and program reviews. Included are plans, contracts, policy letters, and correspondence. Also included are electronic copies of documents created using electronic mail and word processing.

8. Department of Justice, Federal Bureau of Prisons (N1–129–00–3, 5 items, 3 temporary items). Records accumulated in wardens' offices at correctional facilities. Included are strategic planning records and correspondence files pertaining to such matters as staff meetings, congressional inquiries stemming from inmate complaints, emergency guidelines, awards, program reviews, and weekly activities of component units of the facility. Also included are electronic copies of documents created using electronic mail and word processing. Audiovisual records, such as still and motion pictures, audio tapes, and video tapes, are proposed for permanent retention as are institution-specific supplements that adjust national

policies to meet the needs of individual facilities.

9. Department of Justice, Federal Bureau of Prisons (N1–129–00–4, 4 items, 4 temporary items). Records accumulated at correctional facilities consisting of chronological files, reference/subject files, and records relating to audits of the facility. Also included are electronic copies of documents created using electronic mail and word processing.

10. Department of Justice, Federal Bureau of Prisons (N1–129–00–7, 2 items, 2 temporary items). Chaplain records consisting of such files as correspondence with local churches and religious groups, meeting minutes, and lists of inmates' religious preferences. Also included are electronic copies of documents created using electronic mail and word processing.

11. Department of Justice, Federal Bureau of Prisons (N1–129–00–8, 7 items, 7 temporary items). Records relating to inmate education programs. Included are such records as enrollment listings, general equivalency diploma test scores, lesson plans, files documenting student progress, class transcripts, and minutes of meetings of education advisory committees. Also included are electronic copies of documents created using electronic mail and word processing.

12. Department of Labor, Office of Inspector General (N1–174–00–1, 14 items, 13 temporary items). Records relating to investigations of allegations of fraud, abuse, and violation of laws and regulations relating to agency personnel, programs, and operations. Included are investigative case files, an electronic case tracking system, and an electronic system containing information concerning alleged criminal activity. Also included are electronic copies of documents created using electronic mail and word processing. Recordkeeping copies of significant investigative case files are proposed for permanent retention.

13. Department of State, Office of the Legal Adviser (N1–59–00–6, 2 items, 2 temporary items). Non-precedent and non-historical extradition case files that were accumulated prior to 1974. Also included are electronic copies of documents relating to extradition case files that are created using electronic mail and word processing. Recordkeeping copies of case files that are historically valuable or established precedents were previously approved for permanent retention. Recordkeeping copies of files postdating 1974 were previously approved for disposal.

14. Department of Transportation, Federal Highway Administration (N1–406–99–2, 2 items, 2 temporary items). Records relating to highway construction and rehabilitation projects on non-Federal property accumulated after 1966. Included are such records as letters of authorization, inspection reports, project agreements, project modification documents, and copies of construction contracts. Also included are electronic copies of documents created using electronic mail and word processing. Financial information concerning projects is included in the agency's Fiscal Management Information System, which was previously approved for permanent retention. Any individual project files identified as historically valuable by the agency will be appraised by NARA on a case-by-case basis.

15. Department of Transportation, Research and Special Programs Administration (N1–467–00–1, 3 items, 3 temporary items). Electronic copies of records created using electronic mail and word processing that are associated with case files accumulated in connection with applications for relief from an agency regulation. This schedule also authorizes the agency to destroy paper records after they have been imaged and to retain scanned files longer than the previously approved retention period if they are needed for reference purposes.

16. Department of the Treasury, Bureau of Alcohol, Tobacco, and Firearms (N1–436–00–1, 1 item, 1 temporary item). Product Compliance Branch label applications records, including applications, denials, and related papers. This schedule reduces the retention period for these records, which were previously approved for disposal.

17. Department of the Treasury, Office of the Comptroller of the Currency (N1–101–97–1, 8 items, 8 temporary items). Electronic information systems of the Office of Bank Supervision Policy concerning the assessment and supervision of financial institutions. Included are master files and documentation for the Foreign Branches System, the National Bank Surveillance Video Display System, the Supervisory Monitoring System, and the Text Processing System.

18. Advisory Commission on Electronic Commerce, Agency-wide (N1–220–00–3, 17 items, 9 temporary items). Copies of **Federal Register** notices, video recordings of Commission meetings, press clippings, meeting arrangement files, financial records, research documents used to prepare the Commission's final report, public mail, and electronic copies of documents created using electronic mail and word processing. Proposed for permanent retention are such records as the Commission's charter and other records pertaining to its establishment and mission, transcripts of Commission meetings, chronological files, press releases, and the Commission's final report.

19. Armed Forces Retirement Home, Agency-wide (N1–231–00–1, 4 items, 4 temporary items). Records relating to the health care of residents of the Armed Forces Retirement Home, including the United States Soldiers' and Airmen's Home and the United States Naval Home. Included are such records as forms, reports, x-rays, and laboratory findings. Also included are electronic copies of documents created using electronic mail and word processing.

20. Environmental Protection Agency, Agency-wide (N1–412–99–12, 2 items, 2 temporary items). Agendas, meeting minutes, reports, and other records relating to internal agency committees and non-rulemaking work groups, including electronic copies of documents created using electronic mail and word processing. The schedule makes minor changes in the disposition instructions for recordkeeping copies of these files, which were previously approved for disposal.

21. Environmental Protection Agency, Agency-wide (N1–412–99–10, 9 items, 7 temporary items). Electronic and paper records relating to the agency's responsibility under its acid rain program to monitor the emissions of utility plants and the compliance by the utilities with the Clean Air Act. Software associated with three electronic systems is proposed for disposal. Electronic data and related documentation for an electronic system used to document authorizations to emit sulfur dioxide are proposed for disposal as are the data and documentation for a system pertaining to acid rain. The documentation and electronic data associated with the Emissions Tracking System are proposed for permanent retention. This electronic system tracks emissions from utilities under the acid rain program.

22. Federal Energy Regulatory Commission, Agency-wide (N1–138–99–4, 3 items, 3 temporary items). Records relating to planning, administering, and conducting management studies and surveys. Files pertain to such subjects as staffing levels, turnover rates, reference room operations, and duplicating services. Included are final reports, briefing material, work papers, and project plans. Also included are electronic copies of documents created using

electronic mail and word processing. Recordkeeping copies of files relating to substantive organizational changes were previously approved for permanent retention.

23. Federal Retirement Thrift Investment Board, Office of General Counsel (N1–474–00–1, 3 items, 3 temporary items). Electronic copies of documents created using electronic mail and word processing that pertain to legal opinions. This schedule also proposes for disposal an electronic file that contains digests and scanned images of legal opinions and provides for a reduction in the retention period for recordkeeping copies of these opinions, which were previously approved for disposal.

24. National Archives and Records Administration, Agency-wide (N1–64–00–6, 6 items, 6 temporary items). Century Date Conversion (Y2K) policy, planning, and implementation records. Included are such records as project plans, minutes of meetings, decision documents, continuity and contingency plans, documents relating to specific applications and systems reviewed, implementation plans, budget files, and Inspector General inquiries. Also included are electronic copies of documents created using electronic mail and word processing.

Dated: April 4, 2000.

Michael J. Kurtz,

Assistant Archivist for Record Services, Washington, DC.

BILLING CODE 7515–01–P

NUCLEAR REGULATORY COMMISSION

[Docket No. 50–289]

AmerGen Energy Company, LLC, Three Mile Island Nuclear Station, Unit 1; Notice of Consideration of Approval of Transfer of Facility Operating License and Conforming Amendment and Opportunity for a Hearing

The U.S. Nuclear Regulatory Commission (the Commission) is considering the issuance of an order under 10 CFR 50.80 approving the transfer of Facility Operating License No. DPR–50 for Three Mile Island Nuclear Station, Unit 1 (TMI–1), held by AmerGen Energy Company, LLC (AmerGen), as the owner and licensed operator. The transfer would result from the acquisition of PECO Energy Company's (PECO's) existing interest in AmerGen by a new generation company. This company, presently referred to in the subject application described below as GENCO, is to be a subsidiary of a new holding company, Exelon Corporation, formed from the proposed merger between PECO and Unicom Corporation (Unicom). The Commission is also considering amending the license for administrative purposes to reflect the proposed transfer. The facility is located in Dauphin County, Pennsylvania.

According to an application for approval filed by AmerGen, AmerGen is a limited liability company formed to acquire and operate nuclear power plants in the United States. British Energy, Inc., and PECO each own 50 percent of AmerGen. Following completion of the merger between Unicom and PECO, GENCO will acquire PECO's existing 50-percent ownership interest in AmerGen. AmerGen, as owned by GENCO and British Energy, Inc., will continue to be responsible for the operation, maintenance, and eventual decommissioning of TMI–1. No physical changes to the facility or operational changes are being proposed in the application.

The proposed amendment to the operating license would add language to the license transfer conditions that were incorporated into the TMI–1 Operating License upon the initial transfer of the license to AmerGen to reflect the transfer of PECO's ownership interest in AmerGen to a new entity.

Pursuant to 10 CFR 50.80, no license, or any right thereunder, shall be transferred, directly or indirectly, through transfer of control of the license, unless the Commission shall give its consent in writing. The Commission will approve an application for the transfer of a license if the Commission determines that the proposed transferee is qualified to hold the license, and that the transfer is otherwise consistent with applicable provisions of law, regulations, and orders issued by the Commission pursuant thereto.

Before issuance of the proposed conforming license amendments, the Commission will have made findings required by the Atomic Energy Act of 1954, as amended (the Act), and the Commission's regulations.

As provided in 10 CFR 2.1315, unless otherwise determined by the Commission with regard to a specific application, the Commission has determined that any amendment to the license of a utilization facility which does no more than conform the license to reflect the transfer action involves no significant hazards consideration. No contrary determination has been made with respect to this specific license amendment application. In light of the generic determination reflected in 10 CFR 2.1315, no public comments with respect to significant hazards considerations are being solicited, notwithstanding the general comment procedures contained in 10 CFR 50.91.

The filing of requests for hearing and petitions for leave to intervene, and written comments with regard to the license transfer application, are discussed below.

By May 1, 2000, any person whose interest may be affected by the Commission's action on the application may request a hearing and, if not, the applicant may petition for leave to intervene in a hearing proceeding on the Commission's action. Requests for a hearing and petitions for leave to intervene should be filed in accordance with the Commission's rules of practice set forth in Subpart M, "Public Notification, Availability of Documents and Records, Hearing Requests and Procedures for Hearings on License Transfer Applications," of 10 CFR Part 2. In particular, such requests and petitions must comply with the requirements set forth in 10 CFR 2.1306, and should address the considerations contained in 10 CFR 2.1308(a). Untimely requests and petitions may be denied, as provided in 10 CFR 2.1308(b), unless good cause for failure to file on time is established. In addition, an untimely request or petition should address the factors that the Commission will also consider, in reviewing untimely requests or petitions, set forth in 10 CFR 2.1308(b)(1)–(2).

Requests for a hearing and petitions for leave to intervene should be served upon: Kevin P. Gallen, Esq., Morgan, Lewis & Bockius LLP, 1800 M Street, NW., Washington, DC 20036–5869 (phone 202–467–7462, fax 202–467–7176, or e-mail kpgallen@mlb.com); the General Counsel, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001 (e-mail address for filings regarding license transfer cases only: OGCLT@NRC.gov); and the Secretary of the Commission, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001, Attention: Rulemakings and Adjudications Staff, in accordance with 10 CFR 2.1313.

The Commission will issue a notice or order granting or denying a hearing request or intervention petition, designating the issues for any hearing that will be held and designating the Presiding Officer. A notice granting a hearing will be published in the **Federal Register** and served on the parties to the hearing.

As an alternative to requests for hearing and petitions to intervene, by May 10, 2000, persons may submit

written comments regarding the license transfer application, as provided for in 10 CFR 2.1305. The Commission will consider and, if appropriate, respond to these comments, but such comments will not otherwise constitute part of the decisional record. Comments should be submitted to the Secretary, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001, Attention: Rulemakings and Adjudications Staff, and should cite the publication date and page number of this **Federal Register** notice.

For further details with respect to this action, see the application dated February 28, 2000, available for public inspection at the Commission's Public Document Room, the Gelman Building, 2120 L Street, NW., Washington, DC, and accessible electronically through the ADAMS Public Electronic Reading Room link at the NRC Web site (*http:www.nrc.gov*).

Dated at Rockville, Maryland, this 31st day of March 2000.

For the Nuclear Regulatory Commission.

Timothy Colburn,

Project Manager, Section 1, Project Directorate I, Division of Licensing Project Management, Office of Nuclear Reactor Regulation.

[FR Doc. 00–8739 Filed 4–7–00; 8:45 am]

BILLING CODE 7590–01–P

NUCLEAR REGULATORY COMMISSION

Advisory Committee on the Medical Uses of Isotopes; Renewal Notice

AGENCY: Nuclear Regulatory Commission.

ACTION: This notice is to announce the renewal of the Advisory Committee on the Medical Uses of Isotopes (ACMUI) for a period of two years.

SUPPLEMENTARY INFORMATION: The U.S. Nuclear Regulatory Commission (NRC) has determined that the renewal of the charter for the Advisory Committee on the Medical Uses of Isotopes for the two year period commencing on April 4, 2000, is in the public interest, in connection with duties imposed on the Commission by law. This action is being taken in accordance with the Federal Advisory Committee Act, after consultation with the Committee Management Secretariat, General Services Administration.

The purpose of the ACMUI is to provide advice to NRC on policy and technical issues that arise in regulating the medical use of byproduct material for diagnosis and therapy. Responsibilities include providing guidance and comments on current and proposed NRC regulations and regulatory guidance concerning medical use; evaluating certain non-routine uses of byproduct material for medical use; and evaluating training and experience of proposed authorized users. The members are involved in preliminary discussions of major issues in determining the need for changes in NRC policy and regulation to ensure the continued safe use of byproduct material. Each member provides technical assistance in his/her specific area(s) of expertise, particularly with respect to emerging technologies. Members also provide guidance as to NRC's role in relation to the responsibilities of other Federal agencies as well as of various professional organizations and boards.

Members of this Committee have demonstrated professional qualifications and expertise in both scientific and non-scientific disciplines including nuclear medicine; nuclear cardiology; radiation therapy; medical physics; radiopharmacy; State medical regulation; patient's rights and care; health care administration; medical research; medical dosimetry, and Food and Drug Administration regulation.

FOR FURTHER INFORMATION CONTACT: Betty Ann Torres, Office of Nuclear Material Safety and Safeguards, U.S. Nuclear Regulatory Commission, Washington, DC 20555; Telephone (301) 415–0191.

Dated: April 4, 2000.

Andrew L. Bates,

Federal Advisory Committee Management Officer.

BILLING CODE 7590–01–U

NUCLEAR REGULATORY COMMISSION

Proposed New Appendix to Standard Review Plan (NUREG–0800), Chapter 19, "Use of Probabilistic Risk Assessment in Plant-Specific, Risk-Informed Decisionmaking: General Guidance"

AGENCY: Nuclear Regulatory Commission.

ACTION: Notice of opportunity for public comment.

SUMMARY: The Nuclear Regulatory Commission (NRC) has issued for public comment a proposed new appendix to Chapter 19 of its Standard Review Plan (NUREG–0800). This chapter of the Standard Review Plan (SRP) identifies the roles and responsibilities of organizations in the NRC that participate in risk-informed reviews of licensees' proposals for changes to the licensing basis, identifies the types of information that may be used in fulfilling an organization's review responsibilities, and provides general guidance on how the information from a probabilistic risk assessment (PRA) can be combined with other pertinent information in the process of making a regulatory decision.

The proposed appendix is titled "Appendix D—Use of Risk Information in Review of Non-Risk Informed License Amendment Requests." The appendix is being developed to provide guidance to the NRC staff on the use of risk information in those rare instances where license amendment requests appear to meet regulatory requirements but raise significant risk concerns due to some special circumstances associated with the request. The appendix is based on the guidance contained in SECY–99–246, and approved by the Commission for interim use (Staff Requirements Memorandum dated January 5, 2000.)

DATES: The comment period expires May 31, 2000. Comments received after this date will be considered if it is practical to do so, but the Commission is able to assure consideration only for comments received on or before this date. The NRC is also planning to hold a public meeting in Rockville, Maryland, to discuss the proposed appendix before the close of the comment period. The time and location of the meeting will be announced at a later date.

ADDRESSES: Written comments may be submitted to David L. Meyer, Chief, Rules and Directives Branch, Division of Administrative Services, Office of Administration, Nuclear Regulatory Commission, Washington, DC 20555–0001. Copies of comments received may be examined at the NRC Public Document Room, 2120 L Street NW. (Lower Level), Washington, DC. You may also provide comments via the NRC's website at http://www.nrc.gov by using the e-mail link entitled "NRCREP."

FOR FURTHER INFORMATION CONTACT: Mr. Robert Palla, Office of Nuclear Reactor Regulation, Mail Stop O10H4, Washington, DC, 20555–0001; telephone (301) 415–1095; e-mail: rlp3@nrc.gov.

SUPPLEMENTARY INFORMATION: The guidance in the new appendix will be used by the NRC staff in its reviews of license amendment requests. The appendix is based on proposed guidance documented in SECY–99–246, "Proposed Guidelines for Applying Risk-Informed Decisionmaking in License Amendment Reviews." The Commission approved the use of this

guidance on an interim basis, and directed the staff to finalize the guidance and modify relevant guidance documents ensuring that stakeholders are engaged in this process (Staff Requirements Memorandum dated January 5, 2000.) The purpose of this notice is to inform the public of the proposed new appendix, and the opportunity to comment on the guidance. A final version will be issued upon resolution of public comments and review by the Director, Office of Nuclear Reactor Regulation, the NRC's Committee to Review Generic Requirements (CRGR), the Advisory Committee on Reactor Safeguards (ACRS), and the Commission. In a planned future revision to Regulatory Guide 1.174, "An Approach for Using Probabilistic Risk Assessment in Risk-Informed Decisions on Plant-Specific Changes to the Licensing Basis," the NRC plans to incorporate compatible guidance that conforms to the new SRP Appendix D.

The proposed new appendix to NUREG–0800, Chapter 19 follows:

Appendix D—Use of Risk Information in Review of Non-Risk-Informed License Amendment Requests

Areas of Review

When a license amendment request complies with the regulations and other license requirements, there is a presumption by the Commission of adequate protection of public health and safety (*Maine Yankee*, ALAB–161, 6 AEC 1003 (1973)). However, circumstances may arise in which new information reveals an unforeseen hazard or a substantially greater potential for a known hazard to occur, such as identification of an issue that substantially increases risk. In such situations, the NRC has the statutory authority to require licensee action above and beyond existing regulations to maintain the level of protection necessary to avoid undue risk to public health and safety. Section 182.a of the Atomic Energy Act of 1954, as amended, and as implemented by 10 CFR 2.102, gives the NRC the authority to require the submittal of information in connection with a license amendment request if NRC has reason to question adequate protection of public health and safety. The licensee may decline to submit such information, but it would risk having the amendment request denied if NRC cannot find that the requested amendment provides adequate protection of public health and safety.

Under unusual circumstances which could introduce significant and unanticipated risks, the NRC staff reviewers would assume the burden of demonstrating that the presumption of adequate protection is not supported by the bases for the existing staff positions despite the fact that currently specified regulatory requirements are met. Instances in which the reviewers would question licensees regarding risk are expected to be rare. The process used for identifying those situations in which risk implications are appropriate to consider and for deciding if undue risk exists is depicted in Figure 1. This process can be used in the review of both licensee-initiated risk-informed license amendment requests, as well as license amendment requests in which the licensee chooses to not submit risk information (*i.e.*, non-risk informed requests.)

License amendment requests will be screened for potential risk implications as part of the license amendment review process. Office-level license amendment review procedures provide guidance on which license amendment requests should be examined at the level of the integrated risk model due to the potential for significant impacts on plant risk [1]. In accordance with the guidance, the risk implications of a non-risk-informed submittal would be discussed with a risk analyst if the submittal:

- Significantly changes the allowed outage time (*e.g.*, outside the range previously approved at similar plants), probability of initiating event, probability of successful mitigative action, functional recovery time, or operator action requirement;
- Significantly changes functional requirements or redundancy;
- Significantly changes operations that affect the likelihood of undiscovered failures;
- Significantly affects the basis for successful safety function; or
- Could create "special circumstances" under which compliance with existing regulations may not produce the intended or expected level of safety, and plant operation may pose an undue risk to public health and safety.

Non-risk-informed license amendment requests judged to have the potential to significantly impact risk would be referred for a more detailed risk evaluation as part of the license amendment review.

Review Guidance and Procedures

For license amendment requests referred for a risk review, the reviewers should assess the requested changes, and the need for and effectiveness of any compensatory measures that might be warranted because of risk considerations, by evaluating the changes relative to the safety principles and integrated decisionmaking process defined in Regulatory Guide (RG) 1.174. The risk acceptance guidelines (Sections 2.2.4 and 2.2.5 of RG 1.174) describe acceptable levels of risk increase as a function of total core damage frequency (CDF) and large early release frequency (LERF) and the manner in which the acceptance guidelines should be applied in the review and decisionmaking process. Reviewers should note that the guidelines serve as a point of reference for gauging risk impact but are not legally binding requirements.

For non-risk informed license amendment requests, the preliminary assessment would be qualitative with a decision based on engineering judgment since quantitative risk information would not generally be presented in submittals that are not risk informed. If "special circumstances" are believed to exist, the reviewers will explore in more detail the underlying engineering issues contributing to the risk concern, and the potential risk significance of the license amendment request.

"Special circumstances" represent conditions or situations that would raise questions about whether there is adequate protection, and that could rebut the normal presumption of adequate protection from compliance with existing requirements. In such situations, undue risk may exist even when all regulatory requirements are satisfied. In general, these situations would not have been identified or specifically addressed in the development of the current set of regulations, and would be important enough to warrant the promulgation of a new regulation (*e.g.*, a risk-informed regulation) if such situations were encountered on a widespread basis. "Special circumstances" may include but not be limited to license amendment requests which, if approved, could:

- Substantially increase the likelihood or consequences of accidents that are risk-significant but beyond the design and licensing basis of the plant, for example: Proposed changes to steam generator (SG) allowable leak rates that meet Part 100 limits based on the design basis source term, but result in a large early release given a severe accident source term; or use of new materials for SG repairs that provide acceptable performance under normal and design basis accident conditions, but a reduced capability to maintain SG tube integrity in high temperature severe accident scenarios.
- Degrade multiple levels of defense, or cornerstones in the reactor oversight process, through plant operations or situations not explicitly considered in the development of the regulations, *e.g.*, advanced applications of digital instrumentation and controls without due consideration of defense-in-depth.
- Significantly reduce the availability/reliability of SSCs that are risk-significant but not required by regulations, *e.g.*, turbine driven AFW pumps provided in response to NUREG–0737, II.E.1.1, or hardened vents in Mark I containments that protect against containment over-pressure failures in accidents beyond the design basis.
- Involve changes for which the synergistic or cumulative effects could significantly impact risk, *e.g.*, large power uprate requests.

If upon further consideration it is believed that approval of the request would compromise the safety principles described in RG 1.174 and substantially increase risk relative to the risk acceptance guidelines contained in the RG, the reviewers should inform NRC management of the risk concerns, and the need to further evaluate the risk associated with the request. The general criteria that should be met are that: (1) The reviewer has knowledge that indicates that the risk impact associated with the requested change is not reflected by the licensing basis analysis, and (2) the reviewer has reason to believe that the magnitude of the risk increase may be sufficient to warrant denial of the request or to warrant attaching

[1] Following approval of the subject SRP changes, the staff will update the license amendment review procedures to include supplemental information on "special circumstances" and other conforming changes.

conditions to its approval of the request, if the request were evaluated in the context of the existing guidance for approval of risk-informed applications.

In such instances, the reviewers with management concurrence should ask the licensee to address the safety principles and the numerical guidelines for acceptable risk increases contained in RG 1.174 in their submittal. The reviewers may alternatively ask the licensee to submit the information needed for the NRC staff to make an independent risk assessment. If a licensee does not choose to address risk, the reviewers should not issue the requested amendment until they have assessed the risk implications sufficiently to determine that there is reasonable assurance that the public health and safety will be adequately protected if the amendment request is approved. A licensee's decision not to submit requested information could impede the staff's review and could also prevent the reviewers from reaching a finding that there is reasonable assurance of adequate protection. A licensee's failure to submit requested information could also be a basis for rejection pursuant to 10 CFR 2.108.

Evaluation Findings

The numerical guidance for CDF and LERF provided in RG 1.174 is intended to provide a basis for finding that there is reasonable assurance of adequate protection. Therefore, situations that exceed these values or violate the other principles would constitute a trigger point at which questions are raised as to whether the proposed change provides reasonable assurance of adequate protection. A more in-depth assessment of the special circumstances, the safety principles, and the issues identified for management attention in Section 2.2.6 of RG 1.174 should then be made in order to reach a conclusion regarding the level of safety associated with the requested change.

In making this assessment, the reviewers should be mindful to clearly differentiate the concept of adequate protection from the numerical risk acceptance guidelines. The guidelines in themselves do not constitute a definition of adequate protection, but provide an appropriate set of criteria to be used in the process for evaluating adequate protection.

It is not the NRC's policy or within the NRC's technical capabilities to allow risk to increase to a point where protection is almost, but not quite, inadequate. As discussed in RG 1.174, the uncertainty in the analyses must be considered in any finding that adequate protection is achieved. The final acceptability of the proposed change should be based on a consideration of current regulatory requirements, as well as on adherence to the safety principles, and not solely on the basis of a comparison of quantitative PRA results with numerical acceptance guidelines. The authority provided by the Atomic Energy Act and current regulations requires rejection of a license amendment request if the NRC is unable to find that adequate protection is provided.

OFFICE OF PERSONNEL MANAGEMENT

Submission for OMB Review; Comment Request for Review of a Revised and Expired Information Collection: OPM Form 1593

AGENCY: Office of Personnel Management.

ACTION: Notice.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995 (Pub. L. 104–13, May 22, 1995), this notice announces that the Office of Personnel Management (OPM) will submit to the Office of Management and Budget a request for review of a revised and expired information collection. OPM Form 1593, Federal Employment Information Customer Survey, is used by the job seeking public to express their level of satisfaction with our employment information services. Participation is voluntary.

Approximately 245,000 surveys will be completed annually. We estimate it will take 1 minute to complete this form. The total annual burden is 4,083 hours.

Comments are particularly invited on:

—Whether this collection of information is necessary for the proper performance of functions of the Office of Personnel Management, and whether it will have practical utility;

—Whether our estimate of the public burden of this collection is accurate, and based on valid assumptions and methodology; and

—Ways in which we can minimize the burden of the collection of information on those who are to respond, through the use of the appropriate technological collection techniques or other forms of information technology.

For copies of this proposal, contact Mary Beth Smith-Toomey on (202) 606–8358, or E-mail to mbtoomey@opm.gov.

DATES: Comments on this proposal should be received on or before June 9, 2000.

ADDRESSES: Send or deliver comments to Richard A. Whitford, Director, Washington Service Center/ Employment, Information Office, Office of Personnel Management, 1900 E Street, NW, Room 2455, Washington, DC 20415.

Janice R. Lachance,

Director.

BILLING CODE 6325–01–U

OFFICE OF PERSONNEL MANAGEMENT

Excepted Service

AGENCY: Office of Personnel Management.

ACTION: Notice.

SUMMARY: This gives notice of positions placed or revoked under Schedules A and B, and placed under Schedule C in the excepted service, as required by Civil Service Rule VI, Exceptions from the Competitive Service.

FOR FURTHER INFORMATION CONTACT: Suzy Barker, Staffing Reinvention Office, Employment Service (202) 606–0830.

SUPPLEMENTARY INFORMATION: The Office of Personnel Management published its last monthly notice updating appointing authorities established or revoked under the Excepted Service provisions of 5 CFR 213 on March 23, 2000 (65 FR 15664). Individual authorities established or revoked under Schedules A and B and established under Schedule C between February 1, 2000, and February 29, 2000 appear in the listing below. Future notices will be published on the fourth Tuesday of each month, or as soon as possible thereafter. A consolidated listing of all authorities as of June 30 will also be published.

Schedule A

No Schedule A authorities were established during February 2000.

The following Schedule A authority was revoked:

Corporation for National and Community Service

All positions on the Staff of the Corporation for National Community Service. No new appointment may be under this authority after September 30, 1995. Effective February 30, 2000.

Schedule B

No Schedule B authorities were established or revoked during February 2000.

Schedule C

The following Schedule C authorities were established during February 2000.

Broadcasting Board of Governors

Development Officer to the Director, International Broadcasting Bureau. Effective February 4, 2000.

Confidential Assistant to the Director, Voice of America. Effective February 22, 2000.

Consumer Product Safety Commission

Special Assistant (Legal) to the Commissioner. Effective February 17, 2000.

Department of Agriculture

Confidential Assistant to the Administrator, Rural Business Service. Effective February 8, 2000.

Staff Assistant to the Director, Legislative Liaison, Executive Secretariat and Public Affairs Staff. Effective February 9, 2000.

Senior Policy Director to the Deputy Under Secretary, Policy and Planning. Effective February 9, 2000.

Confidential Assistant to the Administrator, Rural Housing Service. Effective February 17, 2000.

Confidential Assistant Chief, Natural Resources Conservation Service. Effective February 29, 2000.

Confidential Assistant to the Assistant Secretary for Congressional Relations. Effective February 29, 2000.

Department of Commerce

Special Assistant to the Under Secretary for Export Administration. Effective February 7, 2000.

Senior Advisor to the Director, Office of Sustainable Development and Intergovernmental Affairs. Effective February 14, 2000.

Special Counsel to the General Counsel. Effective February 16, 2000.

Department of Defense

Special Assistant to the Under Secretary of Defense for Industrial Affairs. Effective February 9, 2000.

Special Assistant for Counterterrorism/Crisis Management to the Assistant Secretary of Defense for Legislative Affairs. Effective February 10, 2000.

Assistant for Terrorism Consequence Management Policy and Programs to the Deputy Assistant Secretary of Defense. Effective February 10, 2000.

Department of Education

Confidential Assistant to the Director, White House Initiative on Hispanic Education. Effective February 29, 2000.

Confidential Assistant to the Senior Advisor to the Secretary. Effective February 29, 2000.

Department of Energy

Senior Advisor to the Assistant Secretary for Fossil Energy. Effective February 24, 2000.

Public Affairs Specialist to the Director, Office of Public Affairs. Effective February 25, 2000.

Senior Policy Advisor to the Secretary of Energy. Effective February 25, 2000.

Department of Health and Human Services

Congressional Liaison Specialist to the Deputy Assistant Secretary for Legislation (Congressional Liaison). Effective February 7, 2000.

Confidential Assistant to the Executive Secretary. Effective February 7, 2000.

Department of Housing and Urban Development

Special Assistant to the Advisor to the Deputy Secretary for Management Reform. Effective February 4, 2000.

Special Events Coordinator to the Advisor to the Deputy Secretary for Management Reform. Effective February 23, 2000.

Department of the Interior

Special Assistant to the Deputy Chief of Staff. Effective February 1, 2000.

Special Assistant to the Deputy Assistant Secretary, Policy and International Affairs. Effective February 1, 2000.

Administrative Aide to the Director of Intergovernmental Affairs. Effective February 24, 2000.

Department of Justice

Chief of Staff to the Director, Community Oriented Policing Services. Effective February 14, 2000.

Special Assistant to the Director, Community Oriented Policing Services. Effective February 18, 2000.

Staff Assistant to the Director, Office of Public Affairs. Effective February 24, 2000.

Secretary (OA)/to the United States Attorney, Northern District of West Virginia. Effective February 29, 2000.

Department of Transportation

Deputy Director to the Director, Office of Congressional Affairs. Effective February 14, 2000.

Senior Advisor to the Administrator, Research and Special Programs Administration. Effective February 18, 2000.

Special Assistant to the Deputy Assistant Secretary for Aviation and International Affairs. Effective February 24, 2000.

Department of the Treasury

Attorney-Advisor to the General Counsel. Effective February 7, 2000.

Export-Import Bank of the United States

Special Assistant to the Chairman. Effective February 3, 2000.

Federal Communications Commission

Assistant Director to the Director, Office of Media Relations. Effective February 10, 2000.

Federal Emergency Management Agency

Director, Office of Public Affairs to the Director, Federal Emergency Management Agency. Effective February 17, 2000.

Federal Energy Regulatory Commission

Regulatory Policy Analyst to the Director, Office of Markets, Tariffs and Rates. Effective February 3, 2000.

Federal Maritime Commission

Special Assistant to the Commissioner. Effective February 10, 2000.

Federal Trade Commission

Confidential Assistant to the Commissioner. Effective February 14, 2000.

Office of Management and Budget

Legislative Analyst to the Associate Director for Legislative Affairs. Effective February 4, 2000.

Small Business Administration

Associate Director for Field Operations to the Associate Administrator for Field Operations. Effective February 1, 2000.

Authority: 5 U.S.C. 3301 and 3302; E.O. 10577, 3 CFR 1954—1958 Comp., P.218.

Office of Personnel Management.

Janice R. Lachance,

Director.

[FR Doc. 00–8841 Filed 4–7–00; 8:45 am]

BILLING CODE 6325–01–P

OFFICE OF PERSONNEL MANAGEMENT

Privacy Act of 1974: Computer Matching Programs—OPM/Social Security Administration

AGENCY: Office of Personnel Management.

ACTION: Publication of notice of computer matching to comply with Public Law 100–503, the Computer Matching and Privacy Protection Act of 1988.

SUMMARY: OPM is publishing notice of its computer matching program with the Social Security Administration (SSA) to meet the reporting requirements of Public Law 100–503. The purpose of this match is for SSA to disclose benefit information to OPM to offset specific benefits.

DATES: The matching program will begin in March 2000, or 40 days after agreements by the parties participating in the match have been submitted to Congress and the Office of Management and Budget, whichever is later. Any public comment on this matching program must be submitted within the 30 day public period, which begins on the publication date of this notice. The matching program will continue for 18 months from the beginning date and may be extended an additional 12 months thereafter. The data exchange will begin at a date mutually agreeable between OPM and SSA after March 1, 2000, unless comments are received which will result in a contrary determination. Subsequent matches will take place on a recurring basis until one of the parties advises the other, in writing, of its intention to reevaluate, modify and/or terminate the agreement.

ADDRESSES: Send comments to William J. Washington, Acting Assistant Director for Systems, Finance and Administration, 1900 E. Street NW., Room 4312, Washington, DC 20415.

FOR FURTHER INFORMATION CONTACT: Marc Flaster, (202) 606–2115.

SUPPLEMENTARY INFORMATION: OPM and SSA intend to conduct a computer matching program. The purpose of this agreement is to establish the conditions under which SSA agrees to the disclosure of benefit information to OPM. The SSA records will be used in a matching program with OPM's records on surviving spouses who may be eligible to receive a Supplementary Annuity, disability retirees, and child survivor annuitants, under the Federal Employees' Retirement System (FERS). The benefits payable to these recipients are offset if paid while also in receipt of SSA benefits. OPM will use the SSA data to verify the earnings information provided directly to OPM by the recipients.

Office of Personnel Management.

Janice R. Lachance,

Director.

Report of Computer Matching Program Between the Office of Personnel Management and Social Security Administration

A. Participating Agencies

OPM and SSA.

B. Purpose of the Matching Program

Chapter 84 of title 5, United States Code (U.S.C.), requires OPM to offset specific benefits by a percentage of benefits payable under Title II of the Social Security Act. The matching will enable OPM to compute benefits at the correct rate and determine eligibility for benefits.

C. Authority for Conducting the Match Program

Chapter 84, title 5, United States Code

D. Categories of Records and Individuals Covered by the Match

The two SSA records systems involved in the match are (1) Master Files of Social Security Number (SSN) Holders and SSN Applications, 09–60–0058 (SSA/OSR) last published on March 24, 1998 at 63 FR 14165 and (2) the Master Beneficiary Record, 09–60–0090 (SSA/OSR) last published January 6, 1995 at 60 FR 2144. The OPM records consist of annuity data from its system of records entitled OPM/Central 1–Civil Service Retirement and Insurance Records, last published on October 8, 1999 at 64 FR 54930.

E. Description of Matching Program

As frequently as daily, OPM will provide SSA with an extract from the annuity master file and from pending claims snapshot records via the File Transfer Management System (FTMS). The extracted file will contain identifying information concerning the disability annuitant, child survivor, or surviving spouse who may be eligible for an annuity under FERS. Each record will be matched to SSA's records and requested information transmitted back to OPM.

F. Privacy Safeguards and Security

The personal privacy of the individuals whose names are included in the files transmitted are protected by strict adherence to the provisions of the Privacy Act of 1974 and OMB's "Guidance Interpreting the Provisions of Public Law 100–503, the Computer Matching and Privacy Protection Act of 1988". Access to the records used in the data exchange is restricted to only those authorized employees and officials who need it to perform their official duties. Records matched or created will be stored in an area that is physically safe. Records used during this exchange and any records created by this exchange will be processed under the immediate supervision and control of authorized personnel in a manner which will protect the confidentiality of the records. The records matched and records created by the match will be transported under appropriate safeguards. Both SSA and OPM have the right to make onsite inspection or make other provisions to ensure that adequate safeguards are being maintained by the other agency.

G. Inclusive Dates of the Matching Program

This computer matching program is subject to review by the Office of Management and Budget and the Congress. OPM's report to these parties must be received at least 40 days prior to the initiation of any matching activity. If no objections are raised by either, and the mandatory 30-day public notice period for comments has expired for this **Federal Register** notice with no significant adverse public comments in receipt resulting in a contrary determination, then this computer matching program becomes effective on the date specified above. By agreement between OPM and SSA, the matching program will be in effect and continue for 18 months with an option to renew for 12 additional months under the terms set forth in 5 U.S.C. 552(a)(o)(2)(D).

BILLING CODE 6325–01–P

DEPARTMENT OF STATE

[Public Notice No. 3276]

Bureau of Oceans, International Environmental and Scientific Affairs; Public Meeting to Discuss Progress on International Harmonization of Chemical Hazard Classification and Labeling

SUMMARY: The United States Government, through an interagency working group, is preparing for a series of international meetings to further develop a harmonized system of chemical hazard classification and labeling, an effort referred to as the "globally harmonized system" or GHS. The Department of State is announcing a public meeting to review the progress since the last public meeting on October 6, 1999, and to outline the issues likely to arise in upcoming international meetings. The public meeting will take place on Thursday, April 27, 2000, from 10:00 am until noon in Room 311 of the U.S. Environmental Protection Agency, Crystal Mall 2, 1921 Jefferson Davis Highway, Arlington, Virginia. To facilitate entry, attendees should bring picture identification with them. No advance registration is necessary. For further information, please contact Marie Ricciardone, U.S. Department of State, Office of Environmental Policy (OES/ENV), Room 4325, 2201 C Street NW, Washington, DC 20520; telephone (202) 647–9799; fax (202) 647–5947; e-mail RicciardoneMD@state.gov.

SUPPLEMENTARY INFORMATION: The U.S. Department of State is issuing this notice to help ensure that interested organizations and individuals are aware of and knowledgeable about the effort to internationally harmonize chemical hazard classification and labeling, and have an opportunity to offer comments. Several agencies participate in the U.S. government interagency group, including: Department of State, Environmental Protection Agency, Department of Transportation, Occupational Safety and Health Administration, Consumer Product Safety Commission, Food and Drug Administration, Department of Commerce, Department of Agriculture, Office of the U.S. Trade Representative, and National Institute of Environmental Health Sciences. For more complete information on the harmonization process, please refer to State Department Public Notice 2526, pages 15951–15957 of the **Federal Register** of April 3, 1997.

This meeting will provide an update on GHS activities since the previous public meeting on October 6, 1999 (see Department of State Public Notice 3121 on page 49834 of the **Federal Register** of September 14, 1999):

- Fourth Meeting of the Inter-Organization Program for the Sound Management of Chemicals (IOMC)/ International Labor Organization (ILO) Working Group on Hazard Communication, November 1–4, 1999, Washington, DC;
- Fifteenth Consultation of the IOMC Coordinating Group for the Harmonization of Chemical Classification Systems, November 5, 1999, Washington, DC;
- Fifth Meeting of the Organization for Economic Cooperation and Development Expert Group on Classification Criteria for Chemical Mixtures, November 8–9, 1999, Washington, DC;
- Seventeenth Session of the UN Subcommittee of Experts on the Transport of Dangerous Goods, December 6–16, 1999, Geneva, Switzerland;
- Fifth Meeting of the Expert Group on Aquatic Environmental Hazards, February 14–15, 2000, Paris, France;
- Third Meeting of the OECD Ad Hoc Expert Group on Target Organ/Systemic Toxicity of the Task Force on Harmonization of Classification and Labeling, February 16–17, 2000, Paris, France;

- Ninth Meeting of the OECD Task Force on Harmonization of Classification and Labeling, February 17–18, 2000, Paris, France.

Members of the interagency working group will also provide an overview of the U.S. preparations for upcoming international meetings:

- The Fifth Meeting of the IOMC/ILO Working Group of Hazard Communication, May 22–25, 2000, Geneva, Switzerland will consider hazard communication label elements for the public and specialized audiences, and material safety data sheets for workers;
- The Sixteenth Consultation of the IOMC Coordinating Group for the Harmonization of Chemical Classification Systems, May 26, 2000, Geneva, Switzerland will consider GHS implementation issues;
- The Sixth Meeting of the OECD Expert Group on Classification Criteria for Chemical Mixtures, May 29–31, 2000, Paris, France will develop approaches and options for a harmonized system of classifying mixtures according to their health and environmental hazards;
- The Eighteenth Session of the UN Subcommittee on Experts on the Transport of Dangerous Goods, July 3–13, 2000, Geneva, Switzerland will consider classification criteria for flammable aerosols.

Interested organizations and individuals are invited to present their views orally and/or in writing at the public meeting. Those organizations/individuals that cannot attend the April 27, 2000 meeting, but wish to submit a written comment or remain informed, should provide Eunice Mourning of the Office of Environmental Policy, U.S. Department of State (telephone 202–647–9266; fax 202–647–5947) with their statement and/or name, organization, address, telephone and fax numbers, and e-mail address. All written comments will be placed in the OSHA public docket (H–022H), which is open Monday through Friday, from 10 am until 4 pm, at the Department of Labor, Room 2625, 200 Constitution Avenue NW, Washington, DC; telephone 202–219–7894; fax: 202–219–5046. Interested organizations /individuals that wish to receive future notifications of GHS-related developments by email should contact Mary Frances Lowe of the U.S. Environmental Protection Agency at "lowe.maryfrances@epa.gov".

Dated: April 4, 2000.

Daniel T. Fantozzi,

Director, Office of Environmental Policy, Department of State.

BILLING CODE 3190–01–M

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

Notice of Intent To Rule on Application To Impose and Use the Revenue From a Passenger Facility Charge (PFC) at Tampa International, Tampa, FL

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of intent to rule on application.

SUMMARY: The FAA proposes to rule and invites public comment on the application to impose and use the revenue from a PFC at Tampa International Airport under the provisions of the Aviation Safety and Capacity Expansion Act of 1990 (Title IX of the Omnibus Budget Reconciliation Act of 1990) (Pub. L. 101–508) and Part 158 of the Federal Aviation Regulations (14 CFR Part 158).

DATES: Comments must be received on or before May 10, 2000.

ADDRESSES: Comments on this application may be mailed or delivered in triplicate to the FAA at the following address: Orlando Airports District Office, Federal Aviation Administration, 5950 Hazeltine National Dr., Suite 400, Orlando, Florida 32822–5024.

In addition, one copy of any comments submitted to the FAA must be mailed or delivered to Mr. Louis E. Miller, Executive Director of the Hillsborough County Aviation Authority at the following address: Tampa International Airport, Terminal Building, 3rd Level, Blue Side, Tampa, Florida 32622.

Air carriers and foreign air carriers may submit copies of written comments previously provided to the Hillsborough County Aviation Authority under section 158.23 of Part 158.

FOR FURTHER INFORMATION CONTACT: Ms. Susan A. Moore, Program Manager, Orlando Airports District Office, Federal Aviation Administration, 5950 Hazeltine National Dr., Suite 400, Orlando, Florida 32822–5024, (407) 812–6331, extension 20. The application may be reviewed in person at this same location.

SUPPLEMENTARY INFORMATION: The FAA proposes to rule and invites public comment on the application to impose and use the revenue from a PFC at Tampa International Airport under the provisions of the Aviation Safety and Capacity Expansion Act of 1990 (Title IX of the Omnibus Budget Reconciliation Act of 1990) (Pub. L. 101–508) and Part 158 of the Federal Aviation Regulations (14 CFR Part 158).

On March 23, 2000, the FAA determined that the application to impose and use the revenue from a PFC submitted by Hillsborough County Aviation Authority was substantially complete within the requirements of section 158.25 of Part 158. The FAA will approve or disapprove the application, in whole or in part, no later than July 7, 2000.

The following is a brief overview of the application.

PFC Application No.: 00–04–C–00–TPA.

Level of the proposed PFC: $3.00.

Proposed charge effective date: July 1, 2002.

Proposed charge expiration date: October 1, 2007.

Total estimated net PFC revenue: $124,728,400.

Brief description of proposed project(s): Airside E development; Departure level expansion and modernization; Purchase passenger loading bridges; Taxiway J extension; Reconstruct portion Taxiway A.

Class or classes of air carriers which the public agency has requested not be required to collect PFCs: On-demand air taxi/commercial operators that (1) do not enplane or deplane passengers at the Authority's main passenger terminal buildings, or (2) enplane less than 500 passengers per year at the Airport.

Any person may inspect the application in person at the FAA office listed above under **FOR FURTHER INFORMATION CONTACT.**

In addition, any person may, upon request, inspect the application, notice and other documents germane to the application in person at the Hillsborough County Aviation Authority.

Issued in Orlando, Florida on March 23, 2000.

W. Dean Stringer,

Manager, Orlando Airports District Office, Southern Region.

[FR Doc. 00–7858 Filed 4–7–00; 8:45 am]

BILLING CODE 4910–13–M

DEPARTMENT OF TRANSPORTATION

Federal Highway Administration

Environmental Impact Statement: Worcester and Auburn, Massachusetts

AGENCY: Federal Highway Administration, DOT.

ACTION: Notice of intent.

SUMMARY: The FHWA is issuing this notice to advise the public that an Environmental Impact Statement will be prepared for a proposed highway project in Worcester and Auburn, Massachusetts.

FOR FURTHER INFORMATION CONTACT: Jamie Sikora, Area Engineer, Federal Highway Administration, 55 Broadway, 10th Floor, Cambridge, MA 02142, Telephone: (617) 494–2481; or Michael E. Miller, Project Manager, Environmental Division, Massachusetts Highway Department, 10 Park Plaza, Boston, MA 02116, Telephone: (617) 973–8290.

SUPPLEMENTARY INFORMATION: The FHWA, in cooperation with the Massachusetts Highway Department (MassHighway), will prepare an Environmental Impact Statement (EIS) on a proposal to study project alternatives potentially involving new roadway construction and major improvements to existing roads in the southwestern section of the City of Worcester and in the Town of Auburn, Massachusetts.

The project's goal is the resolution of long-standing accessibility limitations that impact local and regional travel conditions. It is intended that the project will provide improved conditions between Route 9 in the vicinity of Webster Square in Worcester and the Interstate Highway System (I–290 and I–90). It is anticipated that this improved accessibility will also benefit the on-going revitalization of the Worcester Regional Airport and the degree to which the airport can contribute to the regional airport system.

Alternatives under consideration include: (1) Taking no action (No Build); (2) the Webster Street alternative; (3) the Hope Avenue alternative; (4) the Oxford Street alternative; and (5) other feasible and prudent alternatives which may be identified during the course of the EIS. Build alternatives may include limited access highway construction on a new location, or an improvement to existing alignments.

Materials describing the proposed action and soliciting comments will be sent to appropriate Federal, State, and local agencies, and to private organizations and citizens who have previously expressed or are known to have interest in this proposal. A series of public forums will be held, beginning in late March 2000, and continue thru the course of the study. On January 10, 2000 a public scoping meeting was held by the Massachusetts Secretary of Environmental Affairs where comments on the scope of the study were heard, and the Secretary issued a Certificate on the Environmental Notification Form (ENF) and the scope for the Environmental Impact Report (EIR). A public meeting in April 2000 will also provide an opportunity for the public to comment on the scope for the study. Advance public notice of the time and place of this meeting will be given. A formal scoping meeting with the appropriate Federal agencies will also be held during this time frame. Upon completion of the Draft EIS, a Notice of Availability will be published in the **Federal Register** to provide information on the availability of the document for public and agency review and comment.

To ensure that the full range of issues related to this proposed action are addressed and all significant issues identified, comments, and suggestions are invited from all interest parties. Comments or questions concerning this proposed action and the EIS should be directed to the FHWA at the address provided above.

(Catalog of Federal Domestic Assistance Program Number 20.205, Highway Planning and Construction. The regulations implementing Executive Order 12372 regarding intergovernmental consultation on Federal programs and activities apply to this program).

, Issued on: March 3, 2000.

Alexander Almeida,

Project Delivery Team Leader.

BILLING CODE 4910–22–M

DEPARTMENT OF TRANSPORTATION

Maritime Administration

[Docket No. MARAD–2000–7184]

Information Collection Available for Public Comments and Recommendations

ACTION: Notice and request for comments.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, this notice announces the Maritime Administration's (MARAD) intentions to request approval for three years of a new information collection titled, "Voluntary Intermodal Sealift Agreement (VISA)."

DATES: Comments should be submitted on or before June 9, 2000.

FOR FURTHER INFORMATION CONTACT: Raymond R. Barberesi, Director, Office of Sealift Support, MAR–630, Room 7307, Maritime Administration, 400 Seventh Street, SW, Washington, D.C. 20590, telephone number: 202–366–2323 or fax 202–493–2180. Copies of this collection can be obtained from that office.

SUPPLEMENTARY INFORMATION:

Title of Collection: Voluntary Intermodal Sealift Agreement (VISA).

Type of Request: Approval of a new information collection.

OMB Control Number: 2133–(NEW).

Form Number: MA–1020.

Expiration Date of Approval: Three years from the date of approval.

Summary of Collection of Information: This information collection is in accordance with Section 708, Defense Production Act, 1950, as amended, under which participants agree to provide commercial sealift capacity and intermodal shipping services and systems necessary to meet national defense requirements. In order to meet national defense requirements, the Government must assure the continued availability of commercial sealift resources.

Need and Use of the Information: The information collection is needed by MARAD and the Department of Defense (DOD), including representatives from the U.S. Transportation Command and its components, to evaluate and assess the applicants eligibility for participation in the VISA program. The information will be used by MARAD and the U.S. Transportation Command and its components to assure the continued availability of commercial sealift resources to meet the DOD's military requirements.

Description of Respondents: Operators of qualified dry cargo vessels.

Annual Responses: 40 responses.

Annual Burden: 200 hours.

Comments: Comments should refer to the docket number that appears at the top of this document. Written comments may be submitted to the Docket Clerk, U.S. DOT Dockets, Room PL–401, 400 Seventh Street, SW, Washington, D.C. 20590. Comments may also be submitted by electronic means via the Internet at *http://dmses.dot.gov/submit.* Specifically, address whether this information collection is necessary for proper performance of the function of the agency and will have practical utility, accuracy of the burden estimates, ways to minimize this burden, and ways to enhance quality, utility, and clarity of the information to be collected. All comments received will be available for examination at the above address between 10 a.m. and 5 p.m., EDT. Monday through Friday, except Federal Holidays. An electronic version of this document is available on the World Wide Web at http://dms.dot.gov.

Dated: April 4, 2000.

By Order of the Maritime Administrator.

Joel C. Richard,

Secretary.

BILLING CODE 4910–61–P

DEPARTMENT OF TRANSPORTATION

Maritime Administration

[Docket Number: MARAD–2000–7185]

Requested Administrative Waiver of the Coastwise Trade Laws

AGENCY: Maritime Administration, Department of Transportation.

ACTION: Invitation for public comments on a requested administrative waiver of the Coastwise Trade Laws for the vessel FAIR TRADES.

SUMMARY: As authorized by Public Law 105–383, the Secretary of Transportation, as represented by the Maritime Administration (MARAD), is authorized to grant waivers of the U.S. build requirement of the coastwise laws under certain circumstances. A request for such a waiver has been received by MARAD. The vessel, and a description of the proposed service, is listed below. Interested parties may comment on the effect this action may have on U.S. vessel builders or businesses in the U.S. that use U.S.-flag vessels. If MARAD determines that in accordance with Public Law 105–383 and MARAD's regulations at 46 CFR 388 (65 FR 6905; February 11, 2000) that the issuance of the waiver will have an unduly adverse effect on a U.S.-vessel builder or a business that uses U.S.-flag vessels, a waiver will not be granted.

DATES: Submit comments on or before May 10, 2000.

ADDRESSES: Comments should refer to docket number MARAD–2000–7185.

Written comments may be submitted by hand or by mail to the Docket Clerk, U.S. DOT Dockets, Room PL–401, Department of Transportation, 400 7th St., S.W., Washington, D.C. 20590–0001. You may also send comments electronically via the Internet at http://dmses.dot.gov/submit/. All comments will become part of this docket and will be available for inspection and copying at the above address between 10 a.m. and 5 p.m., E.T., Monday through Friday, except federal holidays. An electronic version of this document and all documents entered into this docket is available on the World Wide Web at http://dms.dot.gov.

FOR FURTHER INFORMATION CONTACT: Michael Hokana, U.S. Department of Transportation, Maritime Administration, MAR 832 Room 7201, 400 Seventh Street, SW, Washington, DC 20590. Telephone 202–366–0760.

SUPPLEMENTARY INFORMATION: Title V of Public Law 105–383 provides authority to the Secretary of Transportation to administratively waive the U.S.-build requirements of the Jones Act, and other statutes, for small commercial passenger vessels (less than 12 passengers). This authority has been delegated to the Maritime Administration per 49 CFR 1.66, Delegations to the Maritime Administrator, as amended. By this notice, MARAD is publishing information on a vessel for which a request for a U.S.-build waiver has been received, and for which MARAD requests comments from interested parties. Comments should refer to the docket number of this notice and the vessel name in order for MARAD to properly consider the comments. Comments should also state the commentor's interest in the waiver application, and address the waiver criteria given in § 388.4 of MARAD'S regulations at 46 CFR 388.

Vessel Proposed for Waiver of the U.S.-build Requirement:

(1) Name of vessel and owner for which waiver is requested: Name of vessel: FAIR TRADES Owner: Michael and Frances Plitman.

(2) Size, capacity and tonnage of vessel: According to the Applicant "FAIR TRADES is 50 feet long, and has a gross tonnage of 35 tons as calculated pursuant to 46 U.S.C. 14502, berths for 8 passengers for overnight charters, and can comfortably accommodate up to 12 passengers for day charters."

(3) Intended use for vessel, including geographic region of intended operation and trade. According to the applicant: "We intend to operate FAIR TRADES on day and overnight charter trips on the Chesapeake Bay and its tributaries for up to 12 passengers. We intend to specialize in providing combination sailing/golfing trips while also offering more traditional sailing cruises. FAIR TRADES is berthed in Annapolis and most charters will operate within 50 nautical miles of the mouth of the Severn River."

(4) Date and place of construction and (if applicable) rebuilding. Date of construction: 1990, place of construction: France.

(5) A statement on the impact this waiver will have on other commercial passenger vessel operators. According to the applicant: "Approval of this waiver will have minimal impact on other commercial passenger vessel operators. Most U.S. built vessels engaged in similar types of charters offer some kind of unique facilities or layout. FAIR TRADES was originally built for the charter trade in the Caribbean and has a unique, 4 cabin layout ideally suited for golfing groups. There are very few similarly constructed U.S. built vessels which is why we chose to buy this French boat. The design has been immensely popular in the islands and we believe it will be successful here. FAIR TRADES will not be competing with the large majority of coastwise operators that offer daily excursions. We have absolutely no interest in providing hourly harbor tour type services. Rates for chartering FAIR TRADES will be based on comparable market prices for similar vessels regardless of place of construction, most of which are operated in "bareboat" charter. There will be no attempt to "undercut" competitors; in fact, we are seeking to make a profit based on quality of service—not volume. Therefore, our

rates will be comparable to other high end charters. There are many foreign-built and U.S.-built boats, including French-built BENETEAUs, that operate legally in the Bareboat trade. It is these types of vessels with which we will really compete and their owners are not truly in the commercial service—they are individuals looking to offset the high costs of boat ownership."

(6) A statement on the impact this waiver will have on U.S. shipyards. According to the applicant: "Any impact on domestic shipbuilders should be positive. In fact, successful operations with FAIR TRADES may stimulate interest among U.S. builders to design and construct similar type vessels. Since we purchased FAIR TRADES, we have spent over $50,000 for U.S. manufactured equipment to upgrade her thereby helping the local marine industry. All repair work contracted for has been performed by U.S. yards. It should be evident that FAIR TRADES is, in fact, stimulating many related marine industries."

Dated: April 4, 2000.

By Order of the Maritime Administrator.

Joel C. Richard,

Secretary, Maritime Administration.

DEPARTMENT OF TRANSPORTATION

National Highway Traffic Safety Administration

Reports, Forms and Record Keeping Requirements; Agency Information Collection Activity Under OMB Review

AGENCY: National Highway Traffic Safety Administration, DOT.

ACTION: Notice.

SUMMARY: In compliance with the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*), this notice announces that the Information Collection Request (ICR) abstracted below has been forwarded to the Office of Management and Budget (OMB) for review and comment. The ICR describes the nature of the information collections and their expected burden. The **Federal Register** notice with a 60-day comment period was published on December 13, 1999 [64 FR 69582–69583].

DATES: Comments must be submitted on or before May 10, 2000.

FOR FURTHER INFORMATION CONTACT: Marvin Levy at the National Highway Traffic Safety Administration, Office of Research and Traffic Records (NTS–31), 202–366–5597, 400 Seventh Street, SW, Room 6240, Washington, DC 20590.

SUPPLEMENTARY INFORMATION:

National Highway Traffic Safety Administration

Title: Five State Survey of Alcohol Targets of Opportunity.

OMB Number: 2127–New.

Type of Request: New information collection.

Abstract: The prevention of alcohol-impaired driving is one of NHTSA's top priorities in reducing deaths and injuries from motor-vehicle crashes. The Partners in Progress goal is to reduce the number of alcohol related fatalities from 15,935, in 1998 to 11,000 by the year 2005. In support of this goal, five states were awarded cooperative agreements by NHTSA to demonstrate and evaluate the effectiveness of traffic safety programs that combine increased law enforcement efforts with substantial publicity about these programs. These states were selected because of their potential for reducing the substantial number of percentage of alcohol related fatalities occurring each year within their state.

Affected Public: Those individuals and law enforcement officials from the five states evaluated to reducing driving after drinking.

Estimated Total Annual Burden: 2,499 hours.

Comments are invited on: Whether the proposed collection of information is necessary for the proper performance of the functions of the Department, including whether the information will have practical utility; the accuracy of the Departments estimate of the burden of the proposed information collection; ways to enhance the quality, utility and clarity of the information to be collected; and ways to minimize the burden of the collection of information on respondents, including the use of automated collection techniques or other forms of information technology. A Comment to OMB is most effective if OMB receives it within 30 days of publication.

Issued in Washington, D.C., on April 4, 2000.

Herman L. Simms,

Associate Administrator for Administration.

DEPARTMENT OF TRANSPORTATION

National Highway Traffic Safety Administration

[Docket No. NHTSA–2000–7002]

Notice of Receipt of Petition for Decision that Nonconforming 1976–1985 Rolls Royce Corniche Passenger Cars Are Eligible for Importation

AGENCY: National Highway Traffic Safety Administration, DOT.

ACTION: Notice of receipt of petition for decision that nonconforming 1976–1985 Rolls Royce Corniche passenger cars are eligible for importation.

SUMMARY: This notice announces receipt by the National Highway Traffic Safety Administration (NHTSA) of a petition for a decision that 1976–1985 Rolls Royce Corniche passenger cars that were not originally manufactured to comply with all applicable Federal motor vehicle safety standards are eligible for importation into the United States because (1) they are substantially similar to vehicles that were originally manufactured for importation into and sale in the United States and that were certified by their manufacturer as complying with the safety standards, and (2) they are capable of being readily altered to conform to the standards.

DATES: The closing date for comments on the petition is May 10, 2000.

ADDRESSES: Comments should refer to the docket number and notice number, and be submitted to: Docket Management, Room PL–401, 400 Seventh St., SW, Washington, DC 20590. [Docket hours are from 9 am to 5 pm].

FOR FURTHER INFORMATION CONTACT: George Entwistle, Office of Vehicle Safety Compliance, NHTSA (202–366–5306).

SUPPLEMENTARY INFORMATION:

Background

Under 49 U.S.C. 30141(a)(1)(A), a motor vehicle that was not originally manufactured to conform to all applicable Federal motor vehicle safety standards shall be refused admission into the United States unless NHTSA has decided that the motor vehicle is substantially similar to a motor vehicle originally manufactured for importation into and sale in the United States, certified under 49 U.S.C. 30115, and of the same model year as the model of the motor vehicle to be compared, and is capable of being readily altered to conform to all applicable Federal motor vehicle safety standards.

Petitions for eligibility decisions may be submitted by either manufacturers or importers who have registered with NHTSA pursuant to 49 CFR Part 592. As specified in 49 CFR 593.7, NHTSA publishes notice in the **Federal Register** of each petition that it receives, and affords interested persons an opportunity to comment on the petition. At the close of the comment period, NHTSA decides, on the basis of the petition and any comments that it has received, whether the vehicle is eligible for importation. The agency then publishes this decision in the **Federal Register**.

Champagne Imports of Lansdale, Pennsylvania ("Champagne") (Registered Importer 90–009) has petitioned NHTSA to decide whether 1976–1985 Rolls Royce Corniche passenger cars are eligible for importation into the United States. The vehicles which Champagne believes are substantially similar are 1976–1985 Rolls Royce Corniche passenger cars that were manufactured for importation into, and sale in, the United States and certified by their manufacturer as conforming to all applicable Federal motor vehicle safety standards.

The petitioner claims that it carefully compared non-U.S. certified 1976–1985 Rolls Royce Corniche passenger cars to their U.S. certified counterparts, and found the vehicles to be substantially similar with respect to compliance with most Federal motor vehicle safety standards.

Champagne submitted information with its petition intended to demonstrate that non-U.S. certified 1976–1985 Rolls Royce Corniche passenger cars, as originally manufactured, conform to many Federal motor vehicle safety standards in the same manner as their U.S. certified counterparts, or are capable of being readily altered to conform to those standards.

Specifically, the petitioner claims that non-U.S. certified 1976–1985 Rolls Royce Corniche passenger cars are identical to their U.S. certified counterparts with respect to compliance with Standards Nos. 102 *Transmission Shift Lever Sequence . . . .*, 103 *Defrosting and Defogging Systems*, 104 *Windshield Wiping and Washing Systems*, 105 *Brake Systems*, 106 *Brake Hoses*, 109 *New Pneumatic Tires*, 113 *Hood Latch Systems*, 116 *Brake Fluid*, 124 *Accelerator Control Systems*, 201 *Occupant Protection in Interior Impact*, 202 *Head Restraints*, 203 *Impact Protection for the Driver from the Steering Control System*, 204 *Steering Control Rearward Displacement*, 205 *Glazing Materials*, 206 *Door Locks and Door Retention Components*, 207 *Seating Systems*, 209 *Seat Belt Assemblies*, 210 *Seat Belt Assembly Anchorages*, 212 *Windshield Retention*, 216 *Roof Crush Resistance*, 219 *Windshield Zone Intrusion*, and 302 *Flammability of Interior Materials*.

Petitioner also contends that the vehicles are capable of being readily altered to meet the following standards, in the manner indicated:

Standard No. 101 *Controls and Displays*: (a) substitution of a lens marked "Brake" for a lens with a noncomplying symbol on the brake failure indicator lamp; (b) installation of a seat belt warning lamp that displays the appropriate symbol; (c) recalibration of the speedometer/odometer from kilometers to miles per hour.

Standard No. 108 *Lamps, Reflective Devices and Associated Equipment*: (a) installation of U.S.-model headlamp assemblies that incorporate headlamps with DOT markings; (b) installation of U.S.-model front and rear sidemarker/reflector assemblies; (c) installation of U.S.-model taillamp assemblies.

Standard No. 110 *Tire Selection and Rims*: installation of a tire information placard.

Standard No. 111 *Rearview Mirror*: replacement of the convex passenger side rearview mirror.

Standard No. 114 *Theft Protection*: installation of a warning buzzer microswitch in the steering lock assembly and a warning buzzer.

Standard No. 118 *Power Window Systems*: rewiring of the power window system so that the window transport is inoperative when the ignition is switched off.

Standard No. 208 *Occupant Crash Protection*: (a) installation of a U.S.-model seat belt in the driver's position, or a belt webbing-actuated microswitch inside the driver's seat belt retractor; (b) installation of an ignition switch-actuated seat belt warning lamp and buzzer. The petitioner states that the vehicles are equipped with combination lap and shoulder restraints that adjust by means of an automatic retractor and release by means of a single push button at both front designated seating positions, and with lap belts at both rear outboard and rear center designated seating positions.

Standard No. 214 *Side Impact Protection*: installation of reinforcing beams.

Standard No. 301 *Fuel System Integrity*: installation of a rollover valve in the fuel tank vent line between the fuel tank and the evaporative emissions collection canister.

Additionally, the petitioner states that the bumpers on the non-U.S. certified 1976–1985 Rolls Royce Corniche passenger cars must be reinforced or U.S.-model bumper components must be installed to comply with the Bumper Standard found in 49 CFR Part 581.

The petitioner also states that a vehicle identification number plate must be affixed to the vehicle to meet the requirements of 49 CFR Part 565.

Interested persons are invited to submit comments on the petition described above. Comments should refer to the docket number and be submitted to: Docket Section, National Highway Traffic Safety Administration, Room 5109, 400 Seventh Street, S.W., Washington, DC 20590. It is requested but not required that 10 copies be submitted.

All comments received before the close of business on the closing date indicated above will be considered, and will be available for examination in the docket at the above address both before and after that date. To the extent possible, comments filed after the closing date will also be considered. Notice of final action on the petition will be published in the **Federal Register** pursuant to the authority indicated below.

Authority: 49 U.S.C. 30141(a)(1)(A) and (b)(1); 49 CFR 593.8; delegations of authority at 49 CFR 1.50 and 501.8.

Issued on: April 5, 2000.

Marilynne Jacobs,

Director, Office of Vehicle Safety Compliance.

Research and Special Programs Administration

Office of Hazardous Materials Safety; Notice of Delays in Processing of Exemption Applications

AGENCY: Research and Special Programs Administration, DOT.

ACTION: List of applications delayed more than 180 days.

SUMMARY: In accordance with the requirements of 49 U.S.C. 5117(c), RSPA is publishing the following list of exemption applications that have been in process for 180 days or more. The reason(s) for delay and the expected completion date for action on each application is provided in association with each identified application.

FOR FURTHER INFORMATION CONTACT: J. Suzanne Hedgepeth, Director, Office of Hazardous Materials, Exemptions and Approvals, Research and Special Programs Administration, U.S.

Department of Transportation, 400 Seventh Street, SW, Washington, DC 20590–0001, (202) 366–4535

Key to "Reasons for Delay"

1. Awaiting additional information from applicant.

2. Extensive public comment under review.

3. Application is technically complex and is of significant impact or precedent-setting and requires extensive analysis.

4. Staff review delayed by other priority issues or volume of exemption applications.

Meaning of Application Number Suffixes.

N—New application
M—Modification request
PM—Party to application with modification request

Issued in Washington, DC, on April 4, 2000.

J. Suzanne Hedgepeth,
Director, Office of Hazardous Materials Exemptions and Approvals.

BILLING CODE 4910–60–M

TRADE DEFICIT REVIEW COMMISSION

Notice of Open Public Hearing

AGENCY: U.S. Trade Deficit Review Commission.

ACTION: Notice of open public hearing.

SUMMARY: Notice is hereby given of the following hearing of the U. S. Trade Deficit Review Commission.

Name: Murray Weidenbaum, Chairman of the U.S. Trade Deficit Review Commission

The Commission is mandated to report to the Congress and the President on the causes, consequences, and solutions to the U. S. trade deficit. The purpose of this public hearing is to take testimony on (1) agricultural trade: its importance, opportunities, obstacles, and challenges for U.S. farmers and rural communities as well as its impacts; (2) U.S.-Canada trade issues; and (3) international trade for small businesses in the United States: its importance, opportunities, challenges and impacts. Witnesses will also be invited to propose policy changes.

Confirmed witnesses include Governor Mel Carnahan of Missouri and Governor Bill Graves of Kansas; Dr. Thomas M. Hoenig, President, and Dr. Alan Barkema, Vice President, of the Federal Reserve Bank of Kansas City; Leland Swenson, President of the National Farmers Union; Daniel Amstutz, President of the North American Export Grain Association; Roger Johnson, North Dakota Agriculture Commissioner; Professors Neil Harl and Dermot Hayes, Iowa State University; Professor Susan Feinberg, University of Maryland; and Professor Peter K. Kresl, Bucknell University.

Background

In fulfilling its statutory mission, the Commission is holding field hearings to collect input from industry and labor leaders, government officials, leading researchers, other informed witnesses, and the public. The Commission has already held hearings in Washington, D.C., Pittsburgh, San Francisco, Seattle, Dallas, and New York on various aspects of our trade relations. Information on these hearings can be obtained from the USTDRC website *www.ustdrc.gov*.

Professor Murray Wiedenbaum of Washington University, St. Louis, who is a former Chairman of the President's Council of Economic Advisors, chairs the Commission. The Vice Chairman is Professor Dimitri Papadimitriou, President of The Jerome Levy Economics Institute at Bard College, Annandale-on-Hudson, New York. The Kansas City, MO, hearing will be chaired by Commissioner Wayne D. Angell, Chief Economist and Senior Managing Director of Bear Stearns & Co., Inc., who is a former Vice Chairman of the Board of Governors at the Federal Reserve.

Purpose of Hearing

In light of the ongoing massive trade and current account deficits incurred by the United States, progress in improving U.S. exporters' access to foreign markets is critically important. The failure of the WTO Ministerial in Seattle to come up with a negotiating agenda for a new round of multilateral trade negotiations highlights how the consensus on reducing barriers to trade has fractured. Rebuilding the consensus on trade issues in the United States is of critical importance in addressing the large U. S. trade deficits. The work of the Commission, by analyzing the U.S. trade deficits in a non-partisan manner with the input of leading experts, will provide a reasoned and informed answer on how to respond to the trade deficit and its consequences. The findings of the Commission, while not binding, will likely form the basis for Congressional consensus building on trade policy as we enter the new century.

There will be two sessions, one in the morning and one in the afternoon, for presentations by invited witnesses on their views on the interrelationship between the trade deficit and the topics of the hearing. There will be a question and answer period between the Commissioners and the witnesses. Public participation is invited and there will be an open-mike session for public comment at the conclusion of the afternoon session. Sign-up for the open-mike session will take place in the afternoon and will be on a first come first served basis. Each individual or group making an oral presentation will be limited to a total time of 3 minutes. Because of time constraints, parties with common interests are encouraged to designate a single speaker to represent their views.

DATES AND TIMES: Wednesday, April 26, 2000, 9:00 AM–5:30 PM Central Standard Time inclusive.

ADDRESSES: The hearing will be held at the Federal Reserve Bank of Kansas City, located at 925 Grand Boulevard, Kansas City, Missouri 64198. Public seating is limited to approximately 50 seats and will be on a first come first served basis. Commercial public parking lots are available within the vicinity of the Bank.

SECURITY REQUIREMENTS: The Federal Reserve Bank of Kansas City is a secure facility and everyone must abide by security procedures. Everyone entering the facility is required to have a picture identification.

FOR FURTHER INFORMATION CONTACT: Any member of the public wishing further information concerning the hearing or who wishes to submit oral or written comments should contact Kathy Michels, Administrative Officer for the U.S. Trade Deficit Review Commission, 444 North Capitol Street, NW, Suite 706, Washington, DC 20001; phone 202/624–1409; or via e-mail at: *kmichels@sso.org*.

PROVIDING ORAL OR WRITTEN COMMENTS AT THE KANSAS CITY HEARING: Copies of the draft meeting agenda, when available, may be obtained from the U.S. Trade Deficit Review Commission by going to the Commission's website at www.ustdrc.gov. The Commission requests that written public statements submitted for the record be brief and concise and limited to two pages in length. Written comments (at least 35 copies) must be received at the USTDRC Headquarters Office in Washington, DC by April 17, 2000. Comments received too close to the hearing date will normally be provided to the Commission Members at its hearing.

Written comments may be provided up until the time of the hearing.

Authority: The Trade Deficit Review Commission Act, Public Law No.105–277, Div. A, section 127, 112 Stat. 2681–547 (1998), established the Commission to study the nature, causes and consequences of the United States merchandise trade and current accounts deficits and report its findings to the President and the Congress. By statute, the Commission must hold at least 4 regional field hearings and 1 hearing in Washington, DC. This is the sixth in a series of field hearings to be conducted. The schedule of hearings is available at the US Trade Deficit Review Commission website <www.ustdrc.gov>.

For the U.S. Trade Deficit Review Commission.

Dated at Washington, DC, April 4, 2000.

Allan I. Mendelowitz,

Executive Director, Trade Deficit Review Commission.

National Primary Drinking Water Regulations: Long Term 1 Enhanced Surface Water Treatment and Filter Backwash Rule

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: In this document, EPA is proposing the Long Term 1 Enhanced Surface Water Treatment and Filter Backwash Rule (LT1FBR). The purposes of the LT1FBR are to: Improve control of microbial pathogens in drinking water, including *Cryptosporidium*, for public water systems (PWSs) serving fewer than 10,000 people; prevent increases in microbial risk while PWSs serving fewer than 10,000 people control for disinfection byproducts, and; require certain PWSs to institute changes to the return of recycle flows within the treatment process to reduce the effects of recycle on compromising microbial control. Today's proposal addresses two statutory requirements of the 1996 Safe Drinking Water Act (SDWA) Amendments. First, it addresses the statutory requirement to establish a Long Term Final Enhanced Surface Water Treatment Rule (LTESWTR) for PWSs that serve under 10,000 people. Second, it addresses the statutory requirement to promulgate a regulation which "governs" the recycle of filter backwash within the treatment process of public utilities.

Today's proposed LT1FBR contains 5 key provisions for surface water and ground water under the direct influence of surface water (GWUDI) systems serving fewer than 10,000 people: A treatment technique requiring a 2-log (99 percent) *Cryptosporidium* removal requirement; strengthened combined filter effluent turbidity performance standards and new individual filter turbidity provisions; disinfection benchmark provisions to assure continued microbial protection is provided while facilities take the necessary steps to comply with new disinfection byproduct standards; inclusion of *Cryptosporidium* in the definition of GWUDI and in the watershed control requirements for unfiltered public water systems; and requirements for covers on new finished water reservoirs.

Today's proposed LT1FBR contains three key provisions for all conventional and direct filtration systems which recycle and use surface water or GWUDI: A provision requiring recycle flows to be introduced prior to the point of primary coagulant addition; a requirement for systems meeting criteria to perform a one-time self assessment of their recycle practice and consult with their primacy agency to address and correct high risk recycle operations; and a requirement for direct filtration systems to provide information to the State on their current recycle practice.

The Agency believes implementing the provisions contained in today's proposal will improve public health protection in two fundamental ways. First, the provisions will reduce the level of *Cryptosporidium* in filtered finished drinking water supplies through improvements in filtration and recycle practice resulting in a reduced likelihood of outbreaks of cryptosporidiosis. Second, the filtration provisions are expected to increase the level of protection from exposure to other pathogens (*i.e. Giardia* or other waterborne bacterial or viral pathogens). It is also important to note that while today's proposed rule contains new provisions which in some cases strengthen or modify requirements of the 1989 Surface Water Treatment Rule, each public water system must continue to comply with the current rules while new microbial and disinfectants/disinfection byproducts rules are being developed. In conjunction with the Maximum Contaminant Level Goal (MCLG) established in the Interim Enhanced Surface Water Treatment Rule, the Agency developed a treatment technique in lieu of a Maximum Contaminant Level (MCL) for *Cryptosporidium* because it is not economically and technologically feasible to accurately ascertain the level of *Cryptosporidium* using current analytical methods.

DATES: The Agency requests comments on today's proposal. Comments must be received or post-marked by midnight June 9, 2000. Comments received after this date may not be considered in decision making on the proposed rule.

ADDRESSES: Send written comments on today's proposed rule to the LT1FBR Comment Clerk: Water Docket MC 410, W–99–10, Environmental Protection Agency 401 M Street, S.W., Washington, DC 20460. Please submit an original and three copies of comments and enclosures (including references).

Those who comment and want EPA to acknowledge receipt of their comments must enclose a self-addressed stamped envelope. No facsimiles (faxes) will be accepted. Comments may also be submitted electronically to ow-docket@epamail.epa.gov. For additional information on submitting electronic comments see Supplementary Information Section.

Public comments on today's proposal, other major supporting documents, and a copy of the index to the public docket for this rulemaking are available for review at EPA's Office of Water Docket: 401 M Street, SW., Rm. EB57, Washington, DC 20460 from 9:00 a.m. to 4:00 p.m., Eastern Time, Monday through Friday, excluding legal holidays. For access to docket materials or to schedule an appointment please call (202) 260–3027.

FOR FURTHER INFORMATION CONTACT: Technical inquiries on the rule should be directed to Jeffery Robichaud at 401 M Street, SW., MC4607, Washington, DC 20460 or (202) 260–2568. For general information contact the Safe Drinking Water Hotline, Telephone (800) 426–4791. The Safe Drinking Water Hotline is open Monday through Friday, excluding federal holidays, from 9:00 a.m. to 5:30 p.m. Eastern Time.

SUPPLEMENTARY INFORMATION: Entities potentially regulated by the LT1FBR are public water systems (PWSs) that use surface water or ground water under the direct influence of surface water (GWUDI). The recycle control provisions are applicable to all PWSs using surface water or GWUDI, regardless of the population served. All other provisions of the LT1FBR are only applicable to PWSs serving under 10,000 people. Regulated categories and entities include:

Category	Examples of regulated entities
Industry	Public Water Systems that use surface water or ground water under the direct influence of surface water.
State, Local, Tribal or Federal Governments.	Public Water Systems that use surface water or ground water under the direct influence of surface water.

This table is not intended to be exhaustive, but rather provides a guide for readers regarding entities likely to be regulated by the LT1FBR. This table lists the types of entities that EPA is now aware could potentially be regulated by this rule. Other types of entities not listed in this table could also be regulated. To determine whether your facility is regulated by this action, you should carefully examine the definition of public water system in § 141.3 of the Code of Federal Regulations and applicability criteria in §§ 141.76 and 141.501 of today's proposal. If you have questions regarding the applicability of the LT1FBR to a particular entity, consult the person listed in the preceding section entitled **FOR FURTHER INFORMATION CONTACT**.

Submitting Comments

Send an original and three copies of your comments and enclosures (including references) to W–99–10 Comment Clerk, Water Docket (MC4101), USEPA, 401 M Street, SW., Washington, D.C. 20460. Comments must be received or post-marked by midnight June 9, 2000. Note that the Agency is not soliciting comment on, nor will it respond to, comments on previously published regulatory language that is included in this document to ease the reader's understanding of the proposed language.

To ensure that EPA can read, understand and therefore properly respond to comments, the Agency would prefer that commenters cite, where possible, the paragraph(s) or sections in the proposed rule or supporting documents to which each comment refers. Commenters should use a separate paragraph for each issue discussed.

Electronic Comments

Comments may also be submitted electronically to ow-docket@epamail.epa.gov. Electronic comments must be submitted as an ASCII, WP5.1, WP6.1 or WP8 file avoiding the use of special characters and form of encryption. Electronic comments must be identified by the docket number W–99–10. Comments and data will also be accepted on disks in WP 5.1, 6.1, 8 or ASCII file format. Electronic comments on this document may be filed online at many Federal Depository Libraries.

The record for this rulemaking has been established under docket number W–99–10, and includes supporting documentation as well as printed, paper versions of electronic comments. The record is available for inspection from 9 a.m. to 4 p.m., Monday through Friday, excluding legal holidays at the Water Docket, EB 57, USEPA Headquarters, 401 M Street, SW., Washington, D.C. For access to docket materials, please call (202) 260–3027 to schedule an appointment.

I. Introduction and Background

A. Statutory Requirements and Legal Authority

The Safe Drinking Water Act (SDWA or the Act), as amended in 1986, requires U.S. Environmental Protection Agency (EPA) to publish a maximum contaminant level goal (MCLG) for each contaminant which, in the judgement of the EPA Administrator, "may have any adverse effect on the health of persons and which is known or anticipated to occur in public water systems' (Section 1412(b)(3)(A)). MCLGs are to be set at a level at which "no known or anticipated adverse effect on the health of persons occur and which allows an adequate margin of safety" (Section 1412(b)(4)).

The Act was again amended in August 1996, resulting in the renumbering and augmentation of certain sections with additional statutory language. New sections were added establishing new drinking water requirements. These modifications are outlined below.

The Act requires EPA to publish a National Primary Drinking Water Regulation (NPDWR) that specifies

either a maximum contaminant level (MCL) or treatment technique (Sections 1401(1) and 1412(a)(3)) at the same time it publishes an MCLG, which is a non-enforceable health goal. EPA is authorized to promulgate a NPDWR "that requires the use of a treatment technique in lieu of establishing an MCL," if the Agency finds that "it is not economically or technologically feasible to ascertain the level of the contaminant." EPA's general authority to set MCLGs and NPDWRs applies to contaminants that may "have an adverse effect on the health of persons," that are "known to occur or there is a substantial likelihood that the contaminant will occur in public water systems with a frequency and at levels of public health concern," and for which "in the sole judgement of the Administrator, regulation of such contaminant presents a meaningful opportunity for health risk reduction for persons served by public water systems" (SDWA Section 1412(b)(1)(A)).

The 1996 amendments, also require EPA, when proposing a NPDWR that includes an MCL or treatment technique, to publish and seek public comment on an analysis of health risk reduction and cost impacts. EPA is required to take into consideration the effects of contaminants upon sensitive subpopulations (i.e., infants, children, pregnant women, the elderly, and individuals with a history of serious illness), and other relevant factors (Section 1412(b)(3)(C)).

The amendments established a number of regulatory deadlines, including schedules for a Stage 1 Disinfection Byproduct Rule (DBPR), an Interim Enhanced Surface Water Treatment Rule (IESWTR), a Long Term Final Enhanced Surface Water Treatment Rule (LTESWTR), and a Stage 2 DBPR (Section 1412(b)(2)(C)). To provide additional time for systems serving fewer than 10,000 people to comply with the IESWTR provisions and also ensure these systems implement Stage 1 DBPR and the IESWTR provisions simultaneously, the Agency split the IESWTR into two rules: the IESWR and the LT1ESWTR. The Act as amended also requires EPA to promulgate regulations to "govern" the recycle of filter backwash within the treatment process of public utilities (Section 1412(b)(14)).

Under 1412(b)(4)(E)(ii), EPA must develop a Small System Technology List for the LT1FBR. The filtration technologies listed in the Small System Compliance Technology List for the Surface Water Treatment Rule and Total Coliform Rule (EPA–815–R–98–001, September 1998) are also the technologies which would achieve compliance with the provisions of the LT1FBR. EPA will develop a separate list for the LT1FBR as new technologies become available.

Although the Act permits small system variances for compliance with a requirement of a national primary drinking water regulation which specifies a maximum contaminant level or treatment technique, Section 1415(e)(6)(B) of SDWA, excludes variances for any national primary drinking water regulation for a microbial contaminant or an indicator or treatment technique for a microbial contaminant. LT1FBR requires treatment techniques to control *Cryptosporidium* (a microbial contaminant), and as such systems governed by the LT1FBR are ineligible for variances.

Finally, as part of the 1996 SDWA Amendments, recordkeeping requirements were modified to apply to every person who is subject to a requirement of this title or who is a grantee (Section 1445(a)(1)(A)). Such persons are required to establish and maintain such records, make such reports, conduct such monitoring, and provide such information as the Administrator may reasonably require by regulation.

B. Existing Regulations and Stakeholder Involvement

1. 1979 Total Trihalomethane Rule

In November 1979 (44 FR 68624) (EPA, 1979) EPA set an interim MCL for total trihalomethanes (TTHM—the sum of chloroform, bromoform, bromodichloromethane, dibromochloromethane) of 0.10 mg/l as an annual average. Compliance is defined on the basis of a running annual average of quarterly averages for four samples taken in the distribution system. The value for each sample is the sum of the measured concentrations of chloroform, bromodichloromethane, dibromochloromethane and bromoform.

The interim TTHM standard applies to community water systems using surface water and/or ground water serving at least 10,000 people that add a disinfectant to the drinking water during any part of the treatment process. At their discretion, States may extend coverage to smaller PWSs; however, most States have not exercised this option. The Stage 1 DBPR (as discussed later) contains updated TTHM requirements.

2. Total Coliform Rule

The Total Coliform Rule (TCR) (54 FR 27544, June 29, 1989) (EPA, 1989a) applies to all public water systems. The TCR sets compliance with the Maximum Contaminant Level (MCL) for total coliforms (TC) as follows. For systems that collect 40 or more samples per month, no more than 5 percent of the samples may be TC-positive; for those that collect fewer than 40 samples, no more than one sample may be TC-positive. If a system has a TC-positive sample, it must test that sample for the presence of fecal coliforms or *E. coli*. The system must also collect a set of repeat samples, and analyze for TC (and fecal coliform or *E. coli* within 24 hours of the first TC-positive sample).

In addition, any fecal coliform-positive repeat sample, *E-coli*.-positive repeat sample, or any total-coliform-positive repeat sample following a fecal coliform-positive or *E-coli*-positive routine sample constitutes an acute violation of the MCL for total coliforms. If a system exceeds the MCL, it must notify the public using mandatory language developed by the EPA. The required monitoring frequency for a system depends on the number of people served and ranges from 480 samples per month for the largest systems to once annually for the smallest systems. All systems must have a written plan identifying where samples are to be collected.

The TCR also requires an on-site inspection (referred to as a sanitary survey) every 5 years for each system that collects fewer than five samples per month. This requirement is extended to every 10 years for non-community systems using only protected and disinfected ground water.

3. Surface Water Treatment Rule

Under the Surface Water Treatment Rule (SWTR) (54 FR 27486, June 29, 1989) (EPA, 1989b), EPA set maximum contaminant level goals of zero for *Giardia lamblia*, viruses, and *Legionella* and promulgated regulatory requirements for all PWSs using surface water sources or ground water sources under the direct influence of surface water. The SWTR includes treatment technique requirements for filtered and unfiltered systems that are intended to protect against the adverse health effects of exposure to *Giardia* lamblia, viruses, and *Legionella*, as well as many other pathogenic organisms. Briefly, those requirements include (1) Requirements for maintenance of a disinfectant residual in the distribution system; (2) removal and/or inactivation of 3 log (99.9 percent) for *Giardia* and 4 log (99.99 percent) for viruses; (3) combined filter effluent turbidity performance standard of 5 nephelometric turbidity units (NTU) as a maximum and 0.5 NTU

at the 95th percentile monthly, based on 4-hour monitoring for treatment plants using conventional treatment or direct filtration (with separate standards for other filtration technologies); and (4) watershed protection and other requirements for unfiltered systems. Systems seeking to avoid filtration were required to meet avoidance criteria and obtain avoidance determination by December 30, 1991, otherwise filtration must have been provided by June 29, 1993. For systems properly avoiding filtration, later failures to meet avoidance criteria triggered a requirement that filtration be provided within 18 months.

4. Information Collection Rule

The Information Collection Rule (ICR), which was promulgated on May 14, 1996 (61 FR 24354) (EPA, 1996) applied to large public water systems serving populations of 100,000 or more. A more limited set of ICR requirements pertain to ground water systems serving between 50,000 and 100,000 people. About 300 PWSs operating 500 treatment plants were involved with the extensive ICR data collection. Under the ICR, these PWSs monitored for water quality factors affecting disinfection byproduct (DBP) formation and DBPs within the treatment plant and in the distribution system on a monthly basis for 18 months. In addition, PWSs were required to provide treatment train schematics, operating data and source water occurrence data for bacteria, viruses, and protozoa. Finally, a subset of PWSs performed treatment studies, using either granular activated carbon (GAC) or membrane processes, to evaluate DBP precursor removal and control of DBPs. Monitoring for treatment study applicability began in September 1996. The remaining occurrence monitoring began in July 1997 and concluded in December 1998.

The purpose of the ICR was to collect occurrence and treatment information to help evaluate the need for possible changes to the current microbial requirements and existing microbial treatment practices, and to help evaluate the need for future regulation of disinfectants and disinfection byproducts (DBPs). The ICR will provide EPA with additional information on the national occurrence in drinking water of (1) chemical byproducts that form when disinfectants used for microbial control react with naturally occurring compounds already present in source water; and (2) disease-causing microorganisms, including *Cryptosporidium*, *Giardia*, and viruses. Analysis of ICR data is not expected to be completed in the time frame necessary for inclusion in the LT1FBR, however if the data is available and has been quality controlled and peer reviewed during the necessary time frame, EPA will consider the datat as it refines its analysis for the final rule.

The ICR also required PWSs to provide engineering data on how they currently control for such contaminants. The ICR monthly sampling data will also provide information on the quality of the recycle waters via monthly monitoring (for 18 months) of pH, alkalinity, turbidity, temperature, calcium and total hardness, TOC, UV_{254}, bromide, ammonia, and disinfectant residual (if disinfectant is used). This data will provide some indication of the treatability of the water, the extent to which contaminant concentration effects may occur, and the potential for contribution to DBP formation. However, sampling to determine the occurrence of pathogens in recycle waters was not performed.

5. Interim Enhanced Surface Water Treatment Rule

Public water systems serving 10,000 or more people that use surface water or ground water under the direct influence of surface water (GWUDI) are required to comply with the IESWTR (63 FR 69477, December 16, 1998) (EPA, 1998a) by December of 2001. The purposes of the IESWTR are to improve control of microbial pathogens, specifically the protozoan *Cryptosporidium*, and address risk trade-offs between pathogens and disinfection byproducts. Key provisions established by the rule include: a Maximum Contaminant Level Goal (MCLG) of zero for *Cryptosporidium*; 2-log (99 percent) *Cryptosporidium* removal requirements for systems that filter; strengthened combined filter effluent turbidity performance standards of 1.0 NTU as a maximum and 0.3 NTU at the 95th percentile monthly, based on 4-hour monitoring for treatment plants using conventional treatment or direct filtration; requirements for individual filter turbidity monitoring; disinfection benchmark provisions to assess the level of microbial protection provided as facilities take the necessary steps to comply with new disinfection byproduct standards; inclusion of *Cryptosporidium* in the definition of GWUDI and in the watershed control requirements for unfiltered public water systems; requirements for covers on new finished water reservoirs; and sanitary surveys for all surface water systems regardless of size.

6. Stage 1 Disinfectants and Disinfection Byproduct Rule

The Stage 1 DBPR applies to all PWSs that are community water systems (CWSs) or nontransient noncommunity water systems (NTNCWs) that treat their water with a chemical disinfectant for either primary or residual treatment. In addition, certain requirements for chlorine dioxide apply to transient noncommunity water systems (TNCWSs). The Stage 1 DBPR (EPA, 1998c) was published at the same time as the IESWTR (63 FR 69477, December 16, 1998) (EPA, 1998a). Surface water and GWUDI systems serving at least 10,000 persons are required to comply with the Stage 1 Disinfectants and Disinfection Byproducts Rule by December 2001. Ground water systems and surface water and GWUDI systems serving fewer than 10,000 must comply with the Stage 1 Disinfectants and Disinfection Byproducts Rule by December 2003.

The Stage 1 DBPR finalizes maximum residual disinfectant level goals (MRDLGs) for chlorine, chloramines, and chlorine dioxide; MCLGs for four trihalomethanes (chloroform, bromodichloromethane, dibromochloromethane, and bromoform), two haloacetic acids (dichloroacetic acid and trichloroacetic acid), bromate, and chlorite; and NPDWRs for three disinfectants (chlorine, chloramines, and chlorine dioxide), two groups of organic disinfection byproducts TTHMs and HAA5 and two inorganic disinfection byproducts, chlorite and bromate. The NPDWRs consist of maximum residual disinfectant levels (MRDLs) or maximum contaminant levels (MCLs) or treatment techniques for these disinfectants and their byproducts. The NPDWRs also include monitoring, reporting, and public notification requirements for these compounds. The Stage 1 DBPR includes the best available technologies (BATs) upon which the MRDLs and MCLs are based. EPA believes the implementation of the Stage 1 DBPR will reduce the levels of disinfectants and disinfection byproducts in drinking water supplies. The Agency believes the rule will provide public health protection for an additional 20 million households that were not previously covered by drinking water rules for disinfection byproducts.

7. Stakeholder Involvement

EPA conducted two stakeholder meetings to solicit feedback and information from the regulated community and other concerned stakeholders on issues relating to

today's proposed rule. The first meeting was held July 22 and 23, 1998 in Lakewood, Colorado. EPA presented potential regulatory components for the LT1FBR. Breakout sessions with stakeholders were held to generate feedback on the regulatory provisions being considered and to solicit feedback on next steps for rule development and stakeholder involvement. Additionally, information was presented summarizing ongoing research and data gathering activities regarding the recycle of filter backwash. The presentations generated useful discussion and provided substantial feedback to EPA regarding technical issues, stakeholder concerns, and possible regulatory options (EPA 1999k). The second stakeholder meeting was held in Dallas, Texas on March 3 and 4, 1999. EPA presented new analyses, summaries of current research, and revised regulatory options and data collected since the July stakeholder meeting. Regional perspectives on turbidity and disinfection benchmarking components were also discussed with presentations from EPA Region VI and the Texas Natural Resources Conservation Commission. Four breakout sessions were extremely useful and generated a wide range of information, issues, and technical input from a diverse group of stakeholders (EPA 1999j).

The Agency utilized the feedback received during these two stakeholder meetings in developing today's proposed rule. EPA also mailed a draft version of the preamble for today's proposed rule to the attendees of these meetings. Several of the options which are presented today represent modifications suggested by stakeholders.

II. Public Health Risk

The purpose of this section is to discuss the health risk associated with pathogens, particularly *Cryptosporidium*, in surface waters and GWUDI. More detailed information about such pathogens and other contaminants of concern may be found in an EPA criteria document for *Giardia* (EPA 1998d), three EPA criteria documents for viruses (EPA, 1985; 1999a; 1999b), the *Cryptosporidium* and *Giardia* Occurrence Assessment for the Interim Enhanced Surface Water Treatment Rule (EPA, 1998b) and the LT1FBR Occurrence and Assessment Document (EPA 1999c). EPA requests comment on today's proposed rule, the information supporting the proposal, and the potential impact of proposed regulatory provisions on public health risk.

A. Introduction

In 1990, EPA's Science Advisory Board (SAB), an independent panel of experts established by Congress, cited drinking water contamination as one of the most important environmental risks and indicated that disease-causing microbial contaminants (i.e., bacteria, protozoa and viruses) are probably the greatest remaining health risk management challenge for drinking water suppliers (EPA/SAB, 1990). Information on the number of waterborne disease outbreaks from the U.S. Centers for Disease Control and Prevention (CDC) underscores this concern. CDC indicates that, between 1980 and 1996, 401 waterborne disease outbreaks were reported, with over 750,000 associated cases of disease. During this period, a number of agents were implicated as the cause, including protozoa, viruses and bacteria.

Waterborne disease caused by *Cryptosporidium* is of particular concern, as it is difficult to inactivate *Cryptosporidium* oocysts with standard disinfection practices (unlike pathogens such as viruses and bacteria), and there is currently no therapeutic treatment for cryptosporidiosis (unlike giardiasis). Because *Cryptosporidium* is not generally inactivated in systems using standard disinfection practices, the control of *Cryptosporidium* is dependent on physical removal processes (e.g., filtration).

The filter effluent turbidity limits specified under the SWTR were created to remove large parasite cysts such as *Giardia* and did not specifically control for smaller *Cryptosporidium* oocysts. In addition, filter backwash water recycling practices such as adding recycled water to the treatment train after primary coagulant addition may overwhelm the plant and harm efforts to control *Giardia lamblia*, *Cryptosporidium*, and emerging pathogens. Despite filtration and disinfection, *Cryptosporidium* oocysts have been found in filtered drinking water (LeChevallier, et al., 1991a; EPA, 1999c), and many of the individuals affected by waterborne disease outbreaks caused by *Cryptosporidium* were served by filtered surface water supplies (Solo-Gabriele and Neumeister, 1996). Surface water systems that filter and disinfect may still be vulnerable to *Cryptosporidium*, depending on the source water quality and treatment effectiveness. EPA believes that today's proposal, however, will ensure that drinking water treatment is operating efficiently to control *Cryptosporidium* (see Sections IV.A and IV.D) and other microbiological contaminants of concern (*e.g., Giardia*).

In order to assess the public health risk associated with consumption of surface water or GWUDI from PWSs, EPA has evaluated information and conducted analysis in four important areas discussed in the following paragraphs. These areas are: (1) The health effects of cryptosporidiosis; (2) cryptosporidiosis waterborne disease outbreak data; (3) *Cryptosporidium* occurrence data from raw surface water, raw GWUDI, finished water, and recycle stream studies; and (4) an assessment of the current baseline surface water treatment required by existing regulations.

B. Health Effects of Cryptosporidiosis and Sources and Transmission of Cryptosporidium

Waterborne diseases are usually acute (*i.e.*, sudden onset and typically lasting a short time in healthy people), and most waterborne pathogens cause gastrointestinal illness, with diarrhea, abdominal discomfort, nausea, vomiting, and/or other symptoms. Some waterborne pathogens cause or are associated with more serious disorders such as hepatitis, gastric cancer, peptic ulcers, myocarditis, swollen lymph glands, meningitis, encephalitis, and many other diseases. Cryptosporidiosis is a protozoal infection that usually causes 7–14 days of diarrhea with possibly a low-grade fever, nausea, and abdominal cramps in healthy individuals (Juranek, 1995). Unlike giardiasis for which effective antibiotic therapy is available, an antibiotic treatment for cryptosporidiosis does not exist (Framm and Soave, 1997).

There are several species of *Cryptosporidium* which have been identified, including *C. baileyi* and *C. meleagridis* (bird host); *C. muris* (mouse host); *C. nasorum* (fish host), *C. parvum* (mammalian host), and *C. serpentis* (snake host). *Cryptosporidium* parvum was first recognized as a human pathogen in 1976 (Juranek, 1995). Recently, both the human and cattle types of *C. parvum* have been found in healthy individuals, and these types, *C. felis*, and a dog type have been found in immunocompromised individuals (Pieniazek et al., 1999). Transmission of cryptosporidiosis often occurs through the ingestion of infective *Cryptosporidium* oocysts from feces-contaminated food or water, but may also result from direct or indirect contact with infected persons or mammals (Casemore, 1990; Cordell and Addiss, 1994). Dupont, et. al., 1995, found through a human feeding study that a low dose of *C. parvum* is

sufficient to cause infection in healthy adults (Dupont et. al., 1995). Animal agriculture as a nonpoint source of *C. parvum* has been implicated as the source of contamination for the 1993 outbreak in Milwaukee, Wisconsin, the largest outbreak of waterborne disease in the history of the United States (Walker et al., 1998). Other sources of *C. parvum* include discharges from municipal wastewater treatment facilities and drainage from slaughterhouses. In addition, rainfall appears to increase the concentration of *Cryptosporidium* in surface water, documented in a study by Atherholt, et al. (1998).

There is evidence that an immune response to *Cryptosporidium* exists, but the degree and duration of this immunity is not well characterized (Fayer and Ungar, 1986). Recent work conducted by Chappell, *et al.* (1999) indicates that individuals with evidence of prior exposure to *Cryptosporidium parvum* have demonstrated immunity to low doses of oocysts (approximately 500 oocysts). The investigators found the 50 percent infectious dose for previously exposed individuals (possessing a pre-existing blood serum antibody) to be 1,880 oocysts compared to 132 oocysts for individuals without prior exposure, and individuals with prior exposure who became infected shed fewer oocysts. Because of this type of immune response, symptomatic infection in communities exposed to chronic low levels of oocysts will primarily be observed in newcomers (*e.g.*, visitors, young children) (Frost *et al.*, 1997; Okhuysen *et al.*, 1998).

Sensitive populations are more likely to become infected and ill, and gastrointestinal illness among this population may be chronic. These sensitive populations include children, especially the very young; the elderly; pregnant women; and the immunocompromised (Gerba *et al.*, 1996; Fayer and Ungar, 1986; EPA 1998e). This sensitive segment represents almost 20 percent of the population in the U.S. (Gerba *et al.*, 1996). EPA is particularly concerned about the exposure of severely immunocompromised persons to *Cryptosporidium* in drinking water, because the severity and duration of illness is often greater in immunocompromised persons than in healthy individuals, and it may be fatal among this population. For instance, a follow-up study of the 1993 Milwaukee, Wisconsin, waterborne disease outbreak reported that at least 50 *Cryptosporidium*-associated deaths occurred among the severely immunocompromised (Hoxie *et al.*, 1997).

Cases of illness from cryptosporidiosis were rarely reported until 1982, when the disease became prevalent due to the AIDS epidemic (Current, 1983). As laboratory diagnostic techniques improved during subsequent years, outbreaks among immunocompetent persons were recognized as well. Over the last several years there have been a number of documented waterborne cryptosporidiosis outbreaks in the U.S., United Kingdom, Canada and other countries (Rose, 1997, Craun *et al.*, 1998).

C. Waterborne Disease Outbreaks in the United States

The occurrence of outbreaks of waterborne gastrointestinal infections, including cryptosporidiosis, may be much greater than suggested by reported surveillance data (Craun and Calderon 1996). The CDC–EPA, and the Council of State and Territorial Epidemiologists have maintained a collaborative surveillance program for collection and periodic reporting of data on waterborne disease outbreaks since 1971. The CDC database and biennial CDC-EPA surveillance summaries include data reported voluntarily by the States on the incidence and prevalence of waterborne illnesses. However, the following information demonstrates why the reported surveillance data may under-report actual outbreaks.

The U.S. National Research Council strongly suggests that the number of identified and reported outbreaks in the CDC database (both for surface and ground waters) represents a small percentage of actual waterborne disease outbreaks National Research Council, 1997; Bennett *et al.*, 1987). In practice, most waterborne outbreaks in community water systems are not recognized until a sizable proportion of the population is ill (Perz *et al.*)

Healthy adults with cryptosporidiosis may not suffer severe symptoms from the disease; therefore, infected individuals may not seek medical assistance, and their cases are subsequently not reported. Even if infected individuals consult a physician, *Cryptosporidium* may not be identified by routine diagnostic tests for gastroenteritis and, therefore, tends to be under-reported in the general population (Juranek 1995). Such obstacles to outbreak reporting indicate that the incidence of disease and outbreaks of cryptosporidiosis may be much higher than officially reported by the CDC.

The CDC database is based upon responses to a voluntary and confidential survey that is completed by State and local public health officials. CDC defines a waterborne disease outbreak as occurring when at least two persons experience a similar illness after ingesting water (Kramer *et al.*, 1996). Cryptosporidiosis water system outbreak data from the CDC database appear in Table II.1 and Table II.2.

Table II.1 illustrates the reported number of waterborne disease outbreaks in U.S. community, noncommunity, and individual drinking water systems between 1971 and 1996. According to the CDC–EPA database, a total of 652 outbreaks and 572,829 cases of illnesses were reported between 1971 and 1996 (see Table II–1). The total number of outbreaks reported includes outbreaks resulting from protozoan contamination, virus contamination, bacterial contamination, chemical contamination, and unknown factors.

TABLE II.1.—COMPARISON OF OUTBREAKS AND OUTBREAK-RELATED ILLNESSES FROM GROUND WATER AND SURFACE WATER FOR THE PERIOD 1971–1996 [1]

Water source	Total outbreaks [2]	Cases of [2] illnesses	Outbreaks in CWSs	Outbreaks in NCWSs
Ground	371 (57%)	90,815 (16%).	113	258
Surface	223 (34%)	471,375 (82%).	148	43
Other	58 (9%)	10,639 (2%).	30	19

TABLE II.1.—COMPARISON OF OUTBREAKS AND OUTBREAK-RELATED ILLNESSES FROM GROUND WATER AND SURFACE WATER FOR THE PERIOD 1971–1996 [1]—Continued

Water source	Total outbreaks [2]	Cases of [2] illnesses	Outbreaks in CWSs	Outbreaks in NCWSs
All Systems [3]	652 (100%).	572,829 (100%).	291	320

[1] Craun and Calderon, 1994, CDC, 1998.
[2] Includes outbreaks in CWSs + NCWSs + Private wells.

Epidemiological investigations of outbreaks in populations served by filtered systems have shown that treatment deficiencies have resulted in the plants' failure to remove contamination from the water. Sometimes operational deficiencies have been discovered only during post-outbreak investigations. Rose (1997) identified the following types of environmental and operating conditions commonly present in filtered surface water systems at the time cryptosporidiosis outbreaks have occurred:

- Improperly-installed, -operated, -maintained, or -interpreted monitoring
- Equipment (*e.g.*, turbidimeters);
- Inoperable flocculators, chemical injectors, or filters;
- Inadequate personnel response to failures of primary monitoring equipment;
- Filter backwash recycle;
- High concentrations of oocysts in source water with no mitigative barrier;
- Flushing of oocysts (by heavy rain or snow melt) from land surfaces upstream of the plant intakes; and
- Altered or suboptimal filtration during periods of high turbidity, with turbidity spikes detected in finished water.

From 1984 to 1994, there have been 19 reported outbreaks of cryptosporidiosis in the U.S. (Craun *et al.*, 1998). As mentioned previously, C. parvum was not identified as a human pathogen until 1976. Furthermore, cryptosporidiosis outbreaks were not reported in the U.S. prior to 1984. Ten of these cryptosporidiosis outbreaks have been documented in CWSs, NCWSs, and a private water system (Moore *et al.*, 1993; Kramer *et al.*, 1996; Levy *et al.*, 1998; ; Craun *et al.*, 1998). The remaining nine outbreaks were associated with recreational activities (Craun *et al.*, 1998). The cryptosporidiosis outbreaks in U.S. drinking water systems are presented in Table II.2.

TABLE II.2.—CRYPTOSPORIDIOSIS OUTBREAKS IN U.S. DRINKING WATER SYSTEMS

Year	Location and CWS, NCWS, or private	Cases of illness (estimated)	Source water	Treatment	Suspected cause
1984	Braun Station, TX, CWS.	117 (2,000)	Well	Chlorination	Sewage-contaminated well.
1987	Carrollton, GA, CWS	(13,000)	River	Conventional filtration/chlorination; inadequate backwashing of some filters.	Treatment deficiencies.
1991	Berks County, PA, NCWS.	(551)	Well	Chlorination	Ground water under the influence of surface water.
1992	Medford (Jackson County), OR, CWS.	(3,000; combined total for Jackson County and Talent, below).	Spring/River	Chlorination/package filtration plant.	Source not identified.
1992	Talent, OR, CWS	see Medford, OR	Spring/River	Chlorination/package filtration plant.	Treatment deficiencies.
1993	Milwaukee, WI, CWS	(403,000)	Lake	Conventional filtration	High source water contamination and treatment deficiencies.
1993	Yakima, WA, private	7	Well	N/A	Ground water under the influence of surface water.
1993	Cook County, MN, NCWS.	27	Lake	Filtered, chlorinated	Possible sewage backflow from toilet/septic tank.
1994	Clark County, NV, CWS.	103; many confirmed for cryptosporidiosis were HIV positive.	River/Lake	Prechlorination, filtration and post-filtration chlorination.	Source not identified.
1994	Walla Walla, WA, CWS.	134	Well	None reported	Sewage contamination.

Craun, *et al.*, 1998.

Six of the ten cryptosporidiosis outbreaks reported in Table II.2 originated from surface water or possibly GWUDI supplied by public drinking water systems serving fewer than 10,000 persons. The first outbreak (117 known cases, 2,000 estimated cases of illness), in Braun Station, Texas in 1984, was caused by sewage leaking into a ground water well suspected to be under the influence of surface water. A second outbreak in Pennsylvania in 1991 (551 estimated cases of illness), occurred at a well also under the influence of surface water. The third and fourth (multi-episodic) outbreaks took place in Jackson County, Oregon in 1992 (3,000 estimated cases of illness) and were linked to treatment deficiencies in the Talent, OR surface water system. A fifth outbreak (27 cases of illness) in Minnesota, in 1993, occurred at a resort supplied by lake water. Finally, a sixth outbreak (134 cases of illness) in Washington in 1994, occurred due to sewage-contaminated wells at a CWS.

Three of the ten outbreaks (Carollton, GA (1987); Talent, OR (1992); Milwaukee, WI (1993)) were caused by water supplied by water treatment plants where the recycle of filter backwash was implicated as a possible cause of the outbreak. In total, the nine outbreaks which have taken place in PWSs have caused an estimated 419,939 cases of illness. These outbreaks illustrate that when treatment in place is not operating optimally or when source water is highly contaminated, *Cryptosporidium* may enter the finished drinking water and infect drinking water consumers, ultimately resulting in waterborne disease outbreaks.

D. Source Water Occurrence Studies

Cryptosporidium is common in the environment (Rose, 1988; LeChevallier et al., 1991b). Runoff from unprotected watersheds allows the transport of these microorganisms from sources of oocysts (*e.g.*, untreated wastewater, agricultural runoff) to water bodies used as intake sites for drinking water treatment plants. If treatment operates inefficiently, oocysts may enter the finished water at levels of public health concern. A particular public health challenge is that simply increasing existing disinfection levels above those most commonly practiced for standard disinfectants (i.e., chlorine or chloramines) in the U.S. today does not appear to be an effective strategy for controlling *Cryptosporidium*.

Cryptosporidium oocysts have been detected in wastewater, pristine surface water, surface water receiving agricultural runoff or contaminated by sewage, ground water under the direct influence of surface water (GWUDI), water for recreational use, and drinking water (Rose 1997, Soave 1995). Over 25 environmental surveys have reported *Cryptosporidium* source water occurrence data from surface water or GWUDI (presented in Tables II.3 and II.4), which typically involved the collection of a few water samples from a number of sampling locations having different characteristics (e.g., polluted vs. pristine; lakes or reservoirs vs. rivers). Results are presented as oocysts per 100 liters, unless otherwise marked.

Each of the studies cited in Tables II.3 and II.4 presents *Cryptosporidium* source water occurrence information, including (where possible): (1) The number of samples collected; (2) the number of samples positive; and (3) both the means and ranges for the concentrations of *Cryptosporidium* detected (where available). However, the immunofluorescence assay (IFA) method and other *Cryptosporidium* detection methods are inaccurate and lack adequate precision. Current methods do not indicate the species of *Cryptosporidium* identified or whether the oocysts detected are viable or infectious (Frey et al., 1997). The methods for detecting *Cryptosporidium* were modeled from *Giardia* methods, therefore recovery of *Cryptosporidium* is deficient primarily because *Cryptosporidium* oocysts are more difficult to capture due to their size (*Cryptosporidium* oocysts are 4–6μθ≥m; *Giardia* cysts are 8–12μθ≥m). In addition, it is a challenge to recover *Cryptosporidium* oocysts from the filters when they are concentrated, due to the adhesive character of the organisms. Other potential limitations to the protozoan detection methods include: (1) Filters used to concentrate the water samples are easily clogged by debris from the water sample; (2) interference occurs between debris or particulates that fluoresce due to cross reactivity of antibodies, which results in false positive identifications; (3) it is difficult to view the structure of oocysts on the membrane filter or slide, resulting in false negative determinations; and (4) most methods require an advanced level of skill to be performed accurately.

Despite these limitations, the occurrence information generated from these studies demonstrates that *Cryptosporidium* occurs in source waters. The source waters for which EPA has compiled information include rivers, reservoirs, lakes, streams, raw water intakes, springs, wells under the influence of surface water and infiltration galleries. The most comprehensive study in scope and national representation (LeChevallier and Norton, 1995) will be described in further detail following Tables II.3 and II.4.

TABLE II.3.—SUMMARY OF SURFACE WATER SURVEY AND MONITORING DATA FOR CRYPTOSPORIDIUM OOCYSTS

Sample source	Number of samples (n)	Samples positive for *Cryptosporidium* (percent)[a]	Range of oocyst conc. (oocysts/100L)	Mean (oocysts/100L)	Reference
Rivers	25	100	200–11,200	2510	Ongerth and Stibbs 1987.
River	6	100	200–580,000	192,000(a)	Madore et al. 1987.

The LeChevallier and Norton (1995) study collected the most samples and repeat samples from the largest number of surface water plants nationally. LeChevallier and Norton conducted the study to determine the level of *Cryptosporidium* in surface water supplies and plant effluent water. In total, surface water sources for 72 treatment plants in 15 States and 2 Canadian provinces were sampled. Sixty-seven surface water locations were examined. The generated data set covered a two-year monitoring period (March, 1991 to January, 1993) which was combined with a previous set of data (October, 1988 to June, 1990) collected from most of the same set of systems to create a database containing five samples (IFA) per site or more for 94 percent of the 67 systems sampled. *Cryptosporidium* oocysts were detected in 135 (51.5 percent) of the 262 raw water samples collected between March 1991 and January 1993, while 87 percent of the 85 samples were positive during the survey period from October, 1988 to June, 1990. The geometric mean of detectable *Cryptosporidium* was 240 oocysts/100L, with a range from 6.5 to 6510 oocysts/100L. When the 1991–1993 results (n=262) were combined with the previous results (n=85), *Cryptosporidium* was detected in 60.2 percent of the samples. The authors hypothesize the origin of the decrease in detections in the second round of sampling to be most probably linked to fluctuating or declining source water concentrations of *Cryptosporidium* oocysts from the first reporting period to the second.

LeChevallier and Norton (1995) also detected *Cryptosporidium* oocysts in 35 of 262 plant effluent samples (13.4 percent) analyzed between 1991 and 1993. When detected, the oocyst levels averaged 3.3 oocysts/100 L (range = 0.29 to 57 oocysts/100 L). A summary of occurrence data for all samples in filtered effluents for the years 1988 to 1993 showed that 32 of the water treatment plants (45 percent) were consistently negative for *Cryptosporidium*; 24 plants (34 percent) were positive once; and 15 plants (21 percent) were positive for *Cryptosporidium* two or more times between 1988 to 1993. Forty-four of the plants (62 percent) were positive for *Giardia*, *Cryptosporidium*, or both at one time or another (LeChevallier and Norton 1995).

The oocyst recoveries and densities reported by LeChevallier and Norton (1995) are comparable to the results of another survey of treated, untreated, protected (pristine) and feces-contaminated (polluted) water supplies (Rose et al. 1991). Six of thirty-six samples (17 percent) taken from potable drinking water were positive for *Cryptosporidium*, and concentrations in these waters ranged from .5 to 1.7 oocysts/100L. In addition, a total of 188 surface water samples were analyzed from rivers, lakes, or springs in 17 States. The majority of surface water samples were obtained from Arizona, California, and Utah (126 samples in all), with others from eastern States (28 samples), northwestern States (14 samples), southern States (13 samples), midwestern States (6 samples), and Hawaii (1 sample). Arithmetic average oocyst concentrations ranged from less than 1 to 4,400 oocysts/100 L, depending on the type of water analyzed. *Cryptosporidium* oocysts were found in 55 percent of the surface water samples at an average concentration of 43 oocysts/100 L.

The LeChevallier and Norton (1995) study collected the most samples and repeat samples from the most surface water plants on a national level. Therefore, the data from this study were analyzed by EPA (EPA, 1998n) to generate a distribution of source water occurrence, presented in Table II.5.

TABLE II.5.—BASELINE EXPECTED NATIONAL SOURCE WATER CRYPTOSPORIDIUM DISTRIBUTIONS

Percentile	Source water concentration (oocysts/100L)
25	103
50	231
75	516
90	1064
95	1641
Mean	470
Standard Deviation	841

Although limited by the small number of samples per site (one to sixteen samples; most sites were sampled five times), the mean concentration at the 69

sites from the eastern and central U.S. seems to be represented by a lognormal distribution.

In addition to the source water data, several studies have detected *Cryptosporidium* oocysts in finished water. The results of these studies have been compiled in Table II.6.

TABLE II.6.—SUMMARY OF U.S. FINISHED WATER MONITORING DATA FOR CRYPTOSPORIDIUM OOCYSTS

*Plants
**Confirmed
***Presumed

These studies show that despite some treatment in place, *Cryptosporidium* may still pass through the treatment plant and into finished water.

In general, oocysts are detected more frequently and in higher concentrations in rivers and streams than in lakes and reservoirs (LeChevallier *et al.*, 1991b; Rose *et al.*, 1988a,b). Madore *et al.* (1987) found high concentrations of oocysts in a river affected by agricultural runoff (5800 oocysts/L). Such concentrations are especially significant if the contaminant removal process (*e.g.*, sedimentation, filtration) of the treatment plant is not operating effectively. Oocysts may pass through to the finished water, as LeChevallier and Norton (1995) and several other researchers also found, and infect drinking water consumers.

E. Filter Backwash and Other Process Streams: Occurrence and Impact Studies

Pathogenic microorganisms are removed during the sedimentation and/or filtration processes in a water treatment plant. Recycle streams generated during treatment, such as spent filter backwash water, sedimentation basin sludge, or thickener supernatant are often returned to the treatment train. These recycle streams, therefore, may contain high concentrations of pathogens, including chlorine-resistant *Cryptosporidium* oocysts. Recycle can degrade the treatment process, especially when entering the treatment train after the rapid mix stage, by causing a chemical imbalance, hydraulic surge and potentially overwhelming the plant's filtration capacity with a large concentration of pathogens. High oocyst concentrations found in recycle waters can increase the risk of pathogens passing through the treatment plant into finished water.

AWWA has compiled issue papers on each of the following recycle streams: Spent filter backwash water, sedimentation basin solids, combined thickener supernatant, ion-exchange regenerate, membrane concentrate, lagoon decant, mechanical dewatering device concentrate, monofill leachate, sludge drying bed leachate, and small-volume streams (*e.g.*, floor, roof, lab drains) (Environmental Engineering & Technology, 1999). In addition, EPA compiled existing occurrence data on *Cryptosporidium* in recycle streams. Through these efforts, *Cryptosporidium* occurrence data has been found for three types of recycle streams: Spent filter backwash water, sedimentation basin solids, and thickener supernatant.

Nine studies have reported the occurrence of *Cryptosporidium* for these process streams. Each study's scope and results are presented in Table II.7, and brief narratives on each major study follow the table. Note that the results of the studies, if not presented in the published report as oocysts/100L, have been converted into oocysts/100L.

TABLE II.7.—CRYPTOSPORIDIUM OCCURRENCE IN FILTER BACKWASH AND OTHER RECYCLE STREAMS

Name/location of study	Number of samples (n)	Type of sample	Cyst/oocyst concentration	Number of treatment plants sampled	Reference
Drinking water treatment facilities.	2	backflush waters from rapid sand filters.	sample 1: 26,000 oocysts/gal (calc. as 686,900 oocysts/100L). sample 2: 92,000 oocysts/gal (calc as 2,430,600 oocysts/100L)	2	Rose et al. 1986.

"Plant A"	1	rapid sand filter (sample taken 10 min. after start of backwashing)	150 oocysts/100L.		

The occurrence data available and reported are primarily for raw and recycle stream water. If filter backwash enters the treatment train as a slug load and disrupts the treatment process, it is possible its effects would not be readily seen in the finished water until several minutes or hours after returning the filter to service. In addition, the poor recovery efficiencies of the IFA *Cryptosporidium* detection method complicate measurements in dilute finished effluent waters.

As shown in Table II.7, the concentrations of oocysts in backwash water and other recycle streams are greater than the concentrations generally found in raw water. For example, four studies (Cornwell and Lee, 1993; States *et al.*, 1997; Rose *et al.*, 1986; and Colbourne, 1989) have reported *Cryptosporidium* oocyst concentrations in filter backwash water exceeding 10,000 oocysts/100L. Such concentrations illustrate that the treatment plant has been removing oocysts from the influent water during the sedimentation and/or filtration processes. As expected, the oocysts have concentrated on the filters and/or in the sedimentation basin sludge. Therefore, the recycling of such process streams (*e.g.*, filter backwash, thickener supernatant, sedimentation basin

sludge) re-introduces high concentrations of oocysts to the drinking water treatment train.

Recycle can potentially return a significant number of oocysts to the treatment plant in a short amount of time, particularly if the recycle is returned to the treatment process without prior treatment, equalization, or some other type of hydraulic detention. In addition, Di Giovanni, *et al.* (1999) presented data indicating that viable oocysts have been detected in filter backwash samples using a cell culture/polymerase chain reaction (PCR) method. Cell culture is a test of the viability/infectivity of the oocysts, while PCR identified the cells infected by *C. parvum*. Although recovery by IFA was poor (6 to 8 percent for backwash samples), 9 filter backwash recycle samples were found to contain viable and infectious oocysts, and the infectious agent was determined to be more than 98 percent similar in structure to *C. parvum*. Should filter backwash recycle disrupt normal treatment operations or should treatment not function efficiently due to other deficiencies, high concentrations of potentially viable, infectious oocysts may pass through the plant into finished drinking water. The recycle stream occurrence studies presented in Table II.7 are described in further detail in the following sections.

Thames, U.K. Water Utilities Experience with Cryptosporidium, Colbourne (1989)

In response to a cryptosporidiosis outbreak reported in February of 1989, Thames Water undertook an investigation of pathogen concentrations within the Farmoor conventional treatment plant's treatment train, finished and raw waters. The investigation occurred over a two month period, from February to April 1989 and included sampling of settled filter backwash, the supernatant from spent filter backwash, raw water, and water sampled at the end of various Thames distribution points.

On February 19, 1989 at the start of the outbreak investigation, a concentration of approximately 1,000,000 oocysts/100L was detected in the filter backwash water. During the first few days of the following investigation, the supernatant of the settled backwash water contained approximately 100,000 oocysts/100L. At the peak of the outbreak, thirty percent of Thames' distribution system samples were positive for oocysts, and ranged in concentration from 0.2 to 7700 oocysts/100L. Raw reservoir water contained oocyst concentrations ranging from .2 to 1400 oocysts/100L. After washing the filters twice in 24 hours, no oocysts were found in the settled backwash waters. Thames, U.K. Water Utilities determined that a storm causing intense precipitation and runoff resulted in elevated levels of oocysts in the source water which led to the high concentrations of oocysts entering the plant and subsequently deposited on the filters and recycled as filter backwash.

Survey of Potable Water Supplies for Cryptosporidium and Giardia, Rose, et al., 1991

In this survey, Rose, *et al.*, collected 257 samples from 17 States from 1985 to 1988. The samples were collected on cartridge filters and analyzed using variations of the IFA method. The reported percent recovery for the method was 29 to 58 percent. Filter backwash samples were a subset of the 257, 10 to 40 L samples were collected from rapid sand filters.

Rose, *et al.* reported the geometric mean of the backwash samples at 217 *Cryptosporidium* oocysts/100L. This was the highest reported average *Cryptosporidium* concentration of any of the water types tested, which included polluted and pristine surface and ground water sources, drinking water sources in addition to filter backwash recycle water.

Giardia and Cryptosporidium in Water Supplies, LeChevallier, et al. (1991c)

LeChevallier *et al.* conducted a study to determine "whether compliance with the SWTR would ensure control of *Giardia* in potable water supplies." Raw water and plant effluent samples were collected from 66 surface water treatment plants in 14 States and one Canadian province, although only selected sites were tested for *Cryptosporidium* oocysts in filter backwash and settled backwash water.

In the analysis of pathogen concentrations in the raw water and filter backwash water of the water treatment process, LeChevallier *et al.* (1991c) found very high oocyst levels in backwash water of utilities that had low raw water parasite concentrations. The pathogens were detected using a combined IFA method that the authors developed. *Cryptosporidium* levels in the initial backwash water were 57 to 61 times higher than in the raw water supplies. Raw water samples were found to contain from 7 to 106 oocysts/100L. LeChevallier *et al.* (1991c) also noted that when *Cryptosporidium* were detected in plant effluent samples (12 of 13 times), the organisms were also observed in the backwash samples. The study concluded that the consistency of these results shows that accumulation of parasites in the treatment filters (and subsequent release in the filter backwash recycle water) could be related to subsequent passage through treatment barriers.

Recycle Stream Effects on Water Treatment, Cornwell and Lee (1993, 1994)

The results described in Cornwell and Lee's 1993 American Water Works Association Research Foundation Report and 1994 Journal of the American Water Works Association article on the Bangor and Moshannon Valley, PA water treatment plants are consistent with the results of States *et al.* (1997). In total, Cornwell and Lee investigated eight water treatment plants, examining treatment efficiencies including several recycle streams and their impacts, and reporting a range of pathogen and other water quality data. All of the pathogen testing was conducted using the EPA IFA method refined by LeChevallier, *et al.* (1991c).

Cornwell and Lee (1993) conducted two rounds of sampling at both the Bangor and Moshannon plants, sampling the different recycle and treatment streams as eight-hour composites. They detected *Cryptosporidium* concentrations of over 16,500 *Cryptosporidium* oocysts/100L in the backwash water at an adsorption clarifier plant (Moshannon Valley) and over 850 *Cryptosporidium* oocysts/100L in backwash water from a direct filtration plant (Bangor). The parasite levels in the backwash samples were significantly higher than concentrations found in the raw source water, which contained *Cryptosporidium* oocyst concentrations of 13–20 oocysts/100L at the Moshannon Valley plant and 6–140 oocysts/100L at the Bangor plant.

In addition, Cornwell and Lee determined oocyst concentrations for two other recycle streams, combined thickener supernatant and sedimentation basin solids. The supernatant pathogen concentrations were reported at 141 *Cryptosporidium* oocysts/100L at the Bangor plant, and levels were reported at 82 to 420 oocysts/100L for the Moshannon plant in Rounds 1 and 2 of sampling, respectively. The sedimentation basin sludge was reported at 2,642 *Cryptosporidium* oocysts/100L in the clarifier sludge from the Moshannon Valley plant.

Giardia and Cryptosporidium in Backwash Water from Rapid Sand Filters Used for Drinking Water, Karanis et al. (1996) and Distribution and Removal of Giardia and Cryptosporidium in Water Supplies in Germany Karanis, et al. (1998)

Karanis *et al.* (1996 and 1998) conducted a four-year research study (samples collected from July, 1993–December, 1995) on the efficiency of *Cryptosporidium* removal by six different surface water treatment plants from Germany, all of which treat by conventional filtration. The method used was an IFA method dubbed the "EPA method", developed by Jakubowski and Ericksen, 1979.

Karanis et al. (1996) detected *Cryptosporidium* in 82 percent of the samples of backwash water from rapid sand filters of a water treatment plant ("Plant C") supplied by small rivers. Eight out of 12 raw water samples tested were positive for *Cryptosporidium* (range of 0.8 to 109 oocysts/100L). Backwash water samples collected by continuous flow centrifugation were positive for *Cryptosporidium* in 8 of 11 samples (range of 1 to 69/100L). Of 39 samples collected using cartridge filters, 33 were positive for *Cryptosporidium* (range of 0.8 to 252/100L). The authors called attention to the high detection rate of *Cryptosporidium* in the backwash waters (82 percent) of Plant C and to the fact that the supernatant following sedimentation was not free from cysts and oocysts (Karanis et al. 1996).

In the 1998 publication, Karanis et al. compiled the data from the 1996 study with more backwash occurrence data collected from another treatment plant ("Plant A"). The filter backwash of Plant A was sampled 10 minutes after the start of backwashing, and the backwash water was found to contain 150 *Cryptosporidium* oocysts/100L.

Protozoa in River Water: Sources, Occurrence, and Treatment, States, et al. (1997)

Over a two year period (July, 1994-June, 1996), States et al. sampled monthly for *Cryptosporidium* in the raw, settled, filtered and filter backwash water at the Pittsburgh Drinking Water Treatment Plant, in order to gauge the efficiency of pathogen removal at the plant. States et al. identified several sources contributing oocysts to the influent water, including sewage plant effluent, combined sewer overflows, dairy farm streams, and recycling of backwash water. All pathogen sampling was conducted with the IFA method. *Cryptosporidium* occurred in the raw Allegheny river water supplying the plant with a geometric mean of 31 oocysts/100L in 63 percent of samples collected, and ranged from non-detect to 2,333 oocysts/100L (see Table II.3 for source water information). Of the filter backwash samples, a geometric mean of 328 oocysts/100L was found at an occurrence rate of 38 percent of samples, with a range from non-detect to 13,158 oocysts/100L. The fact that the mean concentration of *Cryptosporidium* oocysts in backwash water can be substantially higher than the oocyst concentration in untreated river water suggests that recycling untreated filter backwash water can be a significant source of this parasite to water within the treatment process.

F. Summary and Conclusions

Cryptosporidiosis is a disease without a therapeutic cure, and its causative agent, *Cryptosporidium*, is resistant to chlorine disinfection. *Cryptosporidium* has been known to cause severe illness, especially in immunocompromised individuals, and can be fatal. Several waterborne cryptosporidiosis outbreaks have been reported, and it is likely that others have occurred but have gone unreported. *Cryptosporidium* has been detected in a wide range of source waters, documented in over 30 studies from the literature, and it has been found at levels of concern in filter backwash water and other recycle streams.

One of the key regulations EPA has developed and implemented to counter pathogens in drinking water is the SWTR (54 FR 27486, June 19, 1989). The SWTR requires that surface water systems have sufficient treatment to reduce the source water concentration of *Giardia* and viruses by at least 99.9 percent (3 log) and 99.99 percent (4 log), respectively. A shortcoming of the SWTR, however, is that the rule does not specifically control for *Cryptosporidium*. The first report of a recognized waterborne outbreak caused by *Cryptosporidium* was published during the development of the SWTR (D'Antonio et al. 1985).

In 1998, the Agency finalized the IESWTR that enhances the microbial pathogen protection provided by the SWTR for systems serving 10,000 or more persons. The IESWTR includes an MCLG of zero for *Cryptosporidium* and requires a minimum 2-log (99 percent) removal of *Cryptosporidium*, linked to enhanced combined filter effluent and individual filter turbidity control provisions.

Several provisions of today's proposed rule, the LT1FBR, are designed to address the concerns covered by the IESWTR, improving control of *Cryptosporidium* and other microbial contaminants, for the portion of the public served by small PWSs (i.e., serving less than 10,000 persons). The LT1FBR also addresses the concern that for all PWSs that practice recycling, *Cryptosporidium* (and other emerging pathogens resistant to standard disinfection practice) are reintroduced to the treatment process of PWSs by the recycle of spent filter backwash water, solids treatment residuals, and other process streams.

Insufficient treatment practices have been cited as the cause of several reported waterborne disease outbreaks (Rose, 1997). Rose (1997) also found that a reduction in turbidity is indicative of a more efficient filtration process. Therefore, the turbidity and filter monitoring requirements of today's proposed LT1FBR will ensure that the removal process necessary to protect the public from cryptosporidiosis is operating properly, and the recycle stream provisions will ensure that the treatment process is not disrupted or operating inefficiently. The LT1FBR requirements that address the potential for *Cryptosporidium* to enter the finished drinking water supply will be described in more detail in the following sections.

III. Baseline Information-Systems Potentially Affected By Today's Proposed Rule

EPA utilized the 1997 state-verified version of the Safe Drinking Water Information System (SDWIS) to develop the total universe of systems which utilize surface water or groundwater under the direct influence (GWUDI) as sources. This universe consists of 11,593 systems serving fewer than 10,000 persons, and 2,096 systems serving 10,000 or more persons. Given this initial baseline, the Agency developed estimates of the number of systems which would be affected by components of today's proposed rule by utilizing three primary sources: Safe Drinking Water Information Systems; Community Water Supply Survey; and Water: Stats. A brief overview of each of the data sources is described in the following paragraphs.

Safe Drinking Water Information System (SDWIS)

SDWIS contains information about PWSs including violations of EPA's regulations for safe drinking water. Pertinent information in this database includes system name and ID, population served, geographic location,

type of source water, and type of treatment (if provided).

Community Water System Survey (CWSS)

EPA conducted the 1995 CWSS to obtain data to support its development and evaluation of drinking water regulations. The survey consisted of a stratified random sample of 3,700 water systems nationwide (surface water and groundwater). The survey asked 24 operational and 13 financial questions.

Water:/Stats (WaterStats)

WaterStats is an in-depth database of water utility information compiled by the American Water Works Association. The database consists of 898 utilities of all sizes and provides a variety of data including treatment information.

Information regarding estimates of the number of systems which may potentially be affected by specific components of today's proposed rule can be found in the discussion of each proposed rule component in Section IV.

IV. Discussion of Proposed LT1FBR Requirements

A. Enhanced Filtration Requirements

As discussed earlier in this preamble, one of the key objectives of today's proposed rule is ensuring that an adequate level of public health protection is maintained in order to minimize the risk associated with *Cryptosporidium*. While the current SWTR provides protection from viruses and *Giardia*, it does not specifically address *Cryptosporidium*, which has been linked to outbreaks resulting in over 420,000 cases of gastrointestinal illness in the 1990s (403,000 associated with the Milwaukee outbreak). Because of *Cryptosporidium's* resistance to disinfection practices currently in place at small systems throughout the country, the Agency believes enhanced filtration requirements are necessary to improve control of this microbial pathogen.

In the IESWTR, the Agency utilized an approach consisting of three major components to address *Cryptosporidium* at plants serving populations of 10,000 or more. The first component required systems to achieve a 2 log removal of *Cryptosporidium*. The second component consisted of strengthened turbidity requirements for combined filter effluent. The third component required individual filter turbidity monitoring.

In today's proposed rule addressing systems serving fewer than 10,000 persons, the Agency is utilizing the same framework. Where appropriate, EPA has evaluated additional options in an effort to alleviate burden on small systems while still maintaining a comparable level of public health protection.

The following sections describe the overview and purpose of each of the rule components, relevant data utilized during development, the requirements of today's proposed rule (including consideration of additional options where appropriate), and a request for comment regarding each component.

1. Two Log *Cryptosporidium* Removal Requirement

a. Two Log Removal

i. Overview and Purpose

The 1998 IESWTR (63 FR 69477, December 16, 1998) establishes an MCLG of zero for *Cryptosporidium* in order to adequately protect public health. In conjunction with the MCLG, the IESWTR also established a treatment technique requiring 2 log *Cryptosporidium* removal for all surface water and GWUDI systems which filter and serve populations of 10,000 or more people, because it was not economically and technologically feasible to accurately ascertain the level of *Cryptosporidium* using current analytical methods. The Agency believes it is appropriate and necessary to extend this treatment technique of 2 log *Cryptosporidium* removal requirement to systems serving fewer than 10,000 people.

ii. Data

As detailed later in this section, EPA believes that the data and principles supporting requirements established for systems serving populations of 10,000 or more are also applicable to systems serving populations fewer than 10,000. The following section provides information and data regarding: (1) the estimated number of small systems subject to the proposed 2 log *Cryptosporidium* removal requirement; and (2) *Cryptosporidium* removal using various filtration technologies.

Estimate of the Number of Systems Subject to 2 log Cryptosporidium Removal Requirement

Using the baseline described in Section III of today's proposed rule, the Agency applied percentages of surface water and GWUDI systems which filter (taken from the 1995 CWSS) in order to develop an estimate of the number of systems which filter and serve fewer than 10,000 persons. This resulted in an estimated 9,133 surface water and GWUDI systems that filter which may be subject to the proposed removal requirement. Table IV.1 provides this estimate broken down by system size and type.

TABLE IV.1.—ESTIMATE OF SYSTEMS SUBJECT TO 2 LOG CRYPTOSPORIDIUM REMOVAL REQUIREMENT [a]

Cryptosporidium Removal Using Conventional and Direct Filtration

During development of the LT1FBR, the Agency reviewed the results of several studies that demonstrated the ability of conventional and direct filtration systems to achieve 2 log removal of *Cryptosporidium* at well operated plants achieving low turbidity levels. Table IV.2 provides key information from these studies. A brief description of each study follows the table.

TABLE IV.2.—CONVENTIONAL AND DIRECT FILTRATION REMOVAL STUDIES

Type of treatment	Log removal	Experimental design	Researcher
Conventional	*Cryptosporidium* 4.2–5.2	Pilot plants	Patania *et al.* 1995
	Giardia 4.1–5.1	Pilot plants	Patania *et al.* 1995

	Giardia 2.7–5.4		

Patania, Nancy L, et al. 1995

This study consisted of four pilot studies which evaluated treatment variables for their impact on *Cryptosporidium* and *Giardia* removal efficiencies. Raw water turbidities in the study ranged between 0.2 and 13 NTU. When treatment conditions were optimized for turbidity and particle removal at four different sites, *Cryptosporidium* removal ranged from 2.7 to 5.9 log and *Giardia* removal ranged from 3.4 to 5.1 log during stable filter operation. The median turbidity removal was 1.4 log, whereas the median particle removal was 2 log. Median oocyst and cyst removal was 4.2 log. A filter effluent turbidity of 0.1 NTU or less resulted in the most effective cyst removal, up to 1 log greater than when filter effluent turbidities were greater than 0.1 NTU (within the 0.1 to 0.3 NTU range). *Cryptosporidium* removal rates of less than 2.0 log occurred at the end of the filtration cycle.

Nieminski, Eva C. and Ongerth, Jerry E. 1995

This 2-year study evaluated *Giardia* and *Cryptosporidium* cyst removal through direct and conventional filtration. The source water of the full scale plant had turbidities typically between 2.5 and 11 NTU with a maximum of 28 NTU. The source water of the pilot plant typically had turbidities of 4 NTU with a maximum of 23 NTU. For the pilot plant achieving filtered water turbidities between 0.1–0.2 NTU, *Cryptosporidium* removals averaged 3.0 log for conventional treatment and 3.0 log for direct filtration, while the respective *Giardia* removals averaged 3.4 log and 3.3 log. For the full scale plant achieving similar filtered water turbidities, *Cryptosporidium* removal averaged 2.25 log for conventional treatment and 2.8 log for direct filtration, while the respective *Giardia* removals averaged 3.3 log for conventional treatment and 3.9 log for direct filtration. Differences in performance between direct filtration and conventional treatment by the full scale plant were attributed to differences in source water quality during the filter runs.

Ongerth, Jerry E. and Pecaroro, J.P. 1995

A 1 gallon per minute (gpm) pilot scale water filtration plant was used to measure removal efficiencies of *Cryptosporidium* and *Giardia* using very low turbidity source waters (0.35 to 0.58 NTU). With optimal coagulation, 3 log removal for both pathogens were obtained. In one test run, where coagulation was intentionally sub-optimal, the removals were only 1.5 log for *Cryptosporidium* and 1.3 log for *Giardia*. This demonstrates the importance of proper coagulation for cyst removal even though the effluent turbidity was less than 0.5 NTU.

LeChevallier, Mark W. and Norton, William D. 1992

The purpose of this study was to evaluate the relationships among *Giardia*, *Cryptosporidium*, turbidity, and particle counts in raw water and filtered water effluent samples at three different systems. Source water turbidities ranged from less than 1 to 120 NTU. Removals of *Giardia* and *Cryptosporidium* (2.2 to 2.8 log) were slightly less than those reported by other researchers, possibly because full scale plants were studied under less ideal conditions than the pilot plants. The participating treatment plants operated within varying stages of treatment optimization. The median removal achieved was 2.5 log for *Cryptosporidium* and *Giardia*.

LeChevallier, Mark W.; Norton, William D.; and Lee, Raymond G. 1991b

This study evaluated removal efficiencies for *Giardia* and *Cryptosporidium* in 66 surface water treatment plants in 14 States and 1 Canadian province. Most of the utilities achieved between 2 and 2.5 log removals for both *Giardia* and *Cryptosporidium*. When no oocysts were detected in the finished water, occurrence levels were assumed at the detection limit for calculating removal efficiencies.

Foundation for Water Research 1994

This study evaluated *Cryptosporidium* removal efficiencies for several treatment processes (including conventional filtration) using a pilot plant and bench-scale testing. Raw water turbidity ranged from 1 to 30 NTU. *Cryptosporidium* oocyst removal was between 2 and 3 log using conventional filtration. Investigators

concluded that any measure which reduced filter effluent turbidity should reduce risk from *Cryptosporidium*, and also showed the importance of selecting proper coagulants, dosages, and treatment pH. In addition to turbidity, increased color and dissolved metal ion coagulant concentration in the effluent are indicators of reduced efficiency of coagulation/flocculation and possible reduced oocysts removal efficiency.

Kelley, M.B. et al. 1995

This study evaluated two U.S. Army installation drinking water treatment systems for the removal of *Giardia* and *Cryptosporidium*. Protozoa removal was between 1.5 and 2 log. The authors speculated that this low *Cryptosporidium* removal efficiency occurred because the coagulation process was not optimized, although the finished water turbidity was less than 0.5 NTU.

West, Thomas; et al. 1994

This study evaluated the removal efficiency of *Cryptosporidium* through direct filtration using anthracite mono-media at filtration rates of 6 and 14 gpm/sq.ft. Raw water turbidity ranged from 0.3 to 0.7 NTU. Removal efficiencies for *Cryptosporidium* at both filtration rates were 2 log during filter ripening (despite turbidity exceeding 0.2 NTU), and 2 to 3 log for the stable filter run. Log removal declined significantly during particle breakthrough. When effluent turbidity was less than 0.1 NTU, removal typically exceeded 2 log. Log removals of *Cryptosporidium* generally exceeded that for particle removal.

Swertfeger et al., 1998

The Cincinnati Water Works conducted a 13 month pilot study to determine the optimum filtration media and depth of the media to replace media at its surface water treatment plant. The study investigated cyst and oocyst removal through filtration alone (excluding chemical addition, mixing, or sedimentation) and examined sand media, dual media, and deep dual media. Cyst and oocyst removal by each of the media designs was > 2.5 log by filtration alone.

Dugan et al., 1999

EPA conducted pilot scale experiments to assess the ability of conventional treatment to control *Cryptosporidium* oocysts under steady state conditions. The work was performed with a pilot plant designed to minimize flow rates and the number of oocysts required for spiking. With proper coagulation control, the conventional treatment process achieved at least 2 log removal of *Cryptosporidium*. In all cases where 2 log removal was not achieved, the plant also did not comply with the IESWTR filter effluent turbidity requirements.

All of the studies described above indicate that rapid granular filtration, when operated under appropriate coagulation conditions and optimized to achieve a filtered water turbidity level of less than 0.3 NTU, should achieve at least 2 log of *Cryptosporidium* removal. Removal rates vary widely, up to almost 6 log, depending upon water matrix conditions, filtered water turbidity effluent levels, and where and when removal efficiencies are measured within the filtration cycle. The highest log pathogen removal rates occurred in those pilot plants and systems which achieved very low finished water turbidities (less than 0.1 NTU). Other key points related to the studies include:

- As turbidity performance improves for treatment of a particular water, there tends to be greater removal of *Cryptosporidium*.
- Pilot plant study data in particular indicate high likelihood of achieving at least 2 log removal when plant operation is optimized to achieve low turbidity levels. Moreover, pilot studies represented in Table IV.2.a tend to be for low-turbidity waters, which are considered to be the most difficult to treat regarding particulate removal and associated protozoan removal.
- Because high removal rates were demonstrated in pilot studies using lower-turbidity source waters, it is likely that similar or higher removal rates can be achieved for higher-turbidity source waters.
- Determining *Cryptosporidium* removal in full-scale plants can be difficult due to the fact that data includes many non-detects in the finished water. In these cases, finished water concentration levels are assigned at the detection limit and are likely to result in over-estimation of oocysts in the finished water. This tends to under-estimate removal levels.
- Another factor that contributes to differences among the data is that some of the full-scale plant data comes from plants that are not optimized, but meet existing SWTR requirements. In such cases, oocyst removal may be less than 2 log. In those studies that indicate that full-scale plants are achieving greater than 2 log removal (LeChevallier studies in particular), the following characteristics pertain:

—Substantial numbers of filtered water measurements resulted in oocyst detections;

—Source water turbidity tended to be relatively high compared to some of the other studies; and

—A significant percentage of these systems were also achieving low filtered water turbidities, substantially less than 0.5 NTU.

- Removal of *Cryptosporidium* can vary significantly in the course of the filtration cycle (i.e., at the start-up and end of filter operations versus the stable period of operation).

Cryptosporidium Removal Using Slow Sand and Diatomaceous Earth Filtration

During development of the IESWTR, the Agency also evaluated several studies which demonstrated that slow sand and diatomaceous earth filtration were capable of achieving at least 2 log removal of *Cryptosporidium*. Table IV.3 provides key information from these studies. A brief description of each study follows the table.

TABLE IV.3.—SLOW SAND AND DIATOMACEOUS EARTH FILTRATION REMOVAL STUDIES

Type of treatment	Log removal	Experimental design	Researcher
Slow-sand filtration ..	Giardia & Cryptosporidium > 3	Pilot plant at 4.5 to 16.5°C.	Shuler and Ghosh 1991.
	Cryptosporidium 4.5	Full-scale plant	Imms et. al. 1995.
Diatomaceous earth filtration.	Giardia & Cryptosporidium > 3	Pilot plant, ...	Shuler et. al. 1990.
	Cryptosporidium 3.3–6.68	Bench scale	Ongerth & Hutton, 1997.

Shuler and Ghosh 1991

This pilot study was conducted to evaluate the ability of slow sand filters to remove *Giardia*, *Cryptosporidium*, coliforms, and turbidity. The pilot study was conducted at Pennsylvania State University using a raw water source with a turbidity ranging from 0.2–0.4 NTU. Influent concentration of

Cryptosporidium oocysts during the pilot study ranged from 1,300 to 13,000 oocysts/gallon. Oocyst removal was shown to be greater than 4 log.

Timms et al 1995

This pilot study was conducted to evaluate the efficiency of slow sand filters at removing *Cryptosporidium*. A pilot plant was constructed of 1.13 m^2 in area and 0.5 m in depth with a filtration rate of 0.3m/h. The filter was run for 4–5 weeks before the experiment to ensure proper operation. *Cryptosporidium* oocysts were spiked to a concentration of 4,000/L. Results of the study indicated a 4.5 log removal of *Cryptosporidium* oocysts.

Shuler et al 1990

In this study, diatomaceous earth (DE) filtration was evaluated for removal of *Giardia*, *Cryptosporidium*, turbidity and coliform bacteria. The study used a 0.1m^2 pilot scale DE filter with three grades of diatomaceous earth (A, B, and C). The raw water turbidity varied between 0.1 and 1 NTU. Filter runs ranged from 2 days to 34 days. A greater than 3 log removal of *Cryptosporidium* was demonstrated in the 9 filter runs which made up the study.

Ongerth and Hutton, 1997

Bench scale studies were used to define basic characteristics of DE filtration as a function of DE grade and filtration rate. Three grades of DE were used in the tests. *Cryptosporidium* removal was measured by applying river water seeded with *Cryptosporidium* to Walton test filters. Tests were run for filtration rates of 1 and 2 gpm/sq ft. Each run was replicated 3 times. Approximately 6 logs reduction in the concentration of *Cryptosporidium* oocysts was expected under normal operating conditions.

Cryptosporidium Removal Using Alternative Filtration Technologies

EPA recognizes that systems serving fewer than 10,000 individuals employ a variety of filtration technologies other than those previously discussed. EPA collected information regarding several other popular treatment techniques in an effort to verify that these treatments were also technically capable of achieving a 2 log removal of *Cryptosporidium*. A brief discussion of these alternative technologies follows along with studies demonstrating effective *Cryptosporidium* removals.

Membrane Filtration

Membrane filtration (Reverse Osmosis, Nanofiltration, Ultrafiltration, and Microfiltration) relies upon pore size in order to remove particles from water. Membranes possess a pore size smaller than that of a *Cryptosporidium* oocyst, enabling them to achieve effective log removals. The smaller the pore size, the more effective the rate of removal. Typical pore sizes for each of the four types of membrane filtration are shown below:

- Microfiltration—1–0.1 microns (μm)
- Ultrafiltration—0.1–.01 (μm)
- Nanofiltration—.01–.001 (μm)
- Reverse Osmosis—<.001 (μm)

Bag Filtration

Bag filters are non-rigid, disposable, fabric filters where water flows from inside of the bag to the outside of the bag. One or more filter bags are contained within a pressure vessel designed to facilitate rapid change of the filter bags when the filtration capacity has been used up. Bag filters do not generally employ any chemical coagulation. The pore sizes in the filter bags designed for protozoa removal generally are small enough to remove protozoan cysts and oocysts but large enough that bacteria, viruses and fine colloidal clays would pass through. Bag filter studies have shown a significant range of results in the removal of *Cryptosporidium* oocysts (0.33–3.2 log). (Goodrich, 1995)

Cartridge Filtration

Cartridge filtration also relies on physical screening to remove particles from water. Typical cartridge filters are pressure filters with glass, fiber or ceramic membranes, or strings wrapped around a filter element housed in a pressure vessel (USEPA, 1997a).

The Agency evaluated several studies which demonstrate the ability of various alternative filtration technologies to achieve 2 log removal of *Cryptosporidium* (in several studies 2 log removal of 4–5 (μm) microspheres were used as a surrogate for *Cryptosporidium*). These studies demonstrate that 2 log removal was consistently achievable in all but bag filters. Table IV.4 provides key information from these studies. A brief description of each study follows:

TABLE IV.4.—ALTERNATIVE FILTRATION REMOVAL STUDIES

Type of treatment	Log removal	Experimental design	Researcher
Microfiltration	*Cryptosporidium* 4.2–4.9 log	Bench Scale	Jacangelo *et al.* 1997.

	Particles (5–15 um) > 2 log	Bench Scale	Land, 1998.

Jacangelo et al., 1997

Bench scale and pilot plant tests were conducted with microfiltration and ultrafiltration filters (using six different membranes) in order to evaluate microorganism removal. Bench scale studies were conducted under worst case operating conditions (direct flow filtration at the maximum recommended transmembrane pressure using deionized water slightly buffered at pH 7). Log removal ranged from 4.7 to 5.2 log removal. Pilot plant results ranged from 6.0–7.0 log removal during worst-case operating conditions (*i.e.*, direct filtration immediately after backwashing at the maximum recommended operating transmembrane pressure).

Drozd and Schartzbrod, 1997

A pilot plant system was established to evaluate the removal of *Cryptosporidium* using crossflow microfiltration (.2 µm porosity). Results demonstrated *Cryptosporidium* log removals of 4.3 to greater than 5.5 with a corresponding mean filtrate turbidity of 0.25 NTU.

Collins et. al., 1996

This study consisted of bench scale testing of *Cryptosporidium* and *Giardia* log removals using an ultrafiltration system. Log removal of *Cryptosporidium* ranged from 5.73 to 5.89 log, while removal of *Giardia* ranged from 5.75 to 5.85 log.

Hirata & Hashimoto, 1998

Pilot scale testing using microfiltration (nominal pore size of .25 µm) and ultrafiltration (nominal cut-off molecular weight (MW) 13,000 daltons) was conducted to determine *Cryptosporidium* oocyst removal. Results conducted on the ultrafiltration units ranged from 7.1 to 7.5 logs of *Cryptosporidium* removal. Results of the microfiltration studies yielded log removals from 7.0 to 7.7 log.

Lykins et al., [1994]

An ultrafiltration system was evaluated for the removal of *Cryptosporidium* oocysts at the USEPA Test and Evaluation Facility in Cincinnati, Ohio. The filter run was just over 48 hours. A 3.5 log removal of *Cryptosporidium* oocysts was observed. Additionally, twenty-four experiments were performed using 4.5 µm polystyrene microspheres as a surrogate for *Cryptosporidium* because of a similar particle distribution. Log removal of microspheres ranged from 3 to 4 log.

Adham et al., 1998

This study was conducted to evaluate monitoring methods for membrane integrity. In addition to other activities, microbial challenge tests were conducted on reverse osmosis (RO) membranes to both determine log removals and evaluate system integrity. Log removal of *Cryptosporidium* and *Giardia* was >5.7 log in uncompromised conditions, and > 4.5 log in compromised conditions.

Goodrich et al., 1995

This study was conducted to evaluate removal efficiencies of three different bag filtration systems. Average filter pore size of the filters was 1 µm while surface area ranged from 35 to 47 sq ft. Bags were operated at 25, 50 and 100 percent of their maximum flow rate while spiked with 4.5 µm polystyrene microspheres (beads) as a surrogate for *Cryptosporidium*. Bead removal ranged from .33 to 3.2 log removal.

Goodrich et al 1995.

This study evaluated a cartridge filter with a 2 µm rating and 200 square feet of surface area for removal efficiency of *Cryptosporidium* sized particles. The filter was challenge tested with 4.5 µm polystyrene microspheres as a surrogate for *Cryptosporidium*. Flow was set at 25 gpm with 50 psi at the inlet. Results from two runs under the same conditions exhibited log removals of 3.52 and 3.68.

Land, 1998

An alternative technology demonstration test was conducted to evaluate the ability of a cartridge filter to achieve 2 log removal of particles in the 5 to 15 µm range. The cartridge achieved at least 2 log removal of the 5 to 25 µm particles 95 percent of the time up to a 20 psi pressure differential. The filter achieved at least 2 log removal of 5 to 15 µm particles up to 30-psi pressure differential.

While the studies above note that alternative filtration technologies have demonstrated in the lab the capability to achieve a 2 log removal of *Cryptosporidium*, the Agency believes that the proprietary nature of these technologies necessitates a more rigorous technology-specific determination be made. Given this issue, the Agency believes that its Environmental Technology Verification (ETV) Program can be utilized to verify the performance of innovative technologies. Managed by EPA's Office of Research and Development, ETV was created to substantially accelerate the entrance of new environmental technologies into the domestic and international marketplace. ETV consists of 12 pilot programs, one of which focuses on drinking water. The program contains a protocol for physical removal of microbiological and particulate contaminants, including test plans for bag and cartridge filters and membrane filters (NSF, 1999). These protocols can be utilized to determine whether a specific alternative technology can effectively achieve a 2 log removal of *Cryptosporidium*, and under what parameters that technology must be operated to ensure consistent levels of removal. Additional information on the ETV program can be found on the Agency's website at http://www.epa.gov/etv.

iii. Proposed Requirements

Today's proposed rule establishes a requirement for 2 log removal of *Cryptosporidium* for surface water and GWUDI systems serving fewer than 10,000 people that are required to filter under the SWTR. Compliance with the combined filter effluent turbidity requirements, as described later, ensures compliance with the 2 log removal requirement. The requirement for a 2 log removal of *Cryptosporidium* applies between a point where the raw water is not subject to recontamination by surface water runoff and a point downstream before or at the first customer.

iv. Request for Comments

EPA requests comment on the 2 log removal requirement as discussed. The Agency is also soliciting public comment and data on the ability of alternative filtration technologies to achieve 2 log *Cryptosporidium* removal.

2. Turbidity Requirements

a. Combined Filter Effluent

i. Overview and Purpose

In order to address concern with *Cryptosporidium*, EPA has analyzed log removal performance by well operated plants (as described in the previous section) as well as filter performance among small systems to develop an appropriate treatment technique requirement that assures an increased level of *Cryptosporidium* removal. In evaluating combined filter performance requirements, EPA considered the strengthened turbidity provisions within the IESWTR and evaluated whether these were appropriate for small systems as well.

ii. Data

In an effort to evaluate combined filter effluent (CFE) requirements, EPA collected data in several areas to

supplement existing data, and address situations unique to smaller systems. This data includes:

- An estimate of the number of systems subject to the proposed strengthened turbidity requirements;
- Current turbidity levels at systems throughout the U:S. serving populations fewer than 10,000;
- The ability of package plants to meet strengthened turbidity standards; and
- The correlation between meeting CFE requirements and achieving 2 log removal of *Cryptosporidium*.

Estimate of the Number of Systems Subject to Strengthened CFE Turbidity Standards

Using the estimate of 9,134 systems which filter and serve fewer than 10,000 persons (as described in Section IV.A.1 of today's proposal), the Agency used the information contained within the CWSS database to estimate the number of systems which utilized specific types of filtration. The data was segregated based on the type of filtration utilized and the population size of the system. Percentages were derived for each of the following types of filtration:

- Conventional and Direct Filtration;
- Slow Sand Filtration;
- Diatomaceous Earth Filtration; and
- Alternative Filtration Technologies.

The percentages were applied to the estimate discussed in Section IV.A.1 of today's proposal for each of the respective population categories. Based on this analysis, the Agency estimates 5,896 conventional and direct filtration systems will be subject to the strengthened combined filter effluent turbidity standards. EPA estimates 1,756 systems utilize slow sand or diatomaceous earth filtration, and must continue to meet turbidity standards set forth in the SWTR. The remaining 1,482 systems are estimated to use alternative filtration technologies and will be required to meet turbidity standards as set forth by the State upon analysis of a 2 log *Cryptosporidium* demonstration conducted by the system.

Current Turbidity Levels

EPA has developed a data set which summarizes the historical turbidity performance of various filtration plants serving populations fewer than 10,000 (EPA, 1999d). The data set represents those systems that were in compliance with the turbidity requirements of the SWTR during all months being analyzed. The data set consists of 167 plants from 15 States. Table IV.5 provides information regarding the number of plants from each State. The data set includes plants representing each of the five population groups utilized in the CWSS (25–100, 101–500, 501–1,000, 1,001–3,300, and 3,301–10,000). The Agency has also received an additional data set from the State of California (EPA, 2000). This data has not been included in the assessments described below. The California data demonstrates similar results to the larger data set discussed below.

TABLE IV.5.—SUMMARY OF LT1FBR TURBIDITY DATA SET

State	Number of Plants
Alabama	1
California	1
Colorado	16
Illinois	13
Kansas	20
Louisiana	6
Minnesota	3
Montana	2
North Carolina	16
Ohio	4
Pennsylvania	27
South Carolina	16
Texas	23
Washington	17
West Virginia	2
Total	167

(EPA, 1999d)

This data was evaluated to assess the national impact of modifying existing turbidity requirements. The current performance of plants was assessed with respect to the number of months in which selected 95th percentile and maximum turbidity levels were met. The data show that approximately 88 percent of systems are also currently meeting the new requirements of a maximum turbidity limit of 1 NTU (Figure IV.1). With respect to the 95th percentile turbidity limit, roughly 46 percent of these systems are currently meeting the new requirement of 0.3 NTU (Figure IV.2) while approximately 70 percent meet this requirement 9 months out of the year. Estimates for systems needing to make changes to meet a turbidity performance limit of 0.3 NTU were based on the ability of systems currently to meet a 0.2 NTU. This assumption was intended to take into account a utility's concern with possible turbidity measurement error and to reflect the expectation that a number of utilities will attempt to achieve finished water turbidity levels below the regulatory performance level to assure compliance.

As depicted in Figure IV.1 and IV.2, the tighter turbidity performance standards for combined filter effluent in today's proposed rule reflect the actual, current performance many systems already achieve nationally. Revising the turbidity criteria effectively ensures that these systems continue to perform at their current level while also improving performance of a substantial number of systems that currently meet existing SWTR criteria, but operate at turbidity levels higher than proposed in today's rule.

Package Plants

During development of today's proposed rule, some stakeholders expressed concern regarding the ability of "package plants" to meet the proposed requirements. EPA evaluated these systems by gathering data from around the country. The information affirms the Agency's belief that package plants can and currently do meet the turbidity limits in today's proposed rule.

Package plants combine the processes of rapid mixing, flocculation, sedimentation and filtration (rapid sand, mixed or dual media filters) into a single package system. Package Filtration Plants are preconstructed, skid mounted and transported virtually assembled to the site. The use of tube settlers, plate settlers, or adsorption clarifiers in some Package Filtration Plants results in a compact size and more treatment capacity.

Package Filtration Plants are appropriate for treating water of a fairly consistent quality with low to moderate turbidity. Effective treatment of source waters containing high levels of or extreme variability in turbidity levels requires skilled operators and close operational attention. High turbidity or excessive color in the source water could require chemical dosages above the manufacturer's recommendations for the particular plant. Excessive turbidity levels may require presedimentation or a larger capacity plant. Specific design criteria of a typical package plant and operating and maintenance requirements can vary, but an example schematic is depicted in Figure IV.3.

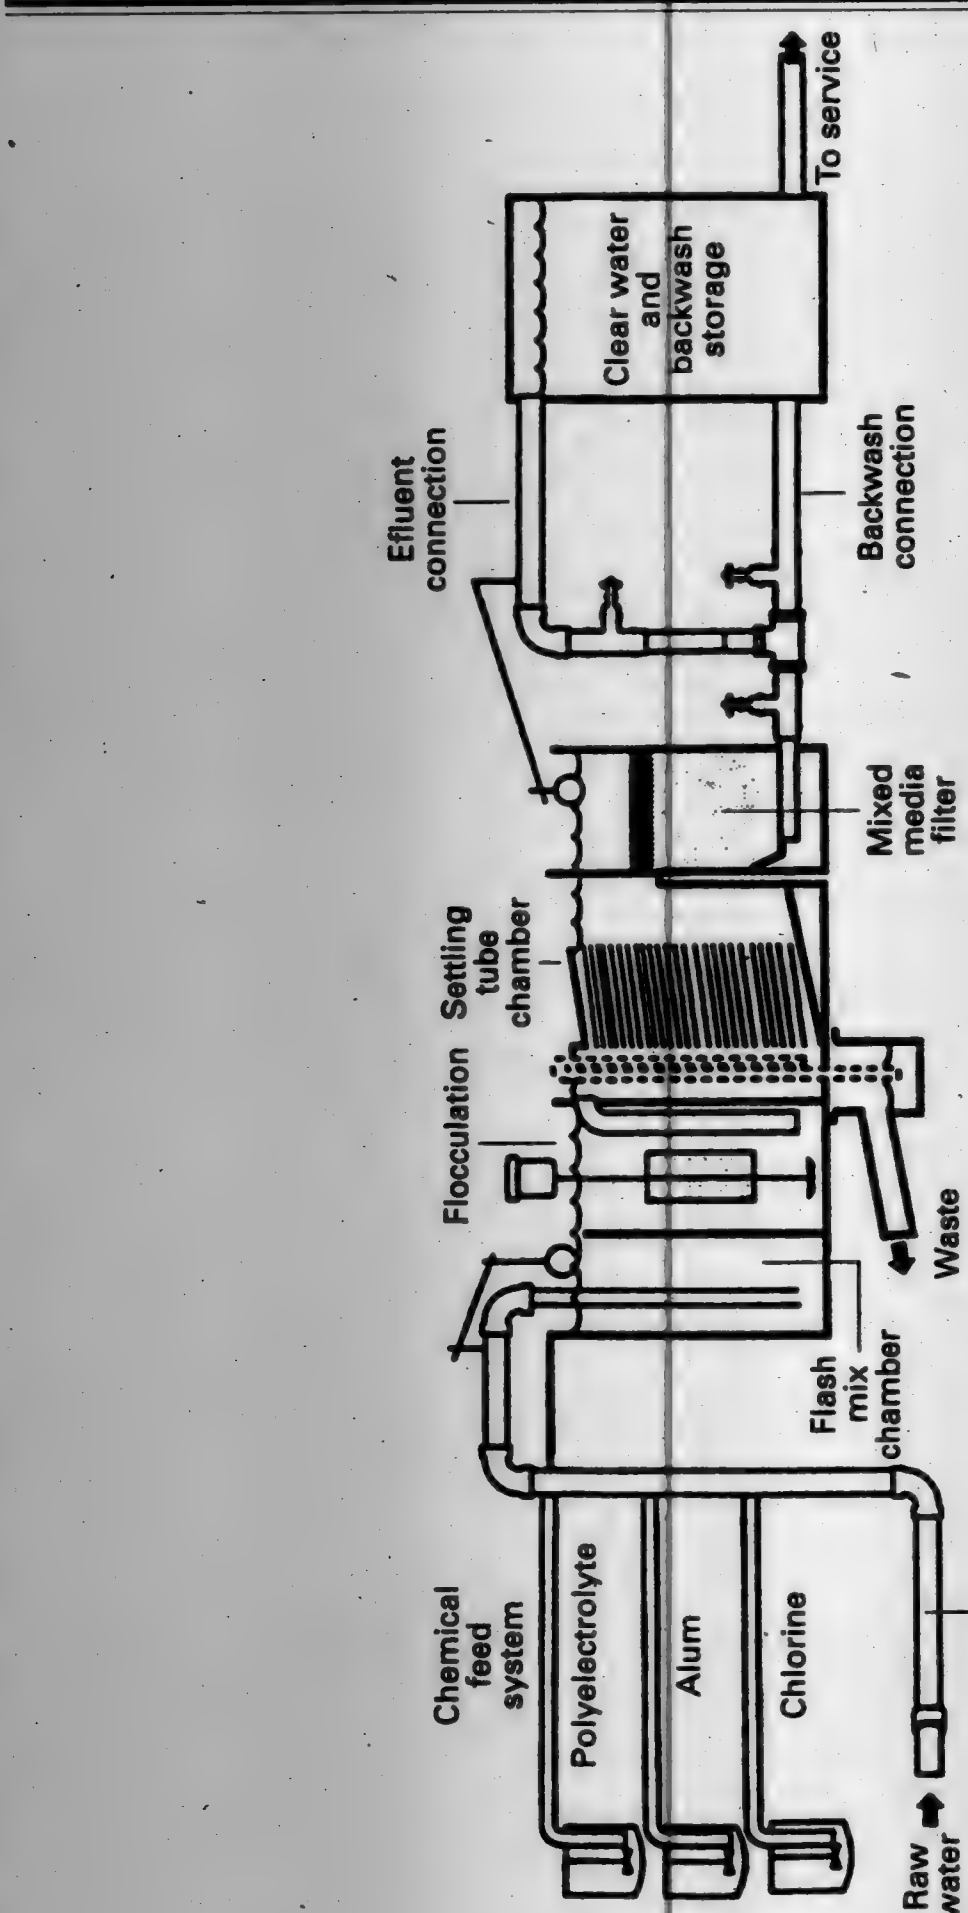

Figure IV.3 Example Package Plant Schematic

BILLING CODE 6560-50-C

The Agency believes that historic data show that package plants have a comparable ability to meet turbidity requirements as conventional or direct filtration systems.

A 1987 report of pilot testing using a trailer-mounted package plant system to treat raw water from Clear Lake in Lakeport, California demonstrates the ability of such systems to achieve low turbidity requirements. The raw water contained moderate to high turbidity (18 to 103 NTU). Finished water turbidities ranged from 0.07 to 0.11 NTU (EPA, 1987). Two previous studies (USEPA, 1980a,b and Cambell et al., 1995) also illustrate the ability of package systems throughout the country to meet historic turbidity performance criteria. These studies are described briefly:

Package Water Treatment Plant Performance Evaluation (USEPA, 1980a,b)

The Agency conducted a study of package water treatment systems which encompassed 36 plants in Kentucky, West Virginia, and Tennessee. Results from that study showed that the plants could provide water that met the existing turbidity limits established under the National Interim Primary Drinking Water Standards. Of the 31 plants at which turbidity measurements were made, 23 (75 percent) were found to be meeting existing standards. Of the 8 which did not meet requirements, one did not use chemical coagulants, and 6 operated less than four hours per day. (USEPA, 1980a, b)

Package Plants for Small Systems: A Field Study (Cambell et al, 1995)

This 1992 project evaluated the application of package plant technology to small communities across the U.S. The project team visited 48 facilities across the U.S. Of the 29 surface water and GWUDI systems, 21 (72 percent) had grab turbidity samples less than 0.5 NTU, the 95 percent limit which became effective in June of 1993. Twelve systems (41 percent) had values less than today's proposed 0.3 NTU 95 percent turbidity limit. (Cambell et al., 1995) It should be noted that today's rule requires compliance with turbidity limits based on 4 hour measurments.

The Agency recently evaluated Filter Plant Performance Evaluations (FPPEs) conducted by the State of Pennsylvania, in an effort to quantify the comparative abilities of package plants and conventional filtration systems to meet the required turbidity limits. The data set consisted of 100 FPPEs conducted at systems serving populations fewer than 10,000 (PADEP, 1999). Thirty-seven FPPEs were conducted at traditional conventional filtration systems while 37 were conducted at package plants or "pre-engineered" systems. The remaining 26 systems utilized other filtration technologies.

The FPPEs provided a rating of either acceptable or unacceptable as determined by the evaluation team. This rating was based on an assessment of the capability of individual unit processes to continuously provide an effective barrier to the passage of microorganisms. Specific performance goals were utilized to evaluate the performance of the system including the consistent ability to produce a finished water turbidity of less than 0.1 NTU, which is lower than the combined filter effluent turbidity requirement in today's proposed rule. Seventy-three percent of the traditional conventional filtration systems were rated acceptable and 89 percent of the package plants were rated acceptable.

The Agency also evaluated historic turbidity data graphs contained within each FPPE to provide a comparison of the ability of package plants and conventional systems to meet the 1 NTU max and 0.3 NTU 95 percent requirements that are contained in today's proposed rule. Sixty-seven percent of the conventional systems would meet today's proposed requirements while 74 percent of package systems in the data set would meet today's proposed requirements. The Agency believes that, when viewed alongside the aforementioned studies (USEPA, 1980a,b and Cambell et al., 1995), it is apparent that package systems have the ability to achieve more stringent turbidity limits.

Correlation Between CFE Requirements and 2-log Cryptosporidium Removal

Recent pilot scale experiments performed by the Agency assessed the ability of conventional treatment to control *Cryptosporidium* under steady state conditions. The work was performed with a pilot plant that was designed to minimize flow rates and as a result the number of oocyst required for continuous spiking. (Dugan et al. 1999)

Viable oocysts were fed into the plant influent at a concentration of 10^6/L for 36 to 60 hours. The removals of oocysts and the surrogate parameters turbidity, total particle counts and aerobic endospores were measured through sedimentation and filtration. There was a positive correlation between the log removals of oocysts and all surrogate parameters through the coagulation and settling process. With proper coagulation control, the conventional treatment process achieved the 2 log total *Cryptosporidium* removal required by the IESWTR. In all cases where 2 log total removal was not achieved, the plant also did not comply with the IESWTR's CFE turbidity requirements. Table IV.6 provides information on *Cryptosporidium* removals from this study.

TABLE IV.6.—LOG REMOVAL OF OOCYSTS (DUGAN ET AL. 1999)

Run	Log removal crypto	Exceeds CFE requirements
1	4.5	No.
2	5.2	No.
3	1.6	Yes, average CFE 2.1 NTU.
4	1.7	Yes, only 88% CFE under 0.3 NTU.
5	4.1	No.
6	5.1	No.
7	0.2	Yes, average CFE 0.5 NTU.
8	0.5	Yes, only 83% CFE under 0.3 NTU.
9	5.1	No.
10	4.8	No.

iii. Proposed Requirements

Today's proposed rule establishes combined filter effluent turbidity requirements which apply to all surface water and GWUDI systems which filter and serve populations fewer than 10,000. For conventional and direct filtration systems, the turbidity level of representative samples of a system's combined filter effluent water must be less than or equal to 0.3 NTU in at least 95 percent of the measurements taken each month. The turbidity level of representative samples of a system's filtered water must not exceed 1 NTU at any time.

For membrane filtration, (microfiltration, ultrafiltration, nanofiltration, and reverse osmosis) the Agency is proposing to require that the turbidity level of representative samples of a system's combined filter effluent water must be less than or equal to 0.3 NTU in at least 95 percent of the measurements taken each month. The turbidity level of representative samples of a system's filtered water must not exceed 1 NTU at any time. EPA included turbidity limits for membrane systems to allow such systems the ability to opt out of a possible costly demonstration of the ability to remove *Cryptosporidium*. The studies displayed previously in Table IV.4, demonstrate the ability of these technologies to achieve log-removals in excess of 2 log. In lieu of these turbidity limits, a public water system which utilizes membrane filtration may demonstrate to the State for purposes of membrane approval (using pilot plant studies or other means) that membrane filtration in combination with disinfection treatment consistently achieves 3 log removal and/or inactivation of *Giardia* lamblia cysts, 4 log removal and/or inactivation of viruses, and 2 log removal of *Cryptosporidium* oocysts. For each approval, the State will set turbidity performance requirements that the system must meet at least 95 percent of the time and that the system may not exceed at any time at a level that consistently achieves 3 log removal and/or inactivation of *Giardia* lamblia cysts, 4 log removal and/or inactivation of viruses, and 2 log removal of *Cryptosporidium* oocysts.

Systems utilizing slow sand or diatomaceous earth filtration must continue to meet the combined filter effluent limits established for these technologies under the SWTR (found in § 141.73 (b) and (c)). Namely, the turbidity level of representative samples of a system's filtered water must be less than or equal to 1 NTU in at least 95 percent of the measurements taken each month and the turbidity level of representative samples of a system's filtered water must at no time exceed 5 NTU.

For all other alternative filtration technologies (those other than conventional, direct, slow sand, diatomaceous earth, or membrane), public water systems must demonstrate to the State for purposes of approval (using pilot plant studies or other means), that the alternative filtration technology in combination with disinfection treatment, consistently achieves 3 log removal and/or inactivation of *Giardia* lamblia cysts, 4 log removal and/or inactivation of viruses, and 2 log removal of *Cryptosporidium* oocysts. For each approval, the State will set turbidity performance requirements that the system must meet at least 95 percent of the time and that the system may not exceed at any time at a level that consistently achieves 3 log removal and/or inactivation of *Giardia* lamblia cysts, 4 log removal and/or inactivation of viruses, and 2 log removal of *Cryptosporidium* oocysts.

iv. Request for Comments

EPA solicits comment on the proposal to require systems to meet the proposed combined filter effluent turbidity requirements. Additionally, EPA solicits comment on the following:

- The ability of package plants and/or other unique conventional and/or direct systems to meet the combined filter effluent requirements;
- Microbial attachment to particulate material or inert substances in water systems may have the effect of providing "shelter" to microbes by reducing their exposure to disinfectants (USEPA, 1999e). While inactivation of *Cryptosporidium* is not a consideration of this rule, should maximum combined filter effluent limits for slow sand and diatomaceous earth filtration systems be lowered to 1 or 2 NTU and/or 95th percentile requirements lowered to 0.3 NTU to minimize the ability of turbidity particles to "shelter" *Cryptosporidium* oocysts?
- Systems which practice enhanced coagulation may produce higher turbidity effluent because of the process. Should such systems be allowed to apply to the State for alternative exceedance levels similar to the provisions contained in the rule for systems which practice lime softening?
- Issues specific to small systems regarding the proposed combined filter effluent requirements;
- Establishment of turbidity limits for alternative filtration technologies;
- Allowance of a demonstration to establish site specific limits in lieu of generic turbidity limits, including components of such demonstration; and
- The number of small membrane systems employed throughout the country.

The Agency also requests comment on establishment of turbidity limits for membrane systems. While integrity of membranes provides the clearest understanding of the effectiveness of membranes, turbidity has been utilized as an indicator of performance (and corresponding *Cryptosporidium* log removal) for all filtration technologies. EPA solicits comment on modifying the requirements for membrane filters to meet integrity testing, as approved by the State and with a frequency approved by the State.

b. Individual Filter Turbidity

i. Overview and Purpose

During development of the IESWTR, it was recognized that performance of individual filters within a plant were of paramount importance to producing low-turbidity water. Two important concepts regarding individual filters were discussed. First, it was recognized that poor performance (and potential pathogen breakthrough) of one filter could be masked by optimal performance in other filters, with no discernable rise in combined filter effluent turbidity. Second, it was noted that individual filters are susceptible to turbidity spikes (of short duration) which would not be captured by four-hour combined filter effluent measurements. To address the shortcomings associated with individual filters, EPA established individual filter monitoring requirements in the IESWTR. For the reasons discussed below, the Agency believes it appropriate and necessary to extend individual filter monitoring requirements to systems serving populations fewer than 10,000 in the LT1FBR.

ii. Data

EPA believes that the support and underlying principles regarding the IESWTR individual filter monitoring requirements are also applicable for the LT1FBR. The Agency has estimated that 5,897 conventional and direct filtration systems will be subject to today's proposed individual filter turbidity requirements. Information regarding this estimate is found in Section IV.A.2.a of today's proposal. The Agency has analyzed information regarding turbidity spikes and filter masking which are presented next.

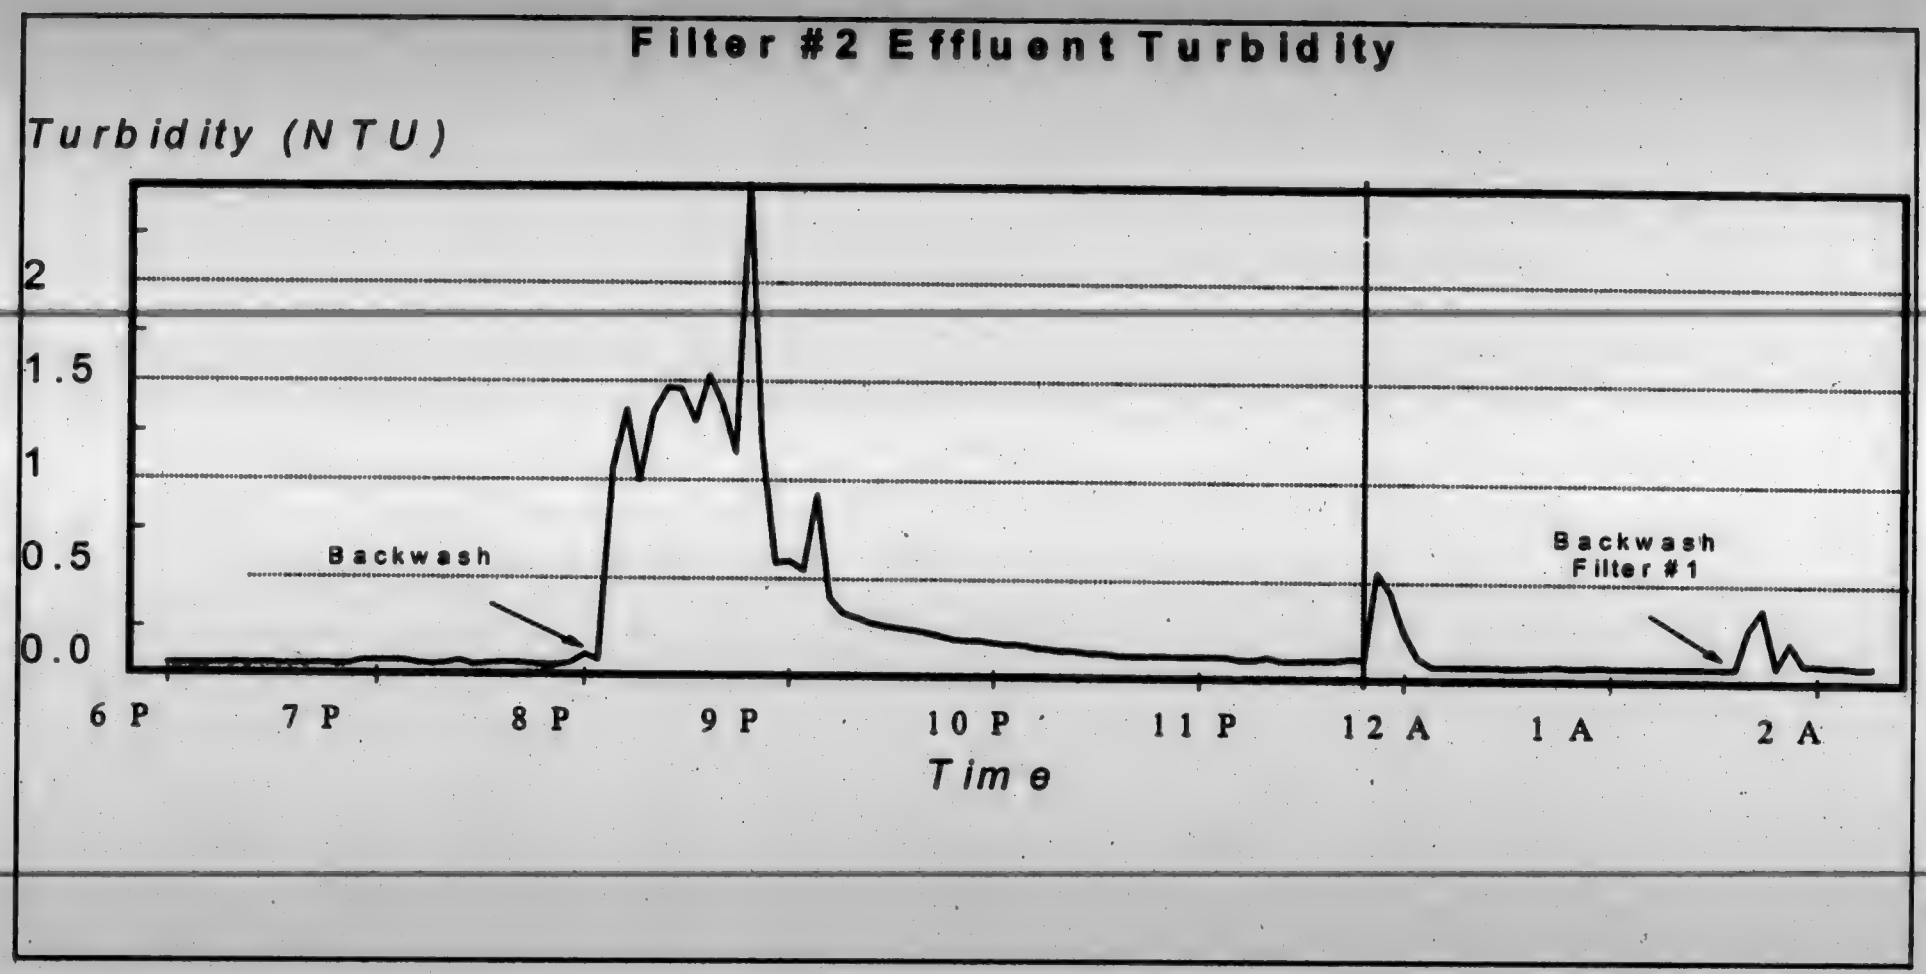
Turbidity Spikes

During a turbidity spike, significant amounts of particulate matter (including *Cryptosporidium* oocysts, if present) may pass through the filter. Various factors affect the duration and amplitude of filter spikes, including sudden changes to the flow rate through the filter, treatment of the filter backwash water, filter-to-waste capability, and site-specific water quality conditions. Recent experiments have suggest that surging has a significant effect on rapid sand filtration performance (Glasgow and Wheatley, 1998). An example filter profile depicting turbidity spikes is shown in Figure IV.4.

BILLING CODE 6560–50–P

BILLING CODE 6560-50-C

Figure IV.4. Example Filter Profile Depicting Turbidity Spikes



VOL 65 ISS 69 AP 10 2000 UMI

Studies considered by both EPA and the M–DBP Advisory Committee noted that the greatest potential for a peak in turbidity (and thus, pathogen breakthrough) is near the beginning of the filter run after filter backwash or start up of operation (Amirtharajah, 1988; Bucklin, et al. 1988; Cleasby, 1990; and Hall and Croll, 1996). This phenomenon is depicted in Figure IV.4. Turbidity spikes also may occur for a variety of other reasons. These include:

- Outages or maintenance activities at processes within the treatment train;
- Coagulant feed pump or equipment failure;
- Filters being run at significantly higher loading rates than approved;
- Disruption in filter media;
- Excessive or insufficient coagulant dosage; and
- Hydraulic surges due to pump changes or other filters being brought on/off-line.

A recent study was completed which evaluated particle removal by filtration throughout the country. While the emphasis of this study was particle counting and removal, fifty-two of the 100 plants surveyed were also surveyed for turbidity with on-line turbidimeters. While all of the plants were able to meet 0.5 NTU 95 percent of the time, it was noted that there was a significant occurrence of spikes during the filter runs. These were determined to be a major source of raising the 95th percentile value for most of the filter runs. (McTigue *et al.* 1998)

Masking of Filter Performance

Combined Filter Effluent monitoring can mask poor performance of individual filters which may allow passage of particulates (including *Cryptosporidium* oocysts). One poorly performing filter, can be effectively "masked" by other well operated filters because water from each of the filters is combined before an effluent turbidity measurement is taken. The following example illustrates this phenomenon.

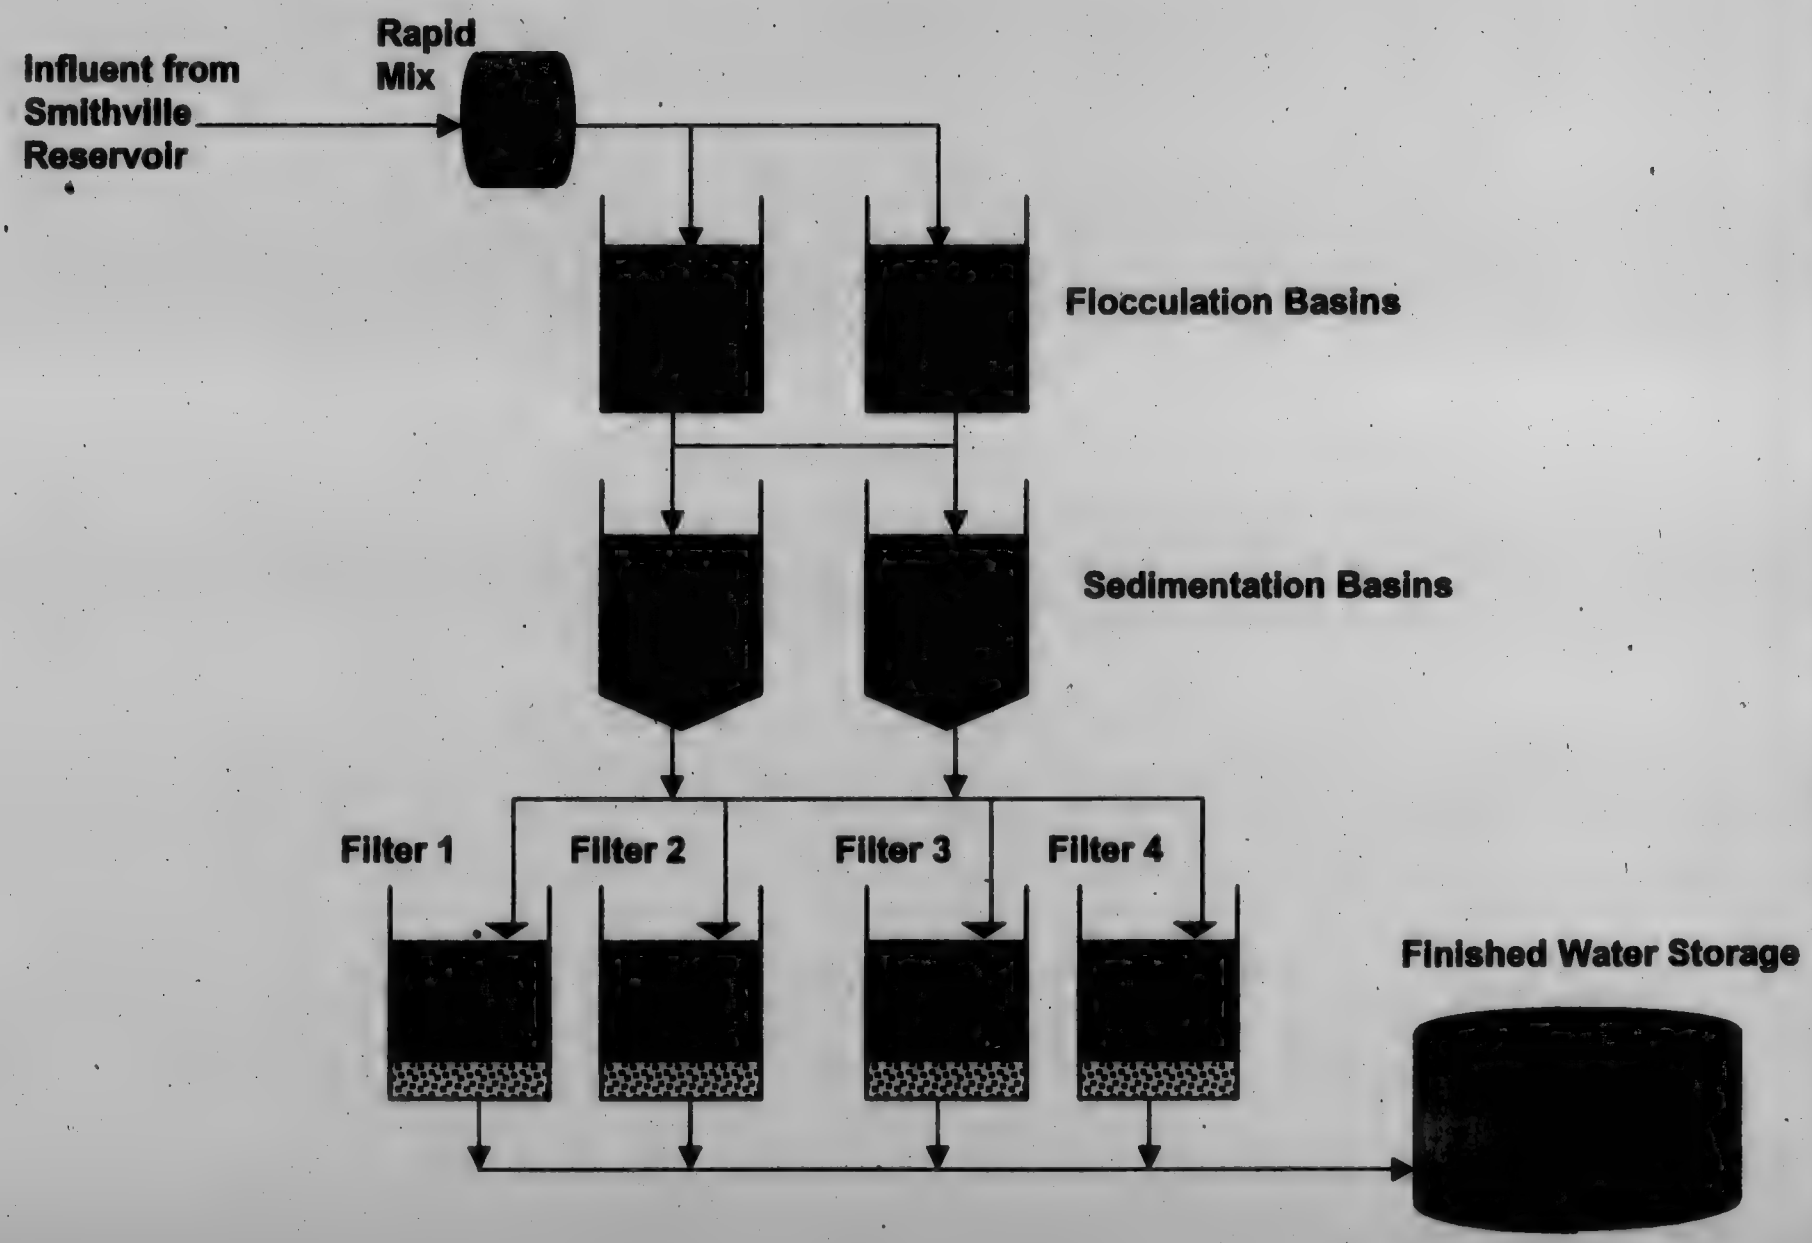
The fictitious City of "Smithville" (depicted in Figure IV.6) operates a conventional filtration plant with four rapid granular filters as shown below. Filter number 1 has significant problems because the depth and placement of the media are contributing to elevated turbidities. Filters 2, 3, and 4 do not have these problems and are operating properly.

BILLING CODE 6560-50-P

VOL 65 ISS 69 AP 10 2000 UMI

BILLING CODE 6560-50-C

Figure IV.6 Schematic of Conventional Treatment Plant



Turbidity measurements taken at the clearwell indicate 0.3 NTU. Filter 4 produces water with a turbidity of 0.08 NTU, Filter 3 a turbidity of 0.2 NTU, Filter 2 a turbidity of 0.1 NTU, and Filter 1 a turbidity of 0.9 NTU. Each filter contributes an equal proportion of water, but each is operating at different turbidity levels which contributes to the combined filter effluent of 0.32 NTU. ([0.08+0.2+0.1+0.9]÷4 = 0.32 NTU)

As discussed previously in Section IV.2.a, the Agency believes that a system must meet 0.3 NTU 95 percent of the time an appropriate treatment technique requirement that assures an increased level of *Cryptosporidium* removal. While the fictitious system described above would barely meet the required CFE turbidity, it is entirely possible that they would not be achieving an overall 2 log removal of *Cryptosporidium* with one filter achieving considerably less than 2-log removal. This issue highlights the importance of understanding the performance of individual filters relative to overall plant performance.

iii. Proposed Requirements

Today's proposed rule establishes an individual filter turbidity requirement which applies to all surface water and GWUDI systems using filtration and which serve populations fewer than 10,000 and utilize direct or conventional filtration. In developing this requirement, the Agency evaluated several alternatives (A, B and C) in an attempt to reduce the burden faced by small systems while still providing: (1) A comparable level of public health protection as that afforded to systems serving 10,000 or more people and (2) an early-warning tool systems can use to detect and correct problems with filters.

Alternative A

The first alternative considered by the Agency was requiring direct and conventional filtration systems serving populations fewer than 10,000 to meet the same requirements as established for systems serving 10,000 or more people. This alternative would require that all conventional and direct filtration systems must conduct continuous monitoring of turbidity (one turbidity measurement every 15 minutes) for each individual filter. Systems must provide an exceptions report to the State as part of the existing combined filter effluent reporting process for any of the following circumstances:

(1) Any individual filter with a turbidity level greater than 1.0 NTU based on two consecutive measurements fifteen minutes apart;

(2) Any individual filter with a turbidity greater than 0.5 NTU at the end of the first four hours of filter operation based on two consecutive measurements fifteen minutes apart;

(3) Any individual filter with turbidity levels greater than 1.0 NTU based on two consecutive measurements fifteen minutes apart at any time in each of three consecutive months (the system must, in addition to filing an exceptions report, conduct a self-assessment of the filter); and

(4) Any individual filter with turbidity levels greater than 2.0 NTU based on two consecutive measurements fifteen minutes apart at any time in each of two consecutive months (the system must file an exceptions report and must arrange for a comprehensive performance evaluation (CPE) to be conducted by the State or a third party approved by the State).

Under the first two circumstances identified, a system must produce a filter profile if no obvious reason for the abnormal filter performance can be identified.

Alternative B

The second alternative considered by the Agency represents a slight modification from the individual filter monitoring requirements of large systems. The 0.5 NTU exceptions report trigger would be omitted in an effort to reduce the burden associated with daily data evaluation. Additionally, the filter profile requirement would be removed. Requirement language was slightly modified in an effort to simplify the requirement for small system operators. This alternative would still require that all conventional and direct filtration systems conduct *continuous* monitoring (one turbidity measurement every 15 minutes) for each individual filter, but includes the following three requirements:

(1) A system must provide an exceptions report to the State as part of the existing combined effluent reporting process if any individual filter turbidity measurement exceeds 1.0 NTU (unless the system can show that the next reading is less than 1.0 NTU);

(2) If a system is required to submit an exceptions report for the same filter in three consecutive months, the system must conduct a self-assessment of the filter.

(3) If a system is required to submit an exceptions report for the same filter in two consecutive months which contains an exceedance of 2.0 NTU by the same filter, the system must arrange for a CPE to be conducted by the State or a third party approved by the State.

Alternative C

The third alternative considered by the Agency would include new triggers for reporting and follow-up action in an effort to reduce the daily burden associated with data review. This alternative would still require that all conventional and direct filtration systems must conduct *continuous* monitoring (one turbidity measurement every 15 minutes) for each individual filter, but would include the following three requirements:

(1) A system must provide an exceptions report to the State as part of the existing combined effluent reporting process if filter samples exceed 0.5 NTU in at least 5 percent of the measurements taken each month and/or any individual filter measurement exceeds 2.0 NTU (unless the system can show that the following reading was < 2.0 NTU).

(2) If a system is required to submit an exceptions report for the same filter in three consecutive months the system must conduct a self-assessment of the filter.

(3) If a system is required to submit an exceptions report for the same filter in two consecutive months which contains an exceedance of 2.0 NTU by the same filter, the system must arrange for a CPE to be conducted by the State or a third party approved by the State.

For all three alternatives the requirements regarding self assessments and CPEs are the same. If a CPE is required, the system must arrange for the State or a third party approved by the State to conduct the CPE no later than 30 days following the exceedance. The CPE must be completed and submitted to the State no later than 90 days following the exceedance which triggered the CPE. If a self-assessment is required it must take place within 14 days of the exceedance and the system must report to the State that the self-assessment was conducted. The self assessment must consist of at least the following components:

- assessment of filter performance;
- development of a filter profile;
- identification and prioritization of factors limiting filter performance;
- assessment of the applicability of corrections; and
- preparation of a filter self assessment report.

In considering each of the above alternatives, the Agency attempted to reduce the burden faced by small systems. Each of the three alternatives was judged to provide levels of public health protection comparable to those in the IESWTR for large systems. Alternative A, because it contains the

same requirements as IESWTR, was expected to afford the same level of public health protection. Alternative B, (which removes the four-hour 0.5 NTU trigger and the filter profile requirement) was expected to afford comparable health protection because the core components which provide the overwhelming majority of the public health protection (monitoring frequency, trigger which requires follow-up action, and the follow-up actions) are the same as the IESWTR. Alternative C was expected to provide comparable health protection because follow-up action is the same as under the IESWTR and a 0.5 NTU 95percent percentile trigger was expected to identify the same systems which the triggers established under the IESWTR would identify. All three were also considered useful diagnostic tools for small systems to evaluate the performance of filters and correct problems before follow-up action was necessary. The first alternative was viewed as significantly more challenging to implement and burdensome for smaller systems due to the amount of required daily data review. This evaluation was also echoed by small entity representatives during the Agency's SBREFA process as well as stakeholders at each of the public meetings held to discuss issues related to today's proposed rule. While Alternative C reduced burden associated with daily data review, it would institute a very different trigger for small systems than established by the IESWTR for large systems. This was viewed as problematic by several stakeholders who stressed the importance of maintaining similar requirements in order to limit transactional costs and additional State burden. Therefore, the Agency is proposing Alternative B as described above, which allows operators to expend less time to evaluate their turbidity data. Alternative B maintains a comparable level of public health protection as those afforded large systems, reduces much of the burden associated with daily data collection and review (removing the requirement to conduct a filter profile allows systems to review data once a week instead of daily if they so choose), yet still serves as a self-diagnostic tool for operators and provides the mechanism for State follow-up when significant performance problems exist.

iv. Request for Comments

The individual filter monitoring provisions represent a challenging opportunity to provide systems with a useful tool for assessing filters and correcting problems before State intervention is necessary or combined filter turbidity is affected and treatment technique violations occur. The Agency is actively seeking comment on this provision. Because of the complexity of this provision, specific requests for comment have been broken down into five distinct areas.

Comments on the Alternatives

EPA requests comment on today's proposed individual filter requirement and each of the alternatives as well as additional alternatives for this provision such as establishing a different frequency for individual filter monitoring (*e.g.*, 60 minute or 30 minute increments). The Agency also seeks comment or information on:

- Tools and or guidance which would be useful and necessary in order to educate operators on how to comply with individual filter provisions and perform any necessary calculations;
- Data correlating individual filter performance relative to combined filter effluent;
- Contributing factors to turbidity spikes associated with reduced filter performance;
- Practices which contribute to poor individual filter performance and filter spikes; and
- Any additional concerns with individual filter performance.

Modifications to the Alternatives

The Agency also seeks comment on a variety of proposed modifications to the individual filter monitoring alternatives discussed which could be incorporated in order to better address the concerns and realities of small surface water systems. These modifications include:

- Modification of the alternatives to include a provision which would require systems which do not staff the plant during all hours of operation, to utilize an alarm/phone system to alert off-site operators of significantly elevated turbidity levels and poor individual filter performance;
- A modification to allow conventional and direct filtration systems with either 2–3 or less filters to sample combined filter effluent continuously (every 15 minutes) in lieu of monitoring individual filter turbidity. This modification would reduce the data collection/analysis burden for the smallest systems while not compromising the level of public health protection;
- A modification to lengthen the period of time (120 days or a period of time established by the State but not to exceed 120 days) for completion of the CPE and/or a modification to lengthen the requirement that a CPE must be conducted no later than 60 or 90 days following the exceedance; and
- A modification to require systems to notify the State within 24 hours of triggering the CPE or IFA. This would inform States sooner so they can begin to work with systems to address performance of filters and conduct CPEs and IFAs as necessary.

Establishment of Subcategories

The Agency is also evaluating the need to establish subcategories in the final rule for individual filter monitoring/reporting. EPA is currently considering these three categories:

1. Systems serving populations of 3,300 or more persons;
2. Systems with more than 2 filters, but less than 3,300 persons; and
3. Systems with 2 or fewer filters serving populations fewer than 3,300 persons.

Individual filter monitoring requirements would also be based on these subcategories. Systems serving 3,300 or greater would be required to meet the same individual turbidity requirements as the IESWTR (Alternative A as described above). Systems serving fewer than 3,300 but using more than 2 filters would be required to meet a modified version of the IESWTR individual filter requirements (Alternative B as described above). Systems serving fewer than 3,300 and using 2 or fewer filters would continue to monitor and report only combined filter effluent turbidity at an increased frequency (once every 15 minutes, 30 minutes, or one hour).

Input and or comment on cut-offs for subcategories and how to apply subcategories to Alternatives is requested. The Agency would also like to take comment on additional strategies to tailor individual filter monitoring for the smallest systems while continuing to maintain an adequate level of public health protection. Such possible strategies include:

- Since small systems are often understaffed one approach would require those systems utilizing only two or fewer filters to utilize, maintain, and continually operate an alarm/phone system during all hours of operation, which alert off-site operators of significantly elevated turbidity levels and poor individual filter performance and/or automatically shuts the system down if turbidity levels exceed a specified performance level. This modification would be in addition to the proposed requirements.
- Establishing a more general modification which would require systems which do not staff the plant during all hours of operation to utilize

an alarm/phone system to alert off-site operators of significantly elevated turbidity levels and poor individual filter performance, and/or to automatically shut the system down if turbidity levels exceed a specified performance level.

• If systems with 2 or fewer filters is allowed to sample combined filter effluent in lieu of individual filter effluent with a frequency of a reading every hour and combined filter effluent turbidity exceeds 0.5 NTU, should the system be required to take grab samples of individual filter turbidity for all filters every 15 minutes until the results of those samples are lower than 0.5 NTU?

Reliability

Maintaining reliable performance at systems using filtration requires that the filters be examined at intervals to determine if problems are developing. This can mean that a filter must go off-line for replacement or upgrades of media, underdrains, backwash lines etc. In order to provide adequate public health protection at small systems, the lack of duplicate units can be a problem. EPA is considering requiring any system with only one filter to install an additional filter. The schedule would be set by the primacy agency, but the filter would have to be installed no later than 6 years after promulgation. EPA is requesting comment on this potential requirement.

Data Gathering Recordkeeping and Reporting

The Agency is evaluating data gathering/reporting requirements for systems. A system collecting data at a frequency of once every 15 minutes, (and operating) 24 hours a day, would record approximately 2800 data points for *each* filter throughout the course of the month. Although the smallest systems in operation today routinely operate on the average of 4 to 12 hours a day (resulting in 480 to 1400 data points per filter), these systems do not typically use sophisticated data recording systems such as SCADAs. The lack of modern equipment at small systems may result in difficulty with retrieving and analyzing data for reporting purposes. While the Agency intends to issue guidance targeted at aiding these systems with the data gathering requirements, EPA is also seeking feedback on a modification to the frequency of data gathering required under each of the aforementioned options. Specifically, the Agency would like to request comment on modifying the frequency for systems serving fewer than 3,300 to continuous monitoring on a 30 or 60 minute basis. EPA also requests comment on the availability and practicality of data systems that would allow small systems, State inspectors, and technical assistance providers to use individual filter turbidity data to improve performance, perform filter analysis, conduct individual filter self assessments, etc. The Agency is interested in *specific* practical combinations of data recorders, charts, hand written recordings from turbidimeters, that would accomplish this.

Failure of Continuous Turbidity Monitoring

Under today's proposed rule, the Agency requires that if there is a failure in the continuous turbidity monitoring equipment, the system must conduct grab sampling every four hours in lieu of continuous monitoring until the turbidimeter is back on-line. A system has five working days to resume continuous monitoring before a violation is incurred. EPA would like to solicit comment on modifying this component to require systems to take grab samples at an increased frequency, specifically every 30 minutes, 1 hour, or 2 hours.

B. Disinfection Benchmarking Requirements

Small systems will be required to comply with the Stage 1 Disinfection Byproduct Rule (Stage 1 DBPR) in the first calendar quarter of 2004. The Stage 1 DBPR set Maximum Contaminant Levels (MCLs) for Total Trihalomethanes (chloroform, bromodichloromethane, chlorodibromomethane, and bromoform), and five Haloacetic Acids (i.e., the sum of the concentrations of mono-, di-, and trichloroacetic acids and mono- and dibromoacetic acids.) The LT1FBR follows the principles set forth in earlier FACA negotiations, i.e., that existing microbial protection must not be significantly reduced or undercut as a result of systems taking the necessary steps to comply with the MCL's for TTHM and HAA5 set forth in Stage 1 DBPR. The disinfection benchmarking requirements are designed to ensure that risk from one contaminant is not increased while risk from another contaminant is decreased.

The Stage 1 DBPR was promulgated because disinfectants such as chlorine can react with natural organic and inorganic matter in source water and distribution systems to form disinfection byproducts (DBPs). Results from toxicology studies have shown several DBPs (e.g., bromodichloromethane, bromoform, chloroform, dichloroacetic acid, and bromate) to potentially cause cancer in laboratory animals. Other DBPs (e.g., certain haloacetic acids) have been shown to cause adverse reproductive or developmental effects in laboratory animals. Concern about these health effects may cause public water utilities to consider altering their disinfection practices to minimize health risks to consumers.

A fundamental principle, therefore, of the 1992–1993 regulatory negotiation reflected in the 1994 proposal for the IESWTR was that new standards for control of DBPs must not result in significant increases in microbial risk. This principle was also one of the underlying premises of the 1997 M–DBP Advisory Committee's deliberations, i.e., that existing microbial protection must not be significantly reduced or undercut as a result of systems taking the necessary steps to comply with the MCL's for TTHM and HAA5 set forth in Stage 1 DBPR. The Advisory Committee reached agreement on the use of microbial profiling and benchmarking as a process by which a PWS and the State, working together, could assure that there would be no significant reduction in microbial protection as the result of modifying disinfection practices in order to comply with Stage 1 DBPR.

The process established under the IESWTR has three components: (1) Applicability Monitoring; (2) Disinfection Profiling; and (3) Disinfection Benchmarking. These components have the following three goals respectively: (1) determine which systems have annual average TTHM and HAA5 levels close enough to the MCL (e.g., 80 percent of the MCL) that they may need to consider altering their disinfection practices to comply with Stage 1 DBPR; (2) those systems that have TTHM and HAA5 levels of at least 80 percent of the MCLs must develop a baseline of current microbial inactivation over the period of 1 year; and (3) determine the benchmark, or the month with the lowest average level of microbial inactivation, which becomes the critical period for that year.

The aforementioned components were applied to systems serving 10,000 or more people in the IESWTR and were carried out sequentially. In response to concerns about early implementation (any requirement which would require action prior to 2 years after the promulgation date of the rule), the Agency is considering modifying the IESWTR approach for small systems, as described in the following section. Additionally, the specific provisions have been modified to take into account

specific needs of small systems. EPA's goal in developing these requirements is to recognize the specific needs of small system and States, while providing small systems with a useful means of ensuring that existing microbial protection must not be significantly reduced or undercut as a result of systems taking the necessary steps to comply with the MCL's for TTHM and HAA5 set forth in Stage 1 DBPR.

The description of the disinfection benchmarking components of today's proposed rule will be broken into the three segments: (1) Applicability Monitoring; (2) Disinfection Profiling; and (3) Disinfection Benchmarking. Each section will provide an overview and purpose, data, a description of the proposed requirements, and request for comment.

1. Applicability Monitoring

a. Overview and Purpose

The purpose of the TTHM and HAA5 applicability monitoring is to serve as an indicator for systems that are likely to consider making changes to their disinfection practices in order to comply with the Stage 1 DBPR. TTHM samples which equal or exceed 0.064 mg/L and/or HAA5 samples equal or exceed 0.048 mg/L (80 percent of their respective MCLs) represent DBP levels of concern. Systems with TTHM or HAA5 levels exceeding 80 percent of the respective MCLs may consider changing their disinfection practice in order to comply with the Stage 1 DBPR.

b. Data

In 1987, EPA established monitoring requirements for 51 unregulated synthetic organic chemicals. Subsequently, an additional 113 unregulated contaminants were added to the monitoring requirements. Information on TTHMs has become available from the first round of monitoring conducted by systems serving fewer than 10,000 people.

Preliminary analysis of the data from the Unregulated Contaminant Information System (URCIS, Data) suggest that roughly 12 percent of systems serving fewer than 10,000 would exceed 64 μ/L or 80 percent of the MCL for TTHM (Table IV.7). This number is presented only as an indicator, as it represents samples taken at the entrance to distribution systems. In general, TTHMs and HAA5s tend to increase with time as water travels through the distribution system. The Stage 1 Disinfection Byproducts Rule estimated 20 percent of systems serving fewer than 10,000 would exceed 80 percent of the MCLs for either TTHMs or HAA5s or both. EPA is working to improve the knowledge of TTHM and HAA5 formation kinetics in the distribution systems for systems serving fewer than 10,000 people. EPA is currently developing a model to predict the formation of TTHM and HAA5 in the distribution system based on operational measurements. This model is not yet available. In order to develop a better estimate of the percent of small systems that would be triggered into the profiling requirements (i.e., develop a profile of microbial inactivation over a period of 1 year) EPA is considering the following method:

- Use URCIS data to show how many systems serving 10,000 or more people have TTHM levels at or above 0.064 mg/L;
- Compare those values to the data received from the Information Collection Rule for TTHM average values taken at representative points in the distribution system;
- Determine the mathematical factor by which the two values differ; and
- Apply that factor to the URCIS data for systems serving fewer than 10,000 people to estimate the percent of those systems that would have TTHM values at or above 0.064mg/L as an average of values taken at representative points in the distribution system.

TABLE IV.7.—TTHM LEVELS AT SMALL SURFACE SYSTEMS

[Data from Unregulated Contaminant Database, 1987–92 [1]]

System size (population served)	Total number of systems	Number of systems w/ ave. TTHM ≥ 64 μg/L (80 % of MCL)	Maximum level of ave. TTHM (μg/L)
<500	74	0 (0%)	56
501–1,000	44	6 (13.6%)	222
1,001–3,300	114	12 (10.5%)	172
3,301–10,000	116	25 (21.6%)	279
Total	348	43 (12.4%)	279

[1] In Unregulated Contaminant Database (1987–1992), there are ten States (*i.e.*, CA, DE, IN, MD, MI, MO, NC, NY, PR, WV). However, only eight of them can be identified with the data of both population and TTHM for systems serving fewer than 10,000 people (See next page).

The Agency requests comment on this approach to estimating TTHM levels in the distribution system based on TTHM levels at the entry point to the distribution system. The Agency also requests comment on the relationship of HAA5 formation relative to TTHM formation in the distribution system. Specifically, is there data to support the hypothesis that HAA5s do not peak at the same point in the distribution system as TTHMs?

The Agency also received two full years of TTHM data for seventy-four systems in the State of Missouri (Missouri, 1998). This data consisted of quarterly TTHM data, which was converted into an annual average. The data (presented in Table IV.8) demonstrates a very different picture than that displayed by the URCIS data described above. In 1996, 88 percent of the systems exceeded 64 μg/L, while in 1997, 85 percent exceeded 64 μg/L. Figure IV.7 graphically displays this data set.

TABLE IV.8.—TTHM LEVELS AT SMALL SURFACE SYSTEMS IN THE STATE OF MISSOURI
[State of Missouri, 1996, 1997]

Year	Total number of systems	Number of systems w/ ave. TTHM ≥ 64 µg/L (80 percent of MCL)	Maximum Level of Ave. TTHM (µg/L)
1996	74	65 (88%)	276
1997	75	64 (85%)	251
All years	149	129 (87%)	276

IV.7 co

VOL 65 ISS 69 AP 10 2000 UMI

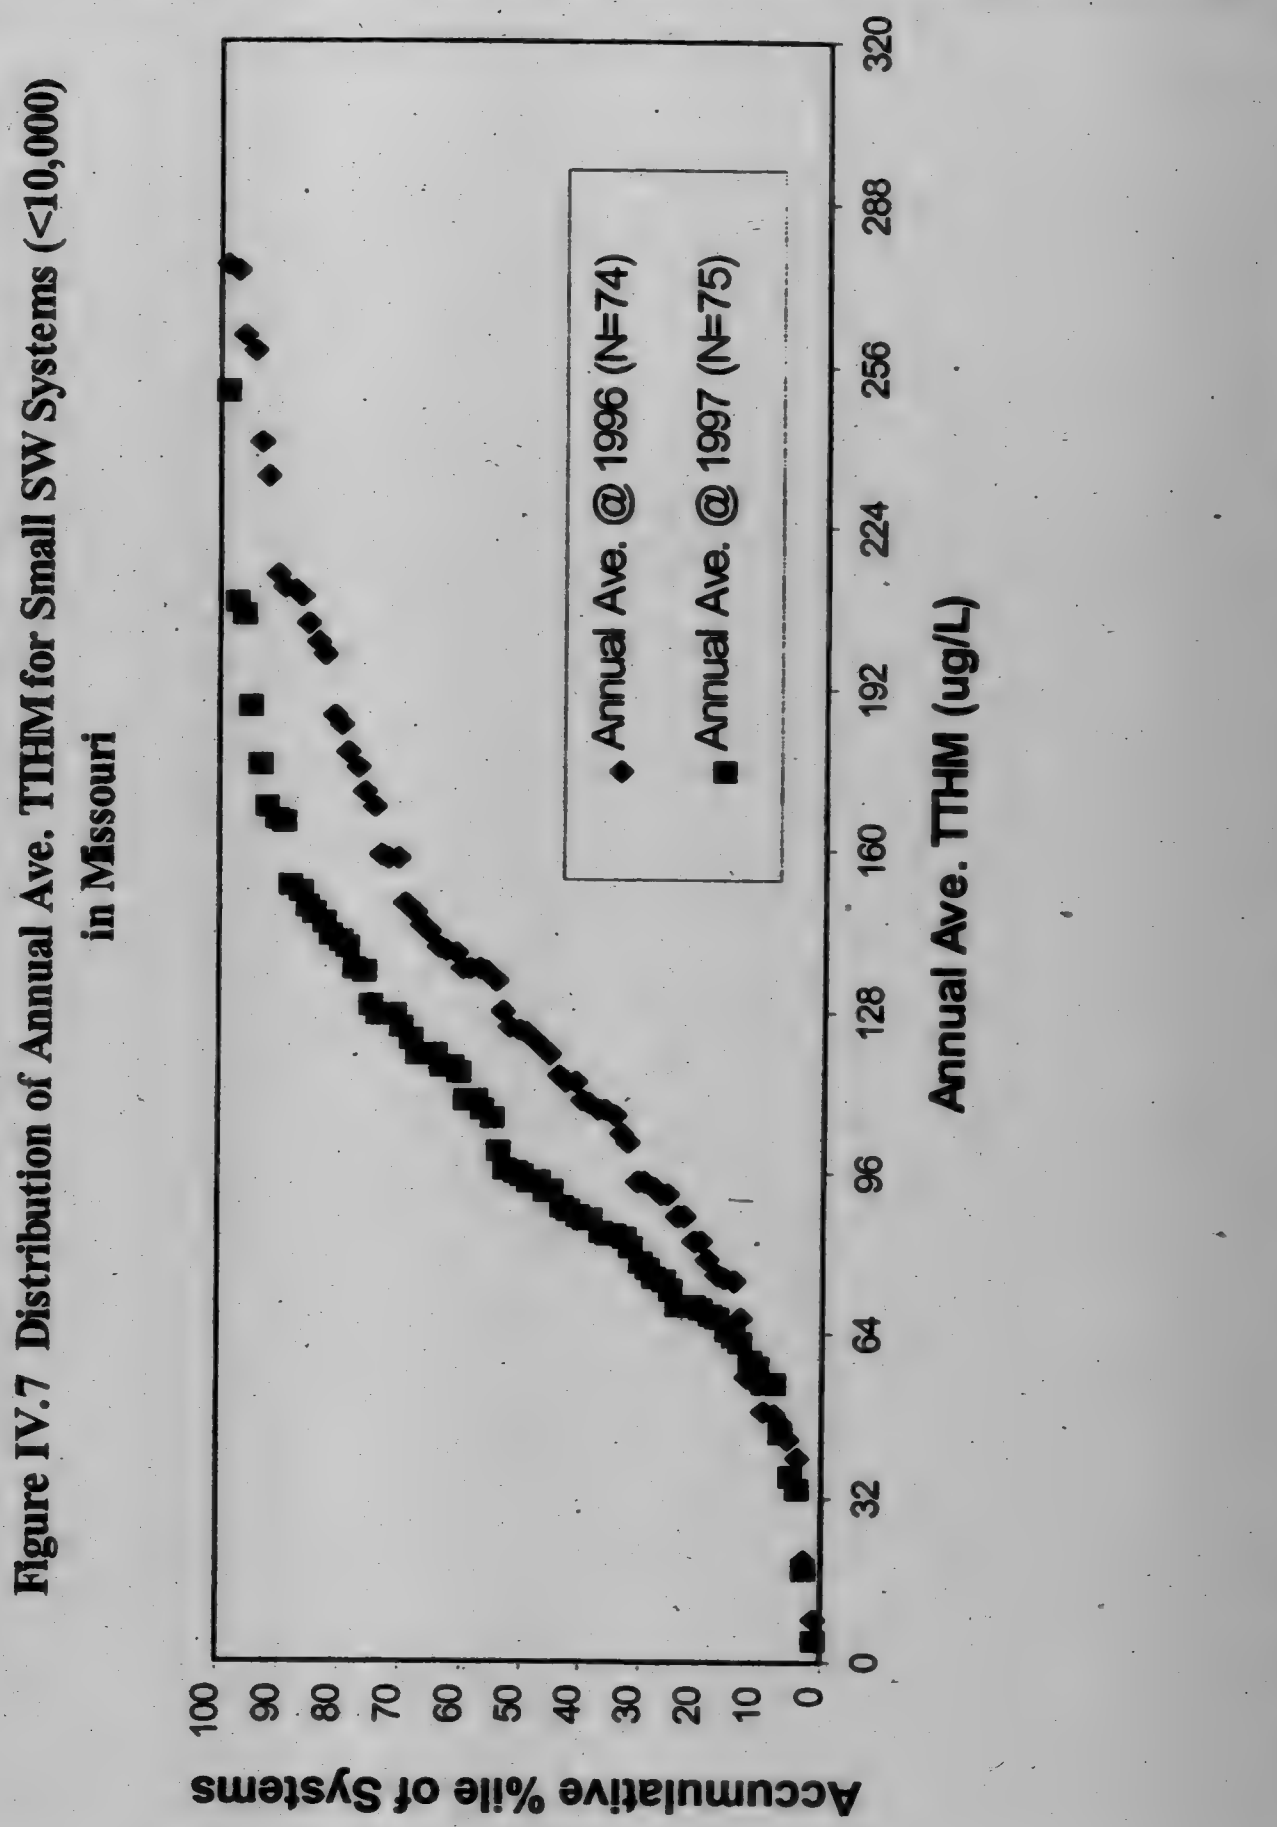

Figure IV.7 Distribution of Annual Ave. TTHM for Small SW Systems (<10,000) in Missouri

There are several potential reasons for the differences between the data shown in Tables IV.7 and IV.8. Data in Table IV.7 contains zero values which may be indicative of no sample being taken rather than a sample with a value of zero. Additionally, data shown in IV.8 was collected within the distribution system, while data in Table IV.7 was taken at the entry point to the distribution system. The data collection method used in collecting the data

shown in Table IV.8 is similar to the methodology required under the Stage 1 DBPR.

c. Proposed Requirements

EPA considered four alternatives for systems to use TTHM and HAA5 data to determine which systems whether they would be required to develop a disinfection profile. In today's proposed rule, EPA is proposing Alternative 4.

Alternative 1

The IESWTR required that systems monitor for TTHMs at four points in the distribution system each quarter. At least one of those samples must be taken at a point which represents the maximum residence time of the water in the system. The remaining three must be taken at representative locations in the distribution system, taking into account number of persons served, different sources of water and different treatment methods employed. The results of all analyses per quarter are averaged and reported to the State.

EPA considered applying this alternative to systems serving fewer than 10,000 people and requested input from small system operators and other interested parties, including the public. Based on the feedback EPA received, two other alternatives were developed for consideration (listed as Alternatives 2 and 3).

Alternative 2

EPA considered requiring systems serving fewer than 10,000 people to monitor for TTHM and HAA5 at the point of maximum residence time according to the following schedule:

- No less than once per quarter per treatment plant operated for systems serving populations between 500 and 10,000 persons; and no less than once per year per treatment plant during the month of warmest water temperature for systems serving populations less than 500. If systems wish to take additional samples, however, they would be permitted to do so.
- Systems may consult with States and elect not to perform TTHM and HAA5 monitoring and proceed directly with the development of a disinfection profile.

This alternative provides an applicability monitoring frequency identical to the DBP monitoring frequency under the Stage 1 DBPR that systems will have to comply with in 2004. In addition, it allows systems the flexibility to skip TTHM and HAA5 monitoring completely, pending State approval, and begin profiling immediately.

Alternative 3

EPA considered requiring all systems serving fewer than 10,000 people to monitor once per year per system during the month of warmest water temperature of 2002 and at the point of maximum residence time.

During the SBREFA process and during stakeholder meetings, EPA received some positive comments regarding Alternative 3 as the least burdensome approach. Other stakeholders, however, pointed out that Alternative 3 does not allow systems to measure seasonal variation as is done in Alternative 2 for systems serving populations between 500 and 10,000. Several stakeholders agreed that despite the costs, the information obtained from applicability monitoring will be useful. EPA agrees that it is valuable to systems to monitor and understand the seasonal variation in TTHM and HAA5 values, however, EPA has determined that requiring a full year of monitoring may place an excessive burden on both States and systems. In order to complete a full year of monitoring and another full year of disinfection data gathering, systems would have to start TTHM and HAA5 monitoring January of 2002.

Under SDWA, States have two years to develop their own regulations as part of their primacy requirements, EPA recognized that requiring Applicability Monitoring during this period would pose a burden on States. In response to these concerns, the Agency developed a new alternative, described in the following paragraph.

Alternative 4

Applicability Monitoring is optional and not a requirement under today's proposed rule. If a system has TTHM and HAA5 data taken during the month of warmest water temperature (from 1998–2002) and taken at the point of maximum residence time, they may submit this data to the State prior to [DATE 2 YEARS AFTER PUBLICATION OF FINAL RULE]. If the data shows TTHM and HAA5 levels less than 80 percent of the MCLs, the system does not have to develop a disinfection profile. If the data shows TTHM and HAA5 levels at or above 80 percent of the MCLs, the system would be required to develop a disinfection profile in 2003 as described later in section IV.B.2. If the system does not have, or does not gather TTHM and HAA5 data during the month of warmest water temperature and at the point of maximum residence time in the distribution system as described, then the system would automatically be required to develop a disinfection profile starting January 1 of 2003. This option still provides systems with the necessary tools for assessing potential changes to their disinfection practice, (i.e. the generation of the profile), while not forcing States to pass their primacy regulations, contact all small systems within their jurisdiction, and set up TTHM and HAA5 monitoring all within the first year after promulgation of this rule. Systems will still be able to ensure public health protection by having the disinfection profile when monitoring under Stage 1 DBPR takes effect. It should be noted that EPA estimates the cost for applicability monitoring (as described in Alternative 4) and disinfection profiling (as described in Alternative 3 in Section IV.B.2.c of this preamble) are roughly equivalent. EPA anticipates that systems with known low levels of TOC may opt to conduct the applicability monitoring while the remaining systems will develop a disinfection profile.

d. Request for Comment

EPA requests comment on the proposed requirement, other alternatives listed, or other alternatives that have not yet been raised for consideration. The Agency also requests comment on approaches for determining the percent of systems that would be affected by this requirement. Specifically:

- With respect to Alternative 4, the Agency requests comment on approaches for determining the percent of systems that might demonstrate TTHM and HAA5 levels less than 80 percent of their respective MCLs and would therefore not develop a disinfection profile.
- The Agency requests additional information (similar to the State of Missouri data discussed previously) on the current levels of TTHM and HAA5s in the distribution systems of systems serving fewer than 10,000 people.
- The Agency requests comment on developing a TTHM and HAA5 monitoring scheme during the winter months as opposed to the current monitoring scheme based on the highest TTHM/HAA5 formation potential during the month of warmest water temperature. If a relationship can be established, and shown to be consistent through geographical variations, EPA would consider modifying an alternative so that applicability monitoring would occur during the 1st quarter of 2003.
- The Agency requests comment on modifying Alternative 3, to require systems to begin monitor for TTHMs and HAA5s during the warmest water temperature month of 2003. The results of this monitoring would be used to

determine whether a system would need to develop a disinfection profile during 2004. This option is closer in structure and timing to the IESWTR and has been included for comment. It should be noted, however, that postponing the disinfection profile until 2004 would prevent systems from having inactivation data prior to their compliance date with the Stage 1 DBPR, possibly compromising simultaneous compliance.

2. Disinfection Profiling

a. Overview and Purpose

The disinfection profile is a graphical representation showing how disinfection varies at a given plant over time. The profile gives the plant operator an idea of how seasonal changes in water quality and water demand can have a direct effect on the level of disinfection the plant is achieving.

The strategy of disinfection profiling and benchmarking stemmed from data provided to the EPA and M–DBP Advisory Committee by PWSs and reviewed by stakeholders. The microbial inactivation data (expressed as logs of *Giardia lamblia* inactivation) used by the M–DBP Advisory Committee demonstrated high variability. Inactivation varied by several log on a day-to-day basis at any particular treatment plant and by as much as tens of logs over a year due to changes in water temperature, flow rate (and, consequently, contact time), seasonal changes in residual disinfectant, pH, and disinfectant demand and, consequently, disinfectant residual. There were also differences between years at individual plants. To address these variations, M–DBP stakeholders developed the procedure of profiling inactivation levels at an individual plant over a period of at least one year, and then establishing a benchmark of minimum inactivation as a way to characterize disinfection practice. This approach makes it possible for a plant that may need to change its disinfection practice in order to meet DBP MCLs to determine the impact the change would have on its current level of disinfection or inactivation and, thereby, to assure that there is no significant increase in microbial risk. In order to develop the profile, a system must measure four parameters (EPA is assuming most small systems use chlorine as their disinfection agent, and these requirements are based on this assumption):

(1) Disinfectant residual concentration (C, in mg/L) before or at the first customer and just prior to each additional point of disinfectant addition;

(2) Contact time (T, in minutes) during peak flow conditions;

(3) Water temperature (°C); and

(4) pH.

Systems convert this operational data to a number representing log inactivation values for *Giardia* by using tables provided by EPA. Systems graph this information over time to develop a profile of their microbial inactivation. EPA will prepare guidance specifically developed for small systems to assist in the development of the disinfection profile. Several spreadsheets and simple programs are currently available to aid in calculating microbial inactivation and the Agency intends to make such spreadsheets available in guidance.

b. Data

Figure IV.8a depicts a hypothetical disinfection profile showing seasonal variation in microbial inactivation.

BILLING CODE 6560-50-P

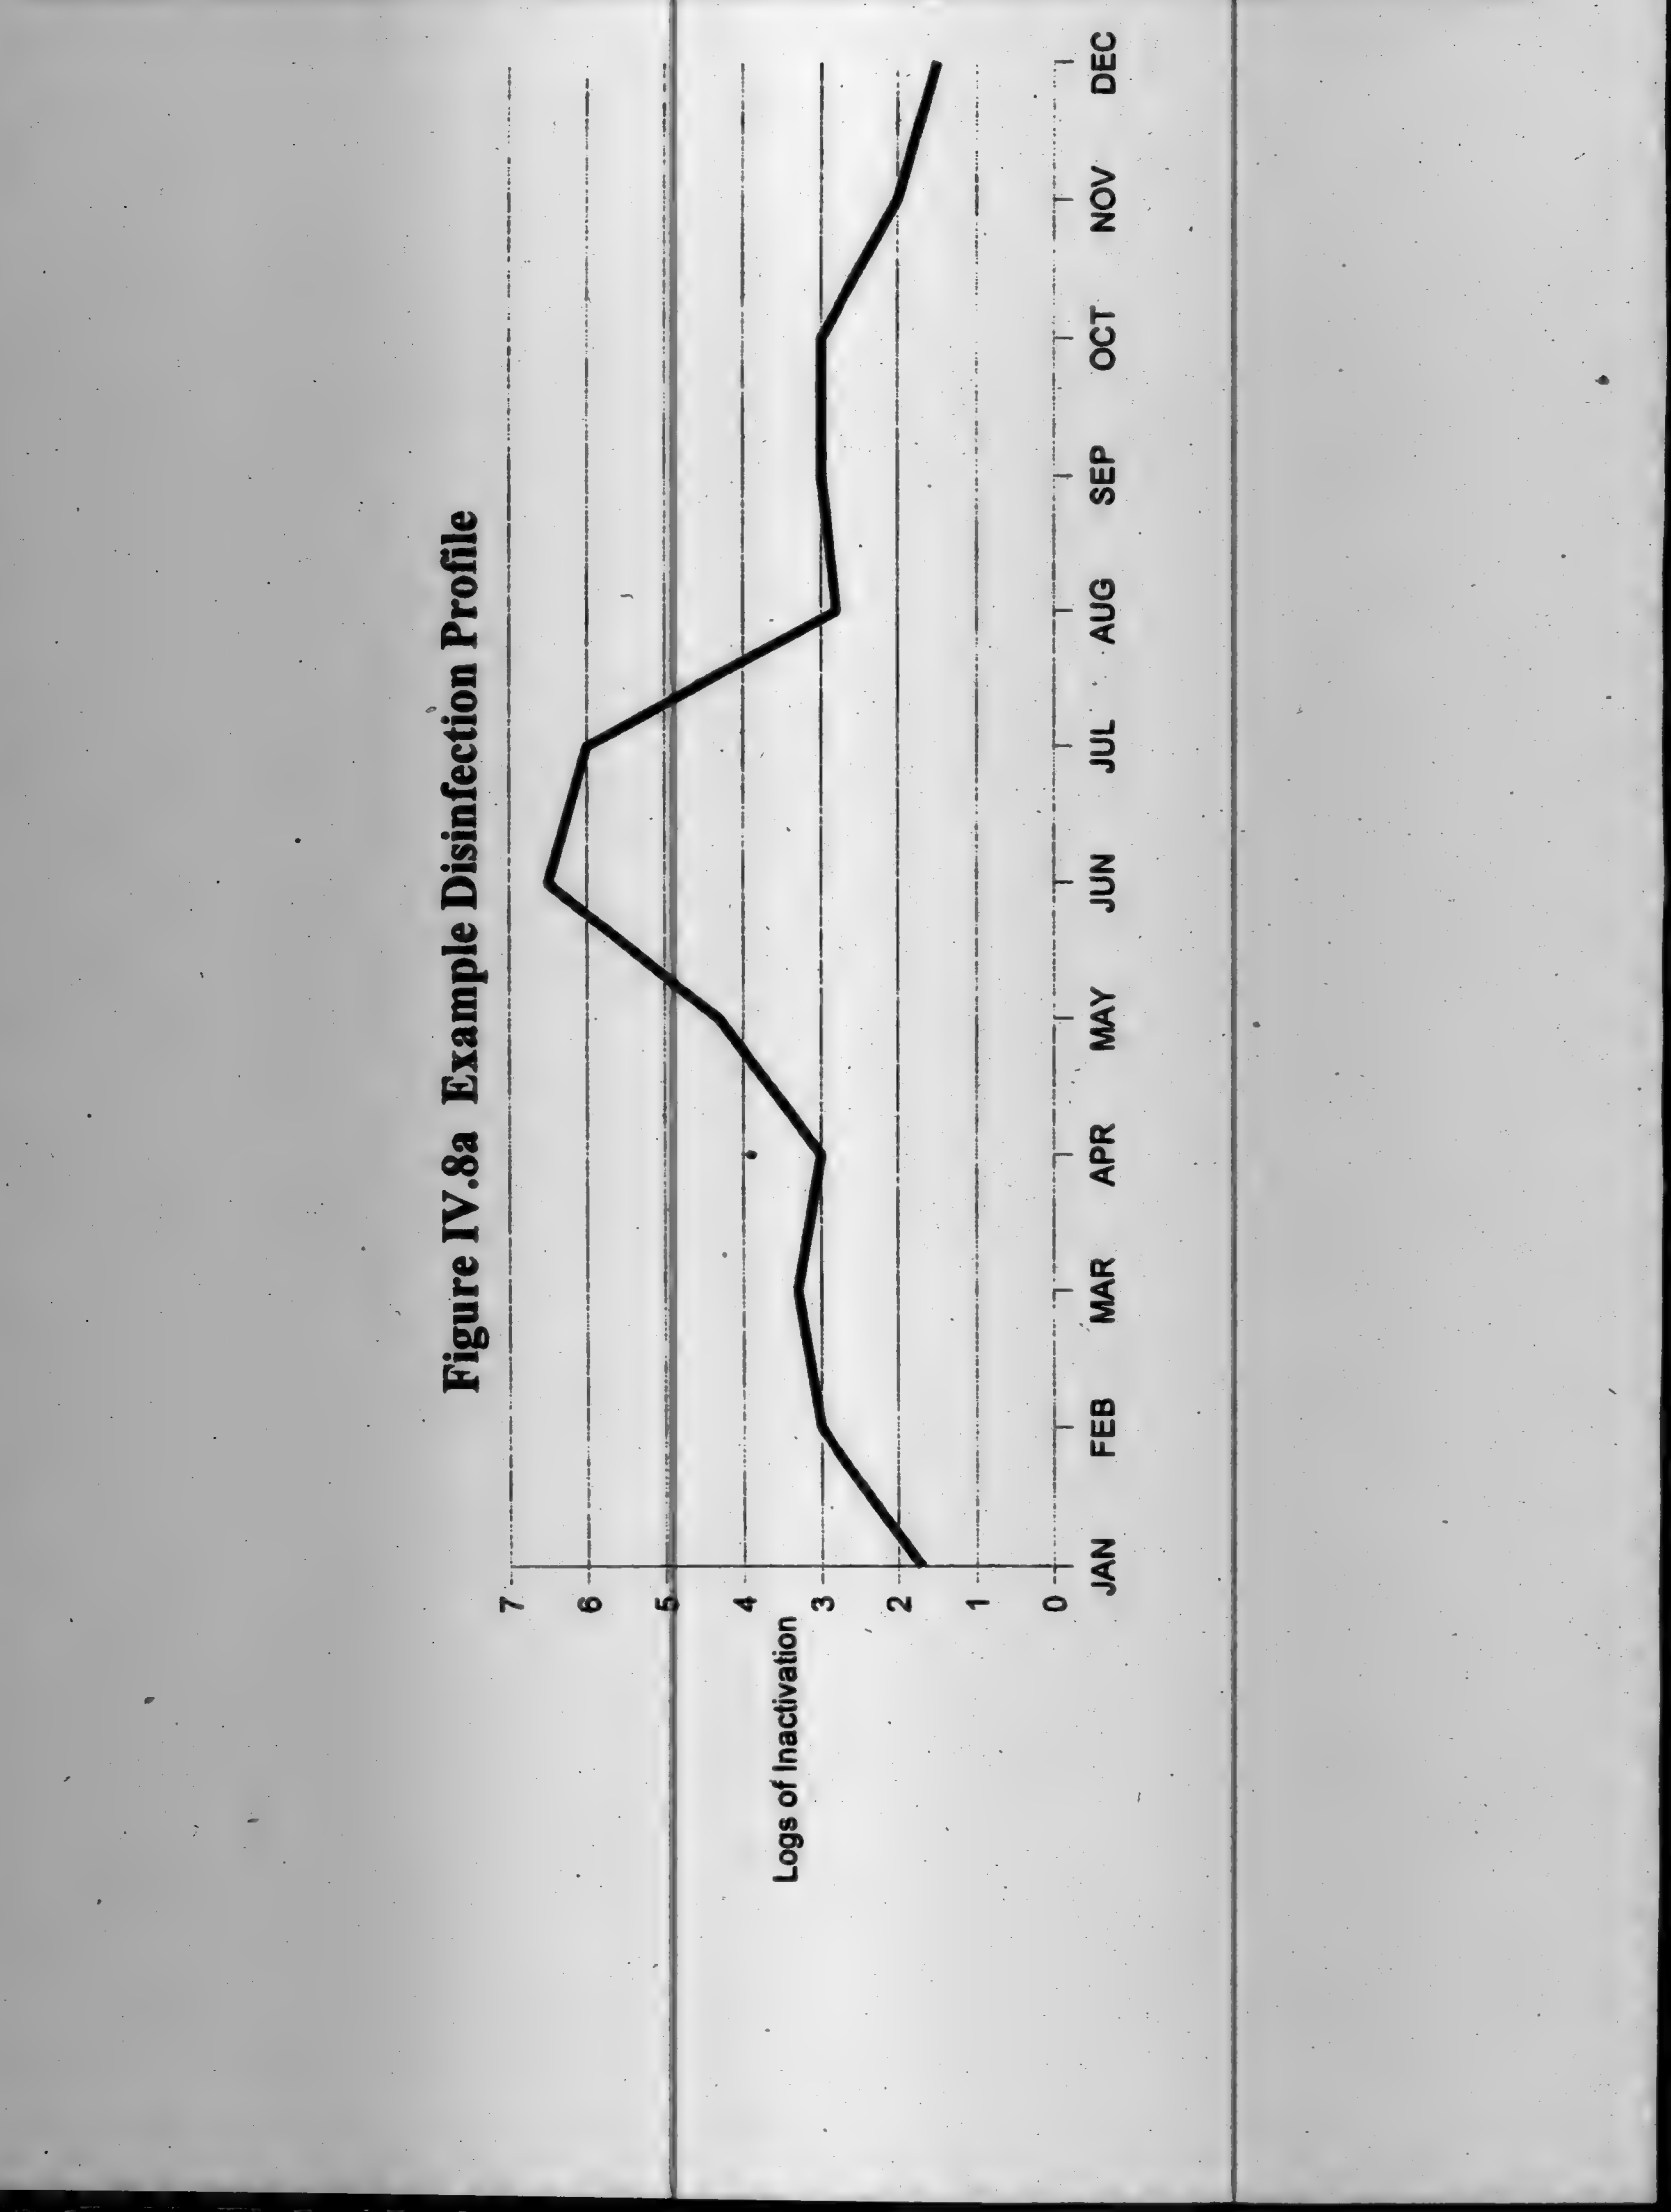

Figure IV.8a Example Disinfection Profile

VOL 65 ISS 69 AP 10 2000 UMI

c. Proposed Requirements

EPA considered four alternatives for requiring systems to develop the disinfection profile.

Alternative 1

The IESWTR requires systems serving 10,000 or more persons to measure the four parameters described above and develop a profile of microbial inactivation on a daily basis. EPA considered extending this requirement to systems serving fewer than 10,000 persons and requested input from small system operators and other interested stakeholders including the public. EPA received feedback that this requirement would place too heavy of a burden on the small system operator for at least two reasons:

- Small system operators are not present at the plant every day; and
- Small systems often have only one operator at a plant who is responsible for all aspects of maintenance, monitoring and operation.

Alternative 2

EPA also considered not requiring the disinfection profile at all. After consideration of the feedback of small system operators and other interested stakeholders, however, EPA believes that there is a strong benefit in the plant operator knowing the level of microbial inactivation, and that the principles developed during the regulation negotiation and Federal Advisory Committee prior to promulgation of the IESWTR could be applied to small systems for the purpose of public health protection. Recognizing the potential burdens the profiling procedures placed on small systems, EPA considered two additional alternatives.

Alternative 3

EPA considered requiring *all* systems serving fewer than 10,000 persons, to develop a disinfection profile based on *weekly* measurements for one year during or prior to 2003. A system with TTHM and HAA5 levels less than 80 percent of the MCLs (based on either required or optional monitoring as described in section IV.B.1) would not be required to conduct disinfection profiling. EPA believes this alternative would save the operator time (in comparison to Alternative 1), and still provide information on seasonal variation over the period of one year.

Alternative 4

Finally, EPA considered a monitoring requirement only during a one month critical monitoring period to be determined by the State. In general, colder temperatures reduce disinfection efficiency. For systems in warmer climates, or climates that do not change very much during the course of the year, the State would identify other critical periods or conditions. This alternative reduces the number of times the operator has to calculate the microbial inactivation.

EPA considered all of the above alternatives, and in today's proposed rule, EPA is proposing Alternative 3. First, this alternative does not require systems to begin monitoring before States have two years to develop their regulations as part of primacy requirements. Given early implementation concerns, the timing of this alternative appears to be the most appropriate in balancing early implementation issues with the need for systems to prepare for implementation of the Stage 1 DBPR and ensuring adequate and effective microbial protection. Second, it allows systems and States which have been proactive in conducting applicability monitoring to reduce costs for those systems which can demonstrate low TTHM and HAA5 levels. Third, this alternative allows systems and States the opportunity to understand seasonal variability in microbial disinfection. Finally, this alternative takes into account the flexibility needed by the smallest systems while maintaining comparable levels of public health protection with the larger systems.

Request for Comments

EPA requests comment on this proposed requirement as well as Alternatives 1,2, and 4. The Agency also requests comment on a possible modification to Alternatives 1, 3 and 4. Under this modification, systems serving populations fewer than 500 would have the opportunity to apply to the State to perform the weekly inactivation calculation (although data weekly data collection would still be required). If the system decided to make a change in disinfection practice, then the State would assist the system with the development of the disinfection profile.

The Agency also requests comment on a modification to Alternative 3 which would require systems to develop a disinfection profile in 2004 only if Applicability Monitoring conducted in 2003 indicated TTHM and HAA5 levels of 80 percent or greater of the MCL. This modification would be coupled with the applicability monitoring modification discussed in the previous section.

3. Disinfection Benchmarking

a. Overview and Purpose

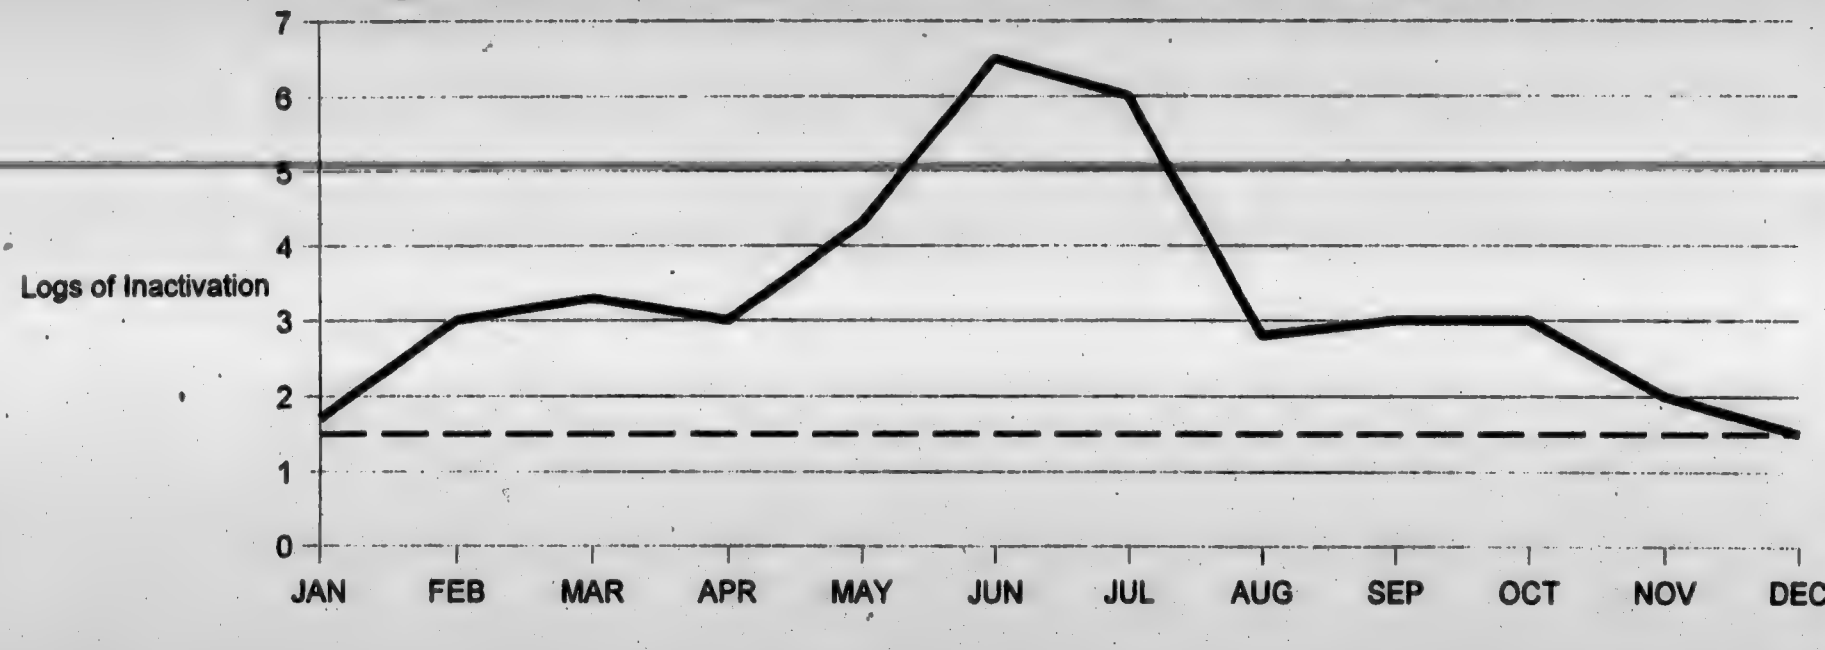
The DBPR requires systems to meet lower MCLs for a number of disinfection byproducts. In order to meet these requirements, many systems will require changes to their current disinfection practices. In order to ensure that current microbial inactivation does not fall below those levels required for adequate *Giardia* and virus inactivation as required by the SWTR, a disinfection benchmark is necessary. A disinfection benchmark represents the lowest average monthly *Giardia* inactivation level achieved by a system. Using this benchmark States and systems can begin to understand the current inactivation achieved at the system, and estimate how changes to disinfection practices will affect inactivation.

b. Data

Based on the hypothetical disinfection profile depicted in Figure IV.8a, the benchmark, or critical period, is the lowest level of inactivation achieved by the system over the course of the year. Figure IV.8b shows that this benchmark (denoted by the dotted line) takes place in December for the hypothetical system.

BILLING CODE 6560-50-P

Figure IV.8b Example Disinfection Profile with Benchmark



BILLING CODE 6560–50–C

c. Proposed Revisions

If a system is required to develop a disinfection profile pursuant to a significant change in disinfection practice, the system must comply with the approval requirements of the significant change in disinfection practice. Significant changes to disinfection practice include: moving the point of disinfection to a location which has a lower TOC concentration; switching to a disinfectant that is not approved for use with the system's type of source water; changing the disinfectant application method or process; changing the disinfectant maximum residual disinfectant level; changing the type of coagulant used (including changing from use of a coagulant to no use of a coagulant); changing the location of the point of coagulant addition; changing from conventional filtration treatment to direct filtration; changing the filter media; increasing the amount of recycle flow from backwash, sedimentation basin, or thickener processes; or making any other change that the State identifies as a significant change to disinfection practice.

d. Requirements for States and Primacy Agencies

EPA believes that it is important that States and primacy agencies making decisions about disinfection profiling and benchmarking have adequate training. EPA intends to provide technical guidance to States and primacy agencies to assist them in making these decisions. EPA also intends to work with States to provide training for States and primacy agencies. EPA is requesting comment on the appropriate roles for States and primacy agencies in making decisions about disinfection profiling and benchmarking, and on the resources that States and primacy agencies will require to implement these provisions. EPA is also requesting comment on the resources that States and primacy agencies will require to implement the requirements for systems to develop disinfection profiles and benchmarks.

EPA is proposing that States with primacy for the Surface Water Treatment Rule must adopt the disinfection profiling and benchmarking provisions for systems serving 500 or more people. EPA is proposing that States with primacy for the Surface Water Treatment Rule have the discretion to determine whether systems serving fewer than 500 people must develop disinfection profiles and benchmarks. EPA is requesting comment on this proposed approach.

e. Reporting and Recordkeeping Requirements

EPA is proposing that systems that are required to develop disinfection profiles and benchmarks must report to the State or primacy agency the following information:

(1) If a system is required to develop a disinfection profile because it has a total coliform monthly average of 5.0 or more, the system must report the total coliform monthly average for each month that the system serves water to the public.

(2) If a system is required to develop a disinfection profile because it has a fecal coliform monthly average of 1.0 or more, the system must report the fecal coliform monthly average for each month that the system serves water to the public.

(3) If a system is required to develop a disinfection profile because it has a HPC monthly average of 500 or more, the system must report the HPC monthly average for each month that the system serves water to the public.

(4) If a system is required to develop a disinfection profile because it has a total coliform monthly average of 5.0 or more, the system must report the total coliform monthly average for each month that the system serves water to the public.

(5) If a system is required to develop a disinfection profile because it has a fecal coliform monthly average of 1.0 or more, the system must report the fecal coliform monthly average for each month that the system serves water to the public.

d. Requirements for States and Primacy Agencies

EPA believes that it is important that States and primacy agencies making decisions about disinfection profiling and benchmarking have adequate training. EPA intends to provide technical guidance to States and primacy agencies to assist them in making these decisions. EPA also intends to work with States to provide training for States and primacy agencies. EPA is requesting comment on the appropriate roles for States and primacy agencies in making decisions about disinfection profiling and benchmarking, and on the resources that States and primacy agencies will require to implement these provisions. EPA is also requesting comment on the resources that States and primacy agencies will require to implement the requirements for systems to develop disinfection profiles and benchmarks.

EPA is proposing that States with primacy for the Surface Water Treatment Rule must adopt the disinfection profiling and benchmarking provisions for systems serving 500 or more people. EPA is proposing that States with primacy for the Surface Water Treatment Rule have the discretion to determine whether systems serving fewer than 500 people must develop disinfection profiles and benchmarks. EPA is requesting comment on this proposed approach.

e. Reporting and Recordkeeping Requirements

EPA is proposing that systems that are required to develop disinfection profiles and benchmarks must report to the State or primacy agency the following information:

(1) If a system is required to develop a disinfection profile because it has a total coliform monthly average of 5.0 or more, the system must report the total coliform monthly average for each month that the system serves water to the public.

(2) If a system is required to develop a disinfection profile because it has a fecal coliform monthly average of 1.0 or more, the system must report the fecal coliform monthly average for each month that the system serves water to the public.

(3) If a system is required to develop a disinfection profile because it has a HPC monthly average of 500 or more, the system must report the HPC monthly average for each month that the system serves water to the public.

(4) If a system is required to develop a disinfection profile because it has a total coliform monthly average of 5.0 or more, the system must report the total coliform monthly average for each month that the system serves water to the public.

(5) If a system is required to develop a disinfection profile because it has a fecal coliform monthly average of 1.0 or more, the system must report the fecal coliform monthly average for each month that the system serves water to the public.

c. Proposed Requirements

If a system that is required to produce a disinfection profile decides to make a significant change in disinfection practice after the profile is developed, it must consult with the State and receive approval before implementing such a change. Significant changes in disinfection practice are defined as: (1) moving the point of disinfection (other than routine seasonal changes already approved by the State); (2) changing the type of disinfectant; (3) changing the disinfection process; or (4) making other modifications designated as significant by the State. Supporting materials for such consultation with the State must include a description of the proposed change, the disinfection profile developed under today's proposed rule for *Giardia lamblia* (and, if necessary, viruses for systems using ozone or chloramines), and an analysis of how the proposed change might affect the current level of *Giardia* inactivation. In addition, the State is required to review disinfection profiles as part of its periodic sanitary survey.

A log inactivation benchmark is calculated as follows:

(1) Calculate the average log inactivation for either each calendar month, or critical monitoring period (depending on final rule requirement for the profiling provisions).

(2) Determine the calendar month with the lowest average log inactivation; or lowest inactivation level within the critical monitoring period.

(3) The lowest average month, or lowest level during the critical monitoring period becomes the critical measurement for that year.

(4) If acceptable data from multiple years are available, the average of critical periods for each year becomes the benchmark.

(5) If only one year of data is available, the critical period (lowest monthly average inactivation level) for that year is the benchmark.

d. Request for Comments

EPA has included a requirement that State approval be obtained prior to making a significant change to disinfection practice. EPA requests comment on whether the rule should require State approval or whether only state consultation is necessary.

EPA also requests comment on providing systems serving fewer than 500 the option to provide raw data to the State, and allowing the State to determine the benchmark.

C. Additional Requirements

1. Inclusion of *Cryptosporidium* in definition of GWUDI

a. Overview and Purpose

Groundwater sources are found to be under the direct influence of surface water (GWUDI) if they exhibit specific traits. The SWTR defined ground waters containing *Giardia lamblia* as GWUDI. One such trait is the presence of protozoa such as *Giardia* which migrate from surface water to groundwater. The IESWTR expanded the SWTR's definition of GWUDI to include the presence of *Cryptosporidium*. The Agency believes it appropriate and necessary to extend this modification of the definition of GWUDI to systems serving fewer than 10,000 persons.

b. Data

The Agency issued guidance on the Microscopic Particulate Analysis (MPA) in October 1992 as the Consensus Method for Determining Groundwater Under the Direct Influence of Surface Water Using Microscopic Particulate Analysis (EPA, 1992). Additional guidance for making GWUDI determinations is also available (USEPA, 1994a,b). Since 1990, States have acquired substantial experience in making GWUDI determinations and have documented their approaches (Massachusetts Department of Environmental Protection, 1993; Maryland, 1993; Sonoma County Water Agency, 1991). Guidance on existing practices undertaken by States in response to the SWTR may also be found in the State Sanitary Survey Resource Directory, jointly published in December 1995 by EPA and the Association of State Drinking Water Administrators (EPA/ASDWA). AWWARF has also published guidance (Wilson et al., 1996).

Most recently, Hancock et al. (1997) used the MPA test to study the occurrence of *Giardia* and *Cryptosporidium* in the subsurface. They found that, in a study of 383 ground water samples, the presence of *Giardia* correlated with the presence of *Cryptosporidium*. The presence of both pathogens correlated with the amount of sample examined, but not with the month of sampling. There was a correlation between source depth and occurrence of *Giardia* but not *Cryptosporidium*. The investigators also found no correlation between the distance of the ground water source from adjacent surface water and the occurrence of either *Giardia* or *Cryptosporidium*. However, they did find a correlation between distance from a surface water source and generalized MPA risk ratings of high (high represents an MPA score of 20 or greater), medium or low, but no correlation was found with the specific numerical values that are calculated by the MPA scoring system. An additional two reports (SAIC 1997a and 1997b) provide data on wells with *Giardia* cyst and *Cryptosporidium* oocyst recovery and concurrent MPA analysis.

c. Proposed Requirements

In today's proposed rule, EPA is modifying the definition of GWUDI to include *Cryptosporidium* for systems serving fewer than 10,000 persons.

Under the SWTR, States were required to determine whether systems using ground water were using ground water under the direct influence of surface water (GWUDI). State determinations were required to be completed by June 29, 1994 for CWSs and by June 29, 1999 for NCWSs. EPA does not believe that it is necessary to make a new determination of GWUDI for this rule based on the addition of *Cryptosporidium* to the definition of "ground water under the direct influence of surface water". While a new determination is not required, States may elect to conduct a new analysis based on such factors as a new land use pattern (conversion to dairy farming, addition of septic tanks).

EPA does not believe that a new determination is necessary because the current screening methods appear to adequately address the possibility of *Cryptosporidium* in the ground water.

d. Request for Comments

The Agency requests comment on the proposal to modify the definition of GWUDI to include *Cryptosporidium* for systems serving fewer than 10,000 persons.

2. Inclusion of *Cryptosporidium* Watershed Requirements for Unfiltered Systems

a. Overview and Purpose

Existing SWTR requirements for unfiltered surface water and GWUDI systems require these systems to minimize the potential for source water contamination by *Giardia lamblia* and viruses. Because *Cryptosporidium* has proven resistant to levels of disinfection currently practiced at systems throughout the country, the Agency felt it imperative to include *Cryptosporidium* in the watershed control provisions wherever *Giardia lamblia* is mentioned. The IESWTR therefore, modified existing watershed regulatory requirements for unfiltered systems to include the control of

Cryptosporidium. The Agency believes it appropriate and necessary to extend this requirement to systems serving fewer than 10,000 persons.

It should be noted that today's proposed requirements do not replace requirements established for unfiltered systems under the SWTR. Systems must continue to maintain compliance with the requirements of the SWTR for avoidance of filtration. If an unfiltered system fails any of the avoidance criteria, that system must install filtration within 18 months, regardless of future compliance with avoidance criteria.

EPA anticipates that in the planned Long Term 2 Enhanced Surface Water Treatment rule, the Agency will reevaluate treatment requirements necessary to manage risks posed by *Cryptosporidium* and other microbial pathogens in both filtered and unfiltered surface water systems. In conducting this reevaluation, EPA will utilize the results of several large surveys, including the Information Collection Rule (ICR) and ICR Supplemental Surveys, to more fully characterize the occurrence of waterborne pathogens, as well as watershed and water quality parameters which might serve as indicators of pathogen risk level. The LT2ESWTR will also incorporate the results of ongoing research on removal and inactivation efficiencies of treatment processes, as well as studies of pathogen health effects and disease transmission. Promulgation of the LT2ESWTR is currently scheduled for May, 2002.

b. Data

Watershed control requirements were initially established in 1989 (54 FR 27496, June 29, 1989) (EPA, 1989b), as one of a number of preconditions that a public water system using surface water must meet to avoid filtration. The SWTR specifies the conditions under which a system can avoid filtration (40 CFR 141.71). These conditions include good source water quality, as measured by concentrations of coliforms and turbidity; disinfection requirements; watershed control; periodic on-site inspections; the absence of waterborne disease outbreaks; and compliance with the Total Coliform Rule and the MCL for TTHMs. The watershed control program under the SWTR must include a characterization of the watershed hydrology characteristics, land ownership, and activities which may have an adverse effect on source water quality, and must minimize the potential for source water contamination by *Giardia lamblia* and viruses.

The SWTR Guidance Manual (EPA, 1991a) identifies both natural and human-caused sources of contamination to be controlled. These sources include wild animal populations, wastewater treatment plants, grazing animals, feedlots, and recreational activities. The SWTR Guidance Manual recommends that grazing and sewage discharges not be permitted within the watershed of unfiltered systems, but indicates that these activities may be permissible on a case-by-case basis where there is a long detention time and a high degree of dilution between the point of activity and the water intake. Although there are no specific monitoring requirements in the watershed protection program, the non-filtering utility is required to develop State-approved techniques to eliminate or minimize the impact of identified point and non-point sources of pathogenic contamination. The guidance already suggests identifying sources of microbial contamination, other than *Giardia*, transmitted by animals, and points out specifically that *Cryptosporidium* may be present if there is grazing in the watershed.

c. Proposed Requirements

In today's proposed rule, EPA is extending the existing watershed control regulatory requirements for unfiltered systems serving fewer than 10,000 people to include the control of *Cryptosporidium*. *Cryptosporidium* will be included in the watershed control provisions for these systems wherever *Giardia lamblia* is mentioned.

Specifically, the public water system must maintain a watershed control program which minimizes the potential for contamination by *Giardia lamblia*, and *Cryptosporidium* oocysts and viruses in the water. The State must determine whether the watershed control program is adequate to meet this goal. The adequacy of a program to limit potential contamination by *Giardia lamblia* cysts, *Cryptosporidium* oocysts and viruses must be based on: The comprehensiveness of the watershed review; the effectiveness of the system's program to monitor and control detrimental activities occurring in the watershed; and the extent to which the water system has maximized land ownership and/or controlled land use within the watershed.

It should be noted that unfiltered systems must continue to maintain compliance with the requirements of the SWTR for avoidance of filtration. If an unfiltered system fails any of the avoidance criteria, that system must install filtration within 18 months, regardless of future compliance with avoidance criteria.

d. Request for Comments

EPA requests comment on the inclusion of these requirements for unfiltered systems serving fewer than 10,000 people

3. Requirements for Covering New Reservoirs

a. Overview and Purpose

Open finished water reservoirs, holding tanks, and storage tanks are utilized by public water systems throughout the country. Because these reservoirs are open to the environment and outside influences, they can be subject to the reintroduction of contaminants which the treatment plant was designed to remove. The IESWTR contains a requirement that all newly constructed finished water reservoirs, holding tanks, and storage tanks be covered. The Agency believes it appropriate and necessary to extend this requirement to systems serving fewer than 10,000 people.

b. Data

Existing EPA guidelines recommend that all finished water reservoirs and storage tanks be covered (EPA, 1991b). The American Water Works Association (AWWA) also has issued a policy statement strongly supporting the covering of reservoirs that store potable water (AWWA, 1993). In addition, a survey of nine States was conducted in the summer of 1996 (Montgomery Watson, 1996). The States which were surveyed included several in the West (Oregon, Washington, California, Idaho, Arizona, and Utah), two States in the East known to have water systems with open reservoirs (New York and New Jersey), and one midwestern State (Wisconsin). Seven of the nine States which were surveyed require by direct rule that all new finished water reservoirs and tanks be covered.

Under the IESWTR, systems serving populations of 10,000 or greater were prohibited from constructing uncovered finished water reservoirs after February 16, 1999. The Agency developed an Uncovered Finished Water Reservoirs Guidance Manual (USEPA, 1999f) which provides a basic understanding of the potential sources of external contamination in uncovered finished water reservoirs. It also provides guidance to water treatment operators for evaluating and maintaining water quality in reservoirs. The document discusses:

- Existing regulations and policies pertaining to uncovered reservoirs;
- Development of a reservoir management plan;

• Potential sources of water quality degradation and contamination;
• Operation and maintenance of reservoirs to maintain water quality; and
• Mitigating potential water quality degradation.

As discussed in the 1997 IESWTR NODA (EPA, 1997b), when a finished water reservoir is open to the atmosphere it may be subject to some of the environmental factors that surface water is subject to, depending upon site-specific characteristics and the extent of protection provided. Potential sources of contamination to uncovered reservoirs and tanks include airborne chemicals, surface water runoff, animal carcasses, animal or bird droppings and growth of algae and other aquatic organisms due to sunlight that results in biomass (Bailey and Lippy, 1978). In addition, uncovered reservoirs may be subject to contamination by persons tossing items into the reservoir or illegal swimming (Pluntze 1974; Erb, 1989). Increases in algal cells, heterotrophic plate count (HPC) bacteria, turbidity, color, particle counts, biomass and decreases in chlorine residuals have been reported (Pluntze, 1974, AWWA Committee Report, 1983, Silverman et al., 1983, LeChevallier et al. 1997a).

Small mammals, birds, fish, and the growth of algae may contribute to the microbial degradation of an open finished water reservoir (Graczyk et al., 1996a; Geldreich, 1990; Fayer and Ungar, 1986;). In one study, sea gulls contaminated a 10 million gallon reservoir and increased bacteriological growth, and in another study waterfowl were found to elevate coliform levels in small recreational lakes by twenty times their normal levels (Morra, 1979). Algal growth increases the biomass in the reservoir, which reduces dissolved oxygen and thereby increases the release of iron, manganese, and nutrients from the sediments. This, in turn, supports more growth (Cooke and Carlson, 1989). In addition, algae can cause drinking water taste and odor problems as well as impact water treatment processes. A 1997 study conducted by the City of Seattle (Seattle Public Utilities, 1997) evaluated nutrient loadings by three groups of birds at Seattle's open reservoirs. Table IV.9 indicated the amount of soluble nutrient loadings estimated over the course of the year. It shows that bird feces may contribute nutrient loadings that can enhance algal growth in the reservoir.

TABLE IV.9.—1997 NUTRIENT LOADINGS BY BIRD GROUPS IN SEATTLE'S OPEN RESERVOIRS

Reservoir	Geese		Gulls		Ducks		Overall	
	Nitr. kg/yr	Phos. kg/yr	Nitr. kg/yr	Phos. kg/yr	Nitr. kg/yr	Phos. kg/yr	Total kg/yr	Conc. (mg/L)

c. Proposed Requirements

In today's proposed rule EPA is requiring surface water and GWUDI systems that serve fewer than 10,000 people to cover all new reservoirs, holding tanks or other storage facilities for finished water for which construction begins 60 days after the publication of the final rule in the **Federal Register**. Today's proposed rule does not apply these requirements to existing uncovered finished water reservoirs.

d. Request for Comments

EPA solicits comments regarding the requirement to require that all new reservoirs, holding tanks and storage facilities for finished water be covered.

D. Recycle Provisions for Public Water Systems Employing Rapid Granular Filtration Using Surface Water and GWUDI as a Source

Section 1412(b)(14) of the 1996 SDWA Amendments requires EPA to promulgate a regulation to govern the recycle of filter backwash within the treatment process of public water systems. The Agency is concerned that the recycle of spent filter backwash and other recycle streams may introduce additional *Cryptosporidium* oocysts to the treatment process. Adding oocysts to the treatment process may increase the risk oocysts will occur in finished water supplies and threaten public health. The Agency is further concerned because *Cryptosporidium* is not inactivated by standard disinfection practice, an important treatment barrier employed to control microbial pathogens. Oocysts returned to the plant by recycle flow therefore remain a threat to pass through filters into the finished water.

The Agency engaged in three primary information gathering activities to investigate the potential risk posed by returning recycle flows that may contain *Cryptosporidium* to the treatment process. First, the Agency performed a broad literature search to gather research papers and information on the occurrence of *Cryptosporidium* and organic and inorganic materials in recycle flows. The literature search also sought information regarding the potential impact recycle may have on plant treatment efficiency. Second, the Agency worked with AWWA, AWWSCo., and Cincinnati Water Works to develop twelve issue papers on commonly generated recycle flows (Environmental Engineering and Technology, Inc.,1999). These papers are summarized in the next section. Information from EPA's literature search was incorporated into the issue papers. Third, the Agency presented preliminary data and potential regulatory components to stakeholders, and solicited feedback, at public meetings in Denver, Colorado, and Dallas, Texas. EPA also received valuable input from representatives of small water systems through the SBREFA process.

Through the above activities, the Agency has identified four primary concerns regarding the recycle of spent filter backwash and other recycle streams within the treatment process of PWSs. The first concern is that some recycle flows contain *Cryptosporidium* oocysts, frequently at higher concentrations than plant source waters. Recycling these flows may increase the number of oocysts entering the plant and the number of oocysts reaching the filters. Loading more oocysts to the

filters could increase finished water oocyst concentrations. The second concern regards the location in the treatment process recycle flow is returned. The return of recycle at the point of primary coagulant addition or downstream of it may disrupt treatment chemistry by introducing residual coagulant or other treatment chemicals to the process stream and thereby lower plant treatment efficiency. Also, recycle flow returned to the clarification process may not achieve sufficient residence time for oocysts in the recycle flow to be removed, or it may create hydraulic currents that lower the unit's overall oocyst removal efficiency. The third concern regards direct filtration plants. Direct filtration plants do not employ clarification in their primary treatment process to remove suspended solids and oocysts; all oocyst removal is achieved by the filters. If the recycle flow is not treated before being returned to the plant, all of the oocysts captured by a filter during a filter run will be returned to the plant and again loaded to the filters. This may lead to ever increasing levels of oocysts being applied to the filters and could increase the concentration of oocysts in finished water. Therefore, it is important for direct filtration plants to provide adequate recycle flow treatment to remove oocysts and protect the integrity of the filters and finished water quality. Finally, the fourth concern is that the direct recycle of spent filter backwash without first providing treatment, equalization, or some form of hydraulic detention for the recycle flow, may cause plants to exceed State-approved operating capacity during recycle events. This can cause clarification and filter loading rates to be exceeded, which may lower overall oocyst removal provided by the plant and increase finished water oocyst concentrations.

EPA has particular concerns regarding the direct recycle of spent filter backwash water as it is produced (i.e., recycle flow is not retained in an equalization basin, treatment unit, or other hydraulic detention unit prior to reintroduction to the main treatment process) for the following reasons:

(1) Direct recycle may cause operating rates for clarification and filtration to be exceeded, which may lower overall *Cryptosporidium* removal;

(2) Direct recycle may hydraulically upset some plants, lowering overall plant treatment performance, and;

(3) Clarification and filtration operating rates may be exceeded at precisely the time recycle flow may be returning large numbers of oocysts to the treatment process.

The impact of direct recycle practice to smaller plants with few filters is of greatest concern because return of recycle flow can double or triple plant influent flow, which may hydraulically overload the plant and reduce oocyst removal.

Since standard disinfection practice does not inactivate *Cryptosporidium*, its control is entirely dependent on physical removal processes. The Agency is concerned that direct recycle may cause some plants to exceed operating capacity and thus lower their physical removal capabilities. This can increase the risk of oocysts entering the finished water and lead to an increased risk to public health.

The limited data (Cornwell and Lee, 1993) EPA has identified regarding plants with existing equalization and/or treatment indicates they may be at no greater risk of hydraulic upset or degradation of oocyst removal performance than non-recycle plants. Given current data limitations, it is reasonable to assume the presence and utilization of adequate recycle flow equalization and/or treatment processes will alleviate the potential for hydraulic disruptions and the impairment of treatment performance. Data suggesting otherwise is currently unavailable.

The potential for recycle to return significant numbers of oocysts to the treatment train does provide a general basis for concern regarding the impact of recycle practice to finished water quality. However, the Agency does not currently believe data warrants a national regulation requiring all recycle plants to provide recycle flow equalization or treatment for the following reasons:

(1) Data correlating oocyst occurrence in recycle streams to increased oocyst occurrence in finished water is unavailable;

(2) Data regarding the response of full-scale plants to recycle events is limited;

(3) Data is not available to determine the level of recycle flow equalization or treatment full-scale systems may need, if any, to control the risk of oocysts entering finished water, and;

(4) Whether and the extent to which oocyst occurrence in source water influences the necessary level of recycle treatment and equalization is unknown.

The Agency believes requiring plants that may be at greater risk due to recycle, such as direct recycle plants and direct filtration plants, to characterize their recycle practice and provide data to the State for its review provides a cost effective opportunity to increase public health protection and supply a measure of safety to finished drinking water supplies. EPA believes that today's proposal will address potentially higher risk recycle situations that may threaten the performance of some systems, and will do so by allowing State drinking water programs to consider site-specific treatment conditions and needs. The Agency believes these recycle provisions are needed to protect plant performance, the quality of finished water supplies, and to provide an additional measure of public health protection.

1. Treatment Processes That Commonly Recycle and Recycle Flow Occurrence Data

a. Treatment Processes That Commonly Recycle

The purpose of this section is to provide general background on common treatment plant processes, fundamental plant operations, and the origin of plant recycle streams. Detailed information on the specific recycle flows these processes generate are presented after this background discussion. Four general types of water treatment processes, conventional filtration, direct filtration, softening, and contact clarification, are discussed. Although there are numerous variations of these four treatment processes, only the most basic configurations are discussed here. The operation of package plants and options to returning recycle to the treatment process are also summarized.

i. Conventional Treatment Plants

Conventional water filtration plants are defined by the use of four essential unit processes: Rapid mix, coagulation/flocculation, sedimentation, and filtration. Sedimentation employs gravity settling to remove floc and particles. Particles not removed by sedimentation may be removed by the filters. Periodically, accumulated solids must be removed from the sedimentation unit. These solids, termed "residuals," are currently disposed to sanitary sewer, treated with gravity thickening, or some other process prior to returning them to plant headworks or other locations in the treatment train. Clarification processes other than sedimentation may also be used, and they also produce process residuals.

Clarification sludge may be processed on-site if the plant is equipped with solids treatment facilities. Commonly employed treatment processes include thickeners, dewatering equipment (*e.g.*, plate and frame presses, belt filter presses, or centrifuges), and lagoons. Each of these processes produces residual water streams that are currently returned to the treatment process at the

headworks or other locations prior to filtration. The volume of residuals produced by clarification depends upon the amount of solids present in the raw water, the dose and type of coagulant applied, and the concentration of solids in the treated water stream.

The one residual stream associated with filtration, spent filter backwash water, is produced during periodic backwashing events performed to remove accumulated solids from the filter. Spent filter backwash is frequently returned to the treatment process at the head of the plant, other locations prior to the filters, or disposed of to sanitary sewer or surface water. Some plants have the capability to send the filtrate produced during the filter ripening period to plant headworks, a raw water reservoir, or to a sanitary sewer or surface water rather than to the clear well as finished water. This practice, referred to as "filter-to-waste" is used to prevent solids, which pass through the filter more easily during the ripening period, from entering the finished water.

Filter backwash operations can differ significantly from plant to plant. The main variables are the time between backwashes (length of filter run), the rate of backwash flow, the duration of the backwash cycle, and the backwashing method. The time between filter backwashes is generally a function of either run time, headloss, or solids breakthrough. Both headloss and solids breakthrough can be dependent upon the quality of the sedimentation effluent. Regardless of the variable driving backwash frequency, the interval between backwashes typically vary from 24 to 72 hours. Recommended backwash frequency is every 24–48 hours (ASCE/AWWA, 1998).

There are a number of different methods that can be used to backwash a filter. These include: Upflow water only, upflow water with surface wash, and air/water backwash. Air/water backwash systems typically use 30–50 percent less water than the other two methods. The filter backwash flow rate can vary, depending on media type, water temperature, and backwash method, but generally has a maximum of 15–23 gpm/ft^2 (air/water backwash may have a lower maximum rate of 6–7 gpm/ft^2). A number of different backwash sequences are employed, but a typical backwash consists of a low rate wash (6–7 gpm/ft^2 for several minutes), followed by a high rate wash (15–23 gpm/ft^2 for 5–15 minutes), which is then followed by a final low rate wash (6–7 gpm/ft^2 for several additional minutes). Some treatment plants only use a high rate wash for 15 to 30 minutes. Backwash rates are significantly higher than filtration rates, which vary from 1 to 8 gpm/ft^2.

ii. Direct Filtration Plants

The direct filtration process is similar to conventional treatment, except the clarification process is not present. Direct filtration plants produce the same filter residual as conventional filtration plants, namely filter backwash, and may also generate a filter-to-waste flow. Direct filtration plants do not produce clarification residuals because clarification is not employed. Filter backwash may be either recycled to the head of the plant or discharged to surface waters or a sanitary sewer. Although direct filtration plants generally treat source waters that have low concentrations of suspended material, the solids loading to the filters may be higher than at conventional plants because solids are not removed in a clarification process prior to filtration. If spent filter backwash is not treated to remove solids prior to recycle, solids loading onto the filters will continue to increase over time, as an exit from the treatment process is unavailable. Filter run length may be shorter in some direct filtration plants relative to conventional plants because the solids loading to the filters may be higher due to the lack of a clarification process. The concentration of solids in the source water is a key variable in filter run length.

iii. Softening Plants

Softening plants utilize the same basic treatment processes as conventional treatment plants. Softening plants remove hardness (calcium and magnesium ions) through precipitation, followed by solids removal. Many softening plants employ a two-stage process, which consists of a rapid mix-flocculation-sedimentation sequence, in series, followed by filtration. Others use a single stage process, resembling conventional treatment plants. Precipitation of the calcium and magnesium ions is accomplished through the addition of lime (calcium hydroxide), with or without soda ash (sodium carbonate), which reacts with the calcium and magnesium ions in the raw water to form calcium carbonate and magnesium hydroxide. The precipitation of the calcium carbonate can be improved by recirculating some of the calcium carbonate sludge into the rapid mix unit because the additional solids provide nucleation points for the precipitation of calcium and magnesium. Without this recirculation, additional hydraulic detention time in the flocculation and sedimentation basins may be required to prevent excessive scale deposits in the plant clearwell or in the distribution system.

A softening plant generally has the same residual streams as a conventional plant: Filter backwash, sedimentation solids, and thickener supernatant and dewatering liquids. A filter-to-waste flow may also be generated. These residual streams are either disposed or recycled within the plant. A portion of the sedimentation basin solids are commonly recycled as the sedimentation basin solids contain significant quantities of precipitated calcium carbonate, recycle of these solids reduces the required chemical dose. Solids are generally recycled into the rapid mix chamber to maximize their effectiveness.

iv. Contact Clarification Plants

In the contact clarification process, the flocculation and clarification (and often the rapid mix) processes are combined in one unit, an upflow solids contactor or contact clarifier. Contact clarifiers are employed in both softening and non-softening processes. Raw water flows into the contact clarifier at the top of the central compartment, where chemical addition and rapid mix occurs. The water then flows underneath a skirt and into the outer sedimentation zone where solid separation occurs. A large portion of previously settled solids from the sedimentation zone is circulated to the mixing zone to enhance flocculation. The remainder of the solids are disposed to prevent their accumulation. Circulation and disposal of accumulated solids allows clarifier loading rates to be 10 to 20 times greater than loading rates for conventional sedimentation basins. Solids recirculation rates are generally different for softening and turbidity removal applications, with rates of up to 12 times the raw water flow for softening processes and up to 8 times the raw water flow for non-softening processes (ASCE/AWWA, 1998). Following clarification, treated water from the contactor is then filtered.

The residual streams from contact clarification plants are similar to those for conventional filtration plants. They include filter backwash, clarification solids, thickener supernatant, and dewatering liquids. The key operational consideration for these types of systems is the maintenance of a high concentration of solids within the skirt to allow high loading rates while maintaining adequate solids removal. Solids recirculation (*e.g.*, recycle) helps contact clarification processes maintain the necessary solids concentration.

Softening plants may also generate filter to waste flow.

v. Package Plants

Package plants are typically used to produce between a few thousand to 1 million gallons of water per day. Package plants can employ a conventional treatment train, as well as proprietary unit processes. Package plants typically include the same processes found in large plants, including coagulation, flocculation, clarification and filtration. The potential recycle streams are also comparable. The recycle of filter backwash may occur, however, the typical package plant may not be designed to convey process streams back into the plant as recycle.

vi. Summary of Recycle Disposal Options

Two recycle disposal options available to some plants are direct discharge to sanitary sewers or discharge to surface waters. Discharge of recycle waters to the municipal sewer system may occur when the treatment plant and Publicly Owned Treatment Works (POTW) are under the same authority or when the plant has access to a sanitary sewer and a POTW agrees to accept its discharge.

There may be a fee associated with discharge to a sanitary sewer system, and the total fee may vary with the volume of backwash effluent discharged as well as the amount of solids in the effluent (Cornwell and Lee, 1994). In addition to the fee requirement, discharging into the sewer system may require the plant to equalize the effluent prior to discharging to the POTW. The equalization process requires holding the effluent in tanks and gradually releasing it into the sanitary sewer system. The fee associated with sanitary sewer discharge may influence whether a plant recycles to the treatment process or discharges to a sanitary sewer.

Another option to recycle within the treatment process is the direct discharge of recycle flow to surface waters, such as creeks, streams, rivers, and reservoirs. Direct discharge is a relatively common method of disposal for water treatment plant flows. A National Pollutant Discharge Elimination System (NPDES) permit requires that certain water quality conditions be met prior to the discharge of effluent into surface waters. Treatment of the effluent prior to discharge may be required. The cost of effluent treatment may influence whether plants recycle within the treatment process or discharge to surface water.

b. Recycle Flow Occurrence Data

EPA has not regulated recycle flows in previous rulemakings. The 1996 SDWA Amendments have lead the Agency to perform an examination of recycle flow occurrence data for the first time. EPA discovered through its literature search and its work with AWWA, AWWSCo., and Cincinnati Water Works to develop the issue papers, that the amount of recycle stream occurrence data available is very limited, particularly for *Cryptosporidium*, the primary focus of this regulation. This may be because *Cryptosporidium* was identified as a contaminant of concern relatively recently and because currently available oocyst detection methods have limitations.

Twelve issue papers were developed to compile information on several commonly produced recycle streams. Each individual paper summarizes how the recycle stream is generated, the typical volume generated, characterizes the occurrence of various recycle stream constituents to the extent data allows, (*i.e.*, occurrence of *Cryptosporidium* and inorganic and organic material), and briefly discusses potential impacts of recycling the stream. The discussion of potential impacts is usually brief, due to overall data limitations and particularly due to a lack of data on *Cryptosporidium* occurrence. The 12 recycle streams examined include:

- untreated spent filter backwash water
- gravity settled spent filter backwash water
- combined gravity thickener supernatant (spent filter backwash and clarification process solids)
- gravity thickener supernatant from sedimentation basin solids
- mechanical dewatering device concentrate
- untreated basin solids
- lagoon decant
- sludge drying bed leachate
- monofill leachate membrane concentrate
- ion exchange regenerate
- minor streams

A total of 112 references were used to complete the issue papers, and AWWSCo. and Cincinnati Water Works performed sampling of non-microbial recycle stream constituents to supplement occurrence information.

Cryptosporidium occurrence data was only identified for five recycle streams, namely: untreated spent filter backwash water, gravity settled spent filter backwash water, untreated sedimentation basin solids, combined thickener supernatant, and sludge drying bed leachate. Oocysts may occur in the other recycle streams as well, but published occurrence data was not identified. The issue papers and supporting literature indicate data does not exist to correlate oocyst occurrence in recycle streams to the occurrence of oocysts in finished water. However, the issue papers did identify data showing that oocysts occur in recycle streams, often at concentrations higher than that of the source water.

Cryptosporidium is not the only constituent of recycle waters. Other common constituents are manganese, iron, aluminum, disinfection byproducts, organic carbon, *Giardia* lamblia and particles. EPA does not currently have data to indicate these constituents occur in recycle streams at levels which threaten treatment plant performance, finished water quality, or public health. Additionally, current regulations may largely control any minor risk these constituents may present. For example, organic matter in recycle flow may form disinfection byproducts in the presence of oxidants. The Stage 1 DBPR, which requires monitoring for disinfection byproducts, will identify systems experiencing disinfection byproduct occurrence above or near applicable MCLs through distribution system monitoring. Additionally, Secondary Maximum Contaminant Levels (SMCLs) have been promulgated to control occurrence of aluminum, iron, and manganese at levels of .05–.2 mg/l, .3 mg/l, and .05 mg/l, respectively. Particle levels are controlled by effluent turbidity standards and *Giardia* lamblia is controlled through a combination of disinfection and filtration requirements. EPA believes existing regulations control these recycle stream constituents. Therefore, their control is not a primary goal of today's proposal. Additionally, detailed discussion of these constituents is not provided in the below summary of the issue papers because: (1) control of *Cryptosporidium* is the focus of the recycle provisions, and; (2) concentrations of inorganic and organic materials reported in the issue papers are for recycle streams, not finished water occurrence. The recycle stream concentrations will be significantly diluted by mixing with source water.

The occurrence of recycle flow constituents other than *Cryptosporidium* is not discussed in today's preamble for the above reasons. The following discussion of recycle stream occurrence data covers only untreated spent filter backwash water, gravity settled spent filter backwash water, combined gravity thickener

supernatant (a combination of spent filter backwash and clarification process solids), gravity thickener supernatant from clarification process solids, and mechanical dewatering device liquids. These five recycle streams are discussed in detail because they are most likely to present a threat to treatment plant performance or finished water quality when recycled. For example, treated and untreated spent filter backwash water and thickener supernatant are the only two recycle streams of sufficient volume to cause plants to exceed their operating capacity during recycle events. The five recycle streams discussed below are also most likely to contain *Cryptosporidium*.

Copies of all the issue papers are available for public review in the Office of Water docket for this rulemaking. Portions of the following recycle stream descriptions use excerpts from the issue papers.

i. Untreated Spent Filter Backwash Water

Water treatment plants that employ rapid granular filtration (e.g., conventional, softening, direct filtration, contact clarification) generate spent filter backwash water. The backwash water is generated when water is forced through the filter, counter-current to the flow direction during treatment operations, to dislodge and remove accumulated particles and pathogens residing in the filter media. Backwash rates are typically five to eight times the process rate, and are used to clean the filter at the end of a filter run, which is generally 24 to 72 hours in length. Backwash operations usually last from 10 to 25 minutes. The flow rate and duration of backwashing are the primary factors that determine the volume of backwash water produced. Once the backwashing process is complete, the backwash water and entrained solids are either disposed of to a sanitary sewer, discharged to a surface water, or returned to the treatment process. Plants currently return spent filter backwash to the treatment process at a variety of locations, usually between plant headworks and clarification. Data regarding common recycle return locations is discussed in the next section of this preamble.

Spent filter backwash can be returned to the treatment process directly as it is produced, be detained in an equalization basin, or passed through a treatment process, such as clarification, prior to being returned to the plant. On a daily basis, spent filter backwash can range from 2 to 10 percent of plant production. Spent filter backwash is usually produced on an intermittent basis, but large plants with numerous filters may produce it continuously. At small and mid-size plants, large volume, short duration flows of spent filter backwash are usually produced. This may cause some plants, particularly smaller plants that recycle directly without flow equalization or treatment, to exceed their operating capacity or to experience hydraulic disruptions, both of which may negatively impact treatment efficiency and oocyst removal.

The concentrations of *Cryptosporidium* reported in the untreated spent filter backwash issue paper ranges from non-detect to a concentration of 18,421 oocysts per 100 L. This range is not amenable to formal statistical analysis, but rather provides a summary of minimum and maximum oocyst concentrations reported in available literature. Although a few studies report isolated data points of greater than 10,000 oocysts/100L for filter backwash water (Rose *et al.*, 1989; Cornwell and Lee, 1993; Colbourne, 1989), occurrence studies that collected the largest number of samples reported mean filter backwash oocyst occurrence concentrations of a few hundred oocysts per 100L (States *et al.*, 1997; Karanis *et al.*, 1996). The high concentration of oocysts found in some spent filter backwash samples is cause for concern, because oocysts are not inactivated by standard disinfection practice. They remain a threat to pass through the plant into the finished water if they are returned to the treatment process. However, current oocyst detection methods do not allow the occurrence of oocysts in spent filter backwash water to be correlated to finished water oocyst concentrations for a range of plant types, source water qualities, and recycle practices. Today's proposal does not require the installation of recycle equalization or treatment for spent filter backwash water on a national basis due to these data limitations.

The Agency is concerned that certain recycle practices, such as returning spent filter backwash to locations other than prior to the point of primary coagulant addition, or hydraulically overloading the plant with recycle flow so it exceeds its State approved operating capacity, may present risk to finished water quality and public health. Exceeding plant operating capacity during recycle events may cause greater risk to finished water quality, because plant performance is potentially being lowered at precisely the time oocysts are returned to the plant in the recycle flow. To address this concern, today's proposal requires that certain direct recycle plants that recycle spent filter backwash water and/or thickener supernatant to perform a self assessment of their recycle practice and report the results to the State. The self assessment requirements are discussed in detail later in this preamble.

ii. Gravity Settled Spent Filter Backwash Water

Gravity settled spent filter backwash water is generated by the same filter backwash process and is produced in the same volume as untreated spent filter backwash water. The difference between the two streams is that the former is treated by gravity settling prior to its return to the primary treatment process. Sedimentation treatment is usually accomplished by retaining the spent filter backwash water in a treatment unit for a period of time to allow suspended solids (including oocysts) to settle to the bottom of the basin. Polymer may be used to improve process efficiency. The water that leaves the basin is gravity settled spent filter backwash water. Removing solids from the spent filter backwash causes only a minor reduction in volume as the solids content of the untreated stream is low, usually below 1 percent.

Providing gravity settling for spent filter backwash is advantageous for two reasons. First, the sedimentation process detains the spent filter backwash in treatment basins for a period of hours, which lowers the possibility a large recycle volume will be returned to the plant in a short amount of time and cause the plant operating capacity to be exceeded. Second, treating the spent filter backwash flow can remove *Cryptosporidium* oocysts from the flow, which will reduce the number of oocysts returned to the plant.

Limited data show that sedimentation can effectively remove oocysts. Cornwell and Lee (1993) conducted limited sampling of spent filter backwash water at two plants prior to and after sedimentation treatment. The first facility practiced direct filtration and was sampled twice. The *Cryptosporidium* concentrations into and out of the sedimentation basin treating spent filter backwash were 900/100L and 140/100L, respectively, for the first sampling and 850/100L in the influent and 750/100L in the effluent for the second sampling. At the second plant a sludge settling pond received both sedimentation basin sludge and spent filter backwash, and the spent filter backwash oocyst concentration was 16,500/100L, and the treated recycle water concentration was 420/100L. In a study by Karanis (1996), *Cryptosporidium* was regularly detected in settled backwash waters. Of the 50

samples collected, 82 percent tested positive for *Cryptosporidium*. The mean value for *Cryptosporidium* was 22 oocysts/100L.

Sedimentation treatment can remove oocysts from spent filter backwash, but data indicate oocysts remain in gravity settled spent filter backwash water even after treatment. The Agency believes that sedimentation treatment for spent filter backwash waters is capable of removing oocysts and improving the quality of the water prior to recycle. However, given current data limitations, the Agency does not believe it is possible to specify, in a national regulation, the conditions (*e.g.*, source water oocyst concentrations, primary treatment train performance, concentration of oocysts in spent filter backwash, ability of sedimentation to remove oocysts under a range of conditions) under which sedimentation treatment of spent filter backwash water may be appropriate. This decision is best made by State programs to allow consideration of site-specific conditions and treatment needs.

iii. Combined Gravity Thickener Supernatant

Combined gravity thickener supernatant is derived from the treatment of filter backwash water and sedimentation basin solids in gravity thickener units. These two flows may not reside in the thickener at the same time or in equal volumes, depending on plant operations. The volume of thickener supernatant generated at a water treatment plant is a function of the type of flows it treats, the solids content of the influent stream, and the method of thickener operation. Regardless of whether a continuous or a batch process is used, a number of factors, including residuals production (a function of plant production, raw water suspended solids, and coagulant dose), volume of spent filter backwash water produced, and the level of treatment provided to thickener influent streams, directly affect the quantity of thickener supernatant produced.

The flow entering the thickener is primarily spent filter backwash water. Sedimentation basin solids is the second largest flow. Flow from dewatering devices, which is generated by the dewatering of residuals, may comprise a minor volume entering the thickener. Combined thickeners will have an influent that may be eighty-percent spent filter backwash or more by volume. About eighty-percent of the solids entering the thickener will be from the sedimentation basin sludge, as spent filter backwash water has a comparatively low solids concentration.

A recent FAX survey (AWWA, 1998) identified more than 300 water treatment plants in the United States with production capacities ranging from less than 2 mgd to greater than 50 mgd that recycle spent filter backwash water. Many of the survey respondents indicated that they recycle more than just spent filter backwash water. Based on the survey and published literature, thickener supernatant is probably the second largest and second most frequently recycled stream at water treatment facilities after spent filter backwash.

Data summarized in the issue paper showed that thickener supernatant quality varies widely, due in large part because the type and quality of recycle streams entering thickeners varies over time and from plant to plant. The turbidity, total suspended solids, and particle counts of thickener effluent are directly impacted by the quality of water loaded onto the thickener, thickener design, and thickener operation (e.g., residence time, use of polymer).

Data on the occurrence of *Cryptosporidium* was limited to two samples, with oocyst occurrence ranging from 82 to 420 oocysts per 100 L. Data is too limited, and practice varies too widely, to draw conclusions on the impact recycle of this flow may have on plant performance. However, given that the contents of the thickener have been treated and the amount of flow produced by gravity thickeners is relatively modest, it may be feasible to recycle the flow in a manner that minimizes adverse impact. Additionally, treatment plant personnel have a vested interest in optimizing thickener operation to minimize sludge dewatering and handling costs; optimization of thickener operation is likely to assist oocyst removal. However, additional data is needed to characterize the occurrence of *Cryptosporidium* and the potential impact recycle of combined thickener supernatant may have on finished water quality.

iv. Gravity Thickener Supernatant from Sedimentation Solids

Gravity settled sedimentation basin solids are sedimentation basin solids that have undergone settling to allow solid sludge components to settle to the bottom of a gravity thickener. The supernatant from the thickener is a potential recycle flow. The tank bottom is sloped to enhance solids thickening and collection and removal of settled solids is accomplished with a bottom scraper mechanism. If the supernatant is recycled, it can be returned to the plant continuously or intermittently, depending on whether the thickener is operated in batch mode. Thickeners may receive and treat both spent filter backwash water and sedimentation basin solids. For purposes of this discussion, and the data presented in the issue paper, the gravity thickener is only receiving sedimentation basin solids.

The volume of treated sedimentation basin solids supernatant generated is dependent on the amount of sludge produced in the sedimentation basin, the solids content of the sludge, and method of thickener operation. Sludge production is a function of plant production, raw water suspended solids, coagulant type, and coagulant dose. The quantity of sedimentation basin sludge supernatant is approximately 75 to 90 percent of the original volume of sedimentation basin sludge produced.

There is a very limited amount of data on the quality of thickener supernatant produced by gravity settling of only sedimentation basin solids (i.e., spent filter backwash and other flows are not added to the thickener), and no data was identified regarding the concentration of *Cryptosporidium* that occur in the supernatant. As is the case with combined gravity thickener supernatant, it is difficult to determine what impact, if any, the return of the supernatant may have on plant operations and finished water quality due to limited data. Additional data is necessary to determine the concentration of oocysts in this recycle stream, and to characterize the impact its recycle may have to plant performance.

v. Mechanical Dewatering Device Liquids

Water treatment plant residuals (usually thickened sludge) are usually dewatered prior to disposal to remove water and reduce volume. Two common mechanical dewatering devices used to separate solids from water are the belt filter press, which compresses the residuals between two continuous porous belts stretched over a series of rollers, and the centrifuge, which applies a strong centrifugal force to separate solids from water. The plate and frame press is another dewatering device that contains a series of filter plates, supported and contained in a structured frame, which separate sludge solids from water using a positive pressure differential as the driving force. Water removed from the solids with a belt filter press is called filtrate, from a filter press it is called pressate, and the water separated from the residuals with a centrifuge is referred to as centrate.

These streams will be collectively referred to as "dewatering liquid" for the following discussion.

The volume of dewatering liquid produced depends primarily on the volume and solids content of the thickened residuals fed to the mechanical dewatering device. Plants that produce small sludge volumes, and hence a low volume of thickener residuals, will process fewer residuals in the mechanical dewatering device and hence produce a smaller volume of dewatering liquid than a plant producing a large volume of solids, all else being equal. Since residuals are often thickened (typically to about 2 percent solids) prior to dewatering, the volume of the dewatering device feed stream is significantly lower than the volume of sedimentation basin residuals generated. If the sedimentation basin sludge flow is assumed to be 0.6 percent of plant production, then dewatering device flow may be approximately 0.1 to 0.2 percent of plant flow. Generally these streams are mixed in with other recycle streams prior to being returned to the plant. Mechanical dewatering devices may be operated intermittently, after a suitable volume of residuals have been produced for dewatering. The production of dewatering liquid and its recycle may not be a continuous process.

Data on the constituents in dewatering liquid were found in three references, one on belt filter press liquids, one on plate and frame pressate, and one on centrifuge centrate. Data on the occurrence of *Cryptosporidium* was not identified. Given the small, intermittent flow produced by mechanical dewatering devices, recycle flows from them are unlikely to cause plants to exceed operating capacity. However, it is possible that dewatering device liquid contains *Cryptosporidium* because it derived from solids likely to hold a large numbers of oocysts. Additional data is necessary to determine the concentration of oocysts in this recycle stream, and to characterize any impact its recycle may have to plant performance.

2. National Recycle Practices

a. Information Collection Rule

Public water systems affected by the ICR were required to report whether recycle is practiced and sample washwater (i.e., recycle flow) between the washwater treatment plant (if one existed) and the point at which recycle is added to the process train. Sampling of plant recycle flow was required prior to blending with the process train. Monthly samples were required for pH, alkalinity, turbidity, temperature, calcium and total hardness, TOC, UV_{254}, bromide, ammonia, and disinfectant residual if disinfectant was used. Systems were also required to measure recycle flow at the time of sampling, the twenty four hour average flow prior to sampling, and report whether treatment of the recycle was provided and, if so, the type of treatment. Reportable treatment types were plain sedimentation, coagulation and sedimentation, filtration, disinfection, or a description of an alternative treatment type. Plants were also required to submit a plant schematic to identify sampling locations. EPA used the sampling schematics and other reported information to compile a database of national recycle practice.

i. Recycle Practice

The Agency developed a database from the ICR sampling schematics and other reported information. Table IV.10 summarizes the plants in the database. Of the 502 plants in the database at the time the analysis was performed, 362 used rapid granular filtration.

TABLE IV.10.—RECYCLE PRACTICE AT ICR PLANTS

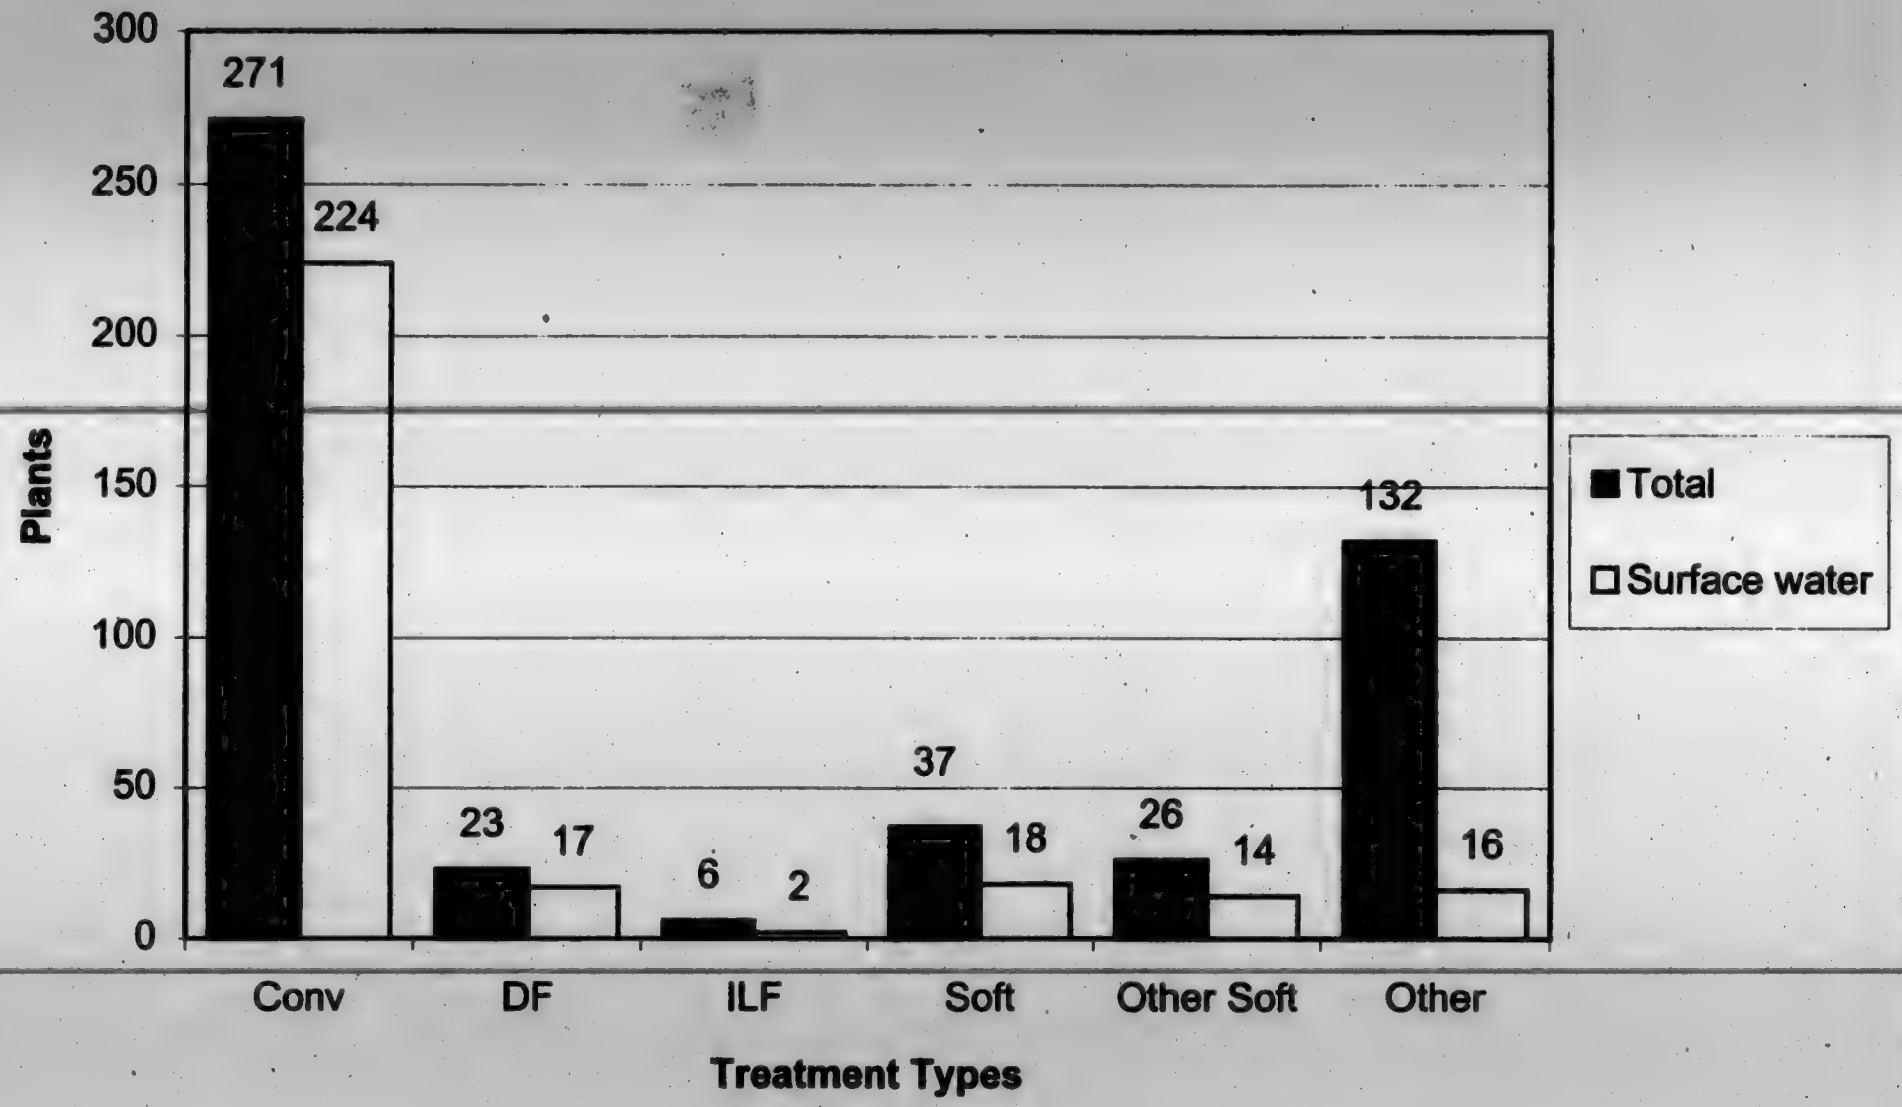
Plant classification	Number
All ICR plants	502
Filtration plants [a]	362
Filtration plants recycling [b]	226
Filtration plants treating recycle	148
Recycle plants serving ≥100,000	168
Recycle plants serving <100,000	58

[a] Defined as conventional, lime softening, other softening, and direct filtration plants.
[b] Plants report existence of a recycle stream, not its origin.

These plants are classified as conventional, lime softening, other softening, and direct filtration. The remaining 140 plants in the database do not employ rapid granular filtration capability and generally provide disinfection for ground water. Of the 362 filtration plants in the database, 226 (62.4 percent) reported recycling to the treatment process. Seventy-four percent of the plants that recycle serve populations greater than 100,000 and 26 percent serve populations below 100,000. Figure IV.9 shows the distribution of plants by treatment type and Figure IV.10 shows the distribution of plants by population served. Table IV.11 shows that 88 percent of ICR recycle plants use surface water. An additional one percent use GWUDI and another one percent use a combination of ground water and surface water. Therefore, 90 percent of ICR recycle plants use a source water that could contain *Cryptosporidium*.

BILLING CODE 6560-50-P

Figure IV.9 ICR Plants by Treatment Train Type



BILLING CODE 6560-50-P

Figure IV.10 ICR Recycle Plants by Population Served

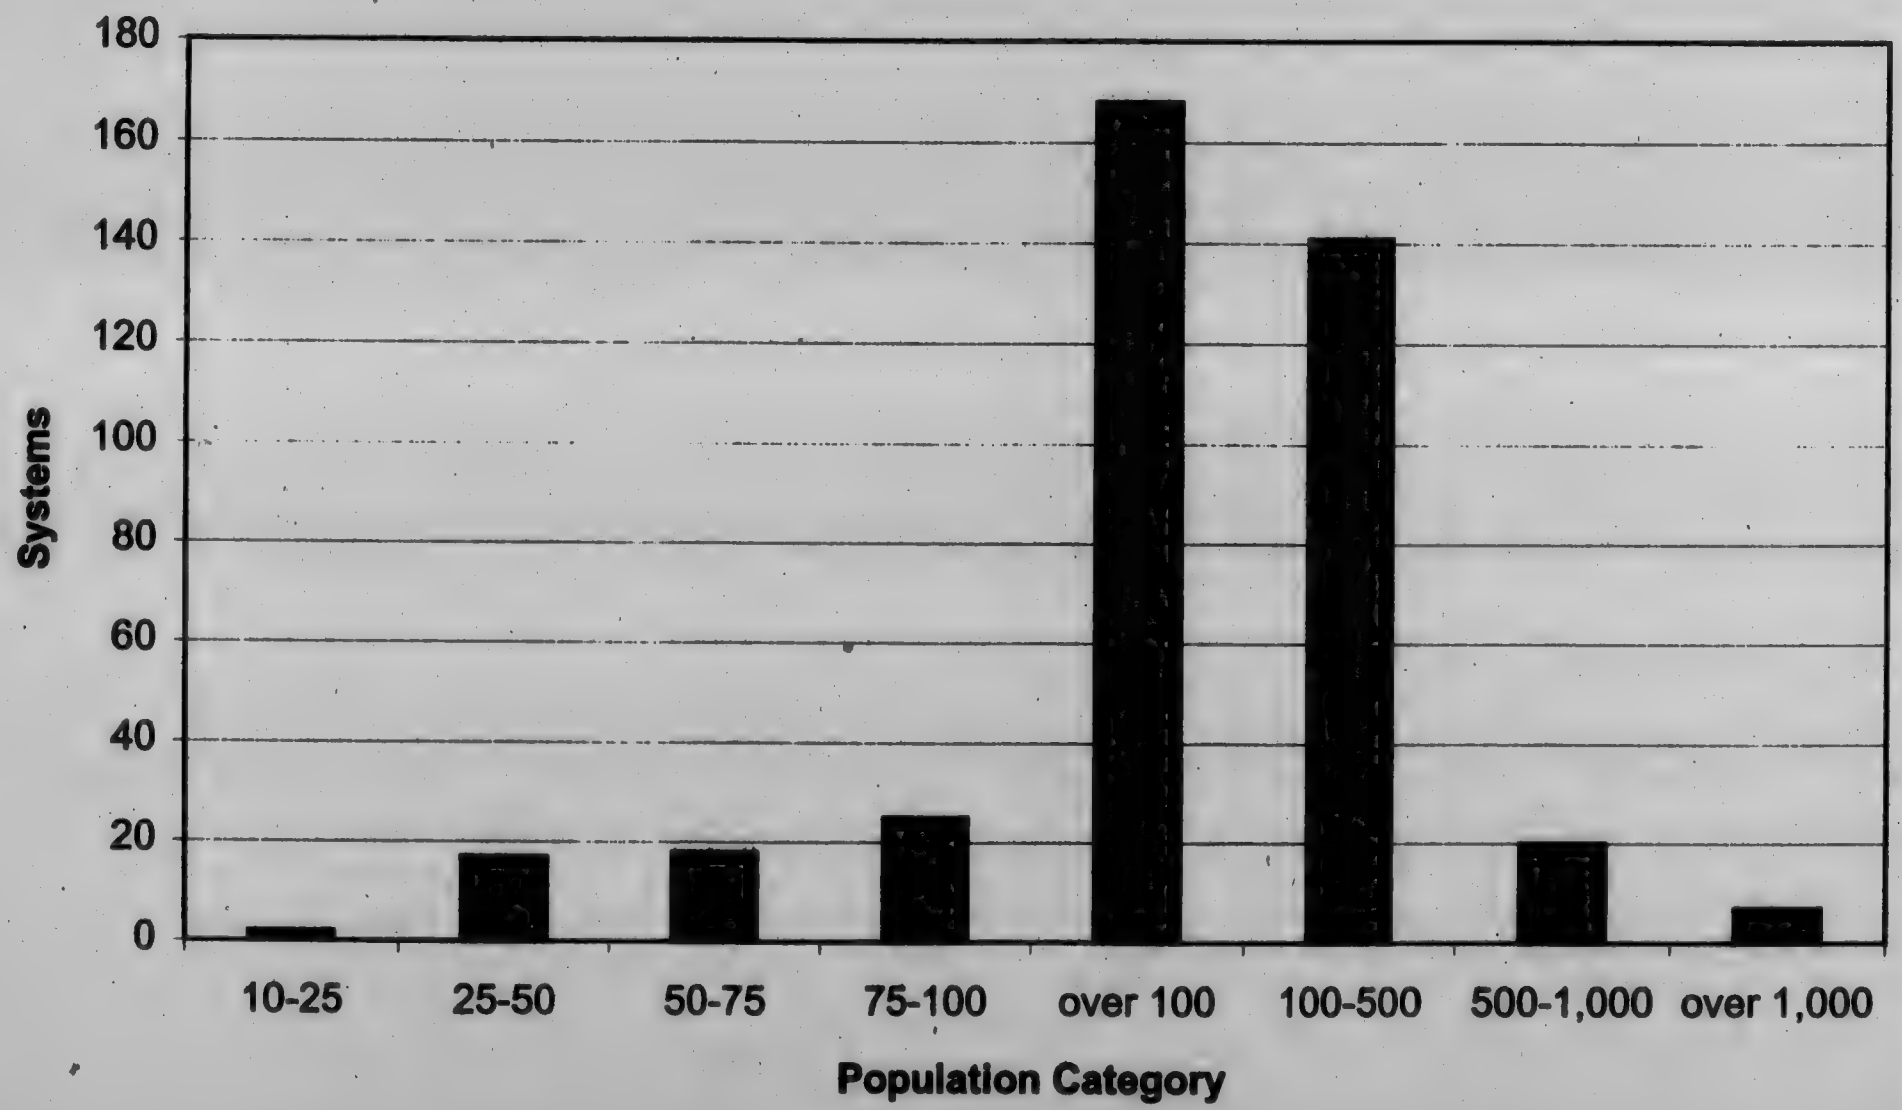


TABLE IV.11.—SOURCE WATER USE BY ICR RECYCLE PLANTS

Source water type	Number of plants	Percent of recycle plants
Total number of recycle plants	226	100
Surface Water	199	88
Ground water under the influence	3	1
Ground water and surface water	2	1
Ground water only	22	10

Table IV.12 shows that 65 percent of ICR recycle plants report providing treatment for the recycle flow. The percentage of plants providing treatment is the same for the subsets of plants serving greater than and less than 100,000 people. Sedimentation is the most widely reported treatment method, as 77 percent of plants providing treatment employ it. The database does not provide information on the solids removal efficiency of the sedimentation units. All direct filtration plants practicing recycle reported providing treatment for the recycle flow.

TABLE IV.12.—TREATMENT OF RECYCLE AT ICR PLANTS [1]

ICR recycling plants	Number of plants	Percentage of recycle plants
Number of recycle plants	226	100
Practice recycle treatment	147	65
Use sedimentation	114	77
Use sedimentation/coagulation	14	10
Use two or more treatments	14	10
Other treatment	5	3

[1] Disinfection not counted as treatment because it does not inactivate *Cryptosporidium*.

Table IV.13 indicates that 75 percent of ICR recycle plants return recycle prior to rapid mix. Fifteen percent return it prior to sedimentation, and ten percent of plants return it prior to filtration. These percentages hold for the subsets of plants serving greater than and less than 100,000 people. The data indicate that introducing recycle prior to rapid mix may be a common practice. EPA believes that introducing recycle flow prior to the point of primary coagulant addition, is the best recycle return location because it limits the possibility residual treatment chemicals in the recycle flow will disrupt treatment chemistry.

TABLE IV.13.—RECYCLE RETURN POINT

Point of recycle return	Number of plants	percent of plants
Number of recycle plants	[1]224	100
Prior to point of primary coagulant addition	169	75
Prior to sedimentation	34	15
Prior to filtration	21	10

[1] Recycle return point could not be determined for two plants.

The data provides the following conclusions regarding the recycle practice of ICR plants: (1) The recycle of spent filter backwash and other process streams is a common practice; (2) the great majority of recycle plants in the database use filtration and surface water sources; (3) a majority of plants in the database that recycle provide treatment for recycle flow, and; (4) a large majority of plants in the database that recycle (approximately 3 out of 4) recycle prior to the point of primary coagulant addition.

b. Recycle FAX Survey

The AWWA sent a FAX survey (AWWA, 1998) to its membership in June 1998 to gather information on recycle practices. Plants were not targeted based on source water type, the type of treatment process employed, or any other factor. The survey was sent to the broad membership to increase the number of responses. Responses indicating a plant recycled spent filter backwash or other flows were compiled to create a database. The resulting database included 335 plants. The database does not contain information from respondents who reported recycle was not practiced. Data from some of the FAX survey respondents also populates the ICR database. Plants in the database are well distributed geographically and represent a broad range of plant sizes as measured by capacity. Figure IV.11 shows plant distribution by capacity and Figure IV.12 by geographic location. The following discussion of FAX survey data is divided into two sections. The first discusses national recycle practice and the second discusses options for recycle disposal in lieu of returning recycle to the treatment process.

i. Recycle Practices

Data from the AWWA survey indicate that 74 percent of surface water plants rely on recycle streams for some flow. The percentage of plants using recycle water in each of the surface water categories (which are based on plant capacity) could be calculated from the data reported in the AWWA survey. Recycle water practices are summarized in Table

i. Recycle practice

Data summarized in Table IV.14 show that 78 percent of plants in the database rely on a surface water as their source. The percentage of plants using source water influenced by a surface water (which may contain *Cryptosporidium*) could be higher because the data do not report whether wells were pure ground water or GWUDI.

TABLE IV.14.—SOURCE WATER USED BY FAX SURVEY PLANTS

Source water type	Percent of plants
Surface Water	78
River	27
Reservoir	28
Lake	16
Other	7
Well [1]	22

[1] Wells sources not defined as either ground water or ground water under the direct influence of surface water.

Table IV.15 shows that a wide variety of treatment process types are included in the data, with conventional filtration (rapid mix, coagulation, sedimentation, filtration) representing over half of the plants submitting data. Upflow clarification is the second most common treatment process reported. Ten percent of plants in the database use direct filtration. Only four percent of plants do not use rapid granular filtration.

TABLE IV.15.—TREATMENT TRAINS OF FAX SURVEY PLANTS

Treatment process type	Percent of plants [1]
Rapid mix, coagulation, filtration	51
Upflow clarifier	21
Softening	14
Direct filtration	10
Other	4

[1] 96 percent of plant in the database provide filtration.

Table IV.16 indicates that a vast majority of plants recycle prior to the point of primary coagulant addition. Only six percent of plants returned recycle in the sedimentation basin or just prior to filtration.

TABLE IV.16.—RECYCLE RETURN POINT OF FAX SURVEY PLANTS

Return point	Percent of plants
Prior to point of primary coagulant addition	83
Pre-sedimentation (e.g., rapid mix)	11
Sedimentation basin	4
Before filtration	2

Table IV.17 shows that the majority of plants in the database provide some type of treatment for the recycle flow prior to its reintroduction to the treatment process. Approximately 70 percent of plants reported providing treatment, with sedimentation being employed by over half of these plants. Equalization, defined as a treatment technology by the survey, is practiced by 20 percent of plants in the database. Fourteen percent of plants reported using both sedimentation and equalization.

TABLE IV.17.—RECYCLE TREATMENT AT FAX SURVEY PLANTS

Treatment type	Percent of plants
No treatment	30
Treatment	70
Sedimentation	54
Equalization	20
Sedimentation and equalization	14
Lagoon	5
Others	7

Table IV.18 summarizes recycle treatment practice and frequency of direct recycle based on population served. The table illustrates that, for plants supplying data, treatment of recycle with sedimentation is provided more frequently as plant service population deceases. Plants serving populations of less than 10,000 recycle directly (27.5 percent) less frequently than plants serving populations greater than 100,000 (50 percent). The data indicate that a majority of small plants in the database may have installed equalization or sedimentation treatment to protect treatment process integrity from recycle induced hydraulic disruption. All direct filtration plants in the FAX survey provide recycle treatment or equalization.

TABLE IV.18.—RECYCLE PRACTICE BASED ON POPULATION SERVED [1]

Population served	Recycle practice			
	#Plants	Equalization	Sedimentation	Direct recycle
<10,000	43	9% (n=4)	67% (n=29)	23% (n=10)
10,000–50,000	79	10% (n=8)	57% (n=45)	33% (n=26)
50,000–100,000	35	17% (n=6)	54% (n=19)	29% (n=10)
100,000	65	35% (n=23)	23% (n=15)	42% (n=27)

[1] Based on 222 surface water plants suppling all necessary data to make determination.

FAX survey data support the following conclusions regarding the recycle practice of plants supplying data: (1) The recycle of spent filter backwash and other process streams is a common practice; (2) the majority of recycle plants use surface water as their source and are thereby at risk from *Cryptosporidium*; (3) a large majority of plants providing data recycle prior to the point of primary coagulant addition, and; (4) a majority of plants supplying data provide treatment for recycle waters prior to reintroducing them to the treatment plant. The FAX survey provides an informative snapshot of national recycle practices due to the number of recycle plants it includes, the geographic distribution of respondents, and the good representation of plants serving populations of less than 10,000 people.

ii. Options to recycle.

The FAX survey asked whether feasible alternatives to recycle are available (i.e., NPDES surface water discharge permit, pretreatment permit for discharge to POTW) and the importance of recycle to optimizing treatment performance and meeting production requirements. Responses to these questions is summarized in Table IV.19.

Table IV.19 shows that approximately 20 percent of respondents could not obtain either an NPDES surface water discharge permit or a pretreatment permit for discharge to a POTW. Approximately 90 percent of respondents stated that recycle flow is not important to meet typical demand.

Twenty-four percent of all respondents stated that returning recycle to the treatment process is important for optimal operation. "Optimal operation" was not defined by the survey and respondents may have considered not changing current plant operation (e.g., not changing current recycle practice) an aspect of optimal treatment, rather than addressing whether recycle practice is important for the plant to produce the highest quality finished water.

TABLE IV.19.—OPTIONS TO RECYCLE AS REPORTED BY FAX SURVEY PLANTS [1]

Question	Percent Yes	Percent No	Percent Unknown
Able to obtain NPDES surface discharge permit?	41% (n=131)	37% (n=120)	22% (n=70)
Able to obtain pretreatment permit for POTW discharge?	43% (n=137)	42% (n=136)	15% (n=48)
Can obtain either an NPDES or a POTW discharge permit?	60% (n=192)	19.5% (n=63)	20.5% (n=66)
Is recycle important to meet peak demand?	14% (n=44)	80% (n=257)	6% (n=20)
Is recycle important to meet typical demand?	9% (n=28)	85% (n=272)	6% (n=21)
Is recycle important to optimal operation? (All plants in survey)	24% (n=75)	70% (n=225)	6% (n=21)
Is recycle important to optimal operation? [2] (softening plants only)	13% (n=3)	83% (n=19)	4% (n=1)

[1] Number of plants varies from question to question due to different response rates.
[2] Optimal operation not defined by survey. May include overall plant operation rather than importance of recycle to producing highest possible quality finished water.

iii. Conclusions

The ICR and FAX survey data are complimentary, as the ICR data supplies a wealth of data regarding recycle practices at large capacity plants, while the FAX Survey provides data on recycle practices over a range of plant capacities. Taken together, the two data sets provide a good picture of current recycle practice. The data indicate that recycle is a common practice for plants sampled. Approximately half of the respondents providing data return recycle flow to the treatment process and 70 percent provide some type of recycle treatment. Sedimentation and equalization are the two most commonly employed treatment technologies for plants supplying data. Approximately 80 percent of plants sampled return recycle prior to the point of primary coagulant addition. Examining the recycle practices of plants in the ICR and FAX survey data show that small plants (*i.e.*, fewer than 10,000 people served) are more than twice as likely as large plants (*i.e.*, greater than 100,000 people served) to provide sedimentation for recycle treatment (58 versus 26 percent).

The FAX survey responses show that approximately half of plants providing data have an option to recycle return, whether it be an NPDES surface water discharge permit or discharge to a POTW. Eighty-five percent of respondents stated that recycle flow is not important to meet peak demand. Less than a quarter of respondents have monitored pathogen concentrations in backwash water and fewer than half have any monitoring data to characterize the quality of the backwash water.

3. Recycle Provisions for PWSs Employing Rapid Granular Filtration Using Surface Water or Ground Water Under the Direct Influence of Surface Water

a. Return Select Recycle Streams Prior to the Point of Primary Coagulant Addition

i. Overview and Purpose

Today's proposal requires that systems employing rapid granular filtration and using surface water or GWUDI as a source return filter backwash, thickener supernatant, and liquids from dewatering processes to the primary treatment process prior to the point of primary coagulant addition. The goal of this provision is to protect the integrity of chemical treatment and ensure these recycle streams are passed through as many physical removal processes as possible to provide maximum opportunity for removal of *Cryptosporidium* oocysts from the recycle flow. Since *Cryptosporidium* is resistant to standard disinfection practice, it is important that chemical treatment be optimized to protect treatment plant efficiency and that all available physical removal processes be employed to remove it.

Today's proposal requires these flows be returned prior to the point of primary coagulant addition because these streams are either of sufficient volume to cause hydraulic disruption within the treatment process when recycled and/or are likely to contain *Cryptosporidium* oocysts. Minor recycle streams, such as lab sample lines, pump packing water, and infrequent process overflows are not likely to threaten plants' hydraulic stability or contain appreciable numbers of oocysts.

Treatment plant types that need to return recycle to a location other than prior to the point of primary coagulant addition to maintain optimal treatment performance (optimal performance as indicated by finished water or intra-plant turbidity levels), plants that are designed to employ recycle flow as an intrinsic component of their operations, plants with very low influent turbidity levels that may need alternative recycle locations to obtain satisfactory suspended solids removal, or other types of plants constrained by unique treatment considerations, may apply to the State to recycle at an alternative location under today's proposal. Once approved by the State, plants may recycle to the specified location.

ii. Data

Data from the ICR and FAX Survey indicate that 75 and 78 percent of plants, respectively, return recycle prior to the point of primary coagulant addition. The "point of primary coagulant addition" was defined in both analyses as the return of recycle prior to the rapid mix unit. The FAX Survey data indicate that 77 percent of plants serving under 10,000 people recycle prior to the point of primary coagulant

addition. It also showed that 78 percent percent of all plants in the database return recycle there, which suggests that plants serving smaller populations may return recycle prior to the point of primary coagulant addition as frequently as plants serving larger populations. Other common recycle return locations are the rapid mix unit, between rapid mix and clarification, or into the clarification unit itself.

The Agency does not believe filter backwash, thickeners supernatant, or liquids from dewatering processes should be recycled at the point of primary coagulant addition or after it for three reasons:

(1) Addition of these recycle streams, which can contain residual coagulant and other treatment chemicals, after the location of primary coagulant addition, may render the chemical dose applied less effective, potentially harming the efficiency of subsequent treatment processes;

(2) Introduction of recycle into the flocculation unit or clarification unit may create hydraulic currents that exacerbate or create short circuiting, and;

(3) Recycle introduced into the clarification process may not experience sufficient residence time for adequate solids removal to occur.

The Agency is concerned that plants may not adjust chemical dosage during recycle events to account for: (1) The presence of a potentially significant amount of residual treatment chemical in recycle flow and changes in recycle flow quality, and; (2) potentially large fluctuations in plant influent flow during recycle events. EPA is concerned that changes in influent water quality and flow are not monitored on an instantaneous basis during recycle events. Since the chemistry of the recycle flow and source water may differ significantly, it is important plants mix source and recycle water to establish a uniform chemistry prior to applying treatment chemical so the dose is appropriate for the mixture. Additionally, wide fluctuation in plant influent flow during recycle events may cause chemical over-or under-dosing, which can lower overall oocyst removal efficiency. In an article concerning optimization of filtration performance, Lytle and Fox (1996) state, "The capability to instantaneously monitor treatment processes and rapidly and effectively respond to raw and filter effluent quality changes are important factors in consistently producing low turbidity water." Logdson (1987) further states, "For a plant to be operated properly, the total flow rate has to be known on an instantaneous basis or by volumetric measurement." EPA believes it is important plants diligently monitor the appropriateness of chemical dosing at all times, but particularly during recycle events, and strive for real-time chemical dose and influent flow management to optimize plant oocyst removal.

Pilot-scale research conducted by Patania *et al.* (1995) to examine the optimization of filtration found that chemical pretreatment was the most important variable determining oocyst removal by filtration. Edzwald and Kelley (1998) performed pilot-scale work to determine the ability of sedimentation, DAF, and filtration to remove *Cryptosporidium* and found that coagulation is critical to effective *Cryptosporidium* control by clarification and filtration. Bellamy *et al.* (1993) stated that the most important factor in plant performance is the use of optimal chemical dosages. Coagulation was recognized as the single most important step in the process of water clarification by Conley (1965). Ten pilot scale runs performed by Dugan *et al.* (1999) showed that coagulation has a large influence on the log removal of *Cryptosporidium* achieved by sedimentation. The importance of proper coagulation to filter performance was noted by Robeck *et al.* (1964) in pilot and full-scale work that showed proper coagulation is more important to the production of safe water than the filtration rate used. Results of direct filtration pilot studies, summarized by Trussell *et al.* (1980), showed that "effective coagulant is absolutely necessary if good effluent qualities are to be consistently produced."

Given the critical role proper chemical dosing plays in maintaining effective clarification and filtration processes, the Agency believes it is prudent and necessary to minimize the possibility recycle of spent filter backwash, thickener supernatant, and dewatering liquids will render chemical dosages applied during recycle events inaccurate, due to the presence of residual chemical or variations in influent flow, by requiring they be returned prior to the point of primary coagulant addition.

Finally, a fundamental tenet of water treatment is multiple treatment barriers should be provided to prevent microbial pathogens from entering finished water. To achieve this, conventional plants rely on coagulation, flocculation, clarification, and filtration as preventive microbial barriers. The Agency believes it is important that recycle waters be passed through each of these treatment processes to maximize the probability disinfection resistant oocysts will be removed in the plant and not enter the finished water supply.

iii. Proposed Requirements

Today's proposal requires that rapid granular filtration plants using surface water or GWUDI as a source return filter backwash, thickener supernatant, and liquids from dewatering processes prior to the point of primary coagulant addition. Plants that require an alternative recycle return location to maintain optimal finished water quality (as indicated by finished water or intra-plant turbidity levels), plants that are designed to employ recycle flow as an intrinsic component of the treatment process, or plants with unique treatment requirements or processes may apply to the State to return recycle flows to an alternative location. Plants may utilize this alternative location once granted by the State. EPA will develop detailed guidance and make it available to States and PWSs.

Softening systems may recycle process solids, but not spent filter backwash, thickener supernatant, or liquids from dewatering processes, at the point of lime addition immediately preceding the softening process to improve treatment efficiency. Literature establishes that return of process solids to point of lime addition decreases production of nuclei, increases the rate of crystallization, and increases crystal size, all of which enhance settling and process integrity (Randtke, 1999; Snoeyink and Jenkins, 1980). Contact clarification systems may recycle process solids, but not spent filter backwash, thickener supernatant, or liquids from dewatering processes, directly into the contactor to improve treatment efficiency.

iv. Request for Comments

EPA requests comment on the proposed requirements. The Agency also requests comment on the following aspects of this provision:

(1) What regulatory options are available to ensure direct recycle plants practice real-time chemical dose and influent flow management? Should flow-paced coagulant feed be required at direct recycle plants to minimize potential harmful impacts of recycle? What regulatory requirements may be applicable to ensure the integrity of the coagulation process?

(2) What treatment processes or treatment configurations may need an alternative recycle location to maintain optimal treatment?

(3) What alternative recycle locations are appropriate for such treatment configurations and what location may be inappropriate?

(4) Are there other reasons, beyond maintaining optimal treatment efficiency, to justify granting alternate recycle locations to plants? What are they?

(5) What criteria, operating practices, or other parameters should be evaluated to determine whether an alternative recycle return location should be granted?

(6) Does recycling at the point of primary coagulant addition, instead of prior to it, provide assurance that an appropriate dose of treatment chemicals will be consistently applied during recycle events? Is it necessary to mix the recycle and raw water prior to chemical addition to ensure a consistent water chemistry for chemical dosing?

(7) Are there circumstances where it would be appropriate to allow systems to recycle at the point of primary coagulant addition?

b. Recycle Requirements for Systems Practicing Direct Recycle and Meeting Specific Criteria

i. Overview and Purpose

Today's proposal requires that self assessments be performed at conventional filtration plants meeting all of the following criteria and the results of the self assessment reported to the State. The criteria are:

(1) Use of surface water or GWUDI as a source;

(2) Employ of 20 or fewer filters to meet production requirements during the highest production month in the 12 month period prior to LT1FBR's compliance date, and;

(3) Recycle spent filter backwash or thickener supernatant directly to the treatment process (*i.e.*, recycle flow is returned within the treatment process of a PWS without first passing the recycle flow through a treatment process designed to remove solids, a raw water storage reservoir, or some other structure with a volume equal to or greater than the volume of spent filter backwash water produced by one filter backwash event.)

The goal of the self assessment is to identify those direct recycle plants that exceed their State approved operating capacity, on an instantaneous basis, during recycle events. Plants are required to submit a monitoring plan to the State prior to conducting the month long self assessment monitoring. Results of self assessment monitoring must be reported to the State. The State is required to determine, by reviewing the self assessment, whether the plant's current recycle practice should be modified to protect plant performance and provide an additional measure of public health protection. The State is required to report its determination for each plant performing a self assessment to EPA and briefly summarize the reason(s) supporting each determination.

EPA selected the three aforementioned criteria to identify plants required to perform a self assessment for the following reasons. First, surface or GWUDI source waters may contain *Cryptosporidium*. Second, the hydraulic impact of recycle to plants typically employing more than 20 filters to meet production requirements should be dampened because plant influent flow is of significantly greater magnitude than the flow produced by a backwash event. Third, plants that practice direct recycle of filter backwash and/or thickener supernatant may exceed their operating capacity during recycle events due to the large volume of these streams.

ii. Data

Plants that recycle filter backwash and thickener supernatant, directly, without recycle flow equalization or treatment, may exceed their operating capacity during recycle events. Table IV.20 illustrates the magnitude by which direct recycle plants may exceed their operating capacity during recycle events. For purposes of the table, operating capacity is assumed to be either plant design flow or average flow (see example below). The values in the table are conservative, as they are likely to over predict the factor by which direct recycle plants will exceed operating capacity during recycle events. This conservatism is due to the assumed filter backwash rate of 15 gpm/ft² and the assumed backwash duration of 15 minutes, the minimum backwash rate and duration recommended by the Great Lakes-Upper Mississippi River Board of State and Provincial Public Health and Environmental Managers (1997). Design and average flow values assumed for plant operating capacity were developed from equations presented in EPA's baseline handbook (1999g). For purposes of this example, plant design and average flow are assumed to equal State approved operating capacity to illustrate the potential for plants to exceed operating capacity during recycle events. Relevant equations and example calculations are shown below.

Example

(1) Design to average ratios:
design flow < .25 mgd; ratio design flow : average flow = 3.2:1
design flow > .25 mgd to 1 mgd; ratio design flow : average flow = 2.8:1
design flow > 1 mgd to 10 mgd; ration design flow : average flow = 2.4:1
design flow > 10 mgd; ratio design flow : average flow = 2.0:1

(2) Maximum filter size: 700 sq./ft² (EPA, 1998a)

(3) Backwash volume calculation:
Filter area (ft²) × 15 gpm/ft² × 15 minutes = volume of one backwash

(4) Design and average capacity exceedence factors:
(Backwash flow + design (or average) flow) + design flow = exceedence factor

(5) Percent Influent that is recycle:
Backwash flow ÷ (Backwash flow + design (or average flow)) = percent of influent that is backwash

(6) Design flow = State approved operating flow

TABLE IV.20.—IMPACT OF DIRECT RECYCLE

Design flow (MGD)	Number of filters	Area of one filter (sq. ft)	Volume of one backwash (gallons)	Backwash return flow (15 minute return, gpm)	Design flow (gpm)	Average flow (gpm)	Factor design flow is exceeded by during recycle (at design flow)	Percent influent that is recycle (at design flow) (percent)	Factor design flow is exceeded by during recycle (at average flow)	Percent influent that is recycle (at average flow) (percent)
.033	2	5	1,125	75	23	7	4.3	77	3.6	91
.669	4	50	11,250	750	465	166	2.6	62	2.0	82
2.02	6	100	22,500	1,500	1,403	584	2.1	52	1.5	72
8.8	8	320	72,000	4,800	6,111	2,546	1.8	44	1.2	65
14.5	10	425	95,625	6,375	10,069	5,135	1.6	39	1.1	55
42.44	18	700	157,500	10,500	29,472	14,736	1.4	26	.86	42
56.23	24	700	157,500	10,500	39,048	19,524	1.3	21	.77	35

The purpose of Table IV.20 is to illustrate the impact direct recycle can have on plant hydraulic loading and the factor by which plant operating capacity can be exceeded during recycle events. As shown in Table IV.20, a plant with two filters would process influent at over three times its operating capacity during a recycle event. Even if the plant reduced or eliminated its raw water influent flow for the duration of the event, the remaining filter would be subject to a loading rate that exceeds its operating capacity, which could harm finished water quality.

The amount of sedimentation basin or clarification process storage available during recycle events will have an impact on the hydraulic loading to the filters and the performance of the sedimentation or clarification process. The actual increase to filter loading rates may be less than predicted in Table IV.20 due to site-specific conditions. However, the potential for direct recycle plants to exceed operating capacity is cause for concern because oocyst removal can be compromised. The Agency believes 20 filters is an appropriate number for specifying which plants are required to perform a self assessment due to the results in Table IV.20 and the above considerations.

The importance of maintaining proper plant hydraulics has been acknowledged, notably by Logdson (1987) who wrote, "Both the quantity and quality of filtered water can be affected by plant hydraulics. Maximum hydraulic capacity is an obvious limitation. The adverse influences of rate of flow and flow patterns on water quality may not be so obvious, but they can be important." Fulton (1987) recognized that short circuiting can diminish the performance of settling basins, cause overloading of filters, and increase breakthrough of turbidity. Other publications (Cleasby, 1990) recognize that settled water quality deteriorates when the surface loading rate of sedimentation basins is increased. Direct recycle practice can give rise to short circuiting, cause plant operating capacity to be exceeded, and increase surface loading rates, all of which can be detrimental to *Cryptosporidium* removal.

Direct recycle practice can abruptly increase filter loading rates, which has been shown to lower filter performance. Cleasby et al. (1963) performed experimental runs with three pilot plant filters by increasing the filtration rate ten, twenty-five, and fifty-percent over various time periods and monitoring the passage of a target material during the rate increase. Conclusions drawn from the experiments were:

(1) Disturbance in filtration rate can cause filters to pass previously deposited material and the amount of material passed is dependent on the magnitude of the rate disturbance;

(2) More rapid disturbances cause more material to be flushed through the filter;

(3) The amount of material flushed through the filter is independent, or very nearly independent of disturbance's duration, and;

(4) The amount of material flushed through the filter following a disturbance is dependent on the type of material being filtered.

Pilot scale work was recently performed by Glasgow and Wheatley (1998) to investigate whether surges affect filtrate quality. Effluent turbidity and headloss within the filter media were monitored for two pilot filter columns that were surged at different magnitudes. The results were compared to control runs through the same pilot columns to determine the effect of the surge. Results indicated that surging may significantly affect full scale filter performance. Additional work is needed to confirm these results.

Recent pilot scale work by McTigue *et al.* (1998) examined the impact of doubling the filter loading instantaneously and gradually (over an 80 minute period) on pilot filters that had been in operation for a period of time or were "dirty." The experiments showed that *Cryptosporidium* removal achieved by the filters was lowered by changes in filtration rate regardless of whether loading rate was increased instantaneously or gradually. In the experiment, filter loading rates of 2 gpm/ft^2 and 4 gpm/ft^2 were doubled in six separate test runs to determine whether oocysts removal was affected. Results showed that log removal of oocysts was reduced by approximately 1.5 to 2.0 logs for when filter loading rates of 2 gpm/ft^2 and 4 gpm/ft^2 were either instantaneously and gradually doubled. The report states, "These data clearly demonstrate that any change in filter loading rate on a filter that is dirty presents a risk for breakthrough of *Giardia* and *Cryptosporidium* to the finished water, should these organisms be present in the filter." Effluent turbidity values remained low during increases in filter loading rates but particle count concentrations immediately increased with increases in loading rate. This may indicate that turbidity is not a good indicator of oocyst passage by dirty filters during filtration rate increases.

Results of three other pilot runs from the study showed that log removal of oocysts did not change when the influent oocyst concentration varied and all other treatment conditions were held constant. A four log removal of oocysts was obtained for all three runs despite influent oocyst concentrations of 4,610/L, 688/L, and 26/L. The report states, "This finding indicates that the risk for passage of large numbers of cysts to the finished water is greater when a water treatment plant receives a highly concentrated slug of cysts at its intake." The Agency believes this is an interesting conclusion, even though it is based on a limited number of pilot runs. If further pilot and full-scale work verifies this finding, it indicates that log removal of oocysts does not increase as more oocysts are loaded to plant. Recycle of flows containing oocysts would therefore increase the number of oocysts present in finished water, relative to the number of oocysts that would occur were recycle not practiced, because plant treatment efficiency would not increase to remove the additional oocysts returned by recycle.

In summary, the Agency is concerned that direct recycle of spent filter backwash, thickener supernatant, and liquids from dewatering process may increase the risk of oocyst occurrence in finished water for the following reasons:

(1) Sampling has established that oocysts occur in finished water supplies (see Table II.6 of this preamble);

(2) Data show that oocysts occur in recycle streams;

(3) Literature indicates that hydraulically overloading the sedimentation process, as may happen during direct recycle events, can harm sedimentation performance;

(4) Literature indicates increasing or abruptly changing filtration rates can lead to more material passing through filters, and;

(5) Recent pilot scale work by McTigue *et al.* (1998) and Glasgow and Wheatley (1998) indicates that filter performance can be harmed by surges and changes to filtration rate.

The Agency encourages the States to closely examine recycle self assessments performed by direct recycle plants to determine whether direct recycle poses an unacceptable risk to finished water quality and public health and needs to be modified due to the considerations cited above.

Finally, EPA realizes that State programs may use different methodologies to set plant operating capacity. States may also apply safety factors of different magnitudes when determining operating capacity. The Agency does not believe it is

appropriate to erode any safety factor or margin of safety States provide when setting operating capacity. Safety factors are provided for a reason: to provide a margin of safety to public health protection efforts. The integrity and magnitude of a safety factor should be maintained, as it is in and of itself integral to adequate public health protection. The fact a safety factor is applied when plant operating capacity is set is not a justification, *a priori*, for allowing plants to operate above said operating capacity during recycle events.

EPA also acknowledges that States may use different methodologies to set plant operating capacity. The Agency is confident that the State programs, its partners in public health protection, set plant capacity to provide necessary level of public health protection. The fact that some State programs may set plant operating capacities with different methodologies likely reflects geographical conditions and public expectations unique to certain States and sections of the country. EPA believes methodologies employed by the States results in establishment of operating capacities necessary to protect public health, meet regulatory requirements, and satisfy unique treatment needs and considerations where they exist.

iii. Proposed Requirements

Self assessments must be performed at plants meeting all of the following criteria and the results of the self assessment reported to the State:

(1) Use surface water or GWUDI as a source and employ conventional rapid granular filtration treatment;

(2) Employ of 20 or fewer filters to meet production requirements during the highest production month in the 12 month period prior to LT1FBR's compliance date, and;

(3) Recycle spent filter backwash or thickener supernatant directly to the treatment process (*i.e.*, recycle flow is returned within the treatment process of a PWS without first passing the recycle flow through a treatment process designed to remove solids, a raw water storage reservoir, or some other structure with a volume equal to or greater than the volume of spent filter backwash water produced by one filter backwash event).

Systems are required to develop and submit a recycle self assessment monitoring plan to the State no later than three months after the rule's compliance date for each plant the requirements are applicable to. At a minimum, the monitoring plan must identify the month during which monitoring will be conducted, contain a schematic identifying the location of raw and recycle flow monitoring devices, describe the type of flow monitoring devices to be used, and describe how data from the raw and recycle flow monitoring devices will be simultaneously retrieved and recorded.

The self assessment of recycle practices shall consist of the following five steps:

(1) From historical records, identify the month in the calendar year preceding LT1FBR's effective date with the highest water production.

(2) Perform the monitoring described below in the twelve month period following submission of the monitoring plan to the State.

(3) For each day of the month identified in (1), separately monitor source water influent flow and recycle flow before their confluence during one filter backwash recycle event per day, at three minute intervals during the duration of the event. Monitoring must be performed between 7:00 a.m. and 8:00 p.m. Systems that do not have a filter backwash recycle event every day between 7:00 am and 8:00 p.m. must monitor one filter backwash recycle event per day, any three days of the week, for each week during the month of monitoring, between 7:00 a.m. and 8:00 p.m. Record the time filter backwash was initiated, the influent and recycle flow at three minute intervals during the duration of the event, and the time the filter backwash recycle event ended. Record the number of filters in use when the filter backwash recycle event is monitored.

(4) Calculate the arithmetic average of all influent and recycle flow values taken at three minute intervals in (3). Sum the arithmetic average calculated for raw water influent and recycle flows. Record this value and the date the monitoring was performed. This value is referred to as event flow.

(5) After monitoring is complete, order the event flow values in increasing order, from lowest to highest, and identify the monitoring events in which plant operating capacity is exceeded.

Systems are required to submit a self assessment report to the State within one month of completing the self assessment monitoring. At a minimum, the report must provide the following information:

(1) All source and recycle flow measurements taken and the dates they were taken. For all events monitored, report the times the filter backwash recycle event was initiated, the flow measurements taken at three minute intervals, and the time the filter backwash recycle event ended. Report the number of filters in use when the backwash recycle event is monitored.

(2) All data and calculations performed to determine whether the plant exceeded its operating capacity. Report the number of event flows that exceed State approved operating capacity.

(3) A plant schematic showing the origin of all recycle flows, the hydraulic conveyance used to transport them, and their final destination in the plant.

(4) A list of all the recycle flows and the frequency at which they are returned to the plant.

(5) Average and maximum backwash flow through the filters and the average and maximum duration of backwash events in minutes, for each monitoring event, and;

(6) Typical filter run length, number of filters typically employed, and a written summary of how filter run length is determined (preset run time, headloss, turbidity level).

EPA is proposing that the State review all self assessments submitted by PWSs and report to the Agency the below information as it applies to individual plants:

(1) A finding that modifications to recycle practice are necessary, followed by a brief description of the required change and a summary of the reason(s) the change is required, or;

(2) A finding that changes to recycle practice are not necessary and a brief description of the reason(s) this determination was made.

The Agency also considered requiring all recycle plants without existing recycle flow equalization or treatment to install recycle flow equalization. As summarized in Table IV.21, several recommendations for recycle equalization and treatment have been provided. However, these recommendations are based on theoretical calculations and/or limited pilot-scale data that has not been verified by full-scale plant performance data. The Agency currently believes insufficient data is available to determine whether recycle flow equalization is necessary to protect finished water quality, and, if it is, the level of equalization required to provide protection to finished water supplies for a wide variety of source water qualities, treatment process types, and levels of treatment effectiveness. The Agency does not believe it is appropriate at this time to propose a national recycle flow equalization requirement for the following reasons:

(1) Data on the occurrence of oocysts in recycle streams, and their impact to

finished water quality upon recycle, is very limited;

(2) Data that establishes the magnitude of hydraulic disruption caused by direct recycle events for a variety of plant types, designs, and operational practices has not been identified; without this data, it is not possible to quantify how much treatment efficiency is reduced by the hydraulic disruption and the number of oocysts in the recycle flow that will enter the finished water due to the disruption. Without this information, it is not possible to specify the level of equalization necessary to control hydraulic disruption for a variety of plant configurations and operational practices with any degree of certainty and cost effectiveness, and;

(3) A uniform, national equalization standard may not be appropriate because it would not allow consideration of site-specific factors such as plant treatment efficiency, loading capacity of clarification and filtration units, source water quality, and other site-specific factors that influence the level of equalization a plant may need to control recycle event induced hydraulic disruption.

EPA believes some plants can realize substantial benefit by installing recycle flow equalization and will review data to determine the need for an equalization requirement when it becomes available. The Agency requests that commenters submit the following pilot or full-scale data to assist its effort to conduct a thorough analysis of equalization based upon the best available science:

(1) Data on the magnitude of hydraulic disruption caused by recycle events and its affect on finished water turbidity and particle count levels;

(2) Data that correlate hydraulic disruption to increased oocyst concentration in finished water, and;

(3) Any other data commenters believe that may be appropriate to analyze the need for equalization, and;

(4) Whether the regulation should require States to specify modifications to recycle practice, for all plants that exceed operating capacity during monitoring, to ensure said plants' remain below their State approved operating capacity during recycle events.

TABLE IV.21—RECOMMENDED EQUALIZATION PERCENTAGES

Source of recommendation[a]	Equalization Percentage	Is recycle treatment recommended?
Recommended Standards for Water Works. Great Lakes—Upper Mississippi River Board of State and Provincial Public Health and Environmental Managers. 1997. Albany: Health Education Services.	10%	No.
Removal of *Cryptosporidium* Oocysts by Water Treatment Process. Foundation for Water Research Limited, United Kingdom (1994).	10%	Yes. Turbidity less than 5.0 NTU or residual of 10mg/L suspended solids in treated recycle flow.
Recycle Stream Effects on Water Treatment. Cornwell, D., and R. Lee. 1993. Denver: AWWARF.	Use equalized, continuous recycle.	Use proper waste stream treatment prior to recycle.

[a] See the reference list at the end of the preamble for complete citations.

Finally, the Agency considered requiring conventional filtration plants that recycle within the treatment process to provide sedimentation or more advanced recycle treatment and concluded a national treatment requirement is inappropriate at this time due data deficiencies. The Agency believes the following data is necessary to determine whether recycle flow treatment is necessary to protect public health and the requisite level of treatment:

(1) Significant amounts of additional data on the occurrence of oocysts for a complete range of recycle streams generated by a wide variety of source water qualities, treatment plant types, plant operational and recycle practices, and plant treatment efficiencies;

(2) Data that correlates recycle stream oocyst occurrence to finished water occurrence;

(3) Additional data on the ability of full-scale sedimentation basins to remove oocysts during normal operation and during recycle events. The Agency has identified only three full-scale studies, States *et al.* (1995), Baudin and Laîné (1998), and Kelly *et al.* (1995), that allow quantification of oocyst removal by sedimentation basins. Pilot scale work, such as Edzwald and Kelley (1998) and Dugan *et al.* (1999) is also available, but the number of studies is not extensive. The removal achieved by sedimentation and other clarification processes is critical for determining the number of oocysts loaded to the filters, the likely concentration of oocysts in various recycle streams, and the impact recycle may have on intra-plant oocyst concentrations. Good oocyst removal in the clarification process will remove a large percentage of oocysts from recycle and source water flows before they reach the filters. The amount of removal provided by primary clarification therefore has a large influence on the level of recycle flow treatment that may be needed to mitigate risk to finished water quality. Given that data on oocyst removal by sedimentation and other clarification processes is very limited, the Agency does not believe it is possible to assess the need for recycle treatment and specify a minimum treatment level that is meaningful for a wide variety of plant types and recycle practices;

(4) Data regarding the ability of DAF and other clarification processes to remove oocysts from recycle flow is very limited. This data is important, because the Agency anticipates plants may respond to any recycle treatment requirement by using DAF to treat recycle flow because of the advantages it provides relative to sedimentation. However, EPA has only identified four studies, Hall *et al.* (1995), Plummer *et al.* (1995), Edzwald and Kelley (1998), and Alvarez *et al.* (1999), that determined the ability of DAF to remove oocysts from source water. One study, by Grubb *et al.* (1997), addresses the ability of DAF to treat filter backwash waters has been identified, but sampling for oocyst removal was not performed, although turbidity and color removal were monitored and good results obtained. Additional data is needed to characterize the ability of DAF to remove oocysts from recycle flow before it can be used to meet any recycle treatment requirement;

(5) Full-scale data on the ability of sedimentation and other clarification processes to remove oocysts from recycle streams before they are returned to the plant is very limited. EPA has identified two studies, one by Cornwell and Lee (1993) and a study by Karanis *et al.* (1998) that provide data regarding

sedimentation's ability to remove oocysts from recycle flows. Additional information is needed to establish lower and upper bounds on the oocyst removal sedimentation can achieve; without this data, it is difficult to specify a feasible level of oocyst removal in a recycle flow treatment requirement;

(6) Microfiltration and ultrafiltration membranes appear to be very reliable at removing *Cryptosporidium* from source waters (Jacangelo *et al.*, 1995). However, the Agency has identified limited data regarding the ability of membranes to effectively treat recycle flow, and treatment of backwash with membranes may not be appropriate at all locations (Thompson *et al.*, 1995) due to incompatibility between membrane filter material and residual treatment chemical(s) in the backwash water. Additional information regarding the ability of microfiltration and ultrafiltration membranes to treat recycle flow is necessary to comprehensively evaluate their applicability, and;

(7) EPA is not aware of a surrogate, including turbidity, particle counts, or any other common and easy to measure parameter, that can serve as an indicator of the log removal of *Cryptosporidium* recycle flow treatment units achieve. The Agency does not believe it is economically or technically feasible to directly monitor oocyst removal by treatment units. Without an accurate, easy to measure surrogate for *Cryptosporidium* removal, the Agency does not believe it is possible to ascertain the level of treatment recycle flow treatment units achieve during routine operations.

Given the above limiting factors, the Agency does not believe it is prudent to establish a national recycle flow treatment requirement until additional data becomes available. EPA requests the following data be submitted:

(1) Data regarding intra-plant and recycle stream occurrence of oocysts;

(2) Information on the ability of individual treatment units of the primary treatment train to remove oocysts during normal, hydraulically challenged, and suboptimal chemical dose operations;

(3) Data on the ability of sedimentation and other clarification processes to remove oocysts from a wide range of recycle streams;

(4) Data on the compatibility of specific ultrafiltration and microfiltration membrane materials with residual chemicals that occur in recycle streams and data regarding the performance of these membrane materials at full and pilot scale, and;

(5) Information on potential surrogates that can be easily measured and can accurately establish the log removal of oocysts removed by recycle flow treatment processes.

iv. Request for Comments

EPA requests comment on the proposed requirements. The Agency also requests comment on the following:

(1) What other parameters could be monitored or what other overall monitoring schemes could be employed to assess whether a plant is exceeding its operating capacity?

(2) What data should the plant report to the State as part of its self assessment, beyond the monitoring data and other information listed above?

(3) Is monitoring during the highest flow month appropriate? Is monitoring during additional months necessary? Is daily monitoring necessary or would less frequent monitoring during the month be sufficient?

(4) Should systems be required to monitor and report turbidity measurements from a representative filter taken immediately preceding and after recycle events monitored during the self assessment to help characterize the impact of recycle on plant performance?

(5) Is limiting the self assessment to plants with 20 or less filters appropriate? Should the number of filters be less or greater than 20? What is the appropriate number of filters?

(6) Should systems be required to monitor sedimentation overflow rates or clarification loading rates while the recycle flow monitoring is performed?

(7) EPA requests comment on criteria that may identify recycle plants that could receive substantial benefit from implementing recycle equalization or treatment as a standard practice.

(8) What type and amount of data is required to determine whether recycle flow equalization would provide a benefit to finished water quality? What methodology could be used to determine an appropriate recycle flow equalization percentage, and how relevant are turbidity and particle counts, at various locations in a plant, to assessing an appropriate equalization percentage for a single plant or a plant type?

d. Requirements for Direct Filtration Plants that Recycle Using Surface Water or GWUDI

i. Overview and Purpose

Today's proposal requires direct filtration plants that recycle to report to the State whether flow equalization or treatment is provided for recycle flow prior to its return to the treatment process. The purpose of today's proposed requirement is to assess whether the existing recycle practice of direct filtration plants addresses potential risks. The Agency believes that direct filtration plants need to remove oocysts from recycle flow prior to reintroducing it to the treatment process.

ii. Data

Twenty-three direct filtration plants that used surface water responded to the FAX Survey (AWWA, 1998). In the FAX survey, plants could report whether they provide recycle flow equalization, sedimentation, or some other type of treatment. Of the respondents, 21 reported providing treatment for the recycle flow and two plants reported providing only equalization. In the ICR database, there were 23 direct filtration plants and fourteen of them recycled to the treatment process. All fourteen plants provide recycle treatment. It is not possible to determine the level of oocyst removal FAX survey and ICR plants achieve with available data.

The treatment train of a direct filtration plant does not have a clarification process to remove *Cryptosporidium* before they reach the filters; all oocyst removal is achieved by the filters. If recycle flow treatment is not provided, all of the oocysts captured in the filters will be returned to the treatment process in the recycle flow. Because a primary clarification process is not present to remove recycled oocysts, they are caught in a closed "loop" from which the only exit is passage through the filters into the distribution system. The Agency believes direct filtration plants should provide solids removal treatment for recycle flows to limit the number of oocysts returned to the treatment plant.

iii. Proposed Requirements

EPA is proposing that PWSs using direct filtration that recycle to the treatment process and utilize surface water or GWUDI as a source report data to the State that describes their current recycle practice. Plants should report the following information to the State:

(1) Whether recycle flow treatment or equalization is in place;

(2) The type of treatment provided for the recycle flow;

(3) If equalization, sedimentation, or some type of clarification process is used, the following information should be provided: a) physical dimensions of the unit (length, width, (or circumference) depth,) sufficient to allow calculation of volume and the

type, typical dose, and frequency with which treatment chemicals are used;

(4) The minimum and maximum hydraulic loading the treatment unit experiences, and;

(5) Maximum backwash rate, duration, typical filter run length, and the number of filters at the plant.

The State should use the above information to determine which plants need to modify recycle practice to provide additional public health protection. States are required to report to EPA whether they required individual direct filtration plants to modify recycle practice and provide a brief explanation of the reason(s) for the decision.

The Agency also considered requiring that all direct filtration plants provide a specific level of treatment for the recycle flow. However, data necessary to determine the appropriate level of treatment is unavailable. Specifically, the following data is needed:

(1) Data on the on the occurrence of oocysts in the spent filter backwash of direct filtration plants. Direct filtration plants generally use higher quality source water than conventional plants (AWWA, 1990) and it would be inaccurate to use spent filter backwash occurrence data from conventional plants to assess the level of treatment direct recycle plants may need;

(2) Data regarding the ability of sedimentation and other clarification processes to remove oocysts from recycle flows is needed to determine what may be a feasible level of treatment. This data need was treated to a detailed discussion in the previous section of the preamble;

(3) An easy to measure and accurate surrogate for oocyst removal is currently unavailable; without such a surrogate, it is not feasible to monitor the performance of recycle treatment units, and;

(4) Data on the applicability of microfiltration and ultrafiltration for treating spent filter backwash produced by direct filtration plants. This data need was discussed in detail in the previous section.

Given the lack of oocyst occurrence data for direct filtration recycle streams, and limited knowledge of the level of treatment clarification processes can achieve, the Agency does not currently believe it is possible to identify a treatment standard for direct filtration plants.

iv. Request for Comments

EPA requests comment on the proposed requirements. The Agency also requests comment on the following:

(1) Whether direct filtration plants should be required to provide treatment for recycle flows;

(2) The level of treatment direct filtration plants should achieve;

(3) Data that establishes turbidity, particle counting, or some other surrogate as an appropriate indicator of oocyst removal achieved by recycle treatment units, and;

(4) Data on the ability of clarification processes to remove oocysts and criteria that can be used to determine the applicability of specific membrane materials for treatment of spent filter backwash produced by direct filtration plants.

d. Request for Additional Comment

EPA requests comment on the following:

(1) Should the recycle of untreated clarification sludges be allowed to continue, or should the Agency ban this practice? What affect would a ban have on the operation of specific plant types, such as softening plants?

(2) Is it appropriate to apply regulatory requirements to the combined recycle flow rather than stipulating requirements for individual recycle flows? Which flows should be regulated individually and why?

V. State Implementation and Compliance Schedules

This section describes the regulations and other procedures and policies States have to adopt, or have in place, to implement today's proposed rule. States must continue to meet all other conditions of primacy in 40 CFR part 142.

Section 1413 of the SDWA establishes requirements that a State or eligible Indian tribe must meet to maintain primary enforcement responsibility (primacy) for its public water systems. These include: (1) Adopting drinking water regulations that are no less stringent than Federal NPDWRs in effect under sections 1412(a) and 1412(b) of the Act, (2) adopting and implementing adequate procedures for enforcement, (3) keeping records and making reports available on activities that EPA requires by regulation, (4) issuing variances and exemptions (if allowed by the State) under conditions no less stringent than allowed by sections 1415 and 1416, and (5) adopting and being capable of implementing an adequate plan for the provision of safe drinking water under emergency situations.

40 CFR part 142 sets out the specific program implementation requirements for States to obtain primacy for the public water supply supervision program, as authorized under section 1413 of the Act. In addition to adopting the basic primacy requirements, States may be required to adopt special primacy provisions pertaining to a specific regulation. These regulation-specific provisions may be necessary where implementation of the NPDWR involves activities beyond those in the generic rule. States are required by 40 CFR 142.12 to include these regulation-specific provisions in an application for approval of their program revisions. These State primacy requirements apply to today's proposed rule, along with the special primacy requirements discussed below.

To implement today's proposed rule, States are required to adopt revisions to § 141.2—definitions; § 141.32—public notification; § 141.70—general requirements; § 141.73—filtration; § 141.76—recycle; § 141.153—content of the reports; § 141.170—general requirements; § 142.14—records kept by States; § 142.16—special primacy requirements; and a new subpart T, consisting of § 141.500 to § 141.571.

A. Special State Primacy Requirements

In addition to adopting drinking water regulations at least as stringent as the Federal regulations listed above, EPA requires that States adopt certain additional provisions related to this regulation to have their program revision application approved by EPA. This information advises the regulated community of State requirements and helps EPA in its oversight of State programs. States which require without exception subpart H systems (all public water systems using a surface water source or a ground water source under the direct influence of surface water) to provide filtration, need not demonstrate that the State program has provisions that apply to systems which do not provide filtration treatment. However, such States must provide the text of the State statutes or regulations which specifies that public water systems using a source water must provide filtration.

EPA is currently developing, with stakeholders input, several guidance documents to aid the States and water systems in implementing today's proposed rule. This includes guidance for the following topics: Disinfection benchmarking and profiling, Turbidity, and Filter Backwash and Recycling. EPA will also work with States to develop a State implementation guidance manual.

To ensure that the State program includes all the elements necessary for a complete enforcement program, the State's application must include the

following in order to obtain EPA's approval for implementing this rule:

(1) Adoption of the promulgated LT1FBR.

(2) Description of the procedures the State will use to determine the adequacy of changes in disinfection process by systems required to profile and benchmark under § 142.16(h)(2)(ii) and how the State will consult with PWSs to approve modifications to disinfection practice.

(3) Description of existing or adoption of appropriate rules or other authority under § 142.16(h)(1) to require systems to participate in a Comprehensive Technical Assistance (CTA) activity, and the performance improvement phase of the Composite Correction Program (CCP).

(4) Description of how the State will approve a method to calculate the logs of inactivation for viruses for a system that uses either chloramines or ozone for primary disinfection.

(5) For filtration technologies other than conventional filtration treatment, direct filtration, slow sand filtration or diatomaceous earth filtration, a description of how the State will determine under § 142.16(h)(2)(iii), that a public water system may use a filtration technology if the PWS demonstrates to the State, using pilot plant studies or other means, that the alternative filtration technology, in combination with the disinfection treatment that meets the requirements of Subpart T of this title, consistently achieves 99.9 percent removal and/or inactivation of *Giardia* lamblia cysts and 99.99 percent removal and/or inactivation of viruses, and 99 percent removal of *Cryptosporidium* oocysts; and a description of how, for the system that makes this demonstration, the State will set turbidity performance requirements that the system must meet 95 percent of the time and that the system may not exceed at any time a level that consistently achieves 99.9 percent removal and/or inactivation of *Giardia* lamblia cysts, 99.99 percent removal and/or inactivation of viruses, and 99 percent removal of *Cryptosporidium* oocysts.

(6) Description of the criteria the State will use under § 142.16(b)(2)(vi) to determine whether public water systems completing self assessments under § 141.76 (c) are required to modify recycle practice and the criteria that will be used to specify modifications to recycle practice.

(7) Description of the criteria the State will use under § 142.16(b)(2)(vii) to determine whether direct filtration systems reporting data under § 141.76 (d) are required to change recycle practice and the criteria that will be used to specify changes to recycle practice.

(8) The application must describe the criteria the State will use under § 142.16(b)(2)(viii) to determine whether public water systems applying for a waiver to return recycle to a location other than prior to the point of primary coagulant addition, will be granted the waiver for an alternative recycle location.

B. State Recordkeeping Requirements

Today's rule includes changes to the existing record-keeping provisions to implement the requirements in today's proposed rule. States must maintain records of the following: (1) Turbidity measurements must be kept for not less than one year;

(2) disinfectant residual measurements and other parameters necessary to document disinfection effectiveness must be kept for not less than one year; (3) decisions made on a system-by-system basis and case-by-case basis under provisions of part 141, subpart H or subpart P or subpart T; (4) records of systems consulting with the State concerning a modification of disinfection practice (including the status of the consultation);

(5) records of decisions that a system using alternative filtration technologies can consistently achieve a 99 percent removal of *Cryptosporidium* oocysts as well as the required levels of removal and/or inactivation of *Giardia* and viruses for systems using alternative filtration technologies, including State-set enforceable turbidity limits for each system. A copy of the decision must be kept until the decision is reversed or revised and the State must provide a copy of the decision to the system, and; (6) records of systems required to do filter self-assessments, CPE or CCP. These decision records must be kept for 40 years (as currently required by § 142.14 for other State decision records) or until a subsequent determination is made, whichever is shorter.

C. State Reporting Requirements

Currently States must report to EPA information under 40 CFR 142.15 regarding violations, variances and exemptions, enforcement actions and general operations of State public water supply programs. Today's proposal requires States to report a list of direct recycle plants performing self assessments, whether the State required these systems to modify recycle practice, and the reason(s)modifications were or were not required and a list of direct filtration plants performing self assessments, whether the State required these systems to modify recycle practice, and the reason(s) modifications were or were not required

D. Interim Primacy

On April 28, 1998, EPA amended its State primacy regulations at 40 CFR 142.12 (63 FR 23362) (EPA 1998i) to incorporate the new process identified in the 1996 SDWA amendments for granting primary enforcement authority to States while their applications to modify their primacy programs are under review. The new process grants interim primary enforcement authority for a new or revised regulation during the period in which EPA is making a determination with regard to primacy for that new or revised regulation. This interim enforcement authority begins on the date of the primacy application submission or the effective date of the new or revised State regulation, whichever is later, and ends when EPA makes a proposed determination. However, this interim primacy authority is only available to a State that has primacy for every existing national primary drinking water regulation in effect when the new regulation is promulgated.

As a result, States that have primacy for every existing NPDWR already in effect may obtain interim primacy for this rule, beginning on the date that the State submits its final application for primacy for this rule to EPA, or the effective date of its revised regulations, whichever is later. Interim primacy is available for the following rules:

- Stage 1 Disinfectants and Disinfection Byproducts Rule (December 16, 1998)(EPA,1998c)
- Interim Enhanced Surface Water Treatment Rule (EPA,1998a)
- Consumer Confidence Report Rule (EPA, 1998f)
- Variances and Exemptions Rule (EPA, 1998g)
- Drinking Water Contaminant Candidate List (EPA, 1998h)
- Revisions to State Primacy Requirements (EPA,1998i)
- Public Notification Rule (EPA, 1999i)

In addition, a State which wishes to obtain interim primacy for future NPDWRs must obtain primacy for this rule. After the effective date of the final rule, any State that does not have primacy for this rule cannot obtain interim primacy for future rules.

E. Compliance Deadlines

Section 1412(b)(10) of SDWA provides that drinking water rules become effective 36 months after promulgation unless the Administrator

determines that an earlier time is practicable. The Administrator may also extend the effective date by an additional 24 months if capital improvements are necessary. The Agency believes the three year effective date is appropriate for all of the provisions in today's notice except for those provisions that address the return of recycle flows. The Agency believes providing a five year compliance period for systems making modifications to recycle practice is appropriate and warranted under 1412(b)(10). To effectively modify recycle practice, capital improvements, such as installing additional equipment and/or constructing new facilities, will likely be required. Specific examples of potential capital improvements are installing new piping and pumps to convey recycle flow prior to the point of primary coagulant addition and constructing equalization basins or recycle flow treatment facilities. A limited number of systems may be able to make operational modifications, per the State's determination, that will effectively address potential risks. However, the Agency believes the great majority of systems required to either relocate their recycle return location or modify recycle practice as directed by the State will need to perform capital improvements. The capital improvement process is lengthy; systems will need to engage in preliminary planning activities, consult with State and local officials, develop engineering and construction designs, obtain financing, and construct the facilities. The Agency believes the widespread need that systems making modifications to recycle practice will have for capital improvements warrants the additional 24 months for compliance purposes. The Agency solicits comment on the appropriateness of providing an additional two years for compliance with the recycle provisions. EPA seeks comment on extending the compliance deadline an extra two years because systems are expected to make capital improvements to address recycle practice. EPA also seeks comment on a similar two year extension to comply with the turbidity provisions of today's proposed rule.

II. Economic Analysis

This section summarizes the Health Risk Reduction and Cost Analysis in support of the Long Term 1 Enhanced Surface Water Treatment and Filter Backwash Rule (LT1FBR) as required by Section 1412(b)(3)(C) of the 1996 Amendments to the SDWA. In addition, under Executive Order 12866, Regulatory Planning and Review, EPA must estimate the costs and benefits of LT1FBR in a Regulatory Impact Analysis (RIA) and submit the analysis to the Office of Management and Budget (OMB) in conjunction with publication of the proposed rule. EPA has prepared an RIA to comply with the requirements of this Order and the SDWA Health Risk Reduction and Cost Analysis (EPA, 1999h). The RIA has been published on the Agency's web site, and can be found at *http://www.epa.gov/safewater*. The RIA can also be found in the docket for this rulemaking.

The goal of the following section is to provide an analysis of the costs, benefits, and other impacts of the proposed rule to support future decisions regarding the development of the LT1FBR.

A. Overview

The analysis for this rule examines the costs and benefits for five rule provisions: filter effluent turbidity, applicability monitoring, disinfection benchmark profiling, uncovered finish water reservoirs, and recycle. Several options were considered for each provision. Costs were estimated for three individual turbidity options, three profiling options, and three applicability monitoring options. In addition, costs were estimated for four different recycle options. All four recycle options require spent filter backwash, thickener supernatant, and liquids from dewatering be returned to the treatment process prior to the point of primary coagulant addition. The extent of modifications to recycle practice varies among the rule options.

The value of health benefits from the turbidity provision was estimated for the preferred option. The benefits from the other rule provisions are described qualitatively. Several non-health benefits from this rule were also considered by EPA but were not monetized. The non-health benefits of this rule include: avoided outbreak response costs and possibly reduced uncertainty and averting behavior costs. By adding the non-monetized benefits with those that are monetized, the overall benefits of these rule options increase beyond the dollar values reported.

Additional analysis was conducted by EPA to look at the incremental impacts of the various rule options, impacts on households, benefits from reductions in co-occurring contaminants, and possible increases in risk from other contaminants. Finally, the Agency evaluated the uncertainty regarding the risk, benefits, and cost estimates.

B. Quantifiable and Non-Quantifiable Costs

In estimating the costs of each rule option, the Agency considered impacts on public water systems and on States (including territories and EPA implementation in non-primacy States). The LT1FBR will result in increased costs to public water systems for improved turbidity treatment, applicability monitoring, disinfection benchmarking, covering new finished water reservoirs and modification to recycle practice. States will also face implementation costs. Most of the provisions of this rule, except the recycle provision, apply to systems using surface water or ground water under the direct influence of surface water that serve less than 10,000 people. The recycle provisions, however, apply to all surface water systems that recycle filter backwash, thickener supernatant, or liquids from dewatering.

1. Total Annual Costs

EPA estimates that the annualized cost of the preferred alternatives for the proposed rule will be $97.5 million. This estimate includes capital costs for treatment changes and start-up labor costs for monitoring and reporting activities that have been annualized assuming a 7% discount rate and a 20-year amortization period. Other cost estimates reported in this section also use these same amortization assumptions. The estimated cost of the preferred alternatives also includes annual operating and maintenance costs for treatment changes and annual labor for turbidity monitoring activities.

The turbidity provisions (including treatment changes, monitoring, and exceptions reporting) account for 70% ($68.6million annually) of total costs and the recycling provisions (*i.e.*, recycle to headworks, self assessment, and direct filtration) account for 25% ($24.5 million annually) of total costs. Utility expenditures for all provisions equal almost 93% ($90.2 million annually) of total costs; State expenditures make up the other 7% ($6.7 million annually).

To reduce the potential cost to small systems, EPA developed and evaluated the cost implications of several regulatory alternatives for four of the proposed LT1FBR provisions: individual filter turbidity monitoring, applicability monitoring, disinfection benchmark profiling, and recycle. Many of these alternatives reduce the labor burden on small systems relative to what it would be if the proposed rule used the same requirements as IESWTR. The total national costs previously

discussed only included the costs of the preferred alternatives. The following section will describe the cost estimates for each provision and discuss the cost of other alternatives that were considered.

2. Annual Costs of Rule Provisions

The national estimate of annual utility costs for the proposed turbidity provisions is based on estimates of system-level costs for the various provisions of the rule and estimates of the number of systems expected to incur each type of cost. The following paragraphs describe the cost estimates for each of the rule provisions.

Turbidity Provision Costs

The turbidity provisions are estimated to cost $69.0 million annually. This cost is associated with three primary activities that result from this provision: treatment changes, monitoring, and exceptions reporting.

The treatment costs associated with meeting the revised turbidity standard of 0.3 NTU or less are the main costs associated with the turbidity provision. EPA estimates that 2,406 systems will modify their turbidity treatment in response to this rule. These costs are estimated to be $52.2 million annually. O&M expenditures account for 59% of annual costs and the remain 41% percent is annualized capital costs.

In addition to the turbidity treatment costs, turbidity monitoring costs apply to all small surface water or GWUDI systems using conventional or direct filtration methods. There are an estimated 5,896 systems that fall under this criteria. EPA estimated the costs to utilities for three turbidity monitoring alternatives. Alternative B, the preferred alternative, excludes the exceptions report for an individual filter exceeding 0.5 NTU in two consecutive measurements, enabling systems to shift from daily to weekly analysis and review of the monitoring data. The annualized individual filter turbidity cost to public water systems for this preferred option is approximately $10.1 million. In contrast, under the IESWTR monitoring requirements of Alternative A, small systems would expend $63.3 million annually for turbidity monitoring. Alternative C, which only requires monthly analysis is estimated to cost $5.6 million annually. The total state turbidity start-up and monitoring annual costs are $4.98 million annually and is assumed to be the same for all of the three alternatives.

In addition to the turbidity treatment and monitoring costs, individual filter turbidity exceptions are estimated to cost utilities $120 thousand annually for the preferred option. State costs will be approximately $1.17 million. This cost includes the annual exception reports and annual individual filter self assessment costs. Costs are slightly higher for the other two alternative individual filter turbidity monitoring options because they result in increased number of exception reports.

Disinfection Benchmarking Costs

Disinfection benchmarking involves three components: profiling, applicability monitoring, and benchmarking. Four options were costed for applicability monitoring. Alternative 3, which uses the critical monitoring period, is estimated to cost less than $0.4 million annually. This is substantially lower than the $6.0 million estimated for Alternative 1, which has the same requirements as IESWTR. Alternative 2 requires sampling once per quarter for 4 quarters for systems serving 501–10,000, but allows systems under 500 to sample once during the critical monitoring period. This option has an annualized cost of $1.1 million. The preferred option, Alternative 4, makes it optional to sample during the critical monitoring period and is estimated to cost $0.04 million annualized.

Three options were considered for disinfection profiling and benchmarking. They differed in the frequency and duration of data collection. The preferred alternative, Alternative 2, requires weekly monitoring for one year and is estimated to have an annualized cost of $0.8 million. In comparison, Alternative 1 which requires daily data collection for one year, has an annualized cost of approximately $1.3 million. The final option, Alternative 3, requires daily monitoring for 1 month and has an estimated annualized cost of $0.5 million.

State disinfection benchmarking annualized costs are estimated to be $0.4 million. This estimate includes start-up, compliance tracking/recordkeeping, and benchmark related costs.

Covered Finished Water Reservoir Provision Costs

The proposed LT1FBR requires that new systems cover all finished water reservoirs, holding tanks, or other storage facilities for finished water. Historical construction rates suggest that new reservoirs over the next 20 years will roughly equal to five percent of the existing number of systems. Assuming then that 580 new uncovered finished water reservoirs would be built in the next 20 years, total annual costs, including annualized capital costs and one year of O&M costs are expected to be $2.6 million for this provision using a 7% discount rate. This estimate is calculated from a projected construction rate of new reservoirs and unit cost assumptions for covering new finished water reservoirs.

Recycle Provision Cost

EPA considered four different regulatory options for recycle. Each of the four options requires spent filter backwash, thickener supernatant, and liquids from dewatering be returned prior to the point of primary coagulant addition. Alternative 1, is estimated to result in an annualized cost of $16.7 million. Of the total costs of this alternative, State start-up and review costs for this alternative are only $20 to $30 thousand annually.

Alternative 2, the preferred option, further requires that conventional rapid granular filtration plants using surface water or GWUDI perform a self assessment if they recycle spent filter backwash and thickener supernatant, employ 20 or less filters, and practice direct recycle (treatment for the recycle flow or equalization in a basin that has a volume equal to the volume of spent filter backwash produced by a single filter backwash event is not provided). The results of the self assessment are reported to the State, and it specifies whether modifications to recycle practice are necessary. PWSs are required to implement the modification specified by the State. Under Alternative 2, direct filtration plants are required to submit data to the State on current recycle practice, and the State specifies whether changes to recycle practice are required. The total annualized cost of Alternative 2 is $17.4 to $24.5 million. $0.4 to $5.9 million of the total annualized cost is for the direct recycle component, $0.1 to $1.7 million is for the direct filtration component, and the remaining cost is for the requirement to return recycle prior to the point of primary coagulant addition. Of the total costs of this alternative, State start-up, review, and self assessment costs for this alternative is only $115 thousand annually.

Alternative 3 contain the same requirements for direct filtration plants and also requires the three recycle flows mentioned above be returned prior to the point of primary coagulant addition. Direct recycle plants are required to install equalization basins with a volume equal to or greater than the volume produced by two filter backwash events. The annualized cost of Alternative 3 is $55.0 to $56.7 million. Of this range, $38.1 million of

the annualized cost is directly associated with requiring direct recycle plants to install equalization, and $0.1 to $1.7 million is associated with the direct filtration component. State start-up and self assessment costs for this alternative is $95 thousand annually.

Alternative 4 requires the three recycle flows mentioned above be returned prior to the point of primary coagulant addition and also requires that all systems that recycle (conventional and direct systems) install sedimentation basins for recycle flow treatment. Systems may also install recycle flow treatment technologies that provide treatment capability equivalent or superior to sedimentation. For cost estimation purposes, sedimentation basins with tube settlers and polymer addition where used. The Agency approximated the annualized costs of this option to be $151.8 million. The sedimentation basin treatment requirement for conventional and direct filtration plants is 88% ($133.3 million) of the total annualized cost of Alternative 4. State start-up and self assessment costs for this alternative is $100 thousand annually.

3. Non-Quantifiable Costs

Although EPA has estimated the cost of all the rule's components on drinking water systems and States, there are some costs that the Agency did not quantify. These non-quantifiable costs result from uncertainties surrounding rule assumptions and from modeling assumptions. For example, EPA did not estimate a cost for systems to acquire land if they needed to build a treatment facility or significantly expand their current facility. This was not costed because many systems will be able to construct new treatment facilities on land already owned by the utility. In addition, if the cost of land was prohibitive, a system may choose another lower cost alternative such as connecting to another source. A cost for systems choosing this alternative is unquantified in our analysis.

C. Quantifiable and Non-Quantifiable Health Benefits

The primary benefits of today's proposed rule come from reductions in the risks of microbial illness from drinking water. In particular, LT1FBR focuses on reducing the risk associated with disinfection resistant pathogens, such as *Cryptosporidium*. Exposure to other pathogenic protozoa, such as *Giardia*, or other waterborne bacteria, viral pathogens, and other emerging pathogens are likely to be reduced by the provisions of this rule as well but are not quantified. In addition, LT1FBR produces nonquantifiable benefits associated with the risk reductions that result from the recycle provision, uncovered reservoirs provision, including *Cryptosporidium* in GWUDI definition, and including *Cryptosporidium* in watershed requirements for unfiltered systems.

1. Quantified Health Benefits

a. Turbidity Provisions

The quantification of benefits from this rule is focused solely on reductions in the risk of cryptosporidiosis. Cryptosporidiosis is an infection caused by *Cryptosporidium* which is an acute, self-limiting illness lasting 7 to 14 days with symptoms that include diarrhea, abdominal cramping, nausea, vomiting and fever (Juranek, 1995). The cost of illness avoided of cryptosporidiosis is estimated to have a mean of $2,016 (Harrington et al., 1985; USEPA 1999h)

The benefits of the turbidity provisions of LT1FBR come from improvements in filtration performance at water systems. The benefits analysis attempts to take into account some of the uncertainties in the analysis by estimating benefits under two different current treatment and three improved removal assumptions. The benefits analysis also used Monte Carlo simulations to derive a distribution of estimates, rather than a single point estimate.

The benefits analysis focused on estimating changes in incidence of cryptosporidiosis that would result from the rule. The analysis included estimating the baseline (pre-LT1FBR) level of exposure from *Cryptosporidium* in drinking water, reductions in such exposure resulting from treatment changes to comply with the LT1FBR, and resultant reductions of risk.

Baseline levels of *Cryptosporidium* in finished water were estimated by assuming national source water occurrence distribution (based on data by LeChevallier and Norton, 1995) and a national distribution of *Cryptosporidium* removal by treatment.

In the LT1FBR RIA, the following two assumptions were made regarding the current *Cryptosporidium* oocyst performance to estimate finished water *Cryptosporidium* concentrations. First, based on treatment removal efficiency data presented in the 1997 IEWSTR, EPA assumed a national distribution of physical removal efficiencies with a mean of 2.0 logs and a standard deviation of ± 0.63 logs. Because the finished water concentrations of oocysts represent the baseline against which improved removal from the LT1FBR is compared, variations in the log removal assumption could have considerable impact on the risk assessment. Second, to evaluate the impact of the removal assumptions on the baseline and resulting improvements, an alternative mean log removal/inactivation assumption of 2.5 logs and a standard deviation of ± 0.63 logs was also used to calculate finished water concentrations of *Cryptosporidium*.

For each of the two baseline assumptions, EPA assumed that a certain number of plants would show low, mid or high improved removal, depending upon factors such as water matrix conditions, filtered water turbidity effluent levels, and coagulant treatment conditions. As a result, the RIA considers six scenarios that encompass the range of endemic health damages avoided based on the rule.

The finished water *Cryptosporidium* distributions that would result from additional log removal with the turbidity provisions, were derived assuming that additional log removal was dependent on current removal, i.e., that sites currently operating at the highest filtered water turbidity levels would show the largest improvements or high improved removal assumption (e.g., plants now failing to meet a 0.4 NTU limit would show greater removal improvements than plants now meeting a 0.3 NTU limit).

Table VI.1 indicates estimated annual benefits associated with implementing the LT1FBR. The benefits analysis quantitatively examines endemic health damages avoided based on the LT1FBR for each of the six scenarios mentioned above. For each of these scenarios, EPA calculated the mean of the distribution of the number of illnesses avoided. The 10th and 90th percentiles imply that there is a 10 percent chance that the estimated value could be as low as the 10th percentile and there is a 10 percent chance that the estimated value could be as high as the 90th percentile. EPA's Office of Water has evaluated drinking water consumption data from USDA's 1994–1996 Continuing Survey of Food Intakes by Individuals (CSFII) Study. EPA's analysis of the CSFII Study resulted in a daily water ingestion lognormally distributed with a mean of 1.2 liters per person (EPA, 2000a). The risk and benefit analysis contained within the RIA reflects this distribution.

TABLE VI.1.—NUMBER AND VALUE OF ILLNESSES AVOIDED ANNUALLY FROM TURBIDITY PROVISIONS [a]
[Dollar amounts in billions]

Improved Log-Removal Assumption	Daily Drinking Water Ingestion and Baseline *Cryptosporidium* Log-Removal Assumptions (Mean = 1.2 Liters per person)	
	2.0 log	2.5 log
Illnesses Avoided with Low Improved *Cryptosporidium* Removal Assumption:		
Mean	62,800.0	22,800.0
10th Percentile	0.0	0.0
90th Percentile	152,000.0	43,900.0
COI Avoided with Low Improved *Cryptosporidium* Removal Assumption:		
Mean	$150.3	$53.9
10th Percentile	$0.0	$0.0
90th Percentile	$288.2	$81.4
Illnesses Avoided with Mid Improved *Cryptosporidium* Removal Assumption:		
Mean	77,500.0	27,900.0
10th Percentile	0.0	.00
90th Percentile	184,000.0	52,900.0
COI Avoided with Mid Improved *Cryptosporidium* Removal Assumption:		
Mean	$185.3	$66.2
10th Percentile	$0.0	$0.0
90th Percentile	$350.9	$98.8
Illnesses Avoided with High Improved *Cryptosporidium* Removal Assumption:		
Mean	83,600.0	30,000.0
10th Percentile	0.0	0.0
90th Percentile	196,000.0	56,500.0
COI Avoided with High Improved *Cryptosporidium* Removal Assumption:		
Mean	$199.5	$71.1
10th Percentile	$0.0	$0.0
90th Percentile	$376.7	$105.8

[a] All values presented are in January 1999 dollars.

According to the RIA performed for the LT1FBR published today, the rule is estimated to reduce the mean annual number of illnesses caused by *Cryptosporidium* in water systems with improved filtration performance by 22,800 to 83,600 cases depending upon which of the six baseline and improved *Cryptosporidium* removal assumptions was used, and assuming the 1.2 liter drinking water consumption distribution. Based on these values, the mean estimated annual benefits of reducing the illnesses ranges from $54 million to $200 million per year. The RIA also indicated that the rule could result in a mean reduction of 3 to 10 fatalities each year, depending upon the varied baseline and improved removal assumptions. Using a mean value of $5.7 million per statistical life saved, reducing these fatalities could produce benefits in the range of $16.0 million to $60 million.

Combining the value of illnesses and mortalities avoided, the total benefits range from $70 million to $260 million assuming a 1.2 liter drinking water consumption distribution.

b. Sensitivity Analysis for Recycle Provisions

Available literature research demonstrates that increased hydraulic loading or disruptive hydraulic currents, such as may be experienced when plants exceed State-approved operating capacity or when recycle is returned directly into the sedimentation basin, can disrupt filter (Cleasby, 1963; Glasgow and Wheatley, 1998; McTigue et al, 1998) and sedimentation (Fulton, 1987; Logsdon, 1987; Cleasby, 1990) performance. However, the literature does not quantify the extent to which performance can be lowered and, more specifically, does not quantify the log reduction in *Cryptosporidium* removal that may be experienced during direct recycle events.

In the absence of quantified log reduction data, the Agency performed a sensitivity analysis to estimate a range of potential benefit provided by the recycle provisions. The analysis assumes a baseline *Cryptosporidium* log removal value of 2.0. The analysis estimates the effect of recycle by reducing the average baseline log removal by a range of values (reduction ranged from 0.05 to 0.50 log) to account for the reduction in removal performance plants may experience if they exceed State-approved operating capacity or return recycle to the sedimentation basin. The installation of equalization to eliminate exceedence of State-approved operating capacity or moving the recycle return location from the sedimentation basin to prior to the point of primary coagulant addition will result in the health benefit. The benefit estimate is conservative, because it does not account for the fact that recycle returns additional oocysts to the plant.

Benefits are estimated by assuming that the installation of equalization or moving the recycle return point prior to the point of primary coagulant addition will return the plant to the baseline *Cryptosporidium* removal of 2.0 log. The difference between the number of illnesses that result from the baseline situation and the reduced performance is used to calculate the monetary benefit. The benefit is compared to the cost of returning recycle prior to the point of primary coagulant additional and the cost of installing equalization for two service populations. Service populations of 1,900 persons, which represents a plant serving fewer than 10,000 people, and a service population of 25,108, which represents a plant serving greater than 10,000 people, are used. Results are summarized in Tables IV.2 and IV.3 below.

TABLE IV.2.—BENEFIT FOR SERVICE POPULATION OF 1,900

Log removal reduction	Benefit[a] for population of 1,900	Cost[a] of moving recycle return	Cost[a] of installing equalization
0.05	$1,400	$5,200	$25,200
0.50	30,700	5,200	25,200

[a] Cost and benefit are annualized with a 7% capital cost over 20 years.

TABLE IV.3.—BENEFIT RANGE FOR SERVICE POPULATION OF 25,108

Log removal reduction	Benefit[a] for population of 25,108	Cost[a] of moving recycle return	Cost[a] of installing equalization
0.05	$18,700	$18,700	$57,200
0.50	405,800	18,700	57,200

[a] Cost and benefit are annualized with a 7% capital cost over 20 years.

Although literature research does not quantify the log reduction caused by specific recycle practices, the results of the sensitivity analysis show that the benefit a plant serving 25,108 people would realize by improving its baseline performance to 2.0 logs would range from $18,700 to $405,800. $27,256 Benefits would range from $1,400 to $30,700 for a plant serving 1,900. This benefit range supports the Agency's determination that unquantified benefits will justify costs. The determination is discussed in the Benefit Cost Determination section.

2. Non-Quantified Health and Non-Health Related Benefits

a. Recycle Provisions

The benefits associated with the filter backwash provision are unquantified because of data limitations. Specifically, there is a lack of treatment performance data to accurately model the oocysts removal achieved by individual full-scale treatment processes and the impact recycle may have on treatment unit performance and finished water quality. Additional data on the ability of unit processes (sedimentation, DAF, contact clarification, filtration) to remove oocysts from source and recycle flows, the extent to which recycle may generate hydraulic surge within plants and lower the performance of individual treatment processes, data on the potential for recycle to threaten the integrity of chemical treatment, and additional information on the occurrence of oocysts in recycle streams are all needed before an impact model can be calibrated and used as a predictive tool.

However, available data demonstrate that oocysts occur in recycle streams, often at concentrations higher than found in source water, and returning recycle streams to the plant will increase intra-plant oocyst concentrations. Data also shows that oocysts frequently occur in the finished water of treatment plants that are not operating under stressed conditions. Engineering literature also shows that proper coagulation and the maintenance of balanced hydraulic conditions within the plant (*i.e.*, not exceeding State approved sedimentation/clarification and filtration operating rates) are important to protect the integrity of the entire treatment process. Some recycle practices, such as direct recycle, can potentially upset coagulation and the proper hydraulic operation of sedimentation/clarification and filtration processes. The benefits of the recycle provisions are derived from protecting the coagulation process and the hydraulic performance of sedimentation/clarification and filtration processes. Today's recycle provisions reduce the risk posed by recycle and provided additional public health protection in the following ways:

(1) Returning spent filter backwash, thickener supernatant, and liquids from dewatering into, or downstream of, the point of primary coagulant addition may disrupt treatment chemistry by introducing residual coagulant or other treatment chemicals to the process stream. The wide variation in plant influent flow can also result in chemical over-or under-dosing if chemical dosage is not adjusted to account for flow variation. Returning the above flows prior to the point of primary coagulant addition will help protect the integrity of coagulation and protect the performance of downstream unit processes, such as clarification and filtration, that require proper coagulation be conducted to maintain proper performance. This will provide an additional measure of public health protection.

(2) The direct recycle of spent filter backwash without first providing treatment, equalization, or some form of hydraulic detention for the flow, may cause plants to exceed State-approved operating capacity during recycle events. This may lead to lower overall oocyst removal performance due to the hydraulic overload unit processes (i.e., clarification and filtration) experience and increase finished water oocyst concentrations. The self assessment provision in today's rule will help the States identify direct recycle systems that may experience this problem so modifications to recycle practice can be made to protect public health.

(3) Direct filtration plants do not employ a sedimentation basin in their primary treatment process to remove solids and oocysts; all oocyst removal is achieved by the filters. If treatment for the recycle flow is not provided prior to its return to the plant, all of the oocysts captured by a filter during a filter run will be returned to the plant and again loaded to the filters. This may lead to ever increasing levels of oocysts being applied to the filters and could increase the concentration of oocysts in finished water. Today's provision for direct recycle systems will help States identify those systems that are not obtaining sufficient oocyst removal from the recycle flow. Public health protection will be increased when systems implement modifications to recycle practice specified by the State.

The goal of the recycle provisions is to reduce the potential for oocysts getting into the finished water and causing cases of cryptosporidiosis. Other disinfection resistant pathogens may also be removed more efficiently due to implementation of these provisions.

b. Issues Associated With Unquantified Benefits

The monetized benefits from filter performance improvements are likely not to fully capture all the benefits of the turbidity provisions. EPA monetized the benefits from reductions in cryptosporidiosis by using cost-of-illness (COI) estimates. This may underestimate the actual benefits of these reductions because COI estimates do not include pain and suffering. In general, the COI approach is considered a lower bound estimate of willingness-to-pay (WTP) to avoid illnesses. EPA requests comment on the use of an appropriate WTP study to calculate the benefits of this rule.

Several non-health benefits from this rule were also considered by EPA but were not monetized. The non-health benefits of this rule include avoided outbreak response costs and possibly reduced uncertainty and averting behavior costs. By adding the non-monetized benefits with those that are monetized, the overall benefits of this rule would increase beyond the dollar values reported.

D. Incremental Costs and Benefits

EPA evaluated the incremental or marginal costs of today's proposed turbidity option by analyzing various turbidity limits, 0.3 NTU, 0.2 NTU, and 0.1 NTU. For each turbidity limit, EPA developed assumptions about which process changes systems might implement to meet the turbidity level and how many systems would adopt each change. The comparison of total compliance cost estimates show that costs are expected to increase significantly across turbidity limits. The total cost of a 0.1 NTU limit, $404.6 million, is almost eight times higher than the cost of the 0.3 NTU limit, which is $52.2 million. Similarly, the total cost of the 0.2 NTU limit, $134.1 million, is more than twice as great as the 0.3 NTU cost.

Analytical limitations in the estimation of the benefits of LT1FBR prevent the Agency from quantitatively describing the incremental benefits of alternatives. The Agency requests comment on how to analyze and the appropriateness of analyzing incremental benefits and costs for treatment techniques that address microbial contaminants.

E. Impacts on Households

The cost impact of LT1FBR at the household level was also assessed. Household costs are a way to represent water system treatment costs as costs to the system's customers. As expected, costs per household increase as system size decreases. Costs to households are higher for households served by smaller systems than larger systems for two reasons. First, smaller systems serve far fewer households than larger systems, and consequently, each household must bear a greater percentage share of capital and O&M costs. Second, filter backwash recycling may pose a greater risk because the flow of water from filter backwash recycling is a larger portion of the total water flow in smaller systems. This greater risk potential in small systems makes it more likely that some form of recycle treatment might be needed.

The average (mean) annual cost for the turbidity, benchmarking, and covered finished water provision per household is $8.66. For almost 86 percent of the 6.6 million households affected by these provisions, the per-household costs are $10 per year or less, and costs of $120 per year (i.e., $10 per month) or less for approximately 99 percent of the households. Costs exceeding $500 per household occur only for the smallest size category, and the number of affected households represent about 34 of the smallest systems. The highest per-household cost estimate is $2,177. This extreme estimate, however, is an artifact of the way the system cost distribution was generated. It is unlikely that any small system will incur annual costs of this magnitude because less costly options are available.

The average household cost for the recycle provisions is $1.80 per year for households that are served by systems that recycle. The cost per household is less than $10 per year for almost 99% of 12.9 million households potentially affected by the proposed rule. The cost per household exceeds $120 per year for less than 1800 households and it exceeds $500 per year for approximately 100 households. The maximum cost of $1,238 per year would only be incurred if a direct filtration system that serves less than 100 customers installed a sedimentation basin for backwash treatment.

There are approximately 1.5 million households served by small drinking water systems that may be affected by the recycling provisions in addition to the turbidity, benchmarking, and covered finished water provisions. The expected aggregate annual cost to these households can be approximated by the sum of the expected cost for each distribution, which is $10.45 per year.

The assumptions and structure of this analysis tend to overestimate the highest costs. To face the highest household costs, a system would have to implement all, or almost all, of the treatment activities. These systems, however, might seek less costly alternatives, such as connecting into a larger regional water system.

F. Benefits From the Reduction of Co-Occurring Contaminants

If a system chooses to install treatment, it may choose a technology that would also address other drinking water contaminants. For example, some membrane technologies installed to remove bacteria or viruses can reduce or eliminate many other drinking water contaminants including arsenic.

The technologies used to reduce individual filter turbidities have the potential to reduce concentrations of other pollutants as well. Reduction in turbidity that result from today's proposed rule are aimed at reducing *Cryptosporidium* by physical removal. It is reasonable to assume that similar microbial contaminants will also be reduced as a result of improvements in turbidity removal. Health risks from *Giardia lamblia* and emerging disinfection resistant pathogens, such as microsporidia, *Toxoplasma*, and *Cyclospora*, are also likely to be reduced as a result of improvements in turbidity removal and recycle practices. The frequency and extent that LT1FBR would reduce risk from other contaminants has not been quantitatively evaluated because of the Agency's lack of data on the removal efficiencies of various technologies for emerging pathogens and the lack of co-occurrence data for microbial pathogens and other contaminants from drink water systems.

G. Risk Increases From Other Contaminants

It is unlikely that LT1FBR will result in any increased risk from other contaminants. Improvements in plant turbidity performance will not result in any increases in risk. In addition, the benchmarking and profiling provisions were designed to minimize the potential reductions in microbial disinfection in order to lower disinfection byproduct levels to comply with the Stage 1 Disinfection Byproducts Rule. Furthermore, the filter backwash provision does not potentially increase the risk from other contaminants.

H. Other Factors: Uncertainty in Risk, Benefits, and Cost Estimates

There is uncertainty in the baseline number of systems, the risk calculation, and the cost estimates. Many of these uncertainties are discussed in more detail in previous sections of today's proposal.

First, the baseline number of systems is uncertain because of data limitation problems in SDWIS. For example, some systems use both ground and surface water but because of other regulatory requirements are labeled in SDWIS as surface water. Therefore, EPA does not have a reliable estimate of how many of these mixed systems exist. The SDWIS data on non-community water systems does not have a consistent reporting convention for population served. Some states may report the population served over the course of a year, while others may report the population served on an average day. Also, SDWIS does not require states to provide information on current filtration practices and, in some cases, it may overestimate the daily population served. For example, a park may report the population served yearly instead of daily. EPA is looking at new approaches to address these issues and both are discussed below in request for comment.

Second, there are several important sources of uncertainty that enter the benefits assessment. They include the following:

- Occurrence of *Cryptosporidium* oocysts in source waters
- Baseline occurrence of *Cryptosporidium* oocysts in finished waters
- Reduction of *Cryptosporidium* oocysts due to improved treatment, including filtration and disinfection
- Viability of *Cryptosporidium* oocysts after treatment
- Infectivity of *Cryptosporidium*
- Incidence of infections (including impact of under reporting)
- Characterization of the risk Willingness-to-pay to reduce risk and avoid costs.
- The baseline water system treatment efficiency for the removal of *Cryptosporidium* is uncertain. Turbidity measurements have been used as a means of estimating removal treatment efficiency (*i.e.* log removal). In addition to the baseline treatment efficiency estimates, improvements in treatment efficiency for *Cryptosporidium* removal that result from this rule are uncertain.

The benefit analysis incorporates all of the uncertainties associated with the benefits assessment in either the Monte Carlo simulations or the assumption of two baselines—2.0 log removal and 2.5 log removal. The results in table VI.1 show that benefits are more sensitive to the baseline log removal assumptions than the range of low to high improved removal assumptions. Third, some costs of today's proposed rule are uncertain because of the diverse nature of the modifications that may be made to address turbidity limits. Cost analysis uncertainties are primarily caused by assumptions made about how many systems will be affected by various provisions and how they will likely respond. Capital and O&M expenditures account for a majority of total costs. EPA derived these costs for a "model" system in each size category using engineering models, best professional judgement, and existing cost and technology documents. Costs for systems affected by the proposed rule could be higher or lower, which would affect total costs. Also, the filter backwash provision's flexibility for States to assess plants' need to modify recycle practices leads to some uncertainty in the estimates of how many plants will have to potentially install some form of recycle equalization or treatment. These uncertainties could either under or overestimate the costs of the rule.

I. Benefit Cost Determination

The Agency has determined that the benefits of the LT1FBR justify the costs. EPA made this determination for both the LT1 and the FBR portions of the rule separately as described below.

The Agency has determined that the benefits of the LT1 provisions justify their costs on a quantitative basis. The LT1 provisions include enhanced filtration, disinfection benchmarking and other non-recycle related provisions. The quantified benefits of $70 million to $259.4 million annually exceed the costs of $73 million at the seven percent cost of capital over a substantial portion of the range of benefits. In addition, the non-quantified benefits include avoided outbreak response costs and possibly reduced uncertainty and averting behavior costs.

The Agency has determined that the benefits of the recycle provisions (FBR) justify their cost on a qualitative basis. The recycle provisions will reduce the potential for certain recycle practices to lower or upset treatment plant performance during recycle events; the provisions will therefore help prevent *Cryptosporidium* oocysts from entering finished drinking water supplies and will increase public health protection.

The Agency strongly believes that returning *Cryptosporidium* to the treatment process in recycle flows, if performed improperly, can create additional public health risk. The Agency holds this belief for three reasons. First, returning recycle flow directly to the plant, without equalization or treatment, can cause large variations in the influent flow magnitude and influent water quality. If chemical dosing is not adjusted to reflect this, less than optimal chemical dosing can occur, which may lower the performance of sedimentation and filtration. Returning recycle flows prior to the point of primary coagulant addition will help diminish the risk of less than optimal chemical dosing and diminished sedimentation and filtration performance. Second, exceeding State-approved operating capacity, which is likely to occur if recycle equalization or treatment is not in place, can hydraulically overload plants and diminish the ability of individual unit processes to remove *Cryptosporidium*. Exceeding approved operating capacity violates fundamental engineering principles and water treatment objectives. States set limits on plant operating capacity and loading rates for individual unit processes to ensure treatment plants and individual treatment processes are operated to within their capabilities so that necessary levels of public health protection are provided. Third, returning recycle flows directly into flocculation or sedimentation basins, which can generate disruptive hydraulic currents, may lower the performance of these units and increase the risk of *Cryptosporidium* in finished water supplies.

The recycle provisions in today's proposal are designed to address those recycle practices that are inconsistent with fundamental engineering and water treatment principles. The objective of the provisions is to eliminate practices that are counter to common sense, sound engineering judgement, and that create additional and preventable risk to public health. EPA believes the public health protection benefit provided by the recycle provisions justifies their cost because they are based upon sound engineering principles and are designed to eliminate recycle practices that are very likely to create additional public health risk.

J. Request for Comment

Pursuant to Section 3142(b)(3)(C), the Agency requests comment on all aspects of the rule's economic impact analysis. Specifically, EPA seeks input into the following two issues.

NTNC and TNC Flow Estimates

As part of the total cost estimates for LT1FBR, EPA estimated the cost of the rule on NTNC and TNC water systems by using flow models. However, these flow models were developed to estimate flows only for CWS and they may not accurately represent the much smaller flows generally found in NTNC and TNC systems. The effect of the overestimate in flow would be to inflate

the cost of the rule for these systems. The Agency requests comment on an alternative flow analysis for NTNC and TNC water systems described below.

Instead of using the population served to determine the average flow for use in the rule's cost calculations, this alternative approach would re-categorize NTNC and TNC water systems based on service type (*e.g.*, restaurants or parks). Service type would be obtained from SDWIS data. However, service type data is not always available because it is a voluntary SDWIS data field. Where unavailable, the service type would be assigned based on statistical analysis. Estimates of service type design flows would be obtained from engineering design manuals and best professional judgement if no design manual specifications exist.

In addition, each service type category would also have corresponding rates for average population served and average water consumption. These would be used to determine contaminant exposure which is used in the benefit determination. For example, schools and churches would be two separate service type categories. They each would have their own corresponding average design flow, average population served (rather than the population as reported in SDWIS), and average water consumption rates. These elements could be used to estimate a rule's benefits and costs for the average church and the average school.

Mixed Systems

Current regulations require that all systems that use any amount of surface water as a source be categorized as surface water systems. This classification applies even if the majority of water in a system is from a ground water source. Therefore, SDWIS does not provide the Agency with information to identify how many mixed systems exist. This information would help the Agency to better understand regulatory impacts.

EPA is investigating ways to identify how many mixed systems exist and how many mix their ground and surface water sources at the same entry point or at separate entry points within the same distribution systems. For example, a system may have several plants/entry points that feed the same distribution system. One of these entry points may mix and treat surface water with ground water prior to its entry into the distribution system. Another entry point might use ground water exclusively for its source while a different entry point would exclusively use surface water. However, all three entry points would supply the same system classified in SDWIS as surface water.

One method EPA could use to address this issue would be to analyze CWSS data then extrapolate this information to SDWIS to obtain a national estimate of mixed systems. CWSS data, from approximately 1,900 systems, details sources of supply at the level of the entry point to the distribution system and further subdivides flow by source type. The Agency is considering this national estimate of mixed systems to regroup surface water systems for certain impact analyses when regulations only impact one type of source. For example, surface water systems that get more than fifty percent of their flow from ground water would be counted as a ground water system in the regulatory impact analysis for this rule. The Agency requests comment on this methodology and its applicability for use in regulatory impact analysis.

VII. Other Requirements

A. Regulatory Flexibility Act (RFA), as amended by the Small Business Regulatory Enforcement Fairness Act of 1996 (SBREFA), 5 USC 601 et seq.

1. Background

The RFA, generally requires an agency to prepare a regulatory flexibility analysis of any rule subject to notice and comment rulemaking requirements under the Administrative Procedure Act or any other statute unless the agency certifies that the rule will not have a significant economic impact on a substantial number of small entities. Small entities include small businesses, small organizations, and small governmental jurisdictions.

2. Use of Alternative Definition

The RFA provides default definitions for each type of small entity. It also authorizes an agency to use alternative definitions for each category of small entity, "which are appropriate to the activities of the agency" after proposing the alternative definition(s) in the **Federal Register** and taking comment. 5 U.S.C. secs. 601(3)–(5). In addition to the above, to establish an alternative small business definition, agencies must consult with SBA's Chief Counsel for Advocacy.

EPA is proposing the LT1FBR which contains provisions which apply to small PWSs serving fewer than 10,000 persons. This is the cut-off level specified by Congress in the 1996 Amendments to the Safe Drinking Water Act for small system flexibility provisions. Because this definition does not correspond to the definitions of "small" for small businesses, governments, and non-profit organizations, EPA requested comment on an alternative definition of "small entity" in the preamble to the proposed Consumer Confidence Report (CCR) regulation (63 FR 7620, February 13, 1998). Comments showed that stakeholders support the proposed alternative definition. EPA also consulted with the SBA Office of Advocacy on the definition as it relates to small business analysis. In the preamble to the final CCR regulation (63 FR 4511, August 19, 1998). EPA stated its intent to establish this alternative definition for regulatory flexibility assessments under the RFA for all drinking water regulations and has thus used it in this proposed rulemaking.

In accordance with Section 603 of the RFA, EPA prepared an initial regulatory flexibility analysis (IRFA) that examines the impact of the proposed rule on small entities along with regulatory alternatives that could reduce that impact. The IRFA is available for review in the docket and is summarized below.

3. Initial Regulatory Flexibility Analysis

As part of the 1996 amendments to the Safe Drinking Water Act (SDWA), Congress required the U.S. Environmental Protection Agency (EPA) to develop a Long Term Stage 1 Enhanced Surface Water Treatment Rule (LT1ESWTR) under Section 1412(b)(2)(C) which focuses on surface water drinking water systems that serve fewer than 10,000 persons. Congress also required EPA to develop a companion Filter Backwash Recycle Rule (FBRR) under Section 1412(b)(14) which will require that all surface water public water systems, regardless of size, meet new requirements governing the recycle of filter backwash within the drinking water treatment process. The goal of both the LT1ESWTR and the related FBRR is to provide additional protection from disease-causing microbial pathogens for community and non-community public water systems (PWSs) utilizing surface water.

For purposes of assessing the impacts of today's rule on small entities, small entity is defined by systems serving fewer than 10,000 people. The small entities directly regulated by this proposed rule are surface water and systems using ground water under the direct influence of surface water (GWUDI), using filtration and serving fewer than 10,000 people. We have determined that the final rule would result in approximately 2,400 systems needing capital improvement to meet the turbidity requirements, approximately 3,360 systems would need to significantly change their

disinfection practices, and approximately 790 systems would need to make capital improvements to change the location of return of their filter backwash recycle stream. A discussion of the impacts on small entities is described in more detail in chapters six and seven of the Regulatory Impact Analysis of the LT1FBR (EPA, 1999).

The following recordkeeping and reporting burdens were projected in the IRFA:

Turbidity Monitoring and Reporting Costs

Utility monitoring activities at the plant level include data collection, data review, data reporting and monthly reporting to the State. The labor burden hours for data collection and review were calculated under the assumption that plants are using on-line monitoring, in the form of a SCADA or other automated data collection system. The data collection process requires that a plant engineer gather and organize turbidimeter readings from the SCADA output and enter them into either a spreadsheet or a log once per 8-hour shift (three times per day).

After data retrieval, the turbidity data from each turbidimeter will be reviewed by a plant engineer once per 8-hour shift (three times per day) to ensure that the filters are functioning properly and are not displaying erratic or exceptional patterns. A monthly summary data report would be prepared. This task involves the review of daily spreadsheets and the compilation of a summary report. It is assumed to take one employee 8 hours per month to prepare. Recordkeeping is expected to take 5 hours per month. Recordkeeping entails organizing daily monitoring spreadsheets and monthly summary reports.

Plant-level data will also be reviewed monthly at the system level to ensure that each plant in a system is in compliance with the rule. A system-level manager or technical worker will review the daily monitoring spreadsheets and monthly summary reports that are generated at the plant level. This task is estimated to take about 4 hours per month. Once the plant-level data have been reviewed, the system manager or technical worker will also compile a monthly system summary report. These reports are estimated to take 4 hours each month to prepare.

Disinfection Benchmarking Monitoring and Reporting Costs

It is assumed that all Subpart H systems currently collect the daily inactivation data required to generate a disinfection profile, in either an electronic or paper format, and therefore would not incur additional data collection expenses due to microbial profiling. Costs per plant are divided into costs per plant using paper data, costs per plant using mainframe data and costs per plant using PC data. Plants with paper data were assumed to represent half of the number of plants needing benchmarking, while plants with mainframe and plants with PC data each represent a quarter.

Filter Backwash Monitoring and Reporting Costs

The proposed requirements are as follows: All subpart H systems, regardless of size, that use conventional rapid granular filtration, and that return spent filter backwash, thickener supernatant, or liquids from dewatering process to submit a schematic diagram to the State showing their intended changes to move the return location above the point of primary coagulant addition.

All subpart H systems, regardless of size, that use conventional rapid granular filtration and employ 20 or fewer filters during the highest production month and that use direct recycling, to perform a self assessment of their recycle practice and report the results to the State.

All subpart H systems, regardless of system size that use direct filtration must submit a report of their recycling practices to the State. The State would then determine whether changes in recycling practices were warranted.

EPA believes that the skill level required for compliance with all of the above recordkeeping, reporting and other compliance activities are similar or equivalent to the skill level required to pass the first level of operator certification required by most States.

Relevant Federal Rules

EPA has issued a Stage 1 Disinfectants/Disinfection Byproducts Rule (DBPR) along with an Interim Enhanced Surface Water Treatment Rule (IESWTR) in December 1998, as required by the Safe Drinking Water Act Amendments of 1996. EPA proposed these rules in July 1994. The Stage 1 DBPR includes a THM MCL of 0.080 mg/L (reduced from the existing THM MCL of 0.10 mg/L established in 1979) and an MCL of 0.060 mg/L for five haloacetic acids (another group of chlorination) as well as MCLs for chlorite (1.0 mg/L) and bromate (0.010 mg/L) byproducts. The Stage 1 DBPR also finalized MRDLs for chlorine (4 mg/L as Cl_2), chloramine (4 mg/L as Cl_2) and chlorine dioxide (0.8 mg/L as ClO_2).

In addition, the Stage 1 DBPR includes requirements for enhanced coagulation to reduce the concentration of TOC in the water and thereby reduce DBP formation potential. The IESWTR was proposed to improve control of microbial pathogens and to control potential risk trade-offs related to the need to meet lower DBP levels under the Stage 1 DBPR.

None of these regulations duplicate, overlap or conflict with this proposed rule.

Significant Alternatives

As a result of consultations during the SBREFA process, and public meetings held subsequently, EPA has developed several alternative options to those presented in the IRFA, and has selected preferred alternatives for each of the turbidity, disinfection benchmarking and filter backwash recycle provisions. These alternatives were developed based on feedback from small system operators and trade associations and are designed to protect public health, while minimizing the burden to small systems. In summary, the proposed turbidity requirements are structured to require recordkeeping once a week as opposed to daily which was written in the IRFA; the proposed disinfection profile requirements are structured to be taken once per week, as opposed to daily which was written in the IRFA; and the filter backwash requirements have been scaled back significantly from those included in the IRFA, *i.e.* a ban on recycle is no longer being considered, nor are several treatment techniques now being considered that were in the IRFA prior to discussions with stakeholders. The provisions being proposed are: systems that recycle will be required to return recycle flows prior to the rapid mix unit; direct recycle systems will need to perform a self assessment to determine whether capacity is exceeded during recycle events, and States will determine whether recycle practices need to be changed based on the self-assessment; and direct filtration systems will need to report their recycle practices to the State, which will determine whether changes to recycle practices are required.

4. Small Entity Outreach and Small Business Advocacy Review Panel

As required by section 609(b) of the RFA, as amended by SBREFA, EPA also conducted outreach to small entities and convened a Small Business Advocacy Review Panel to obtain advice and recommendations of representatives of the small entities that potentially would be subject to the rule's

requirements. The SBAR Panel produced two final reports; one for the LT1 provisions and the other for the filter backwash provisions. Although the LT1 and filter backwash provisions have since been combined into the same rule, the projected economic impact of the provisions have not significantly changed, and the relevance of SERs' comments has not been affected.

The Agency invited 24 SERs to participate in the SBREFA process, and 16 agreed to participate. The SERs were provided with background information on the Safe Drinking Water Act and the LT1FBR in preparation for a teleconference on April 28, 1998. This information package included data on options as well as preliminary unit costs for treatment enhancements under consideration. Eight SERs provided comments on these materials.

On August 25, 1998, EPA's Small Business Advocacy Chair person convened the Panel under section 609(b) of the Regulatory Flexibility Act as amended by the Small Business Regulatory Enforcement Fairness Act (SBREFA). In addition to its chairperson, the Panel consisted of the Director of the Standards and Risk Management Division of the Office of Ground Water and Drinking Water within EPA's Office of Water, the Administrator of the Office of Information and Regulatory Affairs within the Office of Management and Budget, and the Chief Counsel for Advocacy of the Small Business Administration. The SBAR Panels reports, Final Report of the SBREFA Small Business Advocacy Review Panel on EPA's Planned Proposed Rule: Long Term 1 Enhanced Surface Water Treatment (EPA, 1998k) and the Final Report of the SBREFA Small Business Advocacy Review Panel on EPA's Planned Proposed Rule: Filter Backwash Recycling (EPA, 1998l), contain the SERs comments on the components of the LT1FBR.

The SERs were provided with additional information on potential costs related to LT1FBR regulatory options during teleconferences on September 22 and 25, 1998. Nine SERs provided additional comments during the September 22 teleconference, four SERs provided additional comments during the September 25 teleconference, and three SERs provided written comment on these materials.

In general, the SERs that were consulted on the LT1FBR were concerned about the impact of the proposed rule on small water systems (because of their small staff and limited budgets), small systems' ability to acquire the technical and financial capability to implement requirements, and maintaining flexibility to tailor requirements to the needs and limitations of small systems. Consistent with the RFA/SBREFA requirements, the Panel evaluated the assembled materials and small-entity comments on issues related to the elements of the IRFA. The background information provided to the SBAR Panel and the SERs are available for review in the water docket. A copy of the Panel report is also included in the docket for this proposed rule. The Panel's recommendations to address the SERs concerns are described next.

a. Number of Small Entities Affected

When the IRFA was prepared, EPA initially estimated that there were 5,165 small public water systems that use surface water or GWUDI. A more detailed discussion of the impact of the proposed rule and the number of entities affected is found in Section VI. None of the commenters questioned the information provided by EPA on the number and types of small entities which may be impacted by the LT1FBR. This information is based upon the national Safe Drinking Water Information System (SDWIS) database, which contains data on all public water systems in the country. The Panel believed this was a reasonable data source to characterize the number and types of systems impacted by the proposed rule.

b. Recordkeeping and Reporting

The Panel noted that some small systems are operated by a sole, part time operator with many duties beyond operating and maintaining the drinking water treatment system and that several components of the proposed rule may require significant additional operator time to implement. These included disinfection profiling, individual filter monitoring, and ensuring that short-term turbidity spikes are corrected quickly.

One SER stated that assumptions can be made that small systems will have to add an additional person to comply with the monitoring and recordkeeping portions of the rule. Another SER commented that the most viable and economical option would be to use circuit riders (a trained operator who travels between plants) to fill staffing needs, but the LT1FBR would increase the amount of time that a circuit rider would be required to spend at each plant. An additional option recommended by several SERs to reduce monitoring burden and cost was to allow the use of one on-line turbidimeter to measure several filters. This would entail less frequent monitoring of each filter but might still be adequate to ensure that individual filter performance is maintained.

The proposed LT1FBR takes into consideration the recordkeeping and reporting concerns identified by the Panel and the SERs. For example, initially the Agency considered requiring systems to develop a profile of individual filter performance. Based on concerns from the SERs this requirement was eliminated. In addition, the Agency initially considered requiring operators to record pH, temperature, residual chlorine and peak hourly flow every day. This requirement has been scaled back to once per week to meet difficulties faced by small system operators. Finally, in today's proposed rule the Agency is requesting comment on a modification to allow one on-line turbidimeter instead of several to be used at the smallest size systems (systems serving fewer than 100 people).

c. Interaction With Other Federal Rules

The Panel noted that the LT1FBR and Stage 1 DBP rules will affect small systems virtually simultaneously and that the Agency should analyze the net impact of these rules and consider regulatory options that would minimize the impact on small systems.

One SER commented that any added responsibility or workload due to regulations will have to be absorbed by him and his staff. He noted that many systems, including his own, are losing staff through attrition and are unable to hire replacements. The SER stated that he hoped the Panel was aware of the volume of rules and regulations to which small systems are currently subject. As an example, the SER stated that he had spent a week's time collecting samples for the mandated tests of the Lead and Copper rule. He noted that the sampling had delayed important maintenance to his system by over a month.

The Agency considered these comments when developing the requirements of today's proposed rule, and developed the alternatives with the realization that small systems will be required to implement several rules in a short time frame. In today's proposed rule, the preferred options attempt to minimize the impact on small systems by reducing the amount of monitoring and the amount of operator's time necessary to collect and analyze data. For example, under the IESWTR, large systems are required to monitor disinfection byproducts for 1 year to determine whether or not they must develop a disinfection profile (based on

daily measurements of operating conditions). In response to SERs concerns, the Agency is proposing to eliminate the requirement for disinfection byproduct monitoring all together. Under the proposed requirements, all systems would develop a disinfection profile based on weekly measurements of operating parameters for 1 year. Overall, this will save small system operators both time and money. The proposed rule also requests comment on several additional strategies for reducing impacts.

d. Significant Alternatives

During the SBAR panel several alternatives were discussed with the Panel and SERs. These alternatives and the Panel's recommendations are discussed next.

i. Turbidity Provisions

During the SBAR Panel, the Agency presented the IESWTR turbidity provisions as appropriate components for the LT1FBR. The Panel noted that one SER commented that it was a fair assumption that turbidity up to 1 NTU maximum and 0.3 NTU in 95% of all monthly samples is a good indicator of two log removal of *Cryptosporidium*, but stressed the need to allow operators adequate time to respond to exceedances in automated systems. They were referring to the fact the small system operators are often away from the plant performing other duties, and cannot respond immediately if the turbidity levels exceed a predetermined level. The Panel recommended that EPA consider this limitation when developing reporting and recordkeeping requirements.

The Panel also noted that another SER agreed that lowered turbidity level is a good indicator of overall plant performance but thought the 0.3 NTU limit for the 95th percentile reading was too low in light of studies which appear to show variability and inaccuracies in low level turbidity measurements. This SER referenced specific data suggesting that current equipment used to measure turbidity levels below the 0.3 NTU may nonetheless give readings above 0.3 which would put the system out of compliance. EPA has evaluated this issue in the context of the 1997 IESWTR FACA negotiations and believes that readings below the 0.3 NTU are reliable. Moreover, EPA notes that the SERs' concern was based on raw performance evaluation data that had not been fully analyzed.

Finally, the Panel recognized that several SERs supported individual filter monitoring, provided there was flexibility for short duration turbidity spikes. Other SERs, however, noted that the assumption that individual filter monitoring was necessary was unreasonable. The Panel recommended that EPA consider the likelihood and significance of short duration spikes (*i.e.*, during the first 15–30 minutes of filter operation) when evaluating the frequency of individual filter monitoring and reporting requirements and the number and types of exceedances that will trigger requirements for Comprehensive Performance Evaluations (CPEs). The Panel also noted the concern expressed by several SERs that individual filter monitoring may not be practical or feasible in all situations.

The Agency has structured today's proposed rule with an emphasis on providing flexibility for small systems. The individual filter provisions have been tailored to be easier to understand and implement and require less data analysis. For example, the operator can look at monitoring data once per week under this rule, as opposed to having to review turbidity data every day as the larger systems are required to do. The proposed rule also requests comment on several modifications to provide additional flexibility to small systems.

ii. Disinfection Benchmarking: Applicability Monitoring Provisions

None of the SERs commented specifically on the applicability monitoring provisions which are designed to identify systems that may consider cutting back on their disinfection doses in order to avoid problems with disinfection byproducts formation. The Panel noted, however, that burden on small systems might be reduced if alternative applicability monitoring provisions were adopted. In consideration of the Panel's suggestions, the Agency first considered limiting the applicability monitoring, and has now eliminated this requirement from the proposal. It is optional, however, for systems who believe their disinfection byproduct levels are below 80% of the MCL—as required under the Stage 1 DBPR.

The Panel noted SER comments that monitoring and computing *Giardia lamblia* inactivation on a daily basis for a year would place a heavy burden on operators that may only staff the plant for a few hours per day. The Panel therefore recommended that EPA consider alternative profiling strategies which ensure adequate public health protection, but will minimize monitoring and recordkeeping requirements for small system operators.

The Agency considered several alternatives to the profile development strategies, and decided to propose that systems perform the necessary monitoring and record the results once per week, instead of every day as the larger systems are required to do. This will significantly reduce burden and costs for small systems.

iii. Recycling Provisions

During the SBAR Panel, the Agency proposed several alternatives for consideration in the LT1FBR including a ban on recycle, a requirement to return recycle flow to the head of the plant, recycle flow equalization, and recycle flow treatment. The Panel noted the concern of the SERs regarding a ban on the recycle of filter backwash water. These concerns included the expense of filter backwash disposal and the economic and operational concerns of western and southwestern drinking water systems which depend on recycled flow to maintain adequate supply. The Panel strongly recommended that EPA explore alternatives to an outright ban on the recycle of filter backwash and other recycle flows.

The Panel noted that SERs supported a requirement that all recycled water be reintroduced at the head of the plant. This was considered an element of sound engineering practice. The Panel recommended that EPA consider including such a requirement in the proposed rule, and investigate whether there are small systems for which such a requirement would present a significant financial and operational burden.

The Panel noted that SERs agreed with the appropriateness of flow equalization for filter backwash. The Panel supported the concept of flow equalization as a means to minimize hydraulic surges that may be caused by recycle and the reintroduction of a large number of *Cryptosporidium* oocysts or other pathogenic contaminants to the plant in a brief period of time. The Panel noted that there are various ways of achieving flow equalization and suggested that specific requirements remain flexible.

The Panel noted the concerns of SERs regarding installation of treatment, solely for the purpose of treating filter backwash water and/or recycle streams may be costly and potentially prohibitive for small systems. The Agency addressed this concern by allowing the States to determine whether recycle flow equalization or treatment is necessary based on the results of the self assessment prepared by the system rather than requiring universal flow equalization or treatment. This will allow site-specific

factors to be considered and help minimize cost and burden.

e. Other Comments

The Panel also noted the concern of several SERs that flexibility be provided in the compliance schedule of the rule. SERs noted the technical and financial limitations that some small systems will have to address, the significant learning curve for operators with limited experience, and the need to continue providing uninterrupted service as reasons why additional compliance time may be needed for small systems. The panel encouraged EPA to keep these limitations in mind in developing the proposed rule and provide as much compliance flexibility to small systems as is allowable under the SDWA. We invite comments on all aspects of the proposal and its impacts on small entities.

The Agency structured the timing of the LT1ESWTR provisions specifically to follow the promulgation of the IESWTR. Since the IESWTR served as a template for the establishment of the LT1ESWTR provisions, the Agency decided that small systems would have an advantage by giving them an opportunity to see what was in the rule, and how it was implemented by larger systems.

Under SDWA, systems have 3 years to comply with the requirements of the final rule. If capital improvements are necessary for a particular PWS, a State may allow the system up to an additional 2 years to comply with the regulation. The Agency is developing guidance manuals to assist the compliance efforts of small entities.

B. Paperwork Reduction Act

The information collection requirements in this proposed rule have been submitted for approval to the Office of Management and Budget (OMB) under the Paperwork Reduction Act, 44 U.S.C. 3501 *et seq.* An Information Collection Request (ICR) document has been prepared by EPA (ICR No. 1928.01) and a copy may be obtained from Sandy Farmer by mail at OP Regulatory Information Division; U.S. Environmental Protection Agency (2137); 401 M St., S.W.; Washington, DC 20460, by email at farmer.sandy@epamail.epa.gov, or by calling (202) 260–2740. A copy may also be downloaded off the Internet at *http://www.epa.gov/icr*. For technical information about the collection contact Jini Mohanty by calling (202) 260–6415.

The information collected as a result of this rule will allow the States and EPA to determine appropriate requirements for specific systems, in some cases, and to evaluate compliance with the rule. For the first three years after the effective date (six years after promulgation) of the LT1FBR, the major information requirements are (1) monitor filter performance and submit any exceedances of turbidity requirements (*i.e.* exceptions reports) to the State; (2) develop a 1 month recycle monitoring plan and submit both plan and results to the State; (3) submit flow monitoring plan and results to the State; and (4) report data on current recycle treatment (self assessment) to the State. The information collection requirements in Part 141, for systems, and Part 142, for States are mandatory. The information collected is not confidential.

Burden means the total time, effort, or financial resources expended by persons to generate, maintain, retain, or disclose or provide information to or for a Federal Agency. This includes the time needed to review instructions; develop, acquire, install, and utilize technology and systems for the purposes of collecting, validating, and verifying information, processing and maintaining information, and disclosing and providing information; adjust the existing ways to comply with any previously applicable instructions and requirements; train personnel to be able to respond to a collection of information; search data sources; complete and review the collection of information; and transmit or otherwise disclose the information.

The preliminary estimate of aggregate annual average burden hours for LT1FBR is 311,486. Annual average aggregate cost estimate is $10,826,919 for labor, $2,713,815 for capital, and $1,898,596 for operation and maintenance including lab costs which is a purchase of service. The burden hours per response is 18.9. The frequency of response (average responses per respondent) is 2.7 annually. The estimated number of likely respondents is 6,019 (the product of burden hours per response, frequency, and respondents does not total the annual average burden hours due to rounding). Most of the regulatory provisions discussed in this notice entail new reporting and recordkeeping requirements for States, Tribes, and members of the regulated public. An Agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number. The OMB control numbers for EPA's regulations are listed in 40 CFR Part 9 and 48 CFR Chapter 15.

Comments are requested on the Agency's need for this information, the accuracy of the provided burden estimates, and any suggested methods for minimizing respondent burden, including through the use of automated collection techniques. Send comments on the ICR to the Director, OP Regulatory Information Division; U.S. Environmental Protection Agency (2137); 401 M St., S.W.; Washington, DC 20460; and to the Office of Information and Regulatory Affairs, Office of Management and Budget, 725 17th St., N.W., Washington, DC 20503, marked "Attention: Desk Officer for EPA." Include the ICR number in any correspondence. Since OMB is required to make a decision concerning the ICR between 30 and 60 days after April 10, 2000, a comment to OMB is best assured of having its full effect if OMB receives it by May 10, 2000. The final rule will respond to any OMB or public comments on the information collection requirements contained in this proposal.

C. Unfunded Mandates Reform Act

1. Summary of UMRA requirements

Title II of the Unfunded Mandates Reform Act of 1995 (UMRA), Public Law 104–4, establishes requirements for Federal agencies to assess the effects of their regulatory actions on State, local, and tribal governments and the private sector. Under UMRA section 202, EPA generally must prepare a written statement, including a cost-benefit analysis, for proposed and final rules with "Federal mandates" that may result in expenditures by State, local, and tribal governments, in the aggregate, or to the private sector, of $100 million or more in any one year. Before promulgating an EPA rule, for which a written statement is needed, section 205 of the UMRA generally requires EPA to identify and consider a reasonable number of regulatory alternatives and adopt the least costly, most cost-effective or least burdensome alternative that achieves the objectives of the rule. The provisions of section 205 do not apply when they are inconsistent with applicable law. Moreover, section 205 allows EPA to adopt an alternative other than the least costly, most cost effective or least burdensome alternative if the Administrator publishes with the final rule an explanation why that alternative was not adopted.

Before EPA establishes any regulatory requirements that may significantly or uniquely affect small governments, including tribal governments, it must have developed, under section 203 of the UMRA, a small government agency plan. The plan must provide for notification to potentially affected small governments, enabling officials of

affected small governments to have meaningful and timely input in the development of EPA regulatory proposals with significant Federal intergovernmental mandates and informing, educating, and advising small governments on compliance with the regulatory requirements.

2. Written Statement for Rules With Federal Mandates of $100 Million or More

EPA has determined that this rule does not contain a Federal mandate that may result in expenditures of $100 million or more for the State, local and Tribal governments, in the aggregate, or the private sector in any one year. Thus today's rule is not subject to the requirements of sections 202 and 205 of the UMRA. Nevertheless, since the estimate of annual impact is close to $100 million under certain assumptions EPA has prepared a written statement, which is summarized below, even though one is not required. A more detailed description of this analysis is presented in EPA's Regulatory Impact Analysis of the LT1FBR (EPA, 1999h) which is available for public review in the Office of Water docket under docket number W–99–10. The document is available for inspection from 9 a.m. to 4 p.m., Monday through Friday, excluding legal holidays. The docket is located in room EB 57, USEPA Headquarters, 401 M St. SW, Washington, D.C. 20460. For access to docket materials, please call (202) 260–3027 to schedule an appointment.

a. Authorizing Legislation

Today's rule is proposed pursuant to Section 1412 (b)(2)(C) and 1412(b)(14) of the SDWA. Section 1412 (b)(2)(C) directs EPA to establish a series of regulations including an interim and final enhanced surface water treatment rule. Section 1412(b)(14) directs EPA to promulgate a regulation to govern the recycling of filter backwash water. EPA intends to finalize the LT1FBR in the year 2000 to allow systems to consider the dual impact of this rule and the Stage 1 DBP rule on their capital investment decisions.

b. Cost Benefit Analysis

Section VI of this preamble discusses the cost and benefits associated with the LT1FBR. Also, the EPA's Regulatory Impact Analysis of the LT1FBR (EPA, 1999h) contains a detailed cost benefit analysis. Today's proposal is expected to have a total annualized cost of approximately $ 97.5 million using a 7 percent discount rate. At a 3 percent discount rate the annualized costs drop to $87.6 million. The national cost estimate includes cost for all of the rule's major provisions including turbidity monitoring, disinfection benchmarking monitoring, disinfection profiling, covered finished storage, and recycling. The majority of the costs for this rule will be incurred by the public sector. A more detailed discussion of these costs is located in Section VI of this preamble.

In addition, the regulatory impact analysis includes both monetized benefits and descriptions of unquantified benefits for improvements to public health and safety the rule will achieve. Because of scientific uncertainty regarding LT1FBR's exposure and risk assessment, the Agency has used Monte Carlo methods and sensitivity analysis to assess the quantified benefits of today's rule. The monetary analysis was based upon quantification of the number of cryptosporidiosis illnesses avoided due to improved particulate removal that results from the turbidity provisions. The Agency was not able to monetize the benefits from the other rule provisions such as disinfection benchmarking and covered finished storage. The monetized annual benefits of today's rule range from $70.1 million to $259.4 million depending on the baseline and removal assumptions. Better management of recycle streams required by the proposal also result in nonquantifiable health risk reductions from disinfection resistant pathogens. The rule may also decrease illness caused by *Giardia* and other emerging disinfection resistant pathogens, further increasing the benefits.

Several non-health benefits from this rule were also identified by EPA but were not monetized. The non-health benefits of this rule include outbreak response costs avoided, and possibly reduced uncertainty and averting behavior costs. By adding the non-monetized benefits with those that are monetized, the overall benefits of this rule increase beyond the dollar values reported.

Various Federal programs exist to provide financial assistance to State, local, and Tribal governments in complying with this rule. The Federal government provides funding to States that have primary enforcement responsibility for their drinking water programs through the Public Water Systems Supervision Grants program. Additional funding is available from other programs administered either by EPA, or other Federal Agencies. These include EPA's Drinking Water State Revolving Fund (DWSRF), U.S. Department of Agriculture's Rural Utilities' Loan and Grant Program, and Housing and Urban Development's Community Development Block Grant Program.

For example, SDWA authorizes the Administrator of the EPA to award capitalization grants to States, which in turn can provide low cost loans and other types of assistance to eligible public water systems. The DWSRF helps public water systems finance the cost of infrastructure necessary to achieve or maintain compliance with SDWA requirements. Each State has considerable flexibility to design its program and to direct funding toward the most pressing compliance and public health protection needs. States may also, on a matching basis, use up to ten percent of their DWSRF allotments each fiscal year to run the State drinking water program.

Furthermore, a State can use the financial resources of the DWSRF to assist small systems. In fact, a minimum of 15% of a State's DWSRF grant must be used to provide infrastructure loans to small systems. Two percent of the State's grant may be used to provide technical assistance to small systems. For small systems that are disadvantaged, up to 30% of a State's DWSRF may be used for increased loan subsidies. Under the DWSRF, Tribes have a separate set-aside which they can use. In addition to the DWSRF, money is available from the Department of Agriculture's Rural Utility Service (RUS) and Housing and Urban Development's Community Block Grant (CDBG) program. RUS provides loans, guaranteed loans, and grants to improve, repair, or construct water supply and distribution systems in rural areas and towns up to 10,000 people. In fiscal year 1997, the RUS had over $1.3 billion in available funds. Also, three sources of funding exist under the CDBG program to finance building and improvements of public faculties such as water systems. The three sources of funding include: (1) Direct grants to communities with populations over 200,000; (2) direct grants to States, which they in turn award to smaller communities, rural areas, and colonias in Arizona, California, New Mexico, and Texas; and (3) direct grants to US. Territories and Trusts. The CDBG budget for fiscal year 1997 totaled over $4 billion dollars.

c. Estimates of Future Compliance Costs and Disproportionate Budgetary Effects

To meet the UMRA requirement in section 202, EPA analyzed future compliance costs and possible disproportionate budgetary effects. The Agency believes that the cost estimates, indicated previously and discussed in

more detail in Section VI of this preamble, accurately characterize future compliance costs.

In analyzing the disproportionate impacts, EPA considered four measures:

(1) The impacts of small versus large systems and the impacts within the five small system size categories;

(2) The costs to public versus private water systems;

(3) The costs to households, and;

(4) The distribution of costs across States.

First, small systems will experience a greater impact than large systems under LT1FBR because large systems are subject only to the recycle provisions. The Interim Enhanced Surface Water Treatment Rule (IESWTR) promulgated turbidity, benchmarking, and covered finished storage provisions for large systems in December, 1998. However, small systems have realized cost savings over time due to their exclusion from the IESWTR. Also, some provisions in the LT1FBR have been modified so they would not be as burdensome for small systems. Further information on these changes can be found in section VII.A.3.of this proposal.

The second measure of impact is the relative total cost to privately owned water systems compared to the incurred by publicly owned water systems. A majority of the systems are publicly owned (60 percent of the total). As a result, publicly owned systems will incur a larger share of the total costs of the rule.

The third measure, household costs, is described in further detail in VI.E of this preamble. The fourth measure, distribution of costs across States, is described in greater detail in the RIA for today's proposed rule (EPA, 1999h). There is nothing to suggest that costs to individual systems would vary significantly from State to State, but as expected, the States with the greatest number of systems experience the greatest costs.

d. Macro-Economic Effects

As required under UMRA Section 202, EPA is required to estimate the potential macro-economic effects of the regulation. These types of effects include those on productivity, economic growth, full employment, creation of productive jobs, and international competitiveness. Macro-economic effects tend to be measurable in nationwide econometric models only if the economic impact of the regulation reaches 0.25 percent to 0.5 percent of Gross Domestic Product (GDP). In 1998, real GDP was $7,552 billion. This proposal would have to cost at least $18 billion to have a measurable effect. A regulation of less cost is unlikely to have any measurable effect unless it is highly focused on a particular geographic region or economic sector. The macro-economic effects on the national economy from LT1FBR should not have a measurable effect because the total annual cost of the preferred option is approximately $ 97.5 million per year (at a seven percent discount rate). The costs are not expected to be highly focused on a particular geographic region or sector.

e. Summary of EPA's Consultation with State, Local, and Tribal Governments and Their Concerns

Consistent with the intergovernmental consultation provisions of section 204 of UMRA EPA has already initiated consultation with the governmental entities affected by this rule.

EPA began outreach efforts to develop the LT1FBR in the summer of 1998. Two public stakeholder meetings, which were announced in the **Federal Register**, were held on July 22–23, 1998, in Lakewood, Colorado, and on March 3–4, 1999, in Dallas, Texas. In addition to these meetings, EPA has held several formal and informal meetings with stakeholders including the Association of State Drinking Water Administrators. A summary of each meeting and attendees is available in the public docket for this rule. EPA also convened a Small Business Advocacy Review (SBAR) Panel in accordance with the Regulatory Flexibility Act (RFA), as amended by the Small Business Regulatory Enforcement Fairness Act (SBREFA) to address small entity concerns including those of small local governments. The SBAR Panel allows small regulated entities to provide input to EPA early in the regulatory development process. In early June, 1999, EPA mailed an informal draft of the LT1FBR preamble to the approximately 100 stakeholders who attended one of the public stakeholder meetings. Members of trade associations and the SBREFA Panel also received the draft preamble. EPA received valuable comments and stakeholder input from 15 State representatives, trade associations, environmental interest groups, and individual stakeholders. The majority of concerns dealt with reducing burden on small systems and maintaining flexibility. After receipt of comments, EPA made every effort to make modifications to address these concerns.

To inform and involve Tribal governments in the rulemaking process, EPA presented the LT1FBR at three venues: the 16th Annual Consumer Conference of the National Indian Health Board, the annual conference of the National Tribal Environmental Council, and the OGWDW/Inter Tribal Council of Arizona, Inc. tribal consultation meeting. Over 900 attendees representing tribes from across the country attended the National Indian Health Board's Consumer Conference and over 100 tribes were represented at the annual conference of the National Tribal Environmental Council. At both conferences, an OGWDW representative conducted two workshops on EPA's drinking water program and upcoming regulations, including the LT1FBR.

At the OGWDW/Inter Tribal Council of Arizona meeting, representatives from 15 tribes participated. The presentation materials and meeting summary were sent to over 500 tribes and tribal organizations. Additionally, EPA contacted each of our 12 Native American Drinking Water State Revolving Fund Advisors to invite them, and representatives of their organizations to the stakeholder meetings described previously. A list of tribal representatives contacted can be found in the docket for this rule.

The primary concern expressed by State, local and Tribal governments is the difficulty the smallest systems will encounter in adequately staffing drinking water treatment facilities to perform the monitoring and reporting associated with the new requirements. Today's proposal attempts to minimize the monitoring and reporting burden to the greatest extent feasible and still accomplish the rule's objective of protecting public health. The Agency believes the monitoring and reporting requirements are necessary to ensure consumers served by small systems receive the same level of public health protection as consumers served by large systems. Summaries of the meetings have been included in the public docket for this rulemaking.

f. Regulatory Alternatives Considered

As required under Section 205 of the UMRA, EPA considered several regulatory alternatives for individual filter monitoring and disinfection benchmarking, as well as several alternative strategies for addressing recycle practices. A detailed discussion of these alternatives can be found in Section IV and also in the RIA for today's proposed rule (EPA, 1999h). Today's proposal also seeks comment on several regulatory alternatives that EPA will consider for the final rule.

g. Selection of the Least Costly, Most-Cost Effective or Least Burdensome Alternative That Achieves the Objectives of the Rule

As discussed previously, EPA has considered and requested comment on various regulatory options that would reduce *Cryptosporidium* occurrence in the finished water of surface water systems. The Agency believes that the preferred option for turbidity performance, disinfection benchmarking, and recycle management are the most cost effective combination of options to achieve the rule's objective; the reduction of illness and death from *Cryptosporidium* occurrence in the finished water of PWSs using surface water. The Agency will carefully review comments on the proposal and assess suggested changes to the requirements.

3. Impacts on Small Governments

In developing this proposal, EPA consulted with small governments to address impacts of regulatory requirements in the rule that might significantly or uniquely affect small governments. As discussed previously, a variety of stakeholders, including small governments, were provided the opportunity for timely and meaningful participation in the regulatory development process through the SBREFA panel, public stakeholder and Tribal meetings. EPA used these processes to notify potentially affected small governments of regulatory requirements being considered and provided officials of affected small governments with an opportunity to have meaningful and timely input to the regulatory development process.

In addition, EPA will educate, inform, and advise small systems, including those run by small governments, about LT1FBR requirements. One of the most important components of this outreach effort will be the Small Entity Compliance Guide, required by the Small Business Regulatory Enforcement Fairness Act of 1996. This plain-English guide will explain what actions a small entity must take to comply with the rule. Also, the Agency is developing fact sheets that concisely describe various aspects and requirements of the LT1FBR and detailed guidance manuals to assist the compliance effort of PWSs and small government entities.

D. National Technology Transfer and Advancement Act

Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (NTAA), Public Law No. 104–113, section 12(d) (15 U.S.C. 272 note), directs EPA to use voluntary consensus standards in its regulatory activities unless to do so would be inconsistent with applicable law or otherwise impractical. Voluntary consensus standards are technical standards (e.g., materials specifications, test methods, sampling procedures, business practices) that are developed or adopted by voluntary consensus standards bodies. The NTAA directs EPA to provide Congress, through the Office of Management and Budget, explanations when the Agency decides not to use available and applicable voluntary consensus standards.

Today's rule requires the use of previously approved technical standards for the measurement of turbidity. In previous rulemakings, EPA approved three methods for measuring turbidity in drinking water. These can be found in 40 CFR, Part 141.74 (a). Turbidity is a method-defined parameter and therefore modifications to any of the three approved methods requires prior EPA approval. One of the approved methods was published by the Standard Methods Committee of American Public Health Association, the American Water Works Association, and the Water Environment Federation, the latter being a voluntary consensus standard body. That method, Method 2130B (APHA, 1995), is published in Standard Methods for the Examination of Water and Wastewater (19th ed.). Standard Methods is a widely used reference which has been peer-reviewed by the scientific community. In addition to this voluntary consensus standard, EPA approved two additional methods for the measurement of turbidity. One is the Great Lakes Instrument Method 2, which can be used as an alternate test procedure for the measurement of turbidity (Great Lakes Instruments, 1992). Second, the Agency approved revised EPA Method 180.1 for turbidity measurement in August 1993 in Methods for the Determination of Inorganic Substances in Environmental Samples (EPA–600/R–93–100) (EPA, 1993).

In 1994, EPA reviewed and rejected an additional technical standard, a voluntary consensus standard, for the measurement of turbidity, the ISO 7027 standard, an analytical method which measures turbidity at a higher wavelength than the approved test measurement standards. ISO 7027 measures turbidity using either 90° scattered or transmitted light depending on the turbidity concentration evaluated. Although instruments conforming to ISO 7027 specifications are similar to the GLI instrument, only the GLI instrument uses pulsed, multiple detectors to simultaneously read both 90° scattered and transmitted light. EPA has no data upon which to evaluate whether the separate 90° scattered or transmitted light measurement evaluations, according to the ISO 7027 method, would produce results that are equivalent to results produced using GLI Method 2, Standard Method 2130B (APHA, 1995), or EPA Method 180.1 (EPA, 1993).

Today's proposed rule also requires continuous individual filter monitoring for turbidity and requires PWSs to calibrate the individual turbidimeter according to the turbidimeter manufacturer's instructions. These calibration instructions may constitute technical standards as that term is defined in the NTTAA. EPA has looked for voluntary consensus standards with regard to calibration of turbidimeters. The American Society for Testing and Materials (ASTM) is developing such voluntary consensus standards, however, there do not appear to be any voluntary consensus standards available at this time. EPA welcomes comments on this aspect of the proposed rulemaking and, specifically invites the public to identify potentially applicable voluntary consensus standards and to explain why such standards should be used in this regulation.

EPA plans to implement in the future a performance-based measurement system (PBMS) that would allow the option of using either performance criteria or reference methods in its drinking water regulatory programs. The Agency is currently determining the specific steps necessary to implement PBMS in its programs and preparing an implementation plan. Final decisions have not yet been made concerning the implementation of PBMS in water programs. However, EPA is currently evaluating what relevant performance characteristics should be specified for monitoring methods used in the water programs under a PBMS approach to ensure adequate data quality. EPA would then specify performance requirements in its regulations to ensure that any method used for determination of a regulated analyte is at least equivalent to the performance achieved by other currently approved methods.

Once EPA has made its final determinations regarding implementation of PBMS in programs under the Safe Drinking Water Act, EPA would incorporate specific provisions of PBMS into its regulations, which may include specification of the performance characteristics for measurement of regulated contaminants in the drinking water program regulations.

E. Executive Order 12866: Regulatory Planning and Review

Under Executive Order 12866, (58 FR 51735 (October 4, 1993) the Agency must determine whether the regulatory action is "significant" and therefore subject to OMB review and the requirements of the Executive Order. The Order defines "significant regulatory action" as one that is likely to result in a rule that may:

1. Have an annual effect on the economy of $100 million or more or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, tribal governments or communities;

2. Create a serious inconsistency or otherwise interfere with an action taken or planned by another agency;

3. Materially alter the budgetary impact of entitlement, grants, user fees, or loan programs or the rights and obligations of recipients thereof, or;

4. Raise novel legal or policy issues arising out of legal mandates, the President's priorities, or the principles set forth in the Executive Order.

Pursuant to the terms of Executive Order 12866, it has been determined that this rule is a "significant regulatory action." As such, this action was submitted to OMB for review. Changes made in response to OMB suggestions or recommendations will be documented in the public record.

F. Executive Order 12898: Environmental Justice

Executive Order 12898 establishes a Federal policy for incorporating environmental justice into Federal agency missions by directing agencies to identify and address disproportionately high and adverse human health or environmental effects of its programs, policies, and activities on minority and low-income populations. The Agency has considered environmental justice related issues concerning the potential impacts of this action and consulted with minority and low-income stakeholders.

This preamble has discussed many times how the IESWTR served as a template for the development of the LT1FBR. As such, the Agency also built on the efforts conducted during the IESWTRs development to comply with E.O. 12898. On March 12, 1998, the Agency held a stakeholder meeting to address various components of pending drinking water regulations and how they may impact sensitive sub-populations, minority populations, and low-income populations. Topics discussed included treatment techniques, costs and benefits, data quality, health effects, and the regulatory process. Participants included national, State, tribal, municipal, and individual stakeholders. EPA conducted the meetings by video conference call between eleven cities. This meeting was a continuation of stakeholder meetings that started in 1995 to obtain input on the Agency's Drinking Water Programs. The major objectives for the March 12, 1998 meeting were:

(1) Solicit ideas from stakeholders on known issues concerning current drinking water regulatory efforts;

(2) Identify key issues of concern to stakeholders, and;

(3) Receive suggestions from stakeholders concerning ways to increase representation of communities in OGWDW regulatory efforts.

In addition, EPA developed a plain-English guide specifically for this meeting to assist stakeholders in understanding the multiple and sometimes complex issues surrounding drinking water regulation.

The LT1FBR applies to community water systems, non-transient non-community water systems, and transient non-community water systems that use surface water or ground water under the direct influence (GWUDI) as their source water for PWSs serving less than 10,000 people. The recycle provisions apply to all conventional and direct surface water or GWUDI systems regardless of size.

EPA believes this rule will provide equal health protection for all minority and low-income populations served by systems regulated under this rule from exposure to microbial contamination. These requirements will also be consistent with the protection already afforded to people being served by systems with larger population bases.

G. Executive Order 13045: Protection of Children from Environmental Health Risks and Safety Risks

Executive Order 13045: "Protection of Children from Environmental Health Risks and Safety Risks" (62 FR 19885, April 23, 1997) applies to any rule that: 1) is determined to be economically significant as defined under E.O. 12866, and; 2) concerns an environmental health or safety risk that EPA has reason to believe may have a disproportionate effect on children. If the regulatory action meets both criteria, the Agency must evaluate the environmental health or safety effects of the planned rule on children and explain why the planned regulation is preferable to other potentially effective and reasonably feasible alternatives considered by the Agency.

While this proposed rule is not subject to the Executive Order because it is not economically significant as defined by E.O. 12866, we nonetheless have reason to believe that the environmental health or safety risk addressed by this action may have a disproportionate effect on children. Accordingly, EPA evaluated available data on the health effect of *Cryptosporidium* on children. The results of this evaluation are contained in Section II.B of this preamble and in the LT1FBR RIA (EPA, 1999h). A copy of the RIA and supporting documents is available for public review in the Office of Water docket at 401 M St. SW, Washington, D.C.

The risk of illness and death due to cryptosporidiosis depends on several factors, including the age, nutrition, exposure, and the immune status of the individual. Information on mortality from diarrhea shows the greatest risk of mortality occurring among the very young and elderly (Gerba et al., 1996). Specifically, young children are a vulnerable population subject to infectious diarrhea caused by *Cryptosporidium* (CDC 1994). Cryptosporidiosis is prevalent worldwide, and its occurrence is higher in children than in adults (Fayer and Ungar, 1986).

Cryptosporidiosis appears to be more prevalent in populations that may not have established immunity against the disease and may be in greater contact with environmentally contaminated surfaces, such as infants (DuPont, et al., 1995). Once a child is infected it may spread the disease to other children or family members. Evidence of such secondary transmission of cryptosporidiosis from children to household and other close contacts has been found in many outbreak investigations (Casemore, 1990; Cordell et al., 1997; Frost et al., 1997). Chapell et al., 1999, found that prior exposure to *Cryptosporidium* through the ingestion of a low oocyst dose provides protection from infection and illness. However, it is not known whether this immunity is life-long or temporary. Data also indicate that either mothers confer short term immunity to their children or that babies have reduced exposure to *Cryptosporidium*, resulting in a decreased incidence of infection during the first year of life. For example, in a survey of over 30,000 stool sample analyses from different UK patients, the 1–5 year age group suffered a much higher infection rate than individuals less than one year of age. For children under one year of age, those older than

six months of age showed a higher rate of infection than individuals aged fewer than six months (Casemore, 1990).

EPA has not been able to quantify the differential health effects for children as a result of *Cryptosporidium*-contaminated drinking water. However, the result of the LT1FBR will be a reduction in the risk of illness for the entire population, including children. Furthermore, the available anecdotal evidence indicates that children may be more vulnerable to cryptosporidiosis than the rest of the population. The LT1FBR would, therefore, result in greater risk reduction for children than for the general population.

The public is invited to submit or identify peer-reviewed studies and data, of which EPA may not be aware, that assessed results of early life exposure to *Cryptosporidium*.

H. Consultations with the Science Advisory Board, National Drinking Water Advisory Council, and the Secretary of Health and Human Services

In accordance with section 1412 (d) and (e) of the SDWA, the Agency will consult with the National Drinking Water Advisory Council (NDWAC) and the Secretary of Health and Human Services and request comment from the Science Advisory Board on the proposed LT1FBR.

I. Executive Order 13132: Executive Orders on Federalism

Executive Order 13132, entitled "Federalism" (64 FR 43255, August 10, 1999), requires EPA to develop an accountable process to ensure "meaningful and timely input by State and local officials in the development of regulatory policies that have federalism implications." "Policies that have federalism implications" is defined in the Executive Order to include regulations that have "substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government."

Under section 6 of Executive Order 13132, EPA may not issue a regulation that has federalism implications, that imposes substantial direct compliance costs, and that is not required by statute, unless the Federal government provides the funds necessary to pay the direct compliance costs incurred by State and local governments, or EPA consults with State and local officials early in the process of developing the proposed regulation. EPA also may not issue a regulation that has federalism implications and that preempts State law, unless the Agency consults with State and local officials early in the process of developing the proposed regulation.

If EPA complies by consulting, Executive Order 13132 requires EPA to provide to the Office of Management and Budget (OMB), in a separately identified section of the preamble to the final rule, a federalism summary impact statement (FSIS). The FSIS must include a description of the extent of EPA's prior consultation with State and local officials, a summary of the nature of their concerns and the agency's position supporting the need to issue the regulation, and a statement of the extent to which the concerns of State and local officials have been met. Also, when EPA transmits a draft final rule with federalism implications to OMB for review pursuant to Executive Order 12866, EPA must include a certification from the agency's Federalism Official stating that EPA has met the requirements of Executive Order 13132 in a meaningful and timely manner.

EPA has concluded that this proposed rule may have federalism implications since it may impose substantial direct compliance costs on local governments, and the Federal government will not provide the funds necessary to pay those cost. Accordingly, EPA provides the following FSIS as required by section 6(b) of Executive Order 13132.

As discussed further in section VII.C.2.e, EPA met with a variety of State and local representatives, who provided meaningful and timely input in the development of the proposed rule. Summaries of the meetings have been included in the public record for this proposed rulemaking. EPA consulted extensively with State, local, and tribal governments. For example, two public stakeholder meetings were held on July 22–23, 1998, in Lakewood, Colorado, and on March 3–4, 1999, in Dallas, Texas. Several key issues were raised by stakeholders regarding the LT1 provisions, many of which were related to reducing burden and maintaining flexibility. The Office of Water was able to significantly reduce burden and increase flexibility by tailoring requirements to reduce monitoring, reporting, and recordkeeping requirements faced by small systems. These modifications and others aided in lowering the cost of the LT1FBR by $87 million (from $184.5 million to $97.5 million). It should be noted that this rule is important because it will reduce the level of *Cryptosporidium* in filtered finished drinking water supplies through improvements in filtration and recycle practices resulting in a reduced likelihood of outbreaks of cryptosporidiosis. The rule is also expected to increase the level of protection from exposure to other pathogens (i.e., *Giardia* and other waterborne bacterial or viral pathogens). Because consultation on this proposed rule occurred before the November 2, 1999 effective date of Executive Order 13132, EPA will initiate discussions with State and local elected officials regarding the implications of this rule during the public comment period.

J. Executive Order 13084: Consultation and Coordination With Indian Tribal Governments

Under Executive Order 13084, EPA may not issue a regulation that is not required by statute, that significantly or uniquely affects the communities of Indian tribal governments, and that imposes substantial direct compliance costs on those communities, unless the Federal government provides the funds necessary to pay the direct compliance costs incurred by the tribal governments or EPA consults with those governments. If EPA complies by consulting, Executive Order 13084 requires EPA to provide to the Office of Management and Budget, in a separately identified section of the preamble to the rule, a description of the extent of EPA's prior consultation with representatives of affected tribal governments, a summary of the nature of their concerns, and a statement supporting the need to issue the regulation. In addition, Executive Order 13084 requires EPA to develop an effective process permitting elected officials and other representatives of Indian tribal governments "to provide meaningful and timely input in the development of regulatory policies on matters that significantly or uniquely affect their communities."

EPA has concluded that this rule may significantly or unique affect the communities of Indian tribal governments. It may also impose substantial direct compliance costs on such communities. The Federal government will not provide the funds necessary to pay all the direct costs incurred by the Tribal governments in complying with the rule. In developing this rule, EPA consulted with representatives of Tribal governments pursuant to UMRA and Executive Order 13084. EPA held extensive meetings that provided Indian Tribal governments the opportunity for meaningful and timely input in the development of the proposed rule. Summaries of the meetings have been included in the public docket for this rulemaking. EPA's consultation, the nature of the government's concerns, and the position supporting the need for

this rule are discussed in Section VII.C.2.e, which addresses compliance with UMRA.

K. Likely Effect of Compliance with the LT1FBR on the Technical, Financial, and Managerial Capacity of Public Water Systems

Section 1420(d)(3) of the SDWA as amended requires that, in promulgating a NPDWR, the Administrator shall include an analysis of the likely effect of compliance with the regulation on the technical, financial, and managerial capacity of public water systems. This analysis can be found in the LT1FBR RIA (EPA, 1999h).

Overall water system capacity is defined in EPA guidance (EPA, 1998j) as the ability to plan for, achieve, and maintain compliance with applicable drinking water standards. Capacity has three components: technical, managerial, and financial.

Technical capacity is the physical and operational ability of a water system to meet SDWA requirements. Technical capacity refers to the physical infrastructure of the water system, including the adequacy of source water and the adequacy of treatment, storage, and distribution infrastructure. It also refers to the ability of system personnel to adequately operate and maintain the system and to otherwise implement requisite technical knowledge. A water system's technical capacity can be determined by examining key issues and questions, including:

- *Source water adequacy.* Does the system have a reliable source of drinking water? Is the source of generally good quality and adequately protected?
- *Infrastructure adequacy.* Can the system provide water that meets SDWA standards? What is the condition of its infrastructure, including well(s) or source water intakes, treatment, storage, and distribution? What is the infrastructure's life expectancy? Does the system have a capital improvement plan?
- *Technical knowledge and implementation.* Is the system's operator certified? Does the operator have sufficient technical knowledge of applicable standards? Can the operator effectively implement this technical knowledge? Does the operator understand the system's technical and operational characteristics? Does the system have an effective operation and maintenance program?

Managerial capacity is the ability of a water system to conduct its affairs to achieve and maintain compliance with SDWA requirements. Managerial capacity refers to the system's institutional and administrative capabilities. Managerial capacity can be assessed through key issues and questions, including:

- *Ownership accountability.* Are the system owner(s) clearly identified? Can they be held accountable for the system?
- *Staffing and organization.* Are the system operator(s) and manager(s) clearly identified? Is the system properly organized and staffed? Do personnel understand the management aspects of regulatory requirements and system operations? Do they have adequate expertise to manage water system operations? Do personnel have the necessary licenses and certifications?
- *Effective external linkages.* Does the system interact well with customers, regulators, and other entities? Is the system aware of available external resources, such as technical and financial assistance?

Financial capacity is a water system's ability to acquire and manage sufficient financial resources to allow the system to achieve and maintain compliance with SDWA requirements. Financial capacity can be assessed through key issues and questions, including:

- *Revenue sufficiency.* Do revenues cover costs? Are water rates and charges adequate to cover the cost of water?
- *Credit worthiness.* Is the system financially healthy? Does it have access to capital through public or private sources?
- *Fiscal management and controls.* Are adequate books and records maintained? Are appropriate budgeting, accounting, and financial planning methods used? Does the system manage its revenues effectively?

Systems not making significant modifications to the treatment process to meet LT1FBR requirements are not expected to require significantly increased technical, financial, or managerial capacity.

L. Plain Language

Executive Order 12866 and the President's memorandum of June 1, 1998, require each agency to write its rules in plain language. We invite your comments on how to make this proposed rule easier to understand. For example: Have we organized the material to suit your needs? Are the requirements in the rule clearly stated? Does the rule contain technical language or jargon that is not clear? Would a different format (grouping and order of sections, use of headings, paragraphing) make the rule easier to understand? Would shorter sections make the final rule easier to understand? Could we improve clarity by adding tables, lists, or diagrams? What else could we do to make the rule easier to understand?

VIII. Public Comment Procedures

EPA invites you to provide your views on this proposal, approaches we have not considered, the potential impacts of the various options (including possible unintended consequences), and any data or information that you would like the Agency to consider. Many of the sections within today's proposed rule contain "Request for Comment" portions which the Agency is also interested in receiving comment on.

A. Deadlines for Comment

Send your comments on or before June 9, 2000. Comments received after this date may not be considered in decision making on the proposed rule. Again, comments must be received or post-marked by midnight June 9, 2000.

B. Where To Send Comment

Send an original and 3 copies of your comments and enclosures (including references) to W–99–10 Comment Clerk, Water Docket (MC4101), USEPA, 401 M, Washington, D.C. 20460. Comments may also be submitted electronically to ow-docket@epamail.epa.gov. Electronic comments must be submitted as an ASCII, WP5.1, WP6.1 or WP8 file avoiding the use of special characters and form of encryption. Electronic comments must be identified by the docket number W–99–10. Comments and data will also be accepted on disks in WP 5.1, 6.1, 8 or ASCII file format. Electronic comments on this notice may be filed online at many Federal Depository Libraries. Those who comment and want EPA to acknowledge receipt of their comments must enclose a self-addressed stamped envelope. No facsimiles (faxes) will be accepted. Comments may also be submitted electronically to ow-docket@epamail.epa.gov.

C. Guidelines for Commenting

To ensure that EPA can read, understand and therefore properly respond to comments, the Agency would prefer that commenters cite, where possible, the paragraph(s) or sections in the notice or supporting documents to which each comment refers. Commenters should use a separate paragraph for each issue discussed. Note that the Agency is not soliciting comment on, nor will it respond to, comments on previously published regulatory language that is included in this notice to ease the reader's understanding of proposed language. You may find the following

suggestions helpful for preparing your comments:

1. Explain your views as clearly as possible.
2. Describe any assumptions that you used.
3. Provide solid technical information and/or data to support your views.
4. If you estimate potential burden or costs, explain how you arrived at the estimate.
5. Indicate what you support, as well as what you disagree with.
6. Provide specific examples to illustrate your concerns.
7. Make sure to submit your comments by the deadline in this proposed rule.
8. At the beginning of your comments (*e.g.*, as part of the "Subject" heading), be sure to properly identify the document you are commenting on. You can do this by providing the docket control number assigned to the proposed rule, along with the name, date, and **Federal Register** citation.

40 CFR Part 142

Environmental protection, Administrative practice and procedure, Chemicals, Indians-lands, Radiation protection, Reporting and recordkeeping requirements, Water supply.

Dated: March 27, 2000.

Carol M. Browner,

Administrator.

For the reasons set forth in the preamble, title 40 chapter I of the Code of Federal Regulations is proposed to be amended as follows:

PART 141—NATIONAL PRIMARY DRINKING WATER REGULATIONS

3. The authority citation for part 141 continues to read as follows:

Authority: 42 U.S.C. 300f, 300g–1, 300g–2, 300g–3, 300g–4, 300g–5, 300g–6, 300j–4, 300j–9, and 300j–11.

4. Section 141.2 is amended by revising the definition of "Ground water under the direct influence of surface water" and "Disinfection profile" and adding the following definitions in alphabetical order to read as follows:

§ 141.2 Definitions.

* * * * *

Direct recycle is the return of recycle flow within the treatment process of a public water system without first passing the recycle flow through a treatment process designed to remove solids, a raw water storage reservoir, or some other structure with a volume equal to or greater than the volume of spent filter backwash water produced by one filter backwash event.

* * * * *

Disinfection profile is a summary of *Giardia* lamblia inactivation through the treatment plant, from the point of disinfectant application to the first customer. The procedure for developing a disinfection profile is contained in § 141.172 (Disinfection profiling and benchmarking) in subpart P and §§ 141.530–141.536 (Disinfection profile) in subpart T of this part.

* * * * *

Equalization is the detention of recycle flow in a structure with a volume equal to or greater than the volume of spent filter backwash produced by one filter backwash event.

* * * * *

Ground water under the direct influence of surface water (GWUDI) means any water beneath the surface of the ground with significant occurrence of insects or other macroorganisms, algae, or large-diameter pathogens such as *Giardia lamblia* or *Cryptosporidium*, or significant and relatively rapid shifts in water characteristics such as turbidity, temperature, conductivity, or pH which closely correlate to climatological or surface water conditions. Direct influence must be determined for individual sources in accordance with criteria established by the State. The State determination of direct influence may be based on site-specific measurements of water quality and/or documentation of well construction characteristics and geology with field evaluation.

* * * * *

Membrane Filtration means any filtration process using tubular or spiral wound elements that exhibits the ability to mechanically separate water from other ions and solids by creating a pressure differential and flow across a membrane with an absolute pore size <1 micron.

* * * * *

Operating capacity is the maximum finished water production rate approved by the State drinking water program.

* * * * *

Recycle is the return of any water, solid, or semisolid generated by plant treatment processes, operational processes, maintenance processes, and residuals treatment processes into a PWS's primary treatment processes.

* * * * *

5. Section 141.32 is amended by revising paragraph (e)(10) to read as follows:

§ 141.32 Public notification.

* * * * *

(e) * * *

(10) *Microbiological contaminants* (for use when there is a violation of the treatment technique requirements for filtration and disinfection in subpart H, subpart P, or subpart T of this part). The United States Environmental Protection Agency (EPA) sets drinking water standards and has determined that the presence of microbiological contaminants are a health concern at certain levels of exposure. If water is inadequately treated, microbiological contaminants in that water may cause disease. Disease symptoms may include diarrhea, cramps, nausea, and possibly jaundice, and any associated headaches and fatigue. These symptoms, however, are not just associated with disease-causing organisms in drinking water, but also may be caused by a number of factors other than your drinking water. EPA has set enforceable requirements for treating drinking water to reduce the risk of these adverse health effects. Treatment such as filtering and disinfecting the water removes or destroys microbiological contaminants. Drinking water which is treated to meet EPA requirements is associated with little to none of this risk and should be considered safe.

* * * * *

6. Section 141.70 is amended by revising paragraph (b)(2) and adding paragraph (e) to read as follows:

§ 141.70 General requirements.

* * * * *

(b) * * *

(2) It meets the filtration requirements in § 141.73, the disinfection

requirements in § 141.72(b) and the recycle requirements in § 141.76.

* * * * *

(e) *Additional requirements for systems serving fewer than 10,000 people.* In addition to complying with requirements in this subpart, systems serving fewer than 10,000 people must also comply with the requirements in subpart T of this part.

7. Section 141.73 is amended by adding paragraph (a)(4) and revising paragraph (d) to read as follows:

§ 141.73 Filtration.

* * * * *

(a) * * *

(4) Beginning [DATE 36 MONTHS AFTER DATE OF PUBLICATION OF FINAL RULE IN THE FEDERAL REGISTER], systems serving fewer than 10,000 people must meet the turbidity requirements in §§ 141.550 through 141.553.

* * * * *

(d) *Other filtration technologies.* A public water system may use a filtration technology not listed in paragraphs (a) through (c) of this section if it demonstrates to the State, using pilot plant studies or other means, that the alternative filtration technology, in combination with disinfection treatment that meets the requirements of § 141.72(b), consistently achieves 99.9 percent removal and/or inactivation of *Giardia lamblia* cysts and 99.99 percent removal and/or inactivation of viruses. For a system that makes this demonstration, the requirements of paragraph (b) of this section apply. Beginning December 17, 2001, systems serving at least 10,000 people must meet the requirements for other filtration technologies in paragraph (b) of this section. Beginning [DATE 36 MONTHS AFTER DATE OF PUBLICATION OF FINAL RULE IN THE FEDERAL REGISTER], systems serving fewer than 10,000 people must meet the requirements for treatment technologies in §§ 141.550 through141.553.

8. Subpart H is amended by adding a new § 141.76 to subpart H to read as follows:

§ 141.76 Recycle Provisions.

(a) Public water systems employing conventional filtration or direct filtration that use surface water or ground water under the direct influence of surface water and recycle within the treatment process must meet all applicable requirements of this section. Requirements are summarized in the following table.

RECYCLE PROVISIONS FOR SUBPART H SYSTEMS

If you are a . . .	You are required to meet the requirements in . . .
(1) subpart H public water system employing conventional or direct filtration returning spent filter backwash, thickener supernatant, or liquids from dewatering processes concurrent with or downstream of the point of primary coagulant addition.	§ 141.76 (b).
(2) Plant that is part of a subpart H public water system, employ conventional filtration treatment, practice direct recycle, employ 20 or fewer filters to meet production requirements during the highest production month in the 12 month period [date 60 months after publication of final rule], and recycle spent filter backwash or thickener supernatant to the treatment process.	§ 141.76 (c).
(3) subpart H public water system practicing direct filtration and recycling to the treatment process.	§ 141.76 (d).

(b) Recycle return location. All subpart H systems employing conventional filtration or direct filtration and returning spent filter backwash, thickener supernatant, or liquids from dewatering processes at or after the point of primary coagulant addition must return these recycle flows prior to the point of primary coagulant addition by [DATE 60 MONTHS AFTER DATE OF PUBLICATION OF FINAL RULE IN THE FEDERAL REGISTER]. The system must apply to the State for approval of the change in recycle location before the system implements it.

(1) All subpart H systems employing conventional filtration or direct filtration, returning spent filter backwash, thickener supernatant, or liquids from dewatering processes at or after the point of primary coagulant addition must submit a plant schematic to the State by [DATE 42 MONTHS AFTER DATE OF PUBLICATION OF FINAL RULE IN THE FEDERAL REGISTER] showing the current recycle return location(s) for the recycle stream(s) and the new return location that will be used to establish compliance. The system must keep the plant schematic on file for review during sanitary surveys.

(2) Softening systems may recycle process solids at the point of lime addition preceding the softening process to improve treatment efficiency. Process solids may not be returned prior to the point of lime addition. Softening systems shall not return spent filter backwash, thickener supernatant, or liquids from dewatering processes to a location other than prior to the point of primary coagulant addition unless an alternate location is granted by the State.

(3) Contact clarification systems may recycle process solids directly into the contactor. Contact clarification systems shall not return spent filter backwash, thickener supernatant, or liquids from dewatering processes to a location other than prior to the point of primary coagulant addition unless an alternate location is granted by the State.

(4) Systems may apply to the State to return spent filter backwash, thickener supernatant, or liquids from dewatering processes to an alternate location other than prior to the point of primary coagulant addition.

(c) Plants that are part of subpart H public water systems that employ conventional rapid granular filtration, practice direct recycle, employ 20 or fewer filters to meet production requirements during the highest production month in the 12 month period prior to [DATE 60 MONTHS AFTER PUBLICATION OF FINAL RULE IN THE **Federal Register**], and recycle spent filter backwash or thickener supernatant to the primary treatment process shall complete a recycle self assessment, as stipulated in paragraphs(c)(1) and (c)(2) by [Date 51 Months After Date of Publication of Final Rule in the **Federal Register**]. Systems required to perform the self assessment shall:

(1) Submit a recycle self assessment monitoring plan to the State no later than [Date 39 Months After Date of Publication of Final Rule in the **Federal Register**]. At a minimum, the monitoring plan must identify the highest water production month during

which monitoring will be conducted, contain a schematic identifying the location of raw and recycle flow monitoring devices, describe the type of flow monitoring devices to be used, identify the system's State approved operating capacity, and describe how data from the raw and recycle flow monitoring devices will be simultaneously retrieved and recorded.

(2) Implement the following recycle self assessment monitoring and analysis steps:

(i) *Steps for Implementation of Recycle Self Assessment:*

(A) Identify the highest water production month during the 12 month period preceding [Date 36 Months After Date of Publication of Final Rule in the **Federal Register**].

(B) Perform the monitoring described in paragraph (c)(2)(i)(C) of this section during the 12 month period after submission of the monitoring plan to the State. The twelve month period must begin no later than [Date 39 Months After Date of Publication of Final Rule in the **Federal Register**].

(C) For each day of the month identified in paragraph (c)(2)(i)(A) of this section, separately monitor source water influent flow and recycle flow before their confluence during one filter backwash recycle event per day, at three minute intervals during the duration of the event. Monitoring must be performed between 7:00 a.m. and 8:00 p.m. Systems that do not have a filter backwash recycle event every day between 7:00 am and 8:00 p.m. must monitor one filter backwash recycle event per day, any three days of the week, for each week during the month of monitoring, between 7:00 a.m. and 8:00 p.m. Record the time filter backwash was initiated, the influent and recycle flow at three minute intervals during the duration of the event, and the time the filter backwash recycle event ended. Record the number of filters in use when the filter backwash recycle event is monitored.

(D) Calculate the arithmetic average of all influent and recycle flow values taken at three minute intervals in paragraph (c)(2)(i)(c) of this section. Sum the arithmetic average calculated for raw water influent and recycle flows. Record this value and the date the monitoring was performed. This value is referred to as event flow.

(E) After the month of monitoring is complete, order the event flows in a list of increasing order, from lowest to highest. Highlight the event flows that exceed State approved operating capacity and then sum the number of event flows highlighted.

(ii) [Reserved]

(3) Subpart H systems performing recycle self assessments are required to report the results of the self assessment and supporting documentation to the State within one month of completing raw water influent and recycle flow monitoring. The report must be submitted no later than [DATE 52 MONTHS AFTER DATE OF PUBLICATION OF FINAL RULE IN THE FEDERAL REGISTER]. If the State determines the self assessment is incomplete or inaccurate, it may require the system to correct deficiencies or perform an additional self assessment. At a minimum, the report must contain the following information:

(i) *Minimum Information Included in Recycle Assessment Report to State:*

(A) All source and recycle flow measurements taken and the dates they were taken. For all events monitored, report the times the filter backwash recycle event was initiated, the flow measurements taken at three minute intervals, and the time the filter backwash recycle event ended. Report the number of filters in use when the backwash recycle event is monitored.

(B) All data used and calculations performed to determine whether the system exceeded operating capacity during monitored recycle events and the number of event flow values that exceeded State approved operating capacity.

(C) A plant schematic showing the origin of all recycle flows, the hydraulic conveyance used to transport them, and their final destination in the plant.

(D) A list of all the recycle flows and the frequency at which they are returned to the plant's primary treatment process.

(E) Average and maximum backwash flow rate through the filters and the average and maximum duration of the filter backwash process, in minutes.

(F) Typical filter run length and a written summary of how filter run length is determined (preset run time, headloss, turbidity breakthrough, *etc.).*

(ii) [Reserved]

(4) All subpart H systems performing self assessments are required to modify their recycle practice in accordance with the State determination by [DATE 60 MONTHS AFTER DATE OF PUBLICATION OF FINAL RULE IN THE FEDERAL REGISTER] and keep a copy of the self assessment report submitted to the State on file for review during sanitary surveys.

(d) Subpart H public water systems practicing direct filtration and recycling to the primary treatment process are required to submit data to the State on their current recycle treatment no later than [DATE 42 MONTHS AFTER DATE OF PUBLICATION OF FINAL RULE IN THE FEDERAL REGISTER.]

(1) Direct filtration systems submitting data to the State shall report the following information, at a minimum:

(i) *Data Submitted to States by Direct Filtration Systems:*

(A) A plant schematic showing the origin of all recycle flows, the hydraulic conveyance used to transport them, and their final destination in the plant.

(B) The number of filters used at the plant to meet average daily production requirements and average and maximum backwash flow rate through the filter and the average and maximum duration of the filter backwash process, in minutes.

(C) Whether recycle flow treatment or equalization is in place.

(D) The type of treatment provided for the recycle flow.

(E) For recycle equalization and treatment units: data on the physical dimensions of the unit (length, width (or circumference), depth,) sufficient to allow calculation of volume; typical and maximum hydraulic loading rate; type of treatment chemicals used and average dose and frequency of use, and frequency at which solids are removed from the unit, if applicable.

(ii) [Reserved]

(2) All direct filtration systems submitting data to the State are required to modify their recycle practice in accordance with the State determination no later than [DATE 60 MONTHS AFTER DATE OF PUBLICATION OF FINAL RULE IN THE FEDERAL REGISTER] and keep a copy of the report submitted to the State on file for review during sanitary surveys.

9. Section 141.153 is amended by revising the first sentence of paragraph (d)(4)(v)(C) to read as follows:

§ 141.153 Content of the reports.

* * * * *

(d) * * *

(4) * * *

(v) * * *

(C) When it is reported pursuant to § 141.73 or § 141.173 or § 141.551: the highest single measurement and the lowest monthly percentage of samples meeting the turbidity limits specified in § 141.73 or § 141.173, or § 141.551 for the filtration technology being used.

* * *

* * * * *

10. The heading to Subpart P is revised as follows:

Subpart P—Enhanced Filtration and Disinfection-Systems Serving 10,000 or More People

* * * * *

11. Section 141.170 is amended by adding paragraph (d) to read as follows:

§ 141.170 General requirements.

* * * * *

(d) Subpart H systems that did not conduct applicability monitoring under § 141.172 because they served fewer than 10,000 persons when such monitoring was required but serve more than 10,000 persons prior to [DATE 36 MONTHS AFTER DATE OF PUBLICATION OF FINAL RULE IN THE FEDERAL REGISTER] must comply with §§ 141.170, 141.171, 141.173, 141.174, and 141.175. These systems must also consult with the State to establish a disinfection benchmark. A system that decides to make a significant change to its disinfection practice, as described in § 141.172(c)(1)(i) through (iv) must consult with the State prior to making such change.

* * * * *

12. Part 141 is amended by adding a new subpart T to read as follows:

Subpart T—Enhanced Filtration and Disinfection—Systems Serving Fewer than 10,000 People

Sec.

General Requirements

141.500 General requirements.
141.501 Who is subject to the requirements of subpart T?
141.502 When must my system comply with these requirements?
141.503 What does subpart T require?

Finished Water Reservoirs

141.510 Is my system subject to the new finished water reservoir requirements?
141.511 What is required of new finished water reservoirs?

Additional Watershed Control Requirements

141.520 Is my system subject to the updated watershed control requirements?
141.521 What updated watershed control requirements must my system comply with?
141.522 How does the State determine whether my system's watershed control requirements are adequate?

Disinfection Profile

141.530 Who must develop a Disinfection Profile and what is a Disinfection Profile?
141.531 How does my system demonstrate TTHM and HAA5 levels below 0.064 mg/l and 0.048 mg/l respectively?
141.532 How does my system develop a Disinfection Profile and when must it begin?
141.533 What measurements must my system collect to calculate a Disinfection Profile?
141.534 How does my system use these measurements to calculate an inactivation ratio?
141.535 How does my system develop a Disinfection Profile if we use chloramines, ozone, or chlorine dioxide for primary disinfection?
141.536 If my system has developed an inactivation ratio; what must we do now?

Disinfection Benchmark

141.540 Who has to develop a Disinfection Benchmark?
141.541 What are significant changes to disinfection practice?
141.542 How is the Disinfection Benchmark calculated?
141.543 What if my system uses chloramines or ozone for primary disinfection?
141.544 What must my system do if considering a significant change to disinfection practices?

Combined Filter Effluent Requirements

141.550 Is my system required to meet subpart T combined filter effluent turbidity limits?
141.551 What strengthened combined filter effluent turbidity limits must my system meet?
141.552 If my system consists of "alternative filtration" and is required to conduct a demonstration, what is required of my system and how does the State establish my turbidity limits?
141.553 If my system practices lime softening, is there any special provision regarding my combined filter effluent?

Individual Filter Turbidity Requirements

141.560 Is my system subject to individual filter turbidity requirements?
141.561 What happens if my turbidity monitoring equipment fails?
141.562 What follow-up action is my system required to take based on turbidity monitoring of individual filters?
141.563 My system practices lime softening. Is there any special provision regarding my individual filter turbidity monitoring?

Reporting and Recordkeeping Requirements

142.570 What does subpart T require that my system report to the State?
142.571 What records does subpart T require my system to keep?

Subpart T—Enhanced Filtration and Disinfection—Systems Serving Fewer Than 10,000 People

General Requirements

§ 141.500 General requirements.

The requirements of subpart T constitute national primary drinking water regulations. These regulations establish requirements for filtration and disinfection that are in addition to criteria under which filtration and disinfection are required under subpart H of this part. The regulations in this subpart establish or extend treatment technique requirements in lieu of maximum contaminant levels for the following contaminants: *Giardia lamblia*, viruses, heterotrophic plate count bacteria, *Legionella*, *Cryptosporidium* and turbidity. The treatment technique requirements consist of installing and properly operating water treatment processes which reliably achieve:

(a) At least 99 percent (2 log) removal of *Cryptosporidium* between a point where the raw water is not subject to recontamination by surface water runoff and a point downstream before or at the first customer for filtered systems, or *Cryptosporidium* control under the watershed control plan for unfiltered systems.

(b) Compliance with the profiling and benchmark requirements in §§ 141.530 through 141.544.

§ 141.501 Who is subject to the requirements of subpart T?

You are subject to these requirements if your system:

(a) Is a public water system;

(b) Uses surface water or GWUDI as a source; and

(c) Serves fewer than 10,000 persons annually.

§ 141.502 When must my system comply with these requirements?

You must comply with these requirements beginning [DATE 36 MONTHS AFTER DATE OF PUBLICATION OF FINAL RULE IN THE FEDERAL REGISTER] except where otherwise noted.

§ 141.503 What does subpart T require?

There are six requirements of this subpart which your system may need to comply with. These requirements are discussed in detail later in this subpart. They are:

(a) Any finished water reservoir for which construction begins on or after [DATE 60 DAYS AFTER DATE OF PUBLICATION OF FINAL RULE IN THE FEDERAL REGISTER] must be covered;

(b) Unfiltered systems must comply with updated watershed control requirements;

(c) All systems subject to the requirements of this subpart must develop a disinfection profile;

(d) All systems subject to the requirements of this subpart that are considering a significant change to their disinfection practice must develop a disinfection benchmark and receive State approval before changing their disinfection practice;

(e) Filtered systems must comply with specific combined filter effluent turbidity limits and monitoring and reporting requirements; and

(f) Filtered systems using conventional or direct filtration must

comply with individual filter turbidity limits and monitoring and reporting requirements.

Finished Water Reservoirs

§ 141.510 Is my system subject to the new finished water reservoir requirements?

All subpart H systems which serve populations fewer than 10,000 are subject to this requirement.

§ 141.511 What is required for new finished water reservoirs?

If your system initiates construction of a finished water reservoir after [DATE 60 DAYS AFTER DATE OF PUBLICATION OF FINAL RULE IN THE FEDERAL REGISTER the reservoir must be covered. Finished water reservoirs constructed prior to [DATE 60 DAYS AFTER DATE OF PUBLICATION OF FINAL RULE IN THE FEDERAL REGISTER are not subject to this requirement.

Additional Watershed Control Requirements

§ 141.520 Is my system subject to the updated watershed control requirements?

If you are a subpart H system serving fewer than 10,000 persons which does not provide filtration, you must continue to comply with all of the watershed control requirements in § 141.71, as well as the additional watershed control requirements in § 141.521.

§ 141.521 What additional watershed control requirements must my system comply with?

Your system must also maintain the existing watershed control program to minimize the potential for contamination by *Cryptosporidium* oocysts in the source water. Your system's watershed control program must, for *Cryptosporidium*:

(a) Identify watershed characteristics and activities which may have an adverse effect on source water quality; and

(b) Monitor the occurrence of activities which may have an adverse effect on source water quality.

§ 141.522 How does the State determine whether my system's watershed control requirements are adequate?

During an onsite inspection conducted under the provisions of § 141.71(b)(3), the State must determine whether your watershed control program is adequate to limit potential contamination by *Cryptosporidium* oocysts. The adequacy of the program must be based on the comprehensiveness of the watershed review; the effectiveness of your program to monitor and control detrimental activities occurring in the watershed; and the extent to which your system has maximized land ownership and/or controlled land use within the watershed.

Disinfection Profile

§ 141.530 Who must develop a Disinfection Profile and what is a Disinfection Profile?

All subpart H community and non-transient non-community water systems which serve fewer than 10,000 persons must develop a disinfection profile. A disinfection profile is a graphical representation of your system's level of *Giardia lamblia* or virus inactivation measured during the course of a year. Your system must develop a disinfection profile unless you can demonstrate to the State that your TTHM and HAA5 levels are less than 0.064 mg/l and 0.048 mg/l respectively, prior to January 7, 2003.

§ 141.531 How does my system demonstrate TTHM and HAA5 levels below 0.064 mg/l and 0.048 mg/l respectively?

In order to demonstrate that your TTHM and HAA5 levels are below 0.064 mg/L and 0.048 mg/L, respectively your system must have collected one TTHM and one HAA5 sample taken between 1998–2002. Samples must have been collected during the month with the warmest water temperature, at the point of maximum residence time in your distribution system which indicate TTHM levels below 0.064 mg/l and HAA5 levels below 0.048 mg/L. By January 7, 2003, you must submit a copy of the results to the State along with a letter indicating your intention to forgo development of a disinfection profile because of the results of the sampling. This letter, along with a copy of your TTHM and HAA5 sample lab results must be kept on file for review by the State during a sanitary survey. If the data you have collected is either equal to or exceeds either 0.064 mg/l for TTHM and/or 0.048 mg/l for HAA5s, you must develop a disinfection profile.

§ 141.532 How does my system develop a Disinfection Profile and when must it begin?

A disinfection profile consists of three steps:

(a) First, your system must collect measurements for several treatment parameters from the plant as discussed in § 141.533. Your system must begin this monitoring no later than January 7, 2003.

(b) Second, your system must use these measurements to calculate inactivation ratios as discussed in §§ 141.534 and 141.535; and

(c) Third, your system must use these inactivation ratios to develop a disinfection profile as discussed in § 141.536.

§ 141.533 What measurements must my system collect to calculate a Disinfection Profile?

Your system must monitor the parameters necessary to determine the total inactivation ratio using analytical methods in § 141.74 (a), once per week on the same *calendar* day each week as follows:

(a) The temperature of the disinfected water must be measured at each residual disinfectant concentration sampling point during peak hourly flow;

(b) If the system uses chlorine, the pH of the disinfected water must be measured at each chlorine residual disinfectant concentration sampling point during peak hourly flow;

(c) The disinfectant contact time(s) ("T") must be determined during peak hourly flow; and

(d) The residual disinfectant concentration(s) ("C") of the water before or at the first customer and prior to each additional point of disinfection must be measured during peak hourly flow.

§ 141.534 How does my system use these measurements to calculate an inactivation ratio?

Calculate the total inactivation ratio as follows, and multiply the value by 3.0 to determine log inactivation of *Giardia lamblia*:

If a system...	The system must determine...
(a) Uses only one point of disinfectant application	(1) One inactivation ratio ($CTcalc/CT_{99.9}$) before or at the first customer during peak hourly flow, or

If a system...	The system must determine...
	(2) Successive CTcalc/$CT_{99.9}$ values, representing sequential inactivation ratios, between the point of disinfectant application and a point before or at the first customer during peak hourly flow. Under this alternative, the system must calculate the total inactivation ratio by determining (CTcalc/$CT_{99.9}$) for each sequence and then adding the (CTcalc/$CT_{99.9}$) values together to determine (Σ (CTcalc/$CT_{99.9}$)). You may use a spreadsheet that calculates CT and/or contains the necessary inactivation tables.
(b) Uses more than one point of disinfectant application before the first customer.	(1) The CTcalc/$CT_{99.9}$ value of each disinfection segment immediately prior to the next point of disinfectant application, or for the final segment, before or at the first customer, during peak hourly flow using the procedure described in the above paragraph.

§ 141.535 How does my system develop a Disinfection Profile if we use chloramines, ozone, or chlorine dioxide for primary disinfection?

If your system uses either chloramines, ozone or chlorine dioxide for primary disinfection, you must also calculate the logs of inactivation for viruses. You must develop an additional disinfection profile for viruses using a method approved by the State.

§ 141.536 If my system has developed an inactivation ratio, what must we do now?

Each inactivation ratio serves as a data point in your disinfection profile. Your system will have obtained 52 measurements (one for every week of the year). This will allow your system and the State the opportunity to evaluate how microbial inactivation varied over the course of the year by looking at all 52 measurements (your Disinfection Profile). Your system must retain the Disinfection Profile data in graphic form, as a spreadsheet, or in some other format acceptable to the State for review as part of sanitary surveys conducted by the State. Your system will need to use this data to calculate a benchmark if considering changes to disinfection practices.

Disinfection Benchmark

§ 141.540 Who has to develop a Disinfection Benchmark?

If you are a subpart H system required to develop a disinfection profile under §§ 141.530 through 141.536, your system must develop a Disinfection Benchmark if you decide to make a significant change to disinfection practice. State approval must be obtained before you can implement a significant disinfection practice change.

§ 141.541 What are significant changes to disinfection practice?

Significant changes to disinfection practice are:

(a) Changes to the point of disinfection;

(b) Changes to the disinfectant(s) used in the treatment plant;

(c) Changes to the disinfection process; or

(d) Any other modification identified by the State.

§ 141.542 How is the Disinfection Benchmark Calculated?

If your system is making a significant change to its disinfection practice, it must calculate a disinfection benchmark using the following procedure:

(a) To calculate a disinfection benchmark a system must perform the following steps:

Step 1: Using the data your system collected to develop the Disinfection Profile, determine the average *Giardia lamblia* inactivation for each calender month by dividing the sum of all *Giardia lamblia* inactivations for that month by the number of values calculated for that month.

Step 2: Determine the lowest monthly average value out of the twelve values. This value becomes the disinfection benchmark.

(b) [Reserved]

§ 141.543 What if my system uses chloramines or ozone for primary disinfection?

If your system uses chloramines, ozone or chlorinated dioxide for primary disinfection your system must calculate the disinfection benchmark from the data your system collected for viruses to develop the disinfection profile in addition to the *Giardia lamblia* disinfection benchmark calculated under § 141.542. The disinfection benchmark must be calculated as described in § 141.542.

§ 141.544 What must my system do if considering a significant change to disinfection practices?

If your system is considering a significant change to the disinfection practice, it must complete a disinfection benchmark(s) as described in §§ 141.542 and 141.543 and provide the benchmark(s) to your State. Your system may only make a significant disinfection practice change after receiving State approval. The following information must be submitted to the State as part of their review and approval process:

(a) A description of the proposed change;

(b) The disinfection profile for *Giardia lamblia* (and, if necessary, viruses) and disinfection benchmark;

(c) An analysis of how the proposed change will affect the current levels of disinfection; and

(d) Additional information requested by the State.

Combined Filter Effluent Requirements

§ 141.550 Is my system required to meet subpart T combined filter effluent turbidity limits?

All subpart H systems which serve populations fewer than 10,000, and are required to filter, must meet combined filter effluent requirements. Unless your system consists of slow sand or diatomaceous earth filtration, you are required to meet the combined filter effluent turbidity limits in § 141.551. If your system uses slow sand or diatomaceous earth filtration you must continue to meet the combined filter effluent turbidity limits in § 141.73.

§ 141.551 What strengthened combined filter effluent turbidity limits must my system meet?

Your system must meet two strengthened combined filter effluent turbidity limits.

(a) The first combined filter effluent turbidity limit is a "95th percentile" turbidity limit which your system must meet in at least 95 percent of the turbidity measurements taken each month. Measurements must continue to be taken as described in § 141.74(a) and (c). The following table describes the required limits for specific filtration technologies.

If your system consists of . . .	Your 95th percentile turbidity value is . . .
(1) Conventional filtration or direct filtration	0.3 NTU.
(2) Membrane filtration	0.3 NTU or a value determined by the State (not to exceed 1 NTU) based on a demonstration conducted by the system as described in § 141.552.
(3) All other "alternative" filtration	A value determined by the State (not to exceed 1 NTU) based on the demonstration described in § 141.552.

(b) The second combined filter effluent turbidity limit is a "maximum" turbidity limit which your system may at no time exceed during the month. Measurements must continue to be taken as described in § 141.74(a) and (c). The following table describes the required limits for specific filtration technologies.

If your system consists of . . .	Your maximum turbidity value is . . .
(1) Conventional filtration or direct filtration	1 NTU.
(2) Membrane filtration	1 NTU or a value determined by the State (not to exceed 5 NTU) based on a demonstration conducted by the system as described in § 141.552.
(3) All other "alternative" filtration	A value determined by the State (not to exceed 5 NTU) based on the demonstration as described in § 141.552.

§ 141.552 If my system consists of "alternative filtration" and is required to conduct a demonstration, What is required of my system and how does the State establish my turbidity limits?

(a) If your system is required to conduct a demonstration (see tables in § 141.551), your system must demonstrate to the State, using pilot plant studies or other means, that your system's filtration, in combination with disinfection treatment, consistently achieves:

(1) 99.9 percent removal and/or inactivation of *Giardia lamblia* cysts;

(2) 99.99 percent removal and/or inactivation of viruses; and

(3) 99 percent removal of *Cryptosporidium* oocysts.

(b) If the State approves your demonstration, it will set turbidity performance requirements that your system must meet:

(1) At least 95 percent of the time (not to exceed 1 NTU); and

(2) That your system must not exceed at any time (not to exceed 5 NTU).

§ 141.553 If my system practices lime softening, is there any special provision regarding my combined filter effluent?

If your system practices lime softening, you may acidify representative combined filter effluent turbidity samples prior to analysis using a protocol approved by the State.

Individual Filter Turbidity Requirements

§ 141.560 Is my system subject to individual filter turbidity requirements?

If your system is a subpart H system serving fewer than 10,000 people and utilizing conventional filtration or direct filtration, you must conduct continuous monitoring of turbidity for each individual filter at your system. The following requirements apply to individual filter turbidity monitoring:

(a) Monitoring must be conducted using an approved method in § 141.74(a);

(b) Calibration of turbidimeters must be conducted using procedures specified by the manufacturer;

(c) Results of individual filter turbidity monitoring must be recorded every 15 minutes;

(d) Monthly reporting must be completed according § 141.570; and

(e) Records must be maintained according to § 141.571.

§ 141.561 What happens if my system's turbidity monitoring equipment fails?

If there is a failure in the continuous turbidity monitoring equipment, the system must conduct grab sampling every four hours in lieu of continuous monitoring until the turbidimeter is back on-line. A system has five working days to resume continuous monitoring before a violation is incurred.

§ 141.562 What follow-up action is my system required to take based on turbidity monitoring of individual filters?

Follow-up action is required according to the following tables:

If the turbidity of an individual filter exceeds...	The system must...
(a) If the turbidity of an individual filter exceeds 1.0 NTU (in two consecutive recordings).	Submit an exceptions report to the State by the 10th of the month which includes the filter number(s), corresponding date(s), and the turbidity value(s) which exceeded 1.0 NTU.

If an exceptions report is submitted for the same filter...	The system must...
(b) If an exceptions report is submitted for the same filter three months in a row.	Conduct a self-assessment of the filter within 14 days of the exceedance and report that the self assessment was conducted by the 10th of the following month. The self assessment must consist of at least the following components: Assessment of filter performance; development of a filter profile; identification and prioritization of factors limiting filter performance; assessment of the applicability of corrections; and preparation of a filter self-assessment report.

If an exceptions report is submitted for the same filter...	The system must...
(c) If an exceptions report is submitted for the same filter two months in a row and both months contain exceedances of 2.0 NTU (in 2 consecutive recordings).	(1) Arrange to have a comprehensive performance evaluation (CPE) conducted by the State or a third party approved by the State no later than 30 days following the exceedance and have the evaluation completed and submitted to the State no later than 90 days following the exceedance, Unless— (2) A CPE has been completed by the State or a third party approved by the State within the 12 prior months or the system and State are jointly participating in an ongoing Comprehensive Technical Assistance (CTA) project at the system.

§ 141.563 My system practices lime softening. Is there any special provision regarding my individual filter turbidity monitoring?

If your system utilizes lime softening, you may apply to the State for alternative turbidity exceedance levels for the levels specified in the table in § 141.562. You must be able to demonstrate to the State that higher turbidity levels in individual filters are due to lime carryover only, and not due to degraded filter performance.

Reporting and Recordkeeping Requirements

§ 141.570 What does subpart T require that my system report to the State?

This subpart T requires your system to report several items to the State. The following table describes the items which must be reported and the frequency of reporting. Your system is required to report the information described below, if it is subject to the specific requirement shown in the first column.

Corresponding requirement	Description of information to report	Frequency
(a) Combined Filter Effluent Requirements.	(1)The total number of filtered water turbidity measurements taken during the month.	By the 10th of the following month.
	(2) The number and percentage of filtered water turbidity measurements taken during the month which are greater than your system's required 95th percentile limit.	By the 10th of the following month.
	(3) The date and value of any turbidity measurements taken during the month which exceed the maximum turbidity value for your filtration system.	(i) Within 24 hours of exceedance and (ii) By the 10th of the following month.
(b) Individual Filter Turbidity Requirements.	(1) That your system conducted individual filter turbidity monitoring during the month.	By the 10th of the following month.
	(2) The filter number(s), corresponding date(s), and the turbidity value(s) which exceeded 1.0 NTU during the month..	By the 10th of the following month only if— (ii) 2 consecutive values exceeded 1.0 NTU.
	(3) That a self assessment was conducted within 14 days of the date it was triggered.	(i) By the 10th of the following month (or 14 days after the self assessment was triggered only if the self assessment was triggered during the last four days of the month) only if— (ii) A self-assessment is required.
	(4) That a CPE is required and the date that it was triggered	(i) By the 10th of the following month only if— (ii) A CPE is required.
	(5) Copy of completed CPE report	Within 90 days after the CPE was triggered.
(c) Disinfection Profiling	(1) Results of applicability monitoring which show TTHM levels <0.064 mg/l and HAA5 levels <0.048 mg/l. (Only if your system wishes to forgo profiling) or that your system has begun disinfection profiling.	No later than January 7, 2003.
(d) Disinfection Benchmarking	(1) A description of the proposed change in disinfection, your system's disinfection profile for *Giardia lamblia* (and, if necessary, viruses) and disinfection benchmark, and an analysis of how the proposed change will affect the current levels of disinfection.	Anytime your system is considering a significant change to its disinfection practice.

§ 141.571 What records does subpart T require my system to keep?

Your system must keep several types of records based on the requirements of subpart T. The following table describes the necessary records, the length of time these records must be kept, and for which requirement the records pertain. Your system is required to maintain records described in this table, if it is subject to the specific requirement shown in the first column. For example, if your system uses slow sand filtration, you would not be required to keep individual filter turbidity records:

Corresponding requirement	Description of necessary records	Duration of time records must be kept
(a) Individual Filter Turbidity Requirements.	Results of individual filter monitoring	At least 3 years.
(b) Disinfection Profiling	Results of Profile (including raw data and analysis)	Indefinitely.
(c) Disinfection Benchmarking	Benchmark (including raw data and analysis)	Indefinitely.
(d) Covered Reservoirs	Date of construction for all uncovered finished water reservoirs utilized by your system.	Indefinitely.

PART 142—NATIONAL PRIMARY DRINKING WATER REGULATIONS IMPLEMENTATION

13. The authority citation for Part 142 continues to read as follows:

Authority: 42 U.S.C. 300f, 300g–1, 300g–2, 300g–3, 300g–4, 300g–5, 300g–6, 300j–4, 300j–9, and 300j–11.

14. Section 142.14 is amended by revising paragraphs (a)(3), (a)(4)(i), (a)(4)(ii) introductory text, and (a)(7) to read as follows:

§ 142.14 Records kept by States.

(a)* * *

(3) Records of turbidity measurements must be kept for not less than one year. The information retained must be set forth in a form which makes possible comparison with the limits specified in §§ 141.71, 141.73, 141.173 and 141.175, 141.550–141.553 and 141.560–141.563 of this chapter. Until June 29, 1993, for any public water system which is providing filtration treatment and until December 30, 1991, for any public water system not providing filtration treatment and not required by the State to provide filtration treatment, records kept must be set forth in a form which makes possible comparison with the limits contained in § 141.13 of this chapter.

* * * * *

(4)(i) Records of disinfectant residual measurements and other parameters necessary to document disinfection effectiveness in accordance with §§ 141.72 and 141.74 of this chapter and the reporting requirements of §§ 141.75, 141.175, and 141.570, of this chapter must be kept for not less than one year.

(ii) Records of decisions made on a system-by-system and case-by-case basis under provisions of part 141, subpart H, subpart P, or subpart T of this chapter, must be made in writing and kept at the State.

* * * * *

(7) Any decisions made pursuant to the provisions of part 141, subpart P or subpart T of this chapter.

(i) Records of systems consulting with the State concerning a modification to disinfection practice under §§ 141.172(c), 141.170(d), and 141.544 of this chapter, including the status of the consultation or approval.

(ii) Records of decisions that a system using alternative filtration technologies, as allowed under §§ 141.173(b) and § 141.552 of this chapter, can consistently achieve a 99.9 percent removal and/or inactivation of *Giardia lamblia* cysts, 99.99 percent removal and/or inactivation of viruses, and 99 percent removal of *Cryptosporidium* oocysts. The decisions must include State-set enforceable turbidity limits for each system. A copy of the decision must be kept until the decision is reversed or revised. The State must provide a copy of the decision to the system.

(iii) Records of systems required to do filter self-assessment, CPE, or CCP under the requirements of § 141.175 and § 141.562 of this chapter.

* * * * *

15. Section 142.15 is amended by adding paragraphs (c)(6) and (c)(7) and (c)(8).

§ 142.15 Reports by States.

* * * * *

(c) * * *

(6) Recycle return location. A list of all systems moving the recycle return location prior to the point of primary coagulant addition. The list must also contain all the systems the State granted alternate recycle locations, describe the alternative recycle return location, and briefly discuss the reason(s) the alternate recycle location was granted and is due [DATE 60 MONTHS AFTER DATE OF PUBLICATION OF FINAL RULE IN THE FEDERAL REGISTER].

(7) Self assessment determination. A list of all systems performing self assessments must be reported to EPA. The list must state whether individual plants exceeded State approved operating capacity during self assessment monitoring and whether the State required modification to recycle practice. A brief description of the modification to recycle practice required at each plant must be provided. If a plant exceeded State approved operating capacity, and the State did not require modification of recycle practice, the State must provide a brief explanation for this decision. Self assessment results must be reported no later than [DATE 54 MONTHS AFTER DATE OF PUBLICATION OF FINAL RULE IN THE FEDERAL REGISTER].

(8) Direct filtration determination. A list of all direct filtration systems recycling within the treatment process must be submitted to EPA. The list must state which systems were required to modify recycle practice and briefly describe the modification and the reason it was required. It must also identify systems not required to modify recycle practice and provide a brief description of the reason modification to recycle practice was not required. The list must be submitted no later than [DATE 54 MONTHS AFTER DATE OF PUBLICATION OF FINAL RULE IN THE FEDERAL REGISTER].

* * * * *

16. Section 142.16 is amended by adding paragraph (b)(2)(v), (b)(2)(vi), and (b)(2)(vii) and (i) to read as follows:

§ 142.16 Special primacy requirements.

* * * * *

(b) * * *

(2) * * *

(v) The application must describe the criteria the State will use to determine alternate recycle locations for public water systems applying to return spent filter backwash, thickener supernatant,

or liquids from dewatering to an alternate location other than prior to the point of primary coagulant addition.

(vi) The application must describe the criteria the State will use to determine whether public water systems completing self assessments are required to modify recycle practice and the criteria that will be used to specify modifications to recycle practice.

(vii) The application must describe the criteria the State will use to determine whether direct filtration systems are required to change recycle practice and the criteria that will be used to specify changes to recycle practice.

* * * * *

(i) *Requirements for States to adopt 40 CFR part 141, subpart T Enhanced Filtration and Disinfection.* In addition to the general primacy requirements enumerated elsewhere in this part, including the requirement that State provisions are no less stringent than the federal requirements, an application for approval of a State program revision that adopts 40 CFR part 141, subpart T Enhanced Filtration and Disinfection, must contain the information specified in this paragraph:

(1) *Enforceable requirements.* States must have rules or other authority to require systems to participate in a Comprehensive Technical Assistance (CTA) activity, the performance improvement phase of the Composite Correction Program (CCP). The State shall determine whether a CTA must be conducted based on results of a CPE which indicate the potential for improved performance, and a finding by the State that the system is able to receive and implement technical assistance provided through the CTA. A CPE is a thorough review and analysis of a system's performance-based capabilities and associated administrative, operation and maintenance practices. It is conducted to identify factors that may be adversely impacting a plant's capability to achieve compliance. During the CTA phase, the system must identify and systematically address factors limiting performance. The CTA is a combination of utilizing CPE results as a basis for follow-up, implementing process control priority-setting techniques and maintaining long-term involvement to systematically train staff and administrators.

(2) *State practices or procedures.* (i) Section 141.536 of this chapter—How the State will approve a method to calculate the logs of inactivation for viruses for a system that uses either chloramines or ozone for primary disinfection.

(ii) Section 141.544 of this chapter—How the State will approve modifications to disinfection practice.

(iii) Section 141.552 of this chapter—For filtration technologies other than conventional filtration treatment, direct filtration, slow sand filtration, diatomaceous earth filtration, or membrane filtration, how the State will determine that a public water system may use a filtration technology if the PWS demonstrates to the State, using pilot plant studies or other means, that the alternative filtration technology (or membrane filtration), in combination with disinfection treatment that meets the requirements of § 141.72(b) of this chapter, consistently achieves 99.9 percent removal and/or inactivation of *Giardia lamblia* cysts and 99.99 percent removal and/or inactivation of viruses, and 99 percent removal of *Cryptosporidium* oocysts. For a system that makes this demonstration, how the State will set turbidity performance requirements that the system must meet 95 percent of the time and that the system may not exceed at any time at a level that consistently achieves 99.9 percent removal and/or inactivation of *Giardia lamblia* cysts, 99.99 percent removal and/or inactivation of viruses, and 99 percent removal of *Cryptosporidium* oocysts.

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 63

[FRL–6564–6]

RIN 2060–AE83

National Emission Standards for Hazardous Air Pollutants for Pharmaceuticals Production

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule; amendments.

SUMMARY: On September 21, 1998 (63 FR 50280), EPA promulgated national emission standards for hazardous air pollutants (NESHAP) for Pharmaceuticals Production. On November 17 and 20, 1998, petitions for reconsideration and review of the September 1998 rule were filed in the U.S. Court of Appeals for the District of Columbia Circuit. The petitioners raised over 12 technical issues and concerns with the rule. Additional issues were raised by intervenors on the side of the petitioners. In this action, EPA proposes amendments to the Pharmaceuticals Production NESHAP to address these issues and to correct any other inconsistencies that were discovered during the review process.

DATES: The EPA will accept comments regarding this proposal on or before May 10, 2000.

ADDRESSES: *Comments:* Comments should be submitted (in duplicate, if possible) to: Air and Radiation Docket and Information Center (6102), Attention Docket Number A–96–03, Room M–1500, U.S. Environmental Protection Agency, 1200 Pennsylvania Avenue NW, Washington, DC 20460. The EPA requests that a separate copy of each public comment be sent to the contact person listed below (see **FOR FURTHER INFORMATION CONTACT**). Comments may also be submitted electronically by following the instructions provided in **SUPPLEMENTARY INFORMATION.**

Docket: A docket, No. A–96–03, containing information relevant to these proposed amendments, is available for public inspection and copying between 8:30 a.m. and 5:30 p.m., Monday through Friday (except for Federal holidays) at the following address: U. S. Environmental Protection Agency, Air and Radiation Docket and Information Center (6102), 401 M Street, SW, Washington, DC 20460. The docket is located at the above address in Room M–1500, Waterside Mall (ground floor). Alternatively, a docket index, as well as individual items contained within the docket, may be obtained by calling (202) 260–7548 or (202) 260–7549. A reasonable fee may be charged for copying docket items.

FOR FURTHER INFORMATION CONTACT: Mr. Randy McDonald, Organic Chemicals Group, Emission Standards Division (MD–13), U.S. Environmental Protection Agency, Research Triangle Park, North Carolina 27711, telephone number (919) 541–5402, electronic mail address mcdonald.randy@epa.gov.

SUPPLEMENTARY INFORMATION:

Docket

The docket is an organized and complete file of all the information considered by the EPA in the development of this rulemaking. The docket is a dynamic file because material is added throughout the rulemaking process. The docketing system is intended to allow members of the public and industries involved to readily identify and locate documents so that they can effectively participate in the rulemaking process. Along with the proposed and promulgated standards and their preambles, the contents of the docket will serve as the record in the case of judicial review. (See section 307(d)(7)(A) of the Clean Air Act.) The regulatory text and other materials related to this rulemaking are available for review in the docket or copies may be mailed on request from the Air Docket by calling (202) 260–7548. A reasonable fee may be charged for copying docket materials.

Comments

Comments and data may be submitted by electronic mail (e-mail) to: *a-and-r-docket@epa.gov*. Electronic comments must be submitted as an ASCII file to avoid the use of special characters and encryption problems and will also be accepted on disks in WordPerfect® version 5.1, 6.1 or Corel 8 file format. All comments and data submitted in electronic form must note the docket number: A–96–03. No confidential business information (CBI) should be submitted by e-mail. Electronic comments may be filed online at many Federal Depository Libraries.

Commenters wishing to submit proprietary information for consideration must clearly distinguish such information from other comments and clearly label it as CBI. Send submissions containing such proprietary information directly to the following address, and not to the public docket, to ensure that proprietary information is not inadvertently placed in the docket: Attention: Ms. Melva Toomer, U.S. EPA, OAQPS Document Control Officer, 411 W. Chapel Hill Street, Room 740B, Durham, NC 27701. The EPA will disclose information identified as CBI only to the extent allowed by the procedures set forth in 40 CFR part 2. If no claim of confidentiality accompanies a submission when it is received by the EPA, the information may be made available to the public without further notice to the commenter.

Worldwide Web (WWW)

In addition to being available in the docket, an electronic copy of this proposed rule will be available on the WWW through the Technology Transfer Network (TTN). Following signature, a copy of the rule will be posted on the TTN's policy and guidance page for newly proposed or promulgated rules *http://www.epa.gov/ttn/oarpg*. The TTN provides information and technology exchange in various areas of air pollution control. If more information regarding the TTN is needed, call the TTN HELP line at (919) 541–5384.

Regulated Entities

The regulated category and entities affected by this action include:

Category	NAICS	SIC codes	Examples of regulated entities
Industry	325411 and 325412 Typically 325199	2833 and 2834 Typically 2869	• Producers of finished dosage forms of drugs (e.g., tablets, capsules, and solutions), active ingredients, or precursors. • Producers of material whose primary use is as an active ingredient or precursor.

This table is not intended to be exhaustive, but rather provides a guide for readers likely to be interested in the revisions to the regulation affected by this action. To determine whether your facility, company, business, organization, etc., is regulated by this action, you should carefully examine all of the applicability criteria in § 63.1250

of the promulgated rule, as well as in the proposed amendments to the applicability sections contained in this proposal. If you have questions regarding the applicability of these amendments to a particular entity, consult the person listed in the preceding **FOR FURTHER INFORMATION CONTACT** section.

We are soliciting comment on the specific proposed amendments to the Pharmaceuticals Production NESHAP that are described below. We are not seeking comment on portions of the Pharmaceuticals Production NESHAP that we are not currently proposing to change.

I. Why Are We Proposing Changes to the Rule?

On September 21, 1998, we promulgated NESHAP for Pharmaceuticals Production as subpart GGG in 40 CFR part 63. On November 17 and 20, 1998, the Pharmaceutical Research and Manufacturers of America (PhRMA) filed petitions for reconsideration and review of the promulgated Pharmaceuticals Production NESHAP in the U.S. Court of Appeals for the District of Columbia Circuit, *PhRMA* v. *EPA*, 98–1551 (D.C. Cir.). Issues raised by the petitioners included applicability of the rule, definition of a process, the 98 percent reduction requirement for certain process vents, the alternative standard, and recordkeeping requirements. The intervenors raised additional issues regarding the applicability of the rule to specialty chemical manufacturers and the clarity of the rule, especially with respect to the leak detection and repair (LDAR) provisions. On December 21, 1999, the parties filed a motion to lodge a settlement agreement with the court. The settlement agreement established a schedule by which EPA would propose revisions to the NESHAP and the preamble language agreed to by the parties. The settlement agreement provided that EPA would sign proposed rule amendments no later than 60 days after execution of the settlement. The settlement agreement also provided that EPA would sign final rule amendments no later than 180 days after the date on which the proposed amendments were signed. On February 22, 2000, the parties filed a motion to lodge a stipulation to modify the settlement agreement. The parties agreed to change the date by which EPA must sign the proposed rule amendments from 60 to 90 days after the execution of the settlement agreement (March 20, 2000). The date by which EPA must sign the final amendments was not changed (August 21, 2000). Today's proposed amendments address the issues raised by PhRMA and the intervenors of the promulgated Pharmaceuticals Production NESHAP and include corrections and clarifications to ensure that the rule is implemented as intended. Today's proposed amendments also provide some new compliance options, as well as new provisions that would reduce the burden associated with demonstrating compliance. For example, vapor balancing is proposed as a compliance option for storage tanks in § 63.1253(f), and the concept of a standard batch is proposed in § 63.1259(b)(5) that would allow an owner or operator to reduce the amount of recordkeeping by defining an operating scenario based on a range of process operating conditions.

II. What Changes Are We Proposing?

This section of the preamble describes the changes that we are proposing to make to subpart GGG and the rationale for the revisions.

A. Applicability of the Rule

We are proposing three minor changes to §§ 63.1250 and 63.1251 to clarify how applicability determinations are to be reported and what constitutes a new affected source. First, in § 63.1250(a), we are proposing to add a sentence specifying that applicability determinations are to be reported either as part of an operating permit application or as otherwise specified by the permitting authority. This change clarifies how to report applicability determinations. Second, § 63.1250(b) of the Pharmaceuticals Production NESHAP specifies the date after which construction of a dedicated pharmaceutical manufacturing process unit (PMPU) is to be considered a new source, but it did not address reconstructed PMPUs. To correct this oversight, we are proposing additional language in § 63.1250(b) to specify that dedicated PMPUs that are reconstructed after October 21, 1999 are new sources. This date corresponds with the completion of the settlement discussions (see section II.B of this preamble for a discussion of other changes to compliance dates). Third, in § 63.1251, we are proposing to add a sentence to the definition of the term "construction" to specify that adding equipment to a PMPU that is subject to existing source standards does not constitute construction, but it may constitute reconstruction. We are proposing this change to prevent any misinterpretation of the definition.

In addition to these changes, we are also proposing to clarify the intended applicability of the Pharmaceuticals Production NESHAP by revising the definition of pharmaceutical product and related definitions that are used to define the affected source. These changes would clarify when an intermediate is considered a pharmaceutical product and, therefore, subject to the rule.

1. Pharmaceutical Product Definition

We propose to revise the definition of "pharmaceutical product." In the Pharmaceuticals Production NESHAP, the definition of "pharmaceutical product," along with the definitions of "primary use," "active ingredient," and "precursor," are used to identify those manufacturing operations and facilities to which the NESHAP apply. Our intent is that the NESHAP apply to the manufacture of pharmaceutical active ingredients, final dosage products, and the manufacture of precursor chemical(s) whose ultimate primary use is to be subsequently processed through additional chemical transformations and separations into final drug products and pharmaceutical active ingredients. The definition of the term "pharmaceutical product" specifically excludes chemicals that are used as non-reactive solvents, excipients, binders, and fillers in the pharmaceutical manufacturing process. We also did not intend to regulate the manufacture of commodity chemicals under the NESHAP. The following discussion, in conjunction with the clarification in the regulatory text, is provided to assist in properly identifying those operations subject to the NESHAP.

Most pharmaceutical products are produced in a multi-step manufacturing process. Pharmaceutical manufacturers themselves may perform all of the manufacturing steps that take comparatively basic chemicals and transform them into the typically complex molecules that are the active ingredients. The active ingredients are combined with excipients, binders, and fillers to produce finished dosage forms of the drug. Manufacturers might perform all of the steps at one site or they may perform steps at the manufacturer's different production sites. The production of active ingredients and precursors by pharmaceutical manufacturers is always subject to this standard. The sites performing these manufacturing operations are typically described by § 63.1251, paragraph (4) of the pharmaceutical product definition in 40 CFR part 63, subpart GGG, as they usually will have a primary standard industrial classification (SIC) code of 2833 or 2834.

Pharmaceutical manufacturers can also purchase commercially available pharmaceutical active ingredients and intermediates from other manufacturers or chemical brokers and rely on other manufacturers to perform some of the early or intermediate steps in the pharmaceutical manufacturing process. Many chemical manufacturers have divisions that specifically manufacture these pharmaceutical active ingredients and intermediates for sale to pharmaceutical manufacturers. Finally, pharmaceutical manufacturers often contract with another manufacturer to have a particular pharmaceutical intermediate produced. The sites performing these manufacturing operations are typically described by § 63.1251, paragraph (5) of the pharmaceutical product definition in 40 CFR part 63, subpart GGG, and their pharmaceutical manufacturing operations are subject to the Pharmaceuticals Production NESHAP, even though the site's primary operations are chemical production, not pharmaceutical production.

The Pharmaceuticals Production NESHAP are not intended to apply to the manufacture of commodity chemicals which are typically the basic building blocks of the chemicals that eventually become pharmaceutical products. Commodity chemicals are chemicals manufactured and sold in large quantities by chemical manufacturers using their own processes and formulas to meet specifications typically established by the marketplace. Commodity chemicals typically have a wide variety of applications, uses, and customers. The definition of the term "pharmaceutical product" has been clarified to specifically exclude chemicals that are produced in a manufacturing process subject to subparts F and G of 40 CFR part 63, commonly referred to as the Hazardous Organic NESHAP (HON). The remainder of this discussion provides guidance on how to identify chemicals that we consider to be commodity chemicals for the purposes of the Pharmaceuticals Production NESHAP.

First, we consider the chemicals identified in the "Industrial Organic Chemical Use Trees" (Final Report, October 1983, U.S. EPA) to be commodity chemicals (sometimes also referred to as industrial chemicals) that are not regulated by the Pharmaceuticals Production NESHAP. This list, which contains approximately 650 chemicals, is simply an illustration of some of the chemicals that are not regulated by the Pharmaceuticals Production NESHAP. Chemicals listed in subparts NNN and RRR of 40 CFR part 60, many of which are referenced in the chemical use tree report, are also to be considered commodity chemicals. There are also many inorganic chemicals, gases, other organic chemicals and mixtures with non-pharmaceutical uses that are considered commodity chemicals, not active ingredients, and are not covered by the Pharmaceuticals Production NESHAP even though some portion of their production is sold to and used by the pharmaceutical industry. It would not be possible or practical to list all such chemicals in the text of the proposed amendments or in this preamble. The list would be too long and always out of date as new chemicals and mixtures are constantly created and new uses for existing chemicals and mixtures continue to be discovered. We do not intend to bring under the Pharmaceuticals Production NESHAP the manufacture of chemicals which are not produced specifically for use as an active ingredient or as a precursor to the manufacture of an active ingredient and which are not primarily used in the manufacture of pharmaceuticals.

Second, chemicals subject to the inventory update report (IUR) requirement of the Toxic Substances Control Act (TSCA), section 8(a), and the implementing regulations found in 40 CFR part 710 are likely to be commodity chemicals or chemicals that do not have any significant pharmaceutical use and, thus, will not likely be subject to the pharmaceutical standards. Unlike the reference to the chemical tree that broadly applies to the manufacture of the listed chemicals at any site, this paragraph applies to site-specific manufacturing. The IUR requires chemical manufacturers (including importers) to provide information every 4 years about chemical substances they manufacture (including imports) in annual quantities of 10,000 pounds or more at each plant site they own or control. The information required includes company name, plant site location, plant site Dun and Bradstreet number, the identity of the chemical substance, and the production volume of the chemical substance. A material that is regulated by the Food and Drug Administration (FDA) is not a "chemical substance" regulated by TSCA, and as such, would not have to be on the TSCA Inventory and would not be subject to the IUR. If a chemical manufacturing facility is reporting its production of a particular chemical under the IUR, that chemical is most likely a commodity chemical and not primarily an active ingredient or a pharmaceutical precursor. Conversely, the fact that a manufacturer does not have an IUR reporting obligation for a chemical does not necessarily have any bearing on whether the material would be a "pharmaceutical product." For example, under the IUR requirements, chemicals that are manufactured in annual quantities of less than 10,000 pounds do not have to be reported under the IUR, nor do certain polymers, inorganic chemicals, and naturally occurring materials which are not required to be placed on the TSCA Inventory.

We expect that manufacturers of finished drug products and active ingredients will have sufficiently complete knowledge of their products' use to enable them to make applicability determinations that fully comport with our intended implementation of the "pharmaceutical product" definition. Likewise, chemical manufacturing companies who market particular chemicals for use as pharmaceutical intermediates and active ingredients at the time they manufacture a chemical should be able to make accurate applicability determinations (*i.e.*, to know whether the primary use is as a pharmaceutical active ingredient or precursor). We recognize that there may be cases where the customer of the manufacturer does not inform the manufacturer of the intended use of the material due to the customer's interest in protecting its trade secrets or other competitive concerns. Chemical manufacturers who market a chemical as being used in the pharmaceutical industry or manufacture a chemical under a specific contract (toll manufacturing) with a pharmaceutical manufacturer will need to make an applicability determination at the time of manufacturing by considering information about the past and projected use of the chemical, the location to which the chemical is shipped, and other circumstances regarding the production of the chemical.

2. Definition of Precursor

We are proposing to add a definition of "precursor" to more clearly identify what materials are pharmaceutical intermediates. Our intent is to regulate the intermediate materials that are integral to the production of "active ingredients." Typically, pharmaceutical precursors are complex chemicals that have few if any commercially recognized uses outside of the production of pharmaceuticals. We are not aware of the existence of any comprehensive list of pharmaceutical intermediates and even if such a list existed, it would be difficult to keep up-

to-date. As stated above, we do not intend to bring within the Pharmaceuticals Production NESHAP the manufacture of commodity chemicals. We intend for the precursor definition to clarify where this line between pharmaceutical intermediates and commodity chemicals can be drawn.

The term "precursor" means a material produced for the purpose of producing a pharmaceutical product. It does not mean any and every chemical upstream of the finished dosage form or the active ingredient because that would ultimately encompass commodity chemicals. For example, if the pharmaceutical active or intermediate is a chemical ABCD, the precursors are those chemicals specifically produced to manufacture ABCD. If the way this pharmaceutical material is produced is to manufacture the materials AB and CD and then react AB and CD, then the precursors to ABCD are AB and CD. If the raw materials for making AB and CD are chemicals A, B, C, and D, and these chemicals are commodity chemicals or chemicals that have many uses unrelated to pharmaceutical manufacturing, they are not "precursors" for the purposes of the Pharmaceuticals Production NESHAP. Alternatively, if chemicals A, B, C, and D are primarily produced for the purpose of producing AB and CD, then they would be considered precursors and, thus, "pharmaceutical products" under the Pharmaceuticals Production NESHAP.

Materials that are intended to be pharmaceutical intermediates (i.e., precursors) frequently are manufactured according to current Good Manufacturing Practices (cGMP) (21 CFR parts 210 and 211), which have been promulgated by the FDA. The requirement for cGMP is determined by the FDA and the pharmaceutical manufacturer when the drug manufacturing process is first described in a master file or drug application. Considerations the FDA uses in requiring cGMP include the commercial availability of starting materials and how close an intermediate is to the final product form. Once the FDA and the pharmaceutical manufacturer have documented the manufacturing requirements and the process in the master file and/or drug application, this process and the requirements of cGMP must be followed no matter where the manufacturing process occurs. Thus, chemicals which are required to be manufactured according to cGMP, as shown in the master file or drug application for the ultimate active ingredient or drug product, would be considered precursors. However, a chemical may be manufactured under cGMP for reasons other than because the chemical is a precursor or active ingredient. Chemicals intended for use as binders, excipients, or fillers may be manufactured under cGMP, but these materials are excluded from coverage under the Pharmaceuticals Production NESHAP. Other chemicals or materials manufactured under cGMP are not covered by the Pharmaceuticals Production NESHAP because they do not meet the definition of an "active ingredient" (*e.g.*, food, food additives, color additives, in-vitro diagnostic substances, x-ray file, test indicator devices, and medical devices such as implants, artificial joints, surgical bandages, and stitching materials).

3. Definition of Primary Use

We are proposing changes to the primary use criteria that apply to active ingredients and precursors to avoid the unintended regulation of chemical manufacturing processes that produce chemicals that have a minor use as a pharmaceutical active ingredient or precursor. If greater than 50 percent of the projected use of a material produced by a chemical manufacturing site will be either as an active ingredient or a precursor to an active ingredient, then the material is a "pharmaceutical product," and the manufacturing operation is subject to regulation under the Pharmaceuticals Production NESHAP for the period of time it is manufacturing that material. A number of other Clean Air Act (CAA) standards have in place some type of 50 percent test to classify the manufacturing operation for regulatory applicability purposes.

A chemical manufacturer will have to consider information about past and projected uses of a chemical that is not a commodity chemical to determine whether the chemical's primary use is as a pharmaceutical product. A manufacturer should consider specific information about how its customers are using a material, if that information is available to the manufacturer. Otherwise, the chemical manufacturer will have to make assumptions about uses depending on who the customers are and based on the nature of the chemical. For example, if the manufacturer is manufacturing a chemical that is an intermediate (i.e., a chemical that will be used in a process to produce other chemicals), then the manufacturer should consider what products the customer manufactures. If the customer manufacturers pharmaceutical products (*i.e.*, has operations covered under SIC codes 2833 and 2834), the chemical manufacturer may inquire as to whether the chemical is used to manufacture an active ingredient or precursor or may assume that some or all of the chemical intermediate sent to the customer may be used as an active ingredient or precursor and produce that material subject to the Pharmaceuticals Production NESHAP. If the material sent to the same customer is not an intermediate, but rather a trade name product with a specific use or set of uses and that use or those uses would not be as an active ingredient, or as a precursor, then that quantity would not have to be considered as having a pharmaceutical use. For example, shipping a heat transfer fluid or cooling tower water treatment chemical to a pharmaceutical manufacturer does not create the presumption that the chemical is being used in the manufacture of pharmaceutical products in such a manner as to bring its manufacture under the Pharmaceuticals Production NESHAP.

The period of time to use for making the primary use determination will vary depending on the circumstances under which the chemical is manufactured. For example, if a chemical is manufactured under a specific contract with a customer or customers, then the projected use of the chemical by the customers during the period of time of the contract would be considered. Another example would be if a chemical is produced in a single campaign. The manufacturer will have to consider its customer's projected use at the start of the campaign for the material based on how the manufacturer markets the chemical and other available information to determine whether greater than 50 percent of the chemical to be produced in the upcoming campaign will be used as a pharmaceutical product, in which case the manufacturing operation would be subject to the Pharmaceuticals Production NESHAP. For the situation in which a material is manufactured on a continued basis, the primary use determination should be based on a projected annual use.

To make the primary use determination, the chemical manufacturer will use the total amount of the chemical projected to be produced over each specified period of time as the denominator, and then use as the numerator the amount of that chemical that is projected to be either used as an active ingredient and/or as a precursor for the same period of time. The chemical manufacturer will exclude from the numerator the amount of material that is used for non-

pharmaceutical uses and the amount used in the pharmaceutical industry for such uses as an excipient, binder, filler, or non-reactive solvent.

4. Definition of Active Ingredient

We are proposing to clarify the definition of "active ingredient" by identifying some of the materials that are not intended to come within the scope of this term. Because the definition of the term "active ingredient" is based on terminology used by the Federal Food Drug and Cosmetic Act, the language of what is excluded is also borrowed from that. Excluded from the definition are foods, food additives (other than vitamins and materials described in SIC codes 2833 and 2834), color additives, in-vitro diagnostic substances, x-ray film, test indicator devices, and medical devices such as implants, artificial joints, surgical bandages, and stitching materials. We never intended for the manufacture of these materials to be subject to the Pharmaceuticals Production NESHAP. The Pharmaceuticals Production NESHAP were developed to regulate the emissions from manufacturing processes that produce active ingredients and precursors.

B. Compliance Dates

1. Existing Sources

The Pharmaceuticals Production NESHAP promulgated on September 21, 1998, specifies that existing sources must be in compliance with the NESHAP no later than September 21, 2001, unless an extension is granted in accordance with § 63.1250(f)(4). We are proposing a new compliance date of October 21, 2002 because the proposed amendments are sufficiently far reaching and complex that an amended rule would effectively be a new rule warranting a new compliance date.

Section 112(a)(3) of the CAA provides that existing sources are to be in compliance with applicable emission standards "as expeditiously as practicable, but in no event later than 3 years after the effective date of such standard." The September 21, 1998, Pharmaceuticals Production NESHAP specifies a compliance date 3 years from the issuance of that rule. Section 112(d)(6) provides authority for the Administrator to revise the emission standards issued under section 112 "no less often than every 8 years." We believe the authority to revise the standards inherently includes the authority to set new compliance dates for revised rules. Congress provided us discretion to set a compliance date for existing sources of up to 3 years in order to provide time for retrofitting of controls where necessary. Thus, due to the extensive nature of the proposed amendments, we are proposing a new compliance date.

We believe that 13 months from the otherwise applicable compliance date will be sufficient for all sources to come into compliance with the proposed amendments. However, should any source be unable to meet that compliance date because of the need to install controls that cannot be installed by that date, each source may request an extension of up to 1 year in accordance with § 63.1250(f)(6) of the proposed amendments.

2. New Sources

The Pharmaceuticals Production NESHAP specifies that new sources must comply with the NESHAP on September 21, 1998, or upon startup, whichever is later. However, an exception to this requirement was also provided. If the Pharmaceuticals Production NESHAP were more stringent than the proposed rule, the owner or operator would have until 3 years after September 21, 1998 to comply with the NESHAP. We are proposing comparable language to address the event that the final amendments would be more stringent than either the Pharmaceuticals Production NESHAP or these proposed amendments. The compliance date for complying with the final amendments and the requirements with which the owner or operator must comply until that date vary depending on the date construction or reconstruction commenced. Separate requirements are proposed for three time periods. In each case, we believe the allotted times, based on the settlement agreement, will be sufficient for all sources to come into compliance with the proposed amendments.

The first set of requirements would apply to new sources that commenced construction or reconstruction between the proposal and promulgation dates (*i.e.*, April 2, 1997 and September 21, 1998) if final amendments were to be more stringent than the Pharmaceuticals Production NESHAP. We are proposing that these sources come into compliance by September 21, 2001, and we are proposing that they comply with the April 12, 1997 proposed rule until that date.

The second set of requirements would apply to new sources that commenced construction or reconstruction between September 21, 1998 and April 10, 2000 if final amendments were to be more stringent than the Pharmaceuticals Production NESHAP. We are proposing that these sources come into compliance by October 21, 2002. In the absence of the proposed amendments, these sources would be required to comply with the NESHAP upon startup. Therefore, we are proposing that they continue to comply with the NESHAP until October 21, 2002.

The third set of requirements would apply to new sources that commence construction or reconstruction between April 10, 2000 and the date the final amendments are published if the final amendments were to be more stringent than the proposed amendments. We are proposing that these sources come into compliance by the date 1 year after publication of the final amendments, and we are proposing that they comply with the NESHAP between startup and the date 1 year after publication of the final amendments.

C. Overlapping Regulations

1. Overlap with Subpart PPP of 40 CFR Part 63

We are proposing to add a new paragraph at § 63.1250(h)(6) that would specify alternative procedures to address overlap situations between the pharmaceuticals NESHAP and the polyether polyols NESHAP in 40 CFR part 63, subpart PPP. This paragraph would specify that an owner or operator may elect to demonstrate compliance with the process vent standards in § 63.1254 by either controlling all process vents within the process by the most stringent requirements in subpart PPP (i.e., § 63.1425(b), (c)(1), (c)(3), (d), and/or (f)), or by identifying those vents that would require control under § 63.1254 and controlling only those vents by the most stringent requirements in subpart PPP. If you own or operate an affected source and you elect to demonstrate compliance with an amended subpart GGG by controlling process vents within the process in accordance with the requirements in subpart PPP, you would still be required to comply with all other requirements in subpart GGG for the corresponding PMPU (e.g., the storage tank, wastewater, and equipment leak standards and their corresponding initial and continuous compliance requirements and recordkeeping and reporting requirements). The proposed paragraph does not simply state that compliance with the requirements of subpart PPP would constitute compliance with an amended subpart GGG because it is possible that certain process vents that require control under an amended subpart GGG would not meet the applicability requirements for

control under subpart PPP. We believe the proposed requirements are reasonable because the control achieved for process vents complying with subpart PPP would be equal to or greater than the control achieved for process vents complying with an amended subpart GGG. In addition, the monitoring, recordkeeping, and reporting requirements for process vents in the two rules are similar.

2. Overlap With Resource Conservation and Recovery Act Wastewater Provisions

We are proposing several changes to § 63.1250(h)(5) to clarify compliance requirements and options for wastewater that is subject to both subpart GGG and 40 CFR parts 260 through 272. Some of the changes are needed because it is possible that the promulgated language could be interpreted to mean that every owner or operator must determine which provisions are the most stringent. This was not our intent. However, we do believe an owner or operator must determine the most stringent requirements if the owner or operator wants to comply with only one of the rules. We believe this determination is necessary because it is not possible to categorically state which rule is the most stringent. One reason for this is that wastewater conditions and systems vary from site to site. Furthermore, subpart GGG includes requirements for individual drain systems, but 40 CFR parts 260 through 272 do not.

To clarify our intent, we are proposing to delete the last sentence in the section, state in the first sentence that the owner or operator "may elect to determine" which provisions are the most stringent, and add several new statements. One of the new statements specifies that compliance with provisions of 40 CFR parts 260 through 272 that are determined to be more stringent than the requirements of subpart GGG constitutes compliance with subpart GGG. As an example of more stringent requirements that constitute compliance with subpart GGG, a second statement cites the provisions of 40 CFR parts 260 through 272 for treatment units that meet the conditions specified in § 63.1256(g)(13). This example may help to reduce the burden of making a stringency determination. To address a reporting oversight in the Pharmaceuticals Production NESHAP, the third proposed statement would require the owner or operator to identify in the Notification of Compliance Status report both the more stringent provisions of 40 CFR parts 260 through 272 with which the owner or operator will comply, and the information and procedures used to make any stringency determinations. The last of the proposed new statements specifies that § 63.1250(h)(6) does not apply if the owner or operator elects not to determine which provisions are the most stringent, and that the owner or operator must comply with the provisions in both rules. Finally, we are also proposing minor editorial changes to clarify our intent.

3. Overlap with Subpart I

Section 63.1250(h)(4) specifies procedures for equipment that is subject to both subpart GGG and 40 CFR part 63, subpart I. We are proposing several editorial changes to this section to clarify that, for equipment subject to both rules, an owner or operator may elect to comply with either the provisions in § 63.1255 or with the provisions in subpart H of 40 CFR part 63.

4. Overlapping Requirements for Offsite Cleaning and Reloading Facilities

Section II.J. of this preamble describes proposed vapor balancing provisions for storage tanks. One of these provisions is that offsite reloading and cleaning facilities must control emissions from railcars and tank trucks used in vapor balancing at the affected source by either connecting them to a closed vent system with a control device that reduces emissions by 90 percent by weight, or by connecting them to a vapor balancing system during reloading. However, we are proposing to add a new paragraph at § 63.1250(h)(1)(ii) to state that an offsite reloading or cleaning facility in compliance with all of the control requirements of any other standard in 40 CFR part 63 is in compliance with the requirements of subpart GGG.

D. Definition of Process

We are proposing to revise the definition of the term "process" in order to achieve a more uniform and replicable entity for basing applicability of the rule. The Pharmaceuticals Production NESHAP uses the concept of a process as the defining entity for applicability. The NESHAP require that the owner or operator consider emissions from all sources within a process in order to determine what requirements apply. Therefore, it is important to the overall effectiveness and uniformity of the NESHAP that the definition of process is consistently applied across the industry.

In the April 2, 1997, proposed rule, the definition of process included the concept of isolated intermediates, which was intended to encompass essentially the same set of unit operations that we are proposing today. However, during the public comment period following proposal, some commenters objected to the requirement that material be removed from the process equipment in order to be considered an isolated intermediate. Other commenters believed the concept of isolated intermediates was unnecessary; they believed that all operations leading to the production of a final pharmaceutical product could be considered a single process. In addition, we realized that the definition of isolated intermediate could be problematic because it could be interpreted in many ways. To address these concerns we decided to eliminate the concept of isolated intermediates from the definition of process for the promulgated rule. We also revised the definition to consider all operations leading up to a final pharmaceutical product, except in two circumstances. One exception is where an intermediate is used to manufacture more than one product, and the second is where an intermediate is stored for more than 30 days before subsequent processing. Although we made these changes in an effort to eliminate confusion in how to define a process, the changes had other, unintended consequences.

Since promulgation, we have learned that the 30-day storage provision could lead to different interpretations of the number of operations considered within the same process boundaries. For example, the period for which a given intermediate could or would be stored prior to further processing might vary according to production scheduling depending upon availability of materials and processing equipment, demand, and other reasons. The 30-day holding time could therefore result in constantly changing, unpredictable, and unrepeatable process boundaries. We also now realize that including all intermediate steps in the definition of process may have the same effect. This could occur because not all intermediate steps are manufactured in the same process sequence or at the same facility all the time. Nonrepeatable process boundaries are problematic because they could result in inconsistencies in the way in which the NESHAP is implemented.

To address these concerns, we are proposing to eliminate the 30-day storage provision and redraw the boundaries of a process around a more repeatable unit. The unit we selected is that of the single process "step" that results in the production of a pharmaceutical product, which could be an isolated intermediate, active

ingredient, or final dosage form of drug. The defining characteristic of the proposed process definition is that it considers all unit operations associated with generating one or more materials that are stable, isolated, and ultimately stored (see definition of product and isolated intermediate). The concept of storage has intentionally not been defined by a period of time to prevent problems comparable to those caused by the 30-day storage period in the promulgated definition. Moreover, the intent of the storage reference in the definition of isolated intermediate is to draw the boundaries of the process around the unit operations that generate a product that is stored at any time (see discussion of isolated intermediate in section II.E of this preamble). These proposed changes provide a more clearly defined final step for a process than in the originally proposed definition. In addition, because of the proposed facilitywide cap on emissions from process vents for which the owner or operator complies with the annual mass emission limit (see section II.G. of this preamble), any incentive to create additional processes would be minimized.

As a result of this proposed change in the definition of process, we are proposing changes to other provisions to ensure that an amended rule would provide the same level of emissions reductions as the promulgated rule. For details on these other proposed changes, see discussions on definition of storage tank, annual mass emission limit standards for process vents, pollution prevention (P2) provisions, and wastewater load cutoffs in sections II.F., II.G., II.K., and II.M., respectively.

E. Definition of Isolated Intermediate

As part of the change in the definition of process, we are proposing to add the term "isolated intermediate." The purpose of the term "isolated intermediate" is to provide a bright line guide for identifying the boundaries between processes. This definition, in conjunction with the definition of "process," simply provides that a process ends when an intermediate compound is placed in equipment that is used solely within the given process for purposes of storage. For example, if a compound is produced in Reactor A and then transferred directly to Reactor B, where a subsequent reaction takes place, then Reactor A and Reactor B belong to the same process because the product of Reactor A is not placed in storage equipment prior to further processing. This would be true even if two or more batches from Reactor A must be accumulated in Reactor B prior to initiating the reaction in Reactor B. As another example, assume that the compound produced in Reactor A is sometimes put into drums for temporary storage prior to subsequent processing in Reactor B. In this case, the drum storage marks the end of a process, and Reactor B represents the beginning of the next process. This would be true even if the storage is for a short time and even if the material is drummed off infrequently. All that matters for the purposes of identifying the process boundary is that storage occurs. It may sometimes be necessary to put off-spec material into storage for the period until it can be reprocessed or disposed of. We do not intend that infrequent, unplanned events such as these should create process boundaries.

F. Definition of Storage Tank

To be consistent with the proposed changes to the definition of "process," we are also proposing to revise the definition of "storage tank." The promulgated definition of "storage tank" specifies that a storage tank contains either a feedstock or a product of a process (*i.e.*, on a process flow diagram, a storage tank is located on one side of the process—either before or after it). Process tanks are tanks within a process; the tanks receive material from the process and discharge material to the same process (*i.e.*, they would have the process on both sides). Because the promulgated process definition encompassed many processing steps, we believed that the promulgated storage tank definition would mostly capture raw material and solvent storage tanks. We believed there would be few product tanks because final products would most likely not contain solvents and would be stored in drums or other containers suitable for small quantities.

However, the proposed process definition would result in far more products of processes, such as isolated intermediates. The vessels storing these products would be considered storage tanks under the promulgated definition, but the characteristics of these tanks would more likely resemble process tanks. Isolated intermediate tanks would most likely have smaller capacities than raw material or solvent storage tanks, would be expected to operate at higher than ambient temperatures, and would be more likely to experience higher throughputs and possibly more constant levels. Emissions from these process tanks could also be linked with the other operations conducted in a process on a per-batch basis. Therefore, we decided to clarify the definition of "storage tank" to include only raw material coming into the process.

We are also proposing to revise the "storage tank" definition to include solvent storage tanks located in tank farms that receive spent solvent from one or more processes. Typically, these tanks (which are generally 20,000 gallons or higher) are considered storage tanks in previous MACT standards; therefore, the proposed change would make the rule consistent with previous rules.

G. Annual Mass Emission Limit Standards for Process Vents

As a result of the proposed change to the definition of "process," we were concerned that the "shortening" of the process might have some unintended consequences relating to a reduction in the amount of HAP emissions reductions resulting from NESHAP. Under the promulgated rule, the owner or operator of an existing source can comply with the annual mass emission limit standard for as many as seven processes. The seven process limit was based on a review of emissions from the industry which showed only 168,000 pounds per year (lb/yr), out of 16,246,000 lb/yr nationwide, were emitted from processes with emissions less than 2,000 lb/yr. On average, there were seven processes per facility that contributed to this 168,000 lb/yr. With the proposed change in the definition of "process," however, an owner or operator could conceivably exempt more emissions than the 168,000 lb/yr that were originally anticipated if they could redraw process boundaries to utilize all 2,000 lb/yr of the exemption per process. An analysis of the database also indicated that, of the approximately 12 million lb/yr reduction of HAP associated with the process vent MACT alternative, about 0.5 million lb/yr of reductions would be attributed to processes left uncontrolled or to processes controlled down to 2,000 lb/yr, and the remaining 11 million lb/yr would be attributed to achieving 93 percent reduction. For the expected 100 facilities in the source category, the amount of emissions exempted by using the 2,000 lb/yr alternative would average 5,000 lbs/yr (2.5 tons) per facility.

The average emissions per facility from processes for which an owner or operator complies with the 2,000 lb/yr limit could be much higher than 5,000 lb/yr, and nationwide emissions reductions could be much lower, under these proposed amendments than under the NESHAP. To prevent this unintended result, we are proposing several changes. One change is to replace the seven process limit with a facilitywide emission limit of 4,000 lb/

yr. This change would not only preserve the emissions reductions originally anticipated from the process definition, but would also simplify the process vent provisions. A second proposed change is to extend the 2,000 lb/yr/process emission limit to include vents in processes where at least one stream was required to meet the 98 percent reduction requirement. Under the promulgated rule, the owner or operator was required to reduce emissions from these "leftover" vents by 93 percent. However, this restriction is no longer necessary because the 4,000 lb/yr facility cap would preserve the intended overall emissions reductions. Similarly, we propose eliminating the 100 lb/yr process *de minimis* cutoff because the 2,000 lb/yr process limit, or the 4,000 lb/yr facility limit, would apply to these processes as well. Finally, we are proposing to express the limits only in metric units (*i.e.*, 900 kilograms per year (kg/yr) and 1,800 kg/yr, respectively).

We are also proposing to replace the 400 lb/yr (uncontrolled) cutoff for new sources with an 1,800 kg/yr (uncontrolled) facility cap. This change was needed because the new source MACT standard would have been more stringent than the existing source MACT standard had the format and emission limit not been changed.

H. 98 Percent Standard for Process Vents at Existing Sources

We are proposing to make changes to the applicability of the 98 percent individual process vent requirement. The promulgated rule requires 98 percent control of emissions from process vents that meet the total resource effectiveness (TRE) criteria. This requirement is accompanied by a "grandfathering" provision that exempts these process vents from the 98 percent control requirement if they were controlled to at least 93 percent prior to the proposal date.

The original basis for the grandfathering provision provided in the promulgated rule is that it was not cost effective to replace existing devices that could meet the floor level of control, 93 percent, for the incremental 5 percent control. However, upon replacement (*i.e.*, starting from scratch after the useful life of the device is over), upgrading from 93 percent to 98 percent control is cost effective. The promulgated rule language inadvertently grandfathered the process rather than the control device. As a result, the promulgated rule has an unintended adverse effect on one segment of the industry (*i.e.*, nondedicated processes). Since nondedicated, multipurpose facilities are constantly undergoing product changes, the introduction of new processes, which could not be grandfathered, would drive these facilities toward replacing existing devices with devices that could meet 98 percent almost immediately. However, for dedicated processes, the promulgated grandfathering provision exempted the existing process from the 98 percent requirement indefinitely.

To correct this unintended inequity, the proposed revisions grandfather the "control device" rather than the process vent. As noted above, an aspect of the original analysis was that it was cost effective to upgrade to 98 percent control when replacing the control device. In addition, further consideration was given to the useful life of a control device. The useful life typically is 10 to 20 years, depending on the type of device. Therefore, today's proposed amendments would require an owner or operator of both types of processes to meet the 98 percent control requirement upon replacement or reconstruction of the control device, or upon reaching a date either 15 years from issuance of a facility's preconstruction permit, or April 2, 2007, whichever is later. This proposed language provides a definite date by which all such devices must be replaced. Thus, in 2007, control devices installed before the Pharmaceuticals Production NESHAP proposal will be more than 10 years old and, on average, should be about at the end of their useful lives.

In addition to these changes, we are also proposing two additional exemptions from the 98 percent control requirement. The first of these proposed provisions is designed to encourage pollution prevention (P2). Specifically, the owner or operator would be exempt from the 98 percent control requirement if the TRE vent is controlled to at least the MACT floor level of control (93 percent), and the production-indexed HAP consumption factor for the process is reduced by at least 50 percent. The second of the new provisions would allow processes containing hydrogenation vents to maintain the level of control achieved on the date of these proposed amendments while requiring at least 95 percent reduction on all other vents within the process. This provision would allow an owner or operator to control processes containing hydrogenation vents at higher levels than the floor, but less than the 98 percent requirement. We are proposing to add this language to address concerns that controlling some hydrogenation vents can be unsafe.

I. The Alternative Standard

We are proposing several changes to the alternative standard. These changes include new terminology and additional language clarifying when HAP concentrations in gas streams exiting control devices must be corrected for dilution. We are also proposing additional procedures for demonstrating compliance that an owner or operator may use in lieu of the concentration corrections. The following discussion describes our rationale for developing an alternative standard, summarizes our reasons for requiring concentration corrections and how these requirements were included in the promulgated rule, and describes our proposed changes to the alternative standard.

1. Rationale for an Alternative Standard

The Pharmaceuticals Production NESHAP and today's proposed amendments contain several options that allow an owner or operator to meet a concentration cutoff at the outlet of a control device as a means of achieving compliance with the standards. The most common option is referred to as the alternative standard which requires continuous (15-minute) monitoring of control device outlet concentration. The alternative standard also enables compliance to be evaluated at a single point (the outlet of the device) regardless of how many processes or unit operations are tied into the control device inlet. In addition, only one violation per day is assigned for each device complying with the alternative standard. In contrast, compliance with other options is evaluated on a process basis even if multiple processes are tied into a common control device. If monitoring parameters for these devices are exceeded, these exceedances could result in one violation per process per day. Therefore, the alternative standard is viewed as a critical element of the NESHAP and proposed amendments for end-of-line control devices that service numerous unit operations and processes, and it is expected to be utilized widely by the industry.

2. Correcting Concentrations for Dilution

In establishing the alternative standard, we were concerned that an owner or operator could use dilution as a means of achieving compliance with the standard. Although this practice is addressed in the General Provisions (see § 63.4(b)), we recognize that there are valid circumstances where air or inert gases are introduced into manifolds for safety and design considerations, and that these practices should not be

viewed as strictly prohibited by the above-referenced passage in the General Provisions if the effect of adding these gases can somehow be considered. Therefore, we sought to address these situations in the proposed amendments in several ways.

In § 63.1257(b)(6), the NESHAP requires that concentration measurements "be adjusted to negate the dilution effects of introducing nonaffected gaseous streams into the vent streams prior to control or measurement * * *." One of the intended results of this language was to require owners or operators complying with the alternative standard to adjust their measured concentrations by considering the amount of diluent gas introduced into the system prior to comparing this value against the concentration limit. (Another intended result of § 63.1257(b)(6) was to consider diluent gases in defining a process vent—process vents must contain at least 50 parts per million by volume (ppmv) HAP, on an undiluted and uncontrolled basis.)

Another requirement addressed combustion devices specifically. Because combustion devices operate such that the characteristics of the incoming stream are chemically changed, a simple correction for dilution at the inlet of the device will not directly and proportionally correct the concentration at the outlet of the device. Therefore, for combustion devices, the NESHAP also requires that an owner or operator consider dilution by correcting the outlet concentration to 3 percent oxygen (see § 63.1257(a)(3)). The NESHAP further states in § 63.1257(d)(3)(ii) that this correction should be made when the control device is a combustion device that uses supplemental combustion air.

The intent of the provisions described above was to require the correction only when nonaffected streams (*i.e.*, diluent gases or supplemental combustion air) were introduced into the vent or manifold. However, supplemental combustion air was not specifically defined, and the location of the referenced language (under the process vent compliance determination procedures, rather than the general compliance determination procedures) made the intent of this requirement somewhat unclear.

The 3 percent correction factor was first used in the new source performance standards (NSPS) for air oxidation unit processes, distillation operations, and reactor processes in the synthetic organic chemical manufacturing industry (40 CFR part 60, subparts III, NNN, and RRR), and later, the HON. The value of 3 percent originates from good engineering practices. For the oxygen deficient streams found in these industries, if the proper amount of supplemental combustion air is added, the outlet stream would contain approximately 3 percent oxygen. The concept of requiring the correction to 3 percent oxygen only when supplemental combustion air is used has a precedent in the Polymer Manufacturing NSPS (40 CFR part 60, subpart DDD). In the development of that standard, commenters suggested that requiring the 3 percent correction factor for high volume, low concentration streams would make compliance with a 20 part per million by volume (ppmv) outlet concentration standard difficult. We responded by identifying situations where additional air was added to the vent streams (*e.g.*, supplemental combustion air) prior to the control devices and required the correction only when these situations were encountered. In other words, if the vent streams originating from the processes and affected sources themselves were high volume, low concentration, then no correction was required. However, if nonaffected streams were added prior to control, then the NESHAP requires the correction.

This same concept was incorporated into the Pharmaceutical MACT. However, as mentioned previously, the promulgated rule was not clear on several aspects of the requirement, including the definition of supplemental combustion air, and when the requirement to correct to 3 percent oxygen should apply. In addition, the predominant reasons pharmaceutical facilities add excess air or other diluents to manifolds is not to provide the supplemental air necessary for combustion of emissions streams (the high volume, low concentration streams in the pharmaceuticals industry, by their very nature, should not require additional air for combustion), but rather for safety and design considerations. We also recognize that for these high oxygen streams, the correction requirement has the effect of lowering the 20 ppmv compliance level, perhaps significantly.

3. Proposed Changes in Terminology and Dilution Correction Requirements

To clarify the dilution correction requirements, we are proposing to revise terminology, to use the new terminology in the provisions describing the conditions under which outlet concentrations from combustion devices must be corrected, to explicitly state the procedures for correcting outlet concentrations from noncombustion devices, and to increase the compliance level for noncombustion devices from 20 ppmv to 50 ppmv.

In today's proposed amendments, we define a more general term called "supplemental gases." This term distinguishes air added to the vent stream for combustion and gases added for design or safety purposes from the affected vent streams and air required to operate combustion device burner(s). In addition, because this is a general term, it applies in all situations; it is not limited to combustion devices. The definition also clarifies that air used to operate combustion device burner(s) is not considered supplemental gas. Failure to include this clarification could allow the interpretation that every combustion device uses supplemental gases.

Using this new terminology, we are proposing to revise the current compliance option for combustion devices to require that the correction to 3 percent oxygen be made in cases where supplemental gases are added to affected streams prior to combustion. For noncombustion devices, we are proposing to add a new § 63.1257(a)(3)(ii) requiring correction to adjust outlet concentrations by the amount of supplemental gas added. This was the intent of the language in the promulgated rule. In addition to these changes, we are proposing to increase the concentration limit for noncombustion devices from 20 ppmv to 50 ppmv to be consistent with the definition of a process vent. This change would also provide a greater allowance to meet the concentration limit for devices that are perceived to be more environmentally-friendly in terms of potential for material recovery and the minimizing of secondary air pollution.

We believe an explanation of how to determine which streams are supplemental gases is warranted at this point. We are not requiring owners and operators to measure the concentration of total organic compounds (TOC) in gas streams. The proposed definition of supplemental gases indicates that process knowledge is adequate in identifying such streams. We intend that the owner or operator can qualitatively identify these streams based on their knowledge of the process and use reasonable judgement in estimating TOC or HAP concentrations. Similarly, these proposed amendments also allow owners and operators to use process knowledge in identifying affected process vents (defined by containing 50 ppmv HAP) and affected wastewater streams (defined by containing 5 ppmw HAP and a load of at least 0.05 kg/yr).

For characterizing affected wastewater, two "process knowledge"-based approaches, the use of a mass balance, and the use of published water solubility data are identified as adequate for determination of HAP wastewater concentrations. For defining process vents, these proposed amendments state that process knowledge that no HAP are present in an emission stream or the use of engineering assessments are both allowable approaches. Consistent with other guidance on process knowledge, the proposed amendments define engineering assessments broadly in § 63.1257(d)(2)(ii) and do not specify exact procedures or formulas for determining vent stream characteristics. In many cases, the exercise of identifying process vents will also result in identification of supplemental gases.

4. Proposed Alternative to HAP Concentration Correction for Combustion Devices

In addition to the proposed clarification of the 3 percent oxygen correction factor for combustion devices, we are also proposing to add an option that would allow owners and operators to monitor combustion devices for good operating practices in lieu of correcting to 3 percent oxygen when supplemental gases are used. The 20 ppmv concentration limit is based on concentrations achievable by properly operated incinerators—those with adequate residence times and combustion chamber temperatures. With the additional constraints of maintaining residence times and combustion chamber temperatures, owners and operators have economic incentives to minimize the amount of supplemental gases that are introduced prior to combustion devices. Nevertheless, we believe that it is reasonable to allow for monitoring of parameters in lieu of correcting to 3 percent oxygen when supplemental gas is added.

Therefore, we are proposing two sets of parameter levels as alternatives to correcting for dilution when supplemental gases are used in combustion devices. If the owner or operator complies with the alternative standard instead of a percent reduction requirement of 95 percent or less (*e.g.*, for some process vents and storage tanks), the owner or operator would be required to monitor for a minimum residence time of 0.5 seconds and a minimum combustion chamber temperature of 760°C. These values are consistent with parameters specified in subpart GGG for controlling emission streams from vents at wastewater collection and treatment systems. If the owner or operator complies with the alternative standard instead of a percent reduction requirement of 98 percent, the owner or operator would be required to monitor for a minimum residence time of 0.75 seconds and a minimum combustion chamber temperature of 816°C. Based on a considerable amount of data, we have concluded that properly designed and operated incinerators reduce emissions by 98 percent if they maintain these residence times and temperatures.

5. Proposed Alternative to HAP Concentration Correction for Noncombustion Devices

In addition to the proposed clarification of the concentration correction requirements described above, we are proposing an option to allow owners and operators of "dense gas" systems a simplified procedure for correction. Dense gas systems are defined as systems that are designed and operated to limit oxygen levels to less than 12 percent. We are proposing the simplified correction for dense gas systems because these systems are generally used to convey concentrated streams (above 5,000 ppmv). The proposed procedure would allow owners and operators to calculate a system flowrate setpoint. This setpoint is an indicator of stream concentration and would be monitored to demonstrate that significant dilution is not occurring. The owner or operator of a dense gas system would also be able to choose to operate at a higher flowrate than the system setpoint by making a concentration correction.

J. Vapor Balancing for Storage Tanks

We are proposing to allow vapor balancing in conjunction with the use of a pressure setting to comply with the storage tank control requirements. The vapor balancing provisions also would require that displaced vapors from the tank trucks and railcars be controlled at the reloading or cleaning facility to at least 90 percent or be vapor balanced. To demonstrate compliance with the offsite provisions, the owner or operator must obtain a certification from the cleaning and reloading facility indicating that the control requirements will be met. In general, a pressure setting of at least 2.5 pounds per square inch gage (psig) was determined to eliminate breathing losses from tanks that are typically found in this industry. As a means of demonstrating continuous compliance with the pressure setting requirement, the proposed provisions would also require the owner or operator to record the pressure vent setting during each transfer operation and to monitor the pressure relief valve on a quarterly basis to ensure no breathing losses.

K. Wastewater Standards

We are proposing several changes to the wastewater provisions. Because the proposed change in the definition of process reduces the number of steps in a process, we are proposing to reduce the wastewater load point of determination (POD) cutoffs in § 63.1256(a)(1)(i) from 1 megagram per year (Mg/yr) per process to 0.25 Mg/yr per process.

In § 63.1256(a)(5), we are proposing to clarify the offsite wastewater treatment options. Under the Pharmaceuticals Production NESHAP, offsite treatment was allowed only if the wastewater contained less than 50 ppmw of partially soluble HAP to prevent discharges that could result in significant volatilization of HAP prior to treatment. Since this objective would be met if the wastewater or residual is always managed and treated, we are proposing to add a provision to allow the wastewater to be discharged if the transferee (*i.e.*, the company or other organization accepting the discharged wastewater or residual) certifies that the wastewater or residual will be managed and treated in accordance with an amended subpart GGG. The 50 ppmw limit would still apply if this certification is not obtained, but we are also proposing to clarify the management and treatment requirements for these streams. The treatment options would be either enhanced biological treatment (§ 63.1256(g)(10)) or the 95 percent mass reduction option for biological treatment (§ 63.1256(g)(11)(i), (ii), and § 63.1256 (h)), and the management options would be either to cover the waste management units up to the activated sludge units or to demonstrate that less than 5 percent of the total soluble HAP is emitted from waste management units up to the activated sludge unit.

Another proposed change is to add specific provisions in § 63.1256(a)(3) for maintenance wastewater that differ from the provisions for process wastewater. The proposed provisions are equivalent to the provisions in the HON and other recent rules. They would require an owner or operator to prepare a description of maintenance procedures for management of maintenance wastewater as part of the startup, shutdown, and malfunction plan. Modification of the procedures would be required, as necessary.

L. Equipment Leak Provisions

We are proposing numerous clarifying changes within the LDAR provisions. One set of changes would make the difficult-to-monitor, unsafe-to-monitor, and inaccessible provisions consistent with language used in past and pending regulations (changes made to subpart H of the HON and in the proposed consolidated air rule). These changes would clarify which provisions apply to a given component and how to deal with components that cannot be accessed at any time in a safe manner. Another proposed change is to revise § 63.1255(b) to clarify which provisions in subpart H of the HON apply in these proposed amendments.

M. Pollution Prevention Provisions

We are proposing to add language to § 63.1252(e) that would allow owners and operators to merge processes for the purposes of complying with P2 provisions. This proposed change is being made because of the proposed change in the definition of a process. Our intent with regard to compliance under P2 provisions is that the owner or operator can make the P2 demonstration around the same starting and ending materials, regardless of how many "processes" the manufacture of these materials encompass. For example, consider the sequential manufacturing of four intermediates (A, B, C, and D) and the final product (E). Under the promulgated process definition, these five steps would be considered a single process. However, under the proposed revised definition, there are five processes. The proposed P2 language clarifies that owners and operators are allowed to consider any or all of these processes when demonstrating a reduction in the production-indexed consumption factor, as long as the activities covered under P2 provisions are limited to the same starting and ending materials for the baseline (before) and annual (after) demonstrations. In the above example, therefore, the owner or operator could make the P2 demonstration around processes A through E. Additionally, if the facility eliminated middle products C or D through a process optimization or improvement measure, the owner or operator could take credit for reducing the amount of HAP consumed by these steps. However, we stress that under P2 provisions, eliminating steps within a process by transferring operations elsewhere is not allowed. In addition, because the P2 provisions apply beyond the individual process level, other constraints are needed to make the provisions practical for documentation purposes. The baseline date for merged processes is 1992 (approximately 10 years prior to the compliance date) and merging a nondedicated formulation process or a nondedicated solvent recovery process with another process to claim a reduction from both processes is not allowed.

N. Initial Compliance Demonstration Provisions

1. Use of Equations in the 1978 Control Techniques Guideline (CTG) Document

In § 63.1257(d)(2), we are proposing to revise equations 13, 25, 26, and 33. These equations are used to estimate uncontrolled emissions from heating, depressurization, and vacuum system events. One of the proposed changes is to eliminate the requirement to use an average molecular weight in calculations for emission streams that contain more than one HAP. This change has no effect on the emissions estimates, but it makes the equations look more consistent with the equations in the 1978 CTG, which was our original intent. This change also does not apply to the optional approaches in the NESHAP to calculate emissions from heating and depressurization. We are also proposing to correct equation 33 and add new language that would provide additional flexibility in calculating emissions.

The proposed change to equation 13 (heating) is accomplished by simply removing the average molecular weight variable and adding the individual molecular weight to the summation term in the numerator. The NESHAP also includes instructions on how to modify equation 17 when it is used to calculate the average molecular weight for use in equation 13. The proposed change to equation 13 eliminates the need for these instructions, which were included with the definition of the HAP partial pressure in the variable list for equations 13 through 17. Therefore, we are proposing to delete these instructions.

The steps in the 1978 CTG to calculate emissions from depressurization are inconsistent with each other. Steps 6 through 9 describe how to calculate the ratio of air to total volatile organic compounds (VOC), but step 10 describes how to estimate the mass emissions of individual VOC assuming the previous steps were used to calculate the ratio of air to that individual VOC. We are proposing to replace the average molecular weight in equation 26 with individual compound molecular weights because this is consistent with the final step in the 1978 CTG. It appears this was the intent in the CTG (*i.e.*, procedures to calculate emissions from all other types of emission events are for single compounds), and we understand that this is how many pharmaceutical facilities calculate emissions from depressurization. To be consistent with this change in equation 26, we are also proposing to remove the summations from equation 25 so that it will calculate the average ratio of moles of noncondensables to moles of an individual HAP instead of the average ratio of moles of noncondensables to total HAP.

We are proposing two changes to equation 33, which is used to estimate emissions from vacuum systems. The first change is to replace the variable for the average molecular weight with one for an individual HAP molecular weight. This change alone would make the equation valid for emission streams with a single pollutant. To make the equation valid for multicomponent systems, the portion of the equation that represents the ratio of moles of condensable compounds to moles of noncondensable compounds must be replaced. To calculate the emissions of each HAP individually, the numerator of the revised ratio would be the partial pressure of the individual HAP, and the denominator would be the system pressure minus the sum of the partial pressures of all condensable compounds. Because we want to know the total HAP emissions, the proposed equation 33 multiplies the partial pressure of an individual HAP (in the numerator) by the molecular weight for that HAP, and sums over the number of HAPs in the emission stream.

To provide additional flexibility in calculating emissions, we are also proposing to add a statement in § 63.1257(d)(2)(ii) that would allow an owner or operator to calculate emissions using modified versions of the equations in § 63.1257(d)(2)(i) if they meet two conditions. First, the modified equations must have been used to meet other regulatory obligations. Second, the owner or operator must demonstrate that the results obtained using the modified equations do not affect applicability assessments or compliance determinations under these proposed amendments.

2. Process Condenser Demonstration

We are proposing to revise the initial compliance demonstration procedures for process condensers. These changes exclude from the demonstration requirement any process condensers followed by either secondary condensers that would be considered air pollution control devices or air

pollution control devices complying with the alternative standard. The original compliance procedure for process condensers was promulgated to ensure that owners and operators would accurately characterize uncontrolled emissions. If a process condenser was not operating properly, then the load to a secondary condenser or an air pollution control device (APCD) would be higher than the equations contained in the NESHAP would predict.

However, if a secondary condenser operates to cool a stream down to a temperature that corresponds to the required removal, assuming HAP load is at the level estimated by the equations (even though the load is actually higher because the process condenser doesn't work as anticipated), then the secondary condenser actually removes more HAP than is estimated by the equations and, in effect, accounts for the ineffectiveness of the process condenser. A similar effect occurs for other devices whose monitoring parameters are correlated directly with compliance, such as devices meeting the outlet concentration alternative standard. For these devices, the continuous compliance demonstration (monitoring) procedures will provide an indication that the requirements of the NESHAP are met, regardless of whether the process condenser is effective. However, in cases where no control device follows a process condenser, or where the APCD monitoring is based on testing or design evaluation at worst case conditions, either the validity of monitoring correlated to worst case conditions or actual emissions to the atmosphere depend on the effectiveness of the process condenser. Therefore, these proposed amendments require a process condenser initial demonstration for these cases.

3. Clarification of Worst-Case Testing Conditions

Although we are proposing only a minor change to the language in § 63.1257(b)(8) regarding the testing conditions for batch processes, we believe additional clarification of the intent of the worst-case provisions is warranted. Worst-case conditions are the most challenging conditions that the control device will encounter when used to control emission streams subject to the NESHAP which defines two categories of worst-case conditions: Absolute and hypothetical. Absolute worst-case conditions are based on actual emission stream characteristics. If the most challenging conditions are associated with the maximum HAP load, the NESHAP provides two time periods for defining the absolute worst-case conditions: (1) The period of time when the inlet to the control device contains at least 50 percent of the HAP load in the 8-hour period that contains the maximum HAP load, or (2) The 1-hour period when the inlet to the control device contains the maximum hourly HAP load. If the most challenging conditions are associated with a characteristic(s) other than the maximum HAP load, the absolute worst-case conditions are defined as the 1-hour period when those characteristics occur. The NESHAP cites three examples of such conditions: (1) Periods of time when the emission streams contain the maximum combined VOC and HAP load, (2) periods of time when the emission streams contain HAP(s) that approach limits of solubility for scrubbing media, and (3) periods of time when the emission streams contain HAP(s) that approach limits of adsorptivity for carbon adsorption systems. To determine the absolute worst-case conditions, the owner or operator must develop an emission profile that considers the characteristics of all of the vent streams to the control device, the design and operating characteristics of the control device, and scheduling of processes that generate the emission streams.

Hypothetical worst-case conditions are simulated conditions that are at least as challenging as the absolute worst-case conditions. As with absolute worst-case conditions, the owner or operator must develop an emission profile to determine the hypothetical worst-case conditions. The NESHAP provides two options for developing these emission profiles. One option is to determine the 1-hour period of time with the most challenging actual conditions. After these conditions are defined, the owner or operator must describe the equipment configuration, type of material to be processed, and any other characteristics of the simulated conditions under which test runs will be conducted. The owner or operator must also provide rationale for why the simulated conditions are considered to be as challenging as the most challenging actual conditions. The second option is to develop an emissions profile based on characteristics of the capture and control system that limit the maximum hourly emissions that can be routed to the control device. For example, a fan may limit the flowrate, and the concentration may be limited to a certain percentage of the lower explosive limit before a bypass valve opens.

O. Recordkeeping To Demonstrate Compliance With Process Vent Standards

We are proposing several changes to the recordkeeping and reporting procedures to clarify our intent. The provisions of § 63.1259 originally required owners and operators to calculate uncontrolled and controlled emissions for all processes in the PMPU. However, because some compliance options, such as the alternative standard, do not require such calculations to demonstrate compliance, we are proposing to specify the records required to demonstrate compliance with each option. We are also proposing the concept of a "standard" batch to clarify when uncontrolled and controlled emissions must be recalculated as part of ongoing compliance demonstrations.

The language of § 63.1259(b)(6) in the NESHAP states that the owners or operators must keep records of uncontrolled and controlled emissions per batch for each process. In specifying this recordkeeping requirement, we intended that owners and operators keep detailed records of uncontrolled and controlled emissions for each process to be operated at the facility and the number of batches of each process operated at the facility. In order to demonstrate compliance with the percent reduction requirement, only a showing of the process uncontrolled and controlled emissions would be needed since the ongoing continuous compliance demonstration was achieved through the monitoring of process parameters. Similarly, in order to demonstrate compliance with the 2,000 lb/yr emissions limit, we required records of the number of batches run at the facility, in addition to the controlled emissions, for use in calculating a summation of yearly emissions. However, because each batch in a campaign does not necessarily operate under exactly the same conditions, the emissions may vary from batch to batch. The promulgated rule does not clearly describe how to handle these variations in the continuous compliance demonstration. It could be interpreted to mean that the owner or operator must recalculate emissions for every variation in operating conditions, but this was not our intent.

To clarify our intent, we are proposing to add the concept of a standard batch. The owner or operator would create a standard batch based on a range of operating characteristics and other processing variables that affect emissions. The standard batch would become part of an operating scenario for

the process (*i.e.*, the standard batch consists of the same operating parameters as are required in the operating scenario, but the owner or operator may specify a range instead of only a single, fixed value). The owner or operator would calculate emissions for the standard batch using the characteristics that result in the highest emissions, and these results would be used in the demonstration of initial compliance with the process vent standards. If, during the processing of a particular batch, one such process variable was operated outside of the standard batch, the owner or operator would be required to recalculate uncontrolled and controlled emissions for that batch and demonstrate compliance with an amended subpart GGG. If the batch was operated within the standard batch constraints, then only a record that the batch was operated accordingly would be required.

In establishing the standard batch, owners and operators have flexibility in determining how to identify and record nonstandard batches. For example, the owner or operator should focus on the episodes that affect emissions or control efficiency. Likewise, in some cases, tracking control device parameters would be an adequate means of detecting nonstandard batches. Moreover, insignificant episodes, under the revised standard batch concept, would not require any further monitoring for "nonstandardness" during the operating period. For example, a one-time demonstration would be appropriate where a given process vent handles only a small fraction of the uncontrolled emissions from the given process, or where it is not physically possible to exceed the standard batch conditions. As another example, facilities often have head tanks within their processes. These tanks are used to measure a specified quantity of raw material prior to addition to the reactor or other unit operation. Typically, the capacity of these tanks is small—often no more than 100 or 200 gallons. If operated at ambient conditions, the potential emissions from the tank are limited only by the design capacity of the tank. In this situation, it would be sufficient to make a one-time showing that emissions from filling of the tank to capacity cannot exceed emissions under standard batch conditions.

P. Minor Technical Corrections

1. Tables 1 and 5

In Table 1, we are proposing several changes to clarify how subpart A (the General Provisions) applies to these proposed amendments. Some proposed changes correct inconsistencies. For example, we are proposing to change the requirement to conduct a performance test within 180 days of the compliance date to 150 days to be consistent with the time period to conduct necessary performance tests and submit the Notification of Compliance Status report. Other changes direct the reader to appropriate sections of the NESHAP that contain language related to the specific requirements in the General Provisions. We are also proposing to specify that the preconstruction approval requirement in § 63.5(b)(3) would not apply to facilities that are covered by 40 CFR 52.2454.

In Table 5, we are proposing to delete references to fuel gas systems. We inadvertently included these references in the NESHAP. They should be deleted because we did not include requirements specific to fuel gas systems anywhere in the NESHAP. Our intent is that fuel gas systems are a form of control device, and the requirements for control devices apply. We are also proposing changes to the control requirements for in-process tanks that meet the criteria of § 63.1252(f). Table 5 of the promulgated rule required an owner or operator to maintain a fixed roof on these tanks, and if the tank meets certain criteria, to control vent streams from the tank. However, because the tank is within the process, vents from the tank are also process vents and subject to the process vent standards. To eliminate this overlap, we are proposing to replace the vent stream control requirements in Table 5 with a statement that vents on these tanks are process vents.

2. Definitions

In addition to the changes to definitions described in other sections of this preamble, we are also proposing minor changes to definitions of many other terms to correct errors, improve clarity, or to make them consistent with other regulations.

3. Wastewater Provisions

We are proposing several minor changes and corrections to the wastewater provisions. In § 63.1256(a)(3), we are proposing to add an exemption for wastewater samples of a size not greater than reasonably necessary for the method of analysis. If the owner or operator determines that it is unsafe to perform the required seal gap measurements or inspections of a wastewater tank at the specified time, the HON specifies two compliance options. Although we intended to include both of these options in the promulgated pharmaceuticals rule, one of them was inadvertently left out. Therefore, we are proposing to add § 63.1256(b)(6)(i), which would specify that an owner or operator may measure the seal gaps or inspect the tank within 30 calendar days of the determination that the floating roof is unsafe. In § 63.1256(d)(2), we are proposing to add an option to vapor balance wastewater loading operations from containers back to the process.

In § 63.1256(g)(8), (11), and (12), the promulgated rule specifies that compliance with treatment options must be determined based on a performance test; to be consistent with other rules, we are proposing to clarify that compliance with all treatment options, except open biological treatment, may also be determined using a design evaluation. Paragraphs (g)(8) and (12) in § 63.1256 of the promulgated rule cross referenced two paragraphs that describe compliance procedures for biological treatment; we are proposing editorial changes to clarify which cross referenced section applies to open biological treatment and which applies to closed biological treatment.

Finally, to be consistent with other recent rules, we are proposing to add a provision in § 63.1257(b)(10) that would allow an owner or operator to analyze wastewater using Method 8260, as well as Method 8270 in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods" (EPA Publication No. SW–846, Third Edition, September 1986, as amended by Update I, November 15, 1992).

4. Emissions Averaging

According to § 63.1252(d)(6) of the promulgated rule, an affected source may include, in emissions averaging groups, no more than 20 storage tanks that are subject to the 90 percent reduction requirement, and no more than 20 storage tanks that are subject to the 95 percent reduction requirement. However, this provision is inconsistent with the policy we established in the HON of limiting to 20 the number of emission points in an emissions average (59 FR 19428, April 22, 1994). Section 63.1257(g) specifies that emissions averaging for storage tanks applies to all storage tanks at an affected source (*i.e.*, all storage tanks are emission points that may be grouped for emissions averaging). Therefore, we are proposing to correct § 63.1252(d)(6) by specifying that not more than 20 storage tanks at an affected source may be included in emissions averaging.

5. Initial Compliance and Monitoring

We are proposing several minor changes and corrections to the initial compliance and monitoring provisions. In § 63.1257(b)(6)(iii), we are proposing to add that Method 26A of appendix A of 40 CFR part 60 may be used to determine hydrogen chloride concentrations, and we are proposing to specify that both Methods 26 and 26A also may be used to determine hydrogen halide and halogen concentrations. In § 63.1257(d)(2)(i)(H), we are proposing a correction to the note associated with equation 36 so that an owner or operator may elect to disregard the effect of time on the emissions and simply assume all HAP in the vapor space are emitted. In § 63.1257(e), (f), and (g), we are proposing to correct symbols used to define variables in several equations, and we are proposing to correct references to several equation numbers. To reduce the burden of demonstrating compliance with the P2 provisions, we are proposing to add a statement in § 63.1257(f) that would allow an owner or operator to calculate the annual HAP consumption factor once per month if more than 10 batches are produced in a month. We are proposing to move equation 61 from § 63.1257(h)(3) to its proper location in § 63.1257(h)(2)(i). In § 63.1258(b)(6)(iii), we are proposing a change to clarify that an exceedance for a flare occurs only upon the loss of all pilot flames. Because we are proposing to change the annual mass emission limit compliance option for process vents by adding an 1,800 kg/yr facilitywide limit, we are also proposing to add a requirement in § 63.1258(c) that owners and operators demonstrate continuous compliance with this limit by calculating daily 365-day rolling summations; this requirement parallels the requirement for demonstrating compliance with the 2,000 lb/yr limits for individual processes. We are also proposing to delete from this paragraph the sentence that describes what will be considered a violation.

6. Recordkeeping and Reporting

The promulgated rule did not include any recordkeeping and reporting requirements for storage tanks with floating roofs. To correct this oversight we are proposing to add requirements to: (1) record the results of each inspection and seal gap measurement, as specified in § 63.123(c) through (e); and (2) submit the results of inspections that detected a failure or seal gap measurements that exceed required limits, as specified in § 63.122(d) through (f). Clearly, these are the same recordkeeping and reporting requirements in the HON, and they have been applied in other rules as well.

To document compliance with the annual mass emission limit for process vents, § 63.1259(b)(4) of the NESHAP requires records of rolling annual total emission calculations, but it did not specify the recordkeeping frequency. Because the NESHAP specifies that the emission limit not be exceeded in any 365-day period, we are proposing to require daily recordkeeping. In addition, we are proposing that this requirement apply to the proposed 4,000 lb/yr facilitywide emission limit, as well as to the 2,000 lb/yr limit for individual processes.

Table 1 in the NESHAP states that § 63.10(b)(2) does not apply to the NESHAP because we have specified applicable records within the NESHAP. We did not include a requirement in the NESHAP to record all maintenance performed on the air pollution control equipment, but these are important records that we should have required. Therefore, we are proposing to add a requirement to record this information in § 63.1259(a)(3)(iii).

We are proposing several statements to clarify our intent. In § 63.1260(e), we are proposing to add paragraphs (6) and (7) to reiterate requirements already stated in § 63.1257(e)(1)(ii) that data used in determining the annual average concentration of wastewater streams must be included in the precompliance report. We are proposing to edit § 63.1260(g)(1)(ii) to clarify when quarterly reporting is required. We are proposing to move a statement from the definition of the term "operating scenario" to § 63.1260(g)(2)(vii) because it deals with information the owner or operator must provide to verify that requirements for new operating scenarios have been met. In § 63.1260(h)(1), we are proposing to add a statement to clarify that process changes for which the owner or operator must submit a notification of process change means the startup of a new process.

7. Units

The NESHAP specifies most emission limits and other numerical requirements in two sets of units. This can create confusion when a parameter meets the value in one set of units but not the other. One approach to resolve this problem would be to specify the values using an unreasonable number of significant figures. However, we are proposing to simply specify all terms using only one set of units.

III. What are the administrative requirements of the rule?

A. Executive Order 12866, Regulatory Planning and Review

Under Executive Order 12866 (58 FR 51735, October 4, 1993), EPA must determine whether the regulatory action is "significant" and therefore subject to Office of Management and Budget (OMB) review and the requirements of the Executive Order. The Executive Order defines "significant regulatory action" as one that is likely to result in a rule that may:

(1) Have an annual effect on the economy of $100 million or more or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, or tribal governments or communities;

(2) Create a serious inconsistency or otherwise interfere with an action taken or planned by another agency;

(3) Materially alter the budgetary impact of entitlements, grants, user fees, or loan programs, or the rights and obligations of recipients thereof; or

(4) Raise novel legal or policy issues arising out of legal mandates, the President's priorities, or the principles set forth in the Executive Order.

Pursuant to the terms of Executive Order 12866, it has been determined that these proposed amendments do not constitute a "significant regulatory action" because they do not add any new control requirements. Consequently, this action was not submitted to OMB for review under Executive Order 12866.

B. Executive Order 13132, Federalism

Executive Order 13132 (64 FR 43255, August 10, 1999) requires EPA to develop an accountable process to ensure "meaningful and timely input by State and local officials in the development of regulatory policies that have federalism implications." "Policies that have federalism implications" is defined in the Executive Order to include regulations that have "substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government." Under Executive Order 13132, EPA may not issue a regulation that has federalism implications, that imposes substantial direct compliance costs, and that is not required by statute, unless the Federal government provides the funds necessary to pay the direct compliance costs incurred by State and local

governments, or EPA consults with State and local officials early in the process of developing the proposed regulation. The EPA also may not issue a regulation that has federalism implications and that preempts State law unless the Agency consults with State and local officials early in the process of developing the proposed regulation.

If EPA complies by consulting, Executive Order 13132 requires EPA to provide to OMB, in a separately identified section of the preamble to the rule, a federalism summary impact statement (FSIS). The FSIS must include a description of the extent of EPA's prior consultation with State and local officials, a summary of the nature of their concerns and EPA's position supporting the need to issue the regulation, and a statement of the extent to which the concerns of State and local officials have been met. Also, when EPA transmits a draft final rule with federalism implications to OMB for review pursuant to Executive Order 12866, EPA must include a certification from the Agency's Federalism Official stating that EPA has met the requirements of Executive Order 13132 in a meaningful and timely manner.

Today's proposed amendments will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government, as specified in Executive Order 13132, because State and local governments do not own or operate any sources that would be subject to these proposed amendments. Thus, the requirements of section 6 of the Executive Order do not apply to today's action.

C. Executive Order 13084, Consultation and Coordination With Indian Tribal Governments

Under Executive Order 13084, EPA may not issue a regulation that is not required by statute, that significantly or uniquely affects the communities of Indian tribal governments, and that imposes substantial direct compliance costs on those communities, unless the Federal government provides the funds necessary to pay the direct compliance costs incurred by the tribal governments, or EPA consults with those governments. If EPA complies by consulting, Executive Order 13084 requires EPA to provide to OMB, in a separately identified section of the preamble to the rule, a description of the extent of EPA's prior consultation with representatives of affected tribal governments, a summary of the nature of their concerns, and a statement supporting the need to issue the regulation. In addition, Executive Order 13084 requires EPA to develop an effective process permitting elected and other representatives of Indian tribal governments "to provide meaningful and timely input in the development of regulatory policies on matters that significantly or uniquely affect their communities."

Today's proposed amendments to subpart GGG do not significantly or uniquely affect the communities of Indian tribal governments. No tribal governments own or operate sources subject to these proposed amendments. Accordingly, the requirements of section 3(b) of Executive Order 13084 do not apply to today's action.

D. Executive Order 13045, Protection of Children From Environmental Health Risks and Safety Risks

Executive Order 13045 (62 FR 19885, April 23, 1997) applies to any rule that: (1) Is determined to be "economically significant" as defined under Executive Order 12866, and (2) concerns an environmental health or safety risk that EPA has reason to believe may have a disproportionate effect on children. If the regulatory action meets both criteria, EPA must evaluate the environmental health or safety effects of the planned rule on children, and explain why the planned regulation is preferable to other potentially effective and reasonably feasible alternatives considered by EPA.

The EPA interprets Executive Order 13045 as applying only to those regulatory actions that are based on health or safety risks, such that the analysis required under section 5–501 of the Executive Order has the potential to influence the regulation. Today's proposed amendments are not subject to Executive Order 13045 because they are based on technology performance, not health or safety risks. Furthermore, this rule has been determined not to be "economically significant" as defined under Executive Order 12866.

E. Unfunded Mandates Reform Act of 1995

Title II of the Unfunded Mandates Reform Act of 1995 (UMRA), Pub. L. 104–4, establishes requirements for Federal agencies to assess the effects of their regulatory actions on State, local, and tribal governments and the private sector. Under section 202 of the UMRA, EPA generally must prepare a written statement, including a cost-benefit analysis, for proposed and final rules with Federal mandates that may result in expenditures by State, local, and tribal governments, in aggregate, or by the private sector, of $100 million or more in any 1 year. Before promulgating an EPA rule for which a written statement is needed, section 205 of the UMRA generally requires EPA to identify and consider a reasonable number of regulatory alternatives and adopt the least-costly, most cost-effective, or least burdensome alternative that achieves the objectives of the rule. The provisions of section 205 do not apply when they are inconsistent with applicable law. Moreover, section 205 allows EPA to adopt an alternative other than the least-costly, most cost effective, or least-burdensome alternative if the Administrator publishes with the final rule an explanation why that alternative was not adopted. Before EPA establishes any regulatory requirements that may significantly or uniquely affect small governments, including tribal governments, it must have developed under section 203 of the UMRA a small government agency plan. The plan must provide for notifying potentially affected small governments to have meaningful and timely input in the development of EPA regulatory proposals with significant Federal intergovernmental mandates, and informing, educating, and advising small governments on compliance with the regulatory requirements.

The EPA has determined that the proposed amendments do not contain a Federal mandate that may result in expenditures of $100 million or more for State, local, or tribal governments, in the aggregate, or the private sector in any 1 year. The maximum total annual cost of the Pharmaceuticals Production NESHAP for any year has been estimated to be approximately $64 million (63 FR 50287, September 21, 1998), and today's proposed amendments do not add new requirements that would increase this cost. Thus, today's proposed amendments are not subject to the requirements of sections 202 and 205 of the UMRA. In addition, EPA has determined that these proposed amendments contain no regulatory requirements that might significantly or uniquely affect small governments because they contain no requirements that apply to such governments or impose obligations upon them. Therefore, today's proposed amendments are not subject to the requirements of section 203 of the UMRA.

F. Regulatory Flexibility Act (RFA), as Amended by the Small Business Regulatory Enforcement Fairness Act of 1996 (SBREFA), 5 USC 601 et. seq.

The RFA generally requires an agency to prepare a regulatory flexibility analysis of any rule subject to notice and comment rulemaking requirements under the Administrative Procedure Act or any other statute unless the agency certifies that the rule will not have a significant economic impact on a substantial number of small entities. Small entities include small businesses, small organizations, and small governmental jurisdictions.

For purposes of assessing the impacts of today's proposed amendments on small entities, a small entity is defined as: (1) A small business in SIC code 2833 or 2834 that has as many as 750 employees; (2) a small business in SIC code 2869 that has as many as 1,000 employees; (3) a small governmental jurisdiction that is a government of a city, county, town, school district or special district with a population of less than 50,000; and (4) a small organization that is any not-for-profit enterprise which is independently owned and operated and is not dominant in its field.

After considering the economic impacts of today's proposed amendments on small entities, I certify that this action will not have a significant economic impact on a substantial number of small entities. The EPA has determined that none of the small entities will experience a significant impact because the proposed amendments impose no additional regulatory requirements on owners or operators of affected sources.

Although these proposed amendments will not have a significant economic impact, EPA nonetheless has tried to reduce the impact of the proposed amendments on small entities. Many of the proposed amendments define optional means of compliance. For example, vapor balancing was added as an optional means of compliance for storage tanks, a facilitywide limit on the mass of process vent emissions replaces the limit on the number of processes that may comply with the process-based emission limit, additional compliance alternatives are included for process vents that meet the criteria for 98 percent control, and optional parameter monitoring is included as an alternative to correcting to 3 percent O_2 when supplemental gas is introduced to a dense gas system or a system controlled with a combustion device and the owner or operator complies with the alternative standard. The proposed amendments also include simplified recordkeeping requirements when the owner or operator documents conditions that define a standard batch, and the process is operated within that range of conditions. We continue to be interested in the potential impacts of the proposed amendments on small entities and welcome comments on issues related to such impacts.

G. Paperwork Reduction Act

The OMB has approved the information collection requirements contained in the 1998 NESHAP under the provisions of the Paperwork Reduction Act, 44 U.S.C. 3501 *et seq.* and has assigned OMB control No. 2060–0358. An Information Collection Request (ICR) document has been prepared by EPA (ICR No. 1781.01), and a copy may be obtained from Sandy Farmer by mail at U.S. Environmental Protection Agency, Office of Environmental Information, Collection Strategies Division (2822), 1200 Pennsylvania Avenue, NW, Washington DC 20460, by email at *farmer.sandy@epa.gov*, or by calling (202) 260–2740.

Today's proposed amendments to the NESHAP will have no net impact on the information collection burden estimates made previously. An oversight has been corrected by adding recordkeeping and reporting requirements for storage tanks equipped with floating roofs. The promulgated rule only included recordkeeping and reporting requirements for add-on control devices for storage tanks even though add-on control devices and floating roofs were considered in the cost impacts and burden estimates. Also, the proposed amendments clarify the intent of several provisions in the 1998 NESHAP and correct inadvertent omissions and minor drafting errors in the 1998 NESHAP. Consequently, the ICR has not been revised.

H. National Technology Transfer and Advancement Act

Section 12(d) of the National Technology Transfer and Advancement Act (NTTAA), Pub. L. 104–113 (March 7, 1996), directs all Federal agencies to use voluntary consensus standards instead of government-unique standards in their regulatory activities unless to do so would be inconsistent with applicable law or otherwise impractical. Voluntary consensus standards are technical standards (e.g., material specifications, test methods, sampling and analytical procedures, and business practices) that are developed or adopted by one or more voluntary consensus bodies. Examples of organizations generally regarded as voluntary consensus standards bodies include the American Society for Testing and Materials (ASTM), the National Fire Protection Association (NFPA), and the Society of Automotive Engineers (SAE). The NTTAA requires Federal agencies like EPA to provide Congress, through OMB, with explanations when an agency does not use available and applicable voluntary consensus standards.

The proposed amendments to subpart GGG do not involve the proposal of any new technical standards or incorporate by reference existing technical standards. The EPA welcomes comments on this aspect of these proposed amendments and, specifically, invites the public to identify potentially applicable voluntary consensus standards and to explain why such standards should be used in this regulation.

List of Subjects in 40 CFR Part 63

Environmental protection, Administrative practice and procedure, Air pollution control, Hazardous substances, Intergovernmental relations, Reporting and recordkeeping requirements.

Dated: March 20, 2000.

Carol M. Browner,

Administrator.

For the reasons set out in the preamble, part 63 of title 40, chapter I of the Code of Federal Regulations is proposed to be amended as follows:

PART 63—NATIONAL EMISSION STANDARDS FOR HAZARDOUS AIR POLLUTANTS FOR SOURCE CATEGORIES

1. The authority citation for part 63 continues to read as follows:

Authority: 42 U.S.C. 7401, *et seq.*

Subpart GGG—National Emission Standards for Pharmaceuticals Production

2. Section 63.1250 is amended by:
a. Revising paragraph (a),
b. Revising paragraph (b),
c. Revising paragraph (c),
d. Revising paragraph (f);
e. Revising paragraph (h)(1);
f. Revising paragraphs (h)(4) and (5); and
g. Adding paragraph (h)(6).

The revisions and additions read as follows:

§ 63.1250 Applicability.

(a) *Definition of affected source.* (1) The affected source subject to this subpart consists of the pharmaceutical

manufacturing operations as defined in § 63.1251. Except as specified in paragraph (d) of this section, the provisions of this subpart apply to pharmaceutical manufacturing operations that meet the criteria specified in paragraphs (a)(1)(i) through (iii) of this section as follows:

(i) Manufacture a pharmaceutical product as defined in § 63.1251;

(ii) Are located at a plant site that is a major source as defined in section 112(a) of the Act; and

(iii) Process, use, or produce HAP.

(2) Determination of the applicability of this subpart shall be reported as part of an operating permit application or as otherwise specified by the permitting authority.

(b) *New source applicability.* A new affected source subject to this subpart and to which the requirements for new sources apply is: an affected source for which construction or reconstruction commenced after April 2, 1997, and the standard was applicable at the time of construction or reconstruction; or a pharmaceutical manufacturing process unit (PMPU) dedicated to manufacturing a single product that has the potential to emit 10 tons per year of any one HAP or 25 tons per year of combined HAP for which construction commenced after April 2, 1997 or reconstruction commenced after October 21, 1999.

(c) *General provisions.* Table 1 of this subpart specifies and clarifies the provisions of subpart A of this part that apply to an owner or operator of an affected source subject to this subpart. The provisions of subpart A specified in Table 1 are the only provisions of subpart A that apply to an affected source subject to this subpart.

* * * * *

(f) *Compliance dates.* The compliance dates for affected sources are as follows:

(1) An owner or operator of an existing affected source must comply with the provisions of this subpart no later than October 21, 2002.

(2) An owner or operator of a new or reconstructed affected source must comply with the provisions of this subpart on [date of publication of the final amendments] or upon startup, whichever is later.

(3) Notwithstanding the requirements of paragraph (f)(2) of this section, a new source which commences construction or reconstruction after April 2, 1997 and before September 21, 1998 shall not be required to comply with this subpart until September 21, 2001 if:

(i) The requirements of this subpart are more stringent than requirements of this subpart in effect before [effective date of the final rule] and contained in the 40 CFR, part (63.1200-end), edition revised as of July 1, 2000; and

(ii) The owner or operator complies with the requirements published on April 2, 1997 (62 FR 15754) during the period until September 21, 2001.

(4) Notwithstanding the requirements of paragraph (f)(2) of this section, a new source which commences construction or reconstruction after September 21, 1998 and before April 10, 2000 shall not be required to comply with this subpart until October 21, 2002 if:

(i) The requirements of this subpart are more stringent than the requirements of this subpart in effect before [effective date of the final rule]; and

(ii) The owner or operator complies with the requirements of this subpart in effect before [effective date of the final rule] during the period between startup and October 21, 2002.

(5) Notwithstanding the requirements of paragraph (f)(2) of this section, a new source which commences construction or reconstruction after April 10, 2000 and before [date of publication of final amendments] shall not be required to comply with this subpart until [date 1 year after publication of final amendments] if:

(i) The requirements of this subpart are more stringent than the requirements published on April 2, 1997 (62 FR 15754); and

(ii) The owner or operator complies with the requirements of this subpart in effect before [effective date of the final rule] during the period between startup and [date 1 year after publication of final amendments].

(6) Pursuant to section 112(i)(3)(B) of the Act, an owner or operator may request an extension allowing the existing source up to 1 additional year to comply with section 112(d) standards.

(i) For purposes of this subpart, a request for an extension shall be submitted no later than 120 days prior to the compliance dates specified in paragraphs (f)(1) through (5) of this section, except as provided in paragraph (f)(6)(ii) of this section. The dates specified in § 63.6(i) for submittal of requests for extensions shall not apply to sources subject to this subpart.

(ii) An owner or operator may submit a compliance extension request after the date specified in paragraph (f)(6)(i) of this section provided the need for the compliance extension arose after that date and before the otherwise applicable compliance date, and the need arose due to circumstances beyond reasonable control of the owner or operator. This request shall include the data described in § 63.6(i)(6)(i)(A), (B), (C), and (D).

* * * * *

(h) * * *

(1) *Compliance with other MACT standards.* (i) After the compliance dates specified in this section, an affected source subject to the provisions of this subpart that is also subject to the provisions of any other subpart of this part 63 may elect to comply with either the provisions of this subpart of the provisions of another subpart governing the maintenance of records and reporting to EPA. The affected source shall identify in the Notification of Compliance Status report required by § 63.1260(f) under which authority such records will be maintained.

(ii) After the compliance dates specified in paragraph (f) of this section, at an offsite reloading or cleaning facility subject to § 63.1253(f), compliance with the emission standards and associated initial compliance, monitoring, recordkeeping, and reporting provisions of any other subpart of this part 63 constitutes compliance with the provisions of § 63.1253(f)(7)(ii) or (iii). The owner or operator of the affected storage tank shall identify in the Notification of Compliance Status report required by § 63.1260(f) the subpart of this part 63 with which the owner or operator of the offsite reloading or cleaning facility complies.

* * * * *

(4) *Compliance with subpart I of this part.* After the compliance dates specified in this section, an affected source with equipment subject to subpart I of this part may elect to comply with either the provisions of § 63.1255 or the provisions of subpart H of this part for all such equipment. The owner or operator shall identify in the Notification of Compliance Status report required by § 63.1260(f) the provisions with which the owner elects to comply.

(5) *Compliance with other regulations for wastewater.* After the compliance dates specified in this section, the owner or operator of an affected wastewater stream that is also subject to provisions in 40 CFR parts 260 through 272 may elect to determine whether this subpart or 40 CFR parts 260 through 272 contain the more stringent control requirements (*e.g.*, design, operation, and inspection requirements for waste management units; numerical treatment standards; etc.) and the more stringent testing, monitoring, recordkeeping and reporting. Compliance with provisions of 40 CFR parts 260 through 272 that are determined to be more stringent than the requirements of this subpart

constitutes compliance with this subpart. For example, provisions of 40 CFR parts 260 through 272 for treatment units that meet the conditions specified in § 63.1256(g)(13) constitute compliance with this subpart. In the Notification of Compliance Status report required by § 63.1260(f), the owner or operator shall identify the more stringent provisions of 40 CFR parts 260 through 272 with which the owner or operator will comply. The owner or operator shall also identify in the Notification of Compliance Status report required by § 63.1260(f) the information and procedures used to make any stringency determinations. If the owner or operator does not elect to determine the more stringent requirements, the owner or operator must comply with both the provisions of 40 CFR parts 260 through 272 and the provisions of this subpart.

(6) *Compliance with subpart PPP of this part.* After the compliance dates specified in this section, an affected source with equipment in a pharmaceutical manufacturing process unit that is also part of an affected source under subpart PPP of this part may elect to demonstrate compliance with § 63.1254 by controlling all process vents in accordance with § 63.1425(b), (c)(1), (c)(3), (d), and/or (f) of subpart PPP of this part. Alternatively, the owner or operator may elect to determine which process vents must be controlled to comply with the percent reduction requirements of § 63.1254 and control only those vents in accordance with § 63.1425(b), (c)(1), (c)(3), (d), and/or (f) of subpart PPP of this part. For any pharmaceutical manufacturing process unit controlled in accordance with the requirements of § 63.1425 of subpart PPP of this part, the owner or operator must also comply with all other requirements in subpart PPP of this part. In the Notification of Compliance Status report required by § 63.1260(f), the owner or operator shall identify which pharmaceutical manufacturing process units are meeting the control requirements for process vents and all other requirements of subpart PPP of this part, and the owner or operator shall describe the calculations and other information used to identify which process vents must be controlled to comply with the percent reduction requirements of § 63.1254, if applicable.

* * * * *

3. Section 63.1251 is amended by:

a. Revising the definitions for "Active ingredient," Annual average concentration," "Construction," "Consumption," "Excipient," "Large control device," "Pharmaceutical manufacturing operations," "Pharmaceutical product," "Primary use," "Process," "Process tank," "Repaired," "Shutdown," "Small control device," "Startup," "Storage tank," and "Vapor-mounted seal";

b. Removing the definition of "Component";

c. Removing the last sentence from the definition of "Wastewater stream";

d. Revising paragraphs (3) and (8) in the definition for "Operating scenario";

e. Adding definitions in alphabetical order for "Combustion device burner," "Dense gas system," "Isolated intermediate," "Maintenance wastewater," "Precursor," "Reconstruction," "Standard batch," "Supplemental gases," and "System flowrate."

The revisions and additions read as follows:

§ 63.1251 Definitions.

* * * * *

Active ingredient means any material that is intended to furnish pharmacological activity or other direct effect in the diagnosis, cure, mitigation, treatment, or prevention of disease, or to affect the structure or any function of the body of man or other animals. This term does not include food, food additives (except vitamins and other materials described by SIC code 2833 or 2834), color additives, cosmetics, in-vitro diagnostic substances, x-ray film, test indicator devices, and medical devices such as implants, artificial joints, surgical bandages, and stitching material.

* * * * *

Annual average concentration, as used in the wastewater provisions in § 63.1256, means the total mass of partially soluble and/or soluble HAP compounds in a wastewater stream during the calendar year divided by the total mass of the wastewater stream discharged during the same calendar year, as determined according to the procedures specified in § 63.1257(e)(1)(i) and (ii).

* * * * *

Combustion device burner means a device designed to mix and ignite fuel and air to provide a flame to heat and oxidize waste organic vapors in a combustion device.

* * * * *

Construction means the onsite fabrication, erection, or installation of an affected source or a PMPU. Addition of new equipment to a PMPU subject to existing source standards does not constitute construction, but it may constitute reconstruction of the affected source or PMPU if it satisfies the definition of "Reconstruction" in this section.

Consumption means the quantity of all HAP raw materials entering a process in excess of the theoretical amount used as reactant, assuming 100 percent stoichiometric conversion. The raw materials include reactants, solvents, and any other additives. If a HAP is generated in the process as well as added as a raw material, consumption includes the quantity generated in the process.

* * * * *

Dense gas system means a conveyance system operated to limit oxygen levels below 12 percent.

* * * * *

Excipient means any substance other than the active drug or product which has been appropriately evaluated for safety and is included in a drug delivery system to either aid the processing of the drug delivery system during its manufacture; protect, support, or enhance stability, bioavailablity, or patient acceptability; assist in product identification; or enhance any other attribute of the overall safety and effectiveness of the drug delivery system during storage or use.

* * * * *

Isolated intermediate is obtained as the product of a process. An isolated intermediate is usually a product of a chemical synthesis, fermentation, or biological extraction process; several different isolated intermediates may be produced in the manufacture of a finished dosage form of a drug. Precursors, active ingredients, or finished dosage forms are considered isolated intermediates. An isolated intermediate is stored before subsequent processing. Storage occurs at any time the intermediate is placed in equipment used solely for storage, such as drums, totes, day tanks, and storage tanks. The storage of an isolated intermediate marks the end of a process.

* * * * *

Large control device means a control device that controls total HAP emissions of greater than or equal to 10 tons/yr, before control.

* * * * *

Maintenance wastewater means wastewater generated by the draining of process fluid from components in the pharmaceutical manufacturing process unit into an individual drain system in preparation for or during maintenance activities. Maintenance wastewater can be generated during planned and unplanned shutdowns and during periods not associated with a shutdown. Examples of activities that can generate maintenance wastewater include

descaling of heat exchanger tubing bundles, cleaning of distillation column traps, draining of pumps into an individual drain system, and draining of portions of the pharmaceutical manufacturing process unit for repair. Wastewater from cleaning operations is not considered maintenance wastewater.

* * * * *

Operating scenario, * * *

(3) The applicable control requirements of this subpart, including the level of required control, and for vents, the level of control for each vent;

* * * * *

(8) For reporting purposes, a change to any of these elements not previously reported, except for paragraph (5) of this definition, shall constitute a new operating scenario.

* * * * *

Pharmaceutical manufacturing operations means the facilitywide collection of PMPUs and any other equipment such as heat exchanger systems, wastewater and waste management units, or cooling towers that are not associated with an individual PMPU, but that are located at a facility for the purpose of manufacturing pharmaceutical products and are under common control.

* * * * *

Pharmaceutical product means any of the following materials, excluding any material that is a nonreactive solvent, excipient, binder, or filler, or any material that is produced in a chemical manufacturing process unit that is subject to the requirements of subparts F and G of this part 63:

(1) Any material described by the standard industrial classification (SIC) code 2833 or 2834; or

(2) Any material whose manufacturing process is described by North American Industrial Classification System (NAICS) code 325411 or 325412; or

(3) A finished dosage form of a drug, for example, a tablet, capsule, solution, etc.; or

(4) Any active ingredient or precursor that is produced at a facility whose primary manufacturing operations are described by SIC code 2833 or 2834; or

(5) At a facility whose primary operations are not described by SIC code 2833 or 2834, any material whose primary use is as an active ingredient or precursor.

* * * * *

Precursor means a material that is manufactured to undergo further chemical change or processing to ultimately manufacture an active ingredient or finished dosage form of a drug. This term does not include commodity chemicals produced by the synthetic organic chemical manufacturing industry.

* * * * *

Primary use means 50 percent or more of a material is used for a particular purpose.

Process means all equipment which collectively function to produce a pharmaceutical product or isolated intermediate (which is also a pharmaceutical product). A process may consist of one or more unit operations. For the purposes of this subpart, process includes any, all, or a combination of reaction, recovery, separation, purification, or other activity, operation, manufacture, or treatment which are used to produce a pharmaceutical product or isolated intermediate. Cleaning operations conducted are considered part of the process. Nondedicated solvent recovery operations located within a contiguous area within the affected source are considered single processes. A storage tank that is used to accumulate used solvent from multiple batches of a single process for purposes of solvent recovery does not represent the end of the process. Nondedicated formulation operations occurring within a contiguous area are considered a single process that is used to formulate numerous materials and/or products. Quality assurance and quality control laboratories are not considered part of any process. Ancillary activities are not considered a process or part of any process. Ancillary activities include boilers and incinerators (not used to comply with the provisions of § 63.1253, § 63.1254, or § 63.1256(h)), chillers and refrigeration systems, and other equipment and activities that are not directly involved (*i.e.*, they operate within a closed system and materials are not combined with process fluids) in the processing of raw materials or the manufacturing of a pharmaceutical product.

* * * * *

Process tank means a tank that is used to collect material discharged from a feedstock storage tank or unit operation and transfer this material to another unit operation within the process or to a product storage tank. Surge control vessels and bottoms receivers that fit these conditions are considered process tanks. Product storage tanks are considered process tanks and are part of the PMPU that produce the stored material. For the purposes of this subpart, vents from process tanks are considered process vents.

* * * * *

Reconstruction, as used in § 63.1250(b), shall have the meaning given in § 63.2, except that "affected or previously unaffected stationary source" shall mean either "affected facility" or "PMPU." As used in § 63.1254(a)(3)(ii)(A)(*3*), reconstruction shall have the meaning given in § 63.2, except that "source" shall mean "control device."

* * * * *

Repaired means that equipment:

(1) Is adjusted, or otherwise altered, to eliminate a leak as defined in the applicable paragraphs of § 63.1255, and;

(2) Unless otherwise specified in applicable provisions of § 63.1255, is monitored as specified in § 63.180(b) and (c) as appropriate, to verify that emissions from the equipment are below the applicable leak definition.

* * * * *

Shutdown means the cessation of operation of a continuous process for any purpose. Shutdown also means the cessation of a batch process or any related individual piece of equipment required or used to comply with this subpart as a result of a malfunction or for replacement of equipment, repair, or any other purpose not excluded from this definition. Shutdown also applies to emptying and degassing storage vessels. Shutdown does not apply to cessation of a batch process at the end of a campaign, for routine maintenance, for rinsing or washing of equipment between batches, or other routine operations.

* * * * *

Small control device means a control device that controls total HAP emissions of less than 10 tons/yr, before control.

* * * * *

Standard batch means a batch process operated within a range of operating conditions that are documented in an operating scenario. Emissions from a standard batch are based on the operating conditions that result in highest emissions. The standard batch defines the uncontrolled and controlled emissions for each emission episode defined under the operating scenario.

Startup means the setting in operation of a continuous process unit for any purpose; the first time a new or reconstructed batch process unit begins production; for new equipment added, including equipment used to comply with this subpart, the first time the equipment is put into operation; or, for the introduction of a new product/process, the first time the product or process is run in equipment. For batch process units, startup does not apply to the first time the equipment is put into operation at the start of a campaign to

produce a product that has been produced in the past, after a shutdown for maintenance, or when the equipment is put into operation as part of a batch within a campaign. As used in § 63.1255, startup means the setting in operation of a piece of equipment or a control device that is subject to this subpart.

Storage tank means a tank or other vessel that is used to store organic liquids that contain one or more HAP as raw material feedstocks. Storage tank also means a tank or other vessel in a tank farm that receives and accumulates used solvent from multiple batches of a process or processes for purposes of solvent recovery. The following are not considered storage tanks for the purposes of this subpart:

(1) Vessels permanently attached to motor vehicles such as trucks, railcars, barges, or ships;

(2) Pressure vessels designed to operate in excess of 204.9 kilopascals and without emissions to the atmosphere;

(3) Vessels storing organic liquids that contain HAP only as impurities;

(4) Wastewater storage tanks; and

(5) Process tanks (including product tanks and isolated intermediate tanks).

Supplemental gases are any gaseous streams that are not defined as process vents, or closed-vent systems from wastewater management and treatment units, storage tanks, or equipment components and that contain less than 50 ppmv TOC, as determined through process knowledge, that are introduced into vent streams or manifolds. Air required to operate combustion device burner(s) is not considered supplemental gas.

* * * * *

System flowrate means the flowrate of gas entering the control device.

* * * * *

Vapor-mounted seal means a continuous seal that completely covers the annular space between the wall of the storage tank or waste management unit and the edge of the floating roof and is mounted such that there is a vapor space between the stored liquid and the bottom of the seal.

* * * * *

4. Section 63.1252 is amended by:

a. Revising the introductory paragraph;

b. Revising paragraph (d)(2);

c. Revising the first sentence in paragraph (d)(5);

d. Revising paragraph (d)(6);

e. Revising paragraph (e) introductory text;

f. Revising the second sentence in paragraph (e)(1); and

g. Adding paragraph (e)(4).

The revisions and additions read as follows:

§ 63.1252 Standards: General.

Each owner or operator of any affected source subject to the provisions of this subpart shall control HAP emissions to the level specified in this section on and after the compliance dates specified in § 63.1250(f). Initial compliance with the emission limits is demonstrated in accordance with the provisions of § 63.1257, and continuous compliance is demonstrated in accordance with the provisions of § 63.1258.

* * * * *

(d) * * *

(2) Only emission sources subject to the requirements of § 63.1253(b)(1) and (c)(1) or § 63.1254(a)(1)(i) or (a)(3) may be included in any averaging group.

* * * * *

(5) Emission points controlled to comply with a State or Federal rule other than this subpart may not be credited in an emission averaging group, unless the level of control has been increased after November 15, 1990 above what is required by the other State or Federal rule. * * *

(6) Not more than 20 processes subject to § 63.1254(a)(2), and 20 storage tanks subject to § 63.1253(b)(1) or (c)(1)(i) at an affected source may be included in an emissions averaging group.

* * * * *

(e) *Pollution prevention alternative.* Except as provided in paragraph (e)(1) of this section, an owner or operator may choose to meet the pollution prevention alternative requirement specified in either paragraph (e)(2) or (3) of this section for any PMPU or for any situation described in paragraph (e)(4) of this section, in lieu of the requirements specified in §§ 63.1253, 63.1254, 63.1255, and 63.1256. Compliance with paragraphs (e)(2) and (3) of this section shall be demonstrated through the procedures in § 63.1257(f). Any PMPU for which the owner or operator seeks to comply by using the pollution prevention alternative shall begin with the same starting material(s) and end with the same product(s). The owner or operator may not comply with the pollution prevention alternative by eliminating any steps of a process by transferring the step offsite (to another manufacturing location).

(1) * * * The hydrogen halides that are generated as a result of combustion control of emissions must be controlled according to the requirements of paragraph (g)(1) of this section.

* * * * *

(4) The owner or operator may comply with the requirements in either paragraph (e)(2) or (3) of this section for a series of processes, including situations where multiple processes are merged, subject to the following conditions:

(i) The baseline period shall be a single year beginning no earlier than the 1992 calendar year.

(ii) The term "PMPU" shall have the meaning provided in § 63.1251 except that the baseline and modified PMPUs may include multiple processes (*i.e.*, precursors, active ingredients, and final dosage form) if the owner or operator demonstrates to the satisfaction of the Administrator that the multiple processes were merged after the baseline period into an existing process or processes.

(iii) Nondedicated formulation and solvent recovery processes may not be merged with any other processes.

5. Section 63.1253 is amended by:

a. Revising paragraph (a);

b. Revising paragraph (d); and

c. Adding paragraph (f).

The revisions and additions read as follows:

§ 63.1253 Standards: Storage tanks.

(a) Except as provided in paragraphs (d), (e), and (f) of this section, the owner or operator of a storage tank meeting the criteria of paragraph (a)(1) of this section is subject to the requirements of paragraph (b) of this section. Except as provided in paragraphs (d), (e), and (f) of this section, the owner or operator of a storage tank meeting the criteria of paragraph (a)(2) of this section is subject to the requirements of paragraph (c) of this section. Compliance with the provisions of paragraphs (b) and (c) of this section is demonstrated using the initial compliance procedures in § 63.1257(c) and the monitoring requirements in § 63.1258.

(1) A storage tank with a design capacity greater than or equal to 38 m^3 but less than 75 m^3 storing a liquid for which the maximum true vapor pressure of total HAP is greater than or equal to 13.1 kPa.

(2) A storage tank with a design capacity greater than or equal to 75 m^3 storing a liquid for which the maximum true vapor pressure of total HAP is greater than or equal to 13.1 kPa.

* * * * *

(d) As an alternative standard, the owner or operator of an existing or new affected source may comply with the storage tank standards by routing storage tank vents to a combustion control device achieving an outlet TOC concentration, as calibrated on methane or the predominant HAP, of 20 ppmv or

less, and an outlet concentration of hydrogen halides and halogens of 20 ppmv or less. If the owner or operator is routing emissions to a noncombustion control device, it must achieve an outlet TOC concentration, as calibrated on methane or the predominant HAP, of 50 ppmv or less, and an outlet concentration of hydrogen halides and halogens of 50 ppmv or less. Compliance with the outlet concentrations shall be determined by the initial compliance procedures of § 63.1257(c)(4) and the continuous emission monitoring requirements of § 63.1258(b)(5).

* * * * *

(f) *Vapor balancing alternative.* As an alternative to the requirements in paragraphs (b) and (c) of this section, the owner or operator of an existing or new affected source may implement vapor balancing in accordance with paragraphs (f)(1) through (7) of this section.

(1) The vapor balancing system must be designed and operated to route organic HAP vapors displaced from loading of the storage tank to the railcar or tank truck from which the storage tank is filled.

(2) Tank trucks and railcars must have a current certification in accordance with the U.S. Department of Transportation (DOT) pressure test requirements of 49 CFR part 180 for tank trucks and 49 CFR 173.31 for railcars.

(3) Hazardous air pollutants must only be unloaded from tank trucks or railcars when vapor collection systems are connected to the storage tank's vapor collection system.

(4) No pressure relief device on the storage tank, or on the railcar, or tank truck shall open during loading or as a result of diurnal temperature changes (breathing losses).

(5) Pressure relief devices on affected storage tanks must be set to no less than 2.5 psig at all times to prevent breathing losses. The owner or operator shall record the setting as specified in § 63.1259(b)(12) and comply with the following requirements for each pressure relief valve:

(i) The pressure relief valve shall be monitored quarterly using the method described in § 63.180(b).

(ii) An instrument reading of 500 ppmv or greater defines a leak.

(iii) When a leak is detected, it shall be repaired as soon as practicable, but no later than 5 days after it is detected, and the owner or operator shall comply with the recordkeeping requirements of § 63.1255(g)(4)(i) through (iv).

(6) Railcars or tank trucks that deliver HAPs to an affected storage tank must be reloaded or cleaned at a facility that utilizes one of the following control techniques:

(i) The railcar or tank truck must be connected to a closed-vent system with a control device that reduces inlet emissions of HAP by 90 percent by weight or greater; or

(ii) A vapor balancing system designed and operated to collect organic HAP vapor displaced from the tank truck or railcar during reloading must be used to route the collected HAP vapor to the storage tank from which the liquid being transferred originated.

(7) The owner or operator of the facility where the railcar or tank truck is reloaded or cleaned must comply with the following requirements:

(i) Submit to the owner or operator of the affected storage tank and to the Administrator a written certification that the reloading or cleaning facility will meet the requirements of this section. The certifying entity may revoke the written certification by sending a written statement to the owner or operator of the affected storage tank giving at least 90 days notice that the certifying entity is rescinding acceptance of responsibility for compliance with the requirements of this paragraph.

(ii) If complying with paragraph (f)(6)(i) of this section, demonstrate initial compliance in accordance with § 63.1257(c), demonstrate continuous compliance in accordance with § 63.1258, keep records as specified in § 63.1259, and prepare reports as specified in § 63.1260.

(iii) If complying with paragraph (f)(6)(ii) of this section, keep records of:

(A) The equipment to be used and the procedures to be followed when reloading the railcar or tank truck and displacing vapors to the storage tank from which the liquid originates, and

(B) Each time the vapor balancing system is used to comply with paragraph (f)(6)(ii) of this section.

6. Section 63.1254 is revised to read as follows:

§ 63.1254 Standards: Process vents.

(a) *Existing sources.* For each process, the owner or operator of an existing affected source must comply with the requirements in either paragraphs (a)(1) and (3) of this section or paragraphs (a)(2) and (3) of this section. Initial compliance with the required emission limits or reductions in paragraphs (a)(1) through (3) of this section is demonstrated in accordance with the initial compliance procedures described in § 63.1257(d), and continuous compliance is demonstrated in accordance with the monitoring requirements described in § 63.1258.

(1) *Process-based emission reduction requirement.*

(i) Uncontrolled HAP emissions from the sum of all process vents within a process that are not subject to the requirements of paragraph (a)(3) of this section shall be reduced by 93 percent or greater by weight, or as specified in paragraph (a)(1)(ii) of this section. Notification of changes in the compliance method shall be reported according to the procedures in § 63.1260(h).

(ii) Any one or more vents within a process may be controlled in accordance with any of the procedures in paragraphs (a)(1)(ii)(A) through (D) of this section. All other vents within the process must be controlled as specified in paragraph (a)(1)(i) of this section.

(A) To outlet concentrations less than or equal to 20 ppmv as TOC and less than or equal to 20 ppmv as hydrogen halides and halogens;

(B) By a flare that meets the requirements of § 63.11(b);

(C) By a control device specified in § 63.1257(a)(4); or

(D) In accordance with the alternative standard specified in paragraph (c) of this section.

(2) *Process-based annual mass limit.*

(i) Actual HAP emissions from the sum of all process vents within a process must not exceed 900 kilograms (kg) in any 365-day period.

(ii) Actual HAP emissions from the sum of all process vents within processes complying with paragraph (a)(2)(i) of this section are limited to a maximum of 1,800 kg in any 365-day period.

(iii) Emissions from vents that are subject to the requirements of paragraph (a)(3) of this section and emissions from vents that are controlled in accordance with the procedures in paragraph (c) of this section may be excluded from the sums calculated in paragraphs (a)(2)(i) and (ii) of this section.

(iv) The owner or operator may switch from compliance with paragraph (a)(2) of this section to compliance with paragraph (a)(1) of this section only after at least 1 year of operation in compliance with paragraph (a)(2) of this section. Notification of such a change in the compliance method shall be reported according to the procedures in § 63.1260(h).

(3) *Individual vent emission reduction requirements.*

(i) Except as provided in paragraph (a)(3)(ii) of this section, uncontrolled HAP emissions from a process vent must be reduced by 98 percent or in accordance with any of the procedures

in paragraphs (a)(1)(ii)(A) through (D) of this section if the uncontrolled HAP emissions from the vent exceed 25 tons per year, and the flow-weighted average flowrate (FR_a) calculated using Equation 1 of this subpart is less than or equal to the flowrate index (FRI) calculated using Equation 2 of this subpart.

$$FR_a = \frac{\sum_{i=1}^{n}(D_i)(FR_i)}{\sum_{i=1}^{n} D_i} \quad \text{(Eq. 1)}$$

$$FRI = 0.02 * (HL) - 1{,}000 \quad \text{(Eq. 2)}$$

Where:

FR_a=flow-weighted average flowrate for the vent, scfm
D_i=duration of each emission event, min
FR_i=flowrate of each emission event, scfm
n=number of emission events
FRI=flowrate index, scfm
HL=annual uncontrolled HAP emissions, lb/yr, as defined in § 63.1251

(ii) *Grandfathering provisions.* As an alternative to the requirements in paragraph (a)(3)(i) of this section, the owner or operator may comply with the provisions in paragraphs (a)(3)(ii)(A), (B), or (C) of this section, if applicable.

(A) *Control device operation.* If the owner or operator can demonstrate that a process vent is controlled by a control device meeting the criteria specified in paragraph (a)(3)(ii)(A)(*1*) of this section, then the control device is required to be operated according to paragraphs (a)(3)(ii)(A)(*2*), (*3*), and (*4*) of this section:

(*1*) The control device was installed on any process vent that met the conditions of paragraph (a)(3)(i) of this section on or before April 2, 1997, and was operated to reduce uncontrolled emissions of total HAP by greater than or equal to 93 percent by weight, but less than 98 percent by weight;

(*2*) The device must be operated to reduce inlet emissions of total HAP by 93 percent or by the percent reduction specified for that control device in any preconstruction permit issued pursuant to regulations approved or promulgated through rulemaking under title I (including parts C or D) of the Clean Air Act, whichever is greater;

(*3*) The device must be replaced or upgraded to achieve at least 98 percent reduction of HAP or meet any of the conditions specified in paragraphs (a)(1)(ii)(A) through (D) of this section upon reconstruction or replacement.

(*4*) The device must be replaced or upgraded to achieve at least 98 percent reduction of HAP or meet any of the conditions specified in paragraphs (a)(1)(ii)(A) through (D) of this section by April 2, 2007, or 15 years after issuance of the preconstruction permit, whichever is later.

(B) *Process operations.* If a process meets all of the conditions specified in paragraphs (a)(3)(ii)(B)(*1*) through (*3*) of this section, the required level of control for the process is the level that was achieved on or before April 2, 1997. This level of control is demonstrated using the same procedures that are used to demonstrate compliance with paragraph (a)(1) of this section.

(*1*) At least one vent in the process met the conditions of paragraph (a)(3)(i) of this section on or before April 2, 1997; and

(*2*) The overall control for the process on or before April 2, 1997 was greater than or equal to 93 percent by weight, but less than 98 percent by weight; and

(*3*) The production-indexed HAP consumption factor for the 12-month period in which the process was operated prior to the compliance date is less than one-half of the 3-year average baseline value established no earlier than the 1987 through 1989 calendar years.

(C) *Hydrogenation vents.* Processes meeting the conditions of paragraphs (a)(3)(ii)(C)(*1*) through (*3*) of this section are required to be operated to maintain the level of control achieved on or before April 2, 1997. For all other processes meeting the conditions of paragraph (a)(3)(ii)(C)(*3*) of this section, uncontrolled HAP emissions from the sum of all process vents within the process must be reduced by 95 percent or greater by weight.

(*1*) Processes containing a process vent that met the conditions of paragraph (a)(3)(i) of this section on or before April 2, 1997; and

(*2*) Processes that are controlled to greater than or equal to 93 percent by weight, but less than 98 percent by weight; and

(*3*) Processes with a hydrogenation vent that, in conjunction with all other process vents from the process that do not meet the conditions of paragraph (a)(3)(i) of this section, cannot meet the requirements of paragraph (a)(1) or (2) of this section.

(b) *New sources.* (1) Except as provided in paragraph (b)(2) of this section, uncontrolled HAP emissions from the sum of all process vents within a process at a new affected source shall be reduced by 98 percent or greater by weight or controlled in accordance with any of requirements of paragraphs (a)(1)(ii)(A) through (D) of this section. Initial compliance with the required emission limit or reduction is demonstrated in accordance with the initial compliance procedures in § 63.1257(d), and continuous compliance is demonstrated in accordance with the monitoring requirements described in § 63.1258.

(2) *Annual mass limit.* The actual HAP emissions from the sum of all process vents for which the owner or operator is not complying with paragraph (b)(1) of this section are limited to 900 kg in any 365-day period.

(c) *Alternative standard.* As an alternative standard, the owner or operator of an existing or new affected source may comply with the process vent standards by routing vents from a process to a combustion control device achieving an outlet TOC concentration, as calibrated on methane or the predominant HAP, of 20 ppmv or less, and an outlet concentration of hydrogen halides and halogens of 20 ppmv or less. If the owner or operator is routing emissions to a noncombustion control device, it must achieve an outlet TOC concentration, as calibrated on methane or the predominant HAP, of 50 ppmv or less, and an outlet concentration of hydrogen halides and halogens of 50 ppmv or less. Any process vents within a process that are not routed to this control device must be controlled in accordance with the provisions of paragraph (a) or (b) of this section, as applicable. Initial compliance with the outlet concentrations is demonstrated in accordance with the initial compliance procedures described in § 63.1257(d)(1)(iv), and continuous compliance is demonstrated in accordance with the emission monitoring requirements described in § 63.1258(b)(5).

7. Section 63.1255 is amended by:

a. Revising paragraph (a)(1);

b. Revising paragraph (a)(7);

c. Revising paragraphs (a)(10)(ii) and (iii);

d. Adding paragraphs (a)(11) and (12);

e. Revising paragraph (b);

f. Revising paragraph (c)(2)(i);

g. Revising "paragraph (b)(1)(v)" to read "paragraph (b)(4)(i)" in paragraph (c)(3)(i);

h. Revising the definitions of the terms "P_L" and "P_T" following Equation 3 in paragraph (c)(4)(iv);

i. Removing the definition of the term "P_S" following Equation 3 in paragraph (c)(4)(iv) and adding the definition of the term "P_S" following Equation 3 in paragraph (c)(4)(iv);

j. Revising "paragraph (b)(1)(vi)" to read "paragraph (b)(4)(ii)" in paragraph (c)(5)(i)(B);

k. Revising paragraphs (c)(5)(vi)(B) and (C);
l. Revising paragraphs (c)(6) and (7);
m. Revising paragraph (c)(9);
n. Revising paragraphs (d)(1)(i) and (ii);
o. Revising paragraph (e)(2);
p. Revising paragraph (e)(3) introductory text;
q. Revising paragraph (e)(3)(i);
r. Revising the definition of the term "$\%V_L$" following Equation 5 in paragraph (e)(6)(ii);
s. Revising "paragraph (b)(1)(v)" to read "paragraph (b)(4)(i)" in paragraph (e)(7)(i);
t. Adding paragraphs (e)(7)(iii)(A) through (C);
u. Revising the second sentence in paragraph (e)(9);
v. Revising paragraph (f);
w. Revising paragraph (g)(2) introductory text;
x. Revising paragraph (g)(2)(i)(A);
y. Removing paragraph (g)(2)(v), redesignating paragraphs (g)(2)(vi) through (ix) as paragraphs (g)(2)(v) through (viii), and revising redesignated paragraphs (g)(2)(vi) and (viii);
z. Revising the first sentence in paragraph (g)(3);
aa. Revising paragraph (g)(4) introductory text;
bb. Revising paragraph (g)(4)(iv);
cc. Revising paragraph (g)(4)(v)(A);
dd. Revising "§ 63.174(c)" to read "§ 63.174(c)(1)(i) and (c)(2)(ii)" in the first sentence in paragraph (g)(4)(vii)(B);
ee. Revising "§§ 63.178(c)(3)(ii) and (c)(3)(iii)" to read "§ 63.178(c)(3)(ii) and (iii)" in the first sentence in paragraph (g)(4)(viii);
ff. Revising the first sentence in paragraph (g)(5) introductory text;
gg. Removing paragraph (g)(5)(ii), redesignating paragraphs (g)(5)(iii) through (vi) as paragraphs (g)(5)(ii) through (v), and revising "appendix" to read "section" in the second sentence of redesignated paragraph (g)(5)(ii);
hh. Revising paragraph (g)(6) heading;
ii. Revising the first sentence in paragraph (g)(7) introductory text;
jj. Revising "paragraph (b)(1)(vi)" to read "paragraph (b)(4)(ii)" in paragraph (g)(7)(i)(D);
kk. Revising paragraph (h)(2) heading;
ll. Revising paragraph (h)(2)(i)(B);
mm. Revising "paragraph (b)(1)(ix)" to read "paragraph (b)(4)(iv)" in paragraph (h)(2)(ii);
nn. Revising "paragraph (b)(1)(vi)" to read "paragraph (b)(4)(ii)" in paragraph (h)(2)(iii)(B);
oo. Revising paragraph (h)(2)(iv);
pp. Revising "§ 63.1250(e)" to read "§ 63.1250(f)" in the second sentence in paragraph (h)(3)(i);
qq. Revising paragraph (h)(3)(ii) introductory text;
rr. Revising paragraphs (h)(3)(ii)(C) and (D); and
ss. Revising paragraph (h)(3)(iv);

The revisions and additions read as follows:

§ 63.1255 Standards: Equipment leaks.

(a) * * *

(1) The provisions of this section apply to pumps, compressors, agitators, pressure relief devices, sampling connection systems, open-ended valves or lines, valves, connectors, instrumentation systems, control devices, and closed-vent systems required by this section that are intended to operate in organic hazardous air pollutant service 300 hours or more during the calendar year within a source subject to the provisions of this subpart.

* * * * *

(7) Equipment to which this section applies shall be identified such that it can be distinguished readily from equipment that is not subject to this section. Identification of the equipment does not require physical tagging of the equipment. For example, the equipment may be identified on a plant site plan, in log entries, or by designation of process boundaries by some form of weatherproof identification. If changes are made to the affected source subject to the leak detection requirements, equipment identification for each type of component shall be updated, if needed, within 90 calendar days, or by the next Periodic Report, following the end of the monitoring period for that component, whichever is later.

* * * * *

(10) * * *

(ii) The identification on a valve in light liquid or gas/vapor service may be removed after it has been monitored as specified in paragraph (e)(7)(iii) of this section, and no leak has been detected during the follow-up monitoring.

(iii) The identification on equipment, except on a valve in light liquid or gas/vapor service, may be removed after it has been repaired.

(11) Except as provided in paragraph (a)(11)(i) of this section, all terms in this subpart that define a period of time for completion of required tasks (e.g., weekly, monthly, quarterly, annual) refer to the standard calendar periods unless specified otherwise in the section or paragraph that imposes the requirement.

(i) If the initial compliance date does not coincide with the beginning of the standard calendar period, an owner or operator may elect to utilize a period beginning on the compliance date, or may elect to comply in accordance with the provisions of paragraph (a)(11)(ii) or (iii) of this section.

(ii) Time periods specified in this subpart for completion of required tasks may be changed by mutual agreement between the owner or operator and the Administrator, as specified in subpart A of this part. For each time period that is changed by agreement, the revised period shall remain in effect until it is changed. A new request is not necessary for each recurring period.

(iii) Except as provided in paragraph (a)(11)(i) or (ii) of this section, where the period specified for compliance is a standard calendar period, if the initial compliance date does not coincide with the beginning of the calendar period, compliance shall be required according to the schedule specified in paragraph (a)(11)(iii)(A) or (B) of this section, as appropriate.

(A) Compliance shall be required before the end of the standard calendar period within which the initial compliance date occurs if there remain at least 3 days for tasks that must be performed weekly, at least 2 weeks for tasks that must be performed monthly, at least 1 month for tasks that must be performed each quarter, or at least 3 months for tasks that must be performed annually; or

(B) In all other cases, compliance shall be required before the end of the first full standard calendar period after the period within which the initial compliance date occurs.

(iv) In all instances where a provision of this subpart requires completion of a task during each of multiple successive periods, an owner or operator may perform the required task at any time during each period, provided the task is conducted at a reasonable interval after completion of the task during the previous period.

(12) In all cases where the provisions of this subpart require an owner or operator to repair leaks by a specified time after the leak is detected, it is a violation of this section to fail to take action to repair the leaks within the specified time. If action is taken to repair the leaks within the specified time, failure of that action to successfully repair the leak is not a violation of this section. However, if the repairs are unsuccessful, a leak is detected and the owner or operator shall take further action as required by applicable provisions of this section.

(b) *References.* (1) The owner or operator of a source subject to this section shall comply with the provisions of subpart H of this part, as specified in paragraphs (b)(2) through (4) of this section. The term "process unit" as used in subpart H of this part

shall be considered to be defined the same as "group of processes" for sources subject to this subpart GGG. The term "fuel gas system," as used in subpart H of this part, shall not apply for the purposes of this subpart GGG.

(2) Sections 63.160, 63.161, 63.162, 63.163, 63.167, 63.168, 63.170, 63.173, 63.175, 63.176, 63.181, and 63.182 shall not apply for the purposes of this subpart GGG. The owner or operator shall comply with the provisions specified in paragraphs (b)(2)(i) through (viii) of this section.

(i) Sections 63.160 and 63.162 shall not apply; instead, the owner or operator shall comply with paragraph (a) of this section;

(ii) Section 63.161 shall not apply; instead, the owner or operator shall comply with § 63.1251;

(iii) Sections 63.163 and 63.173 shall not apply; instead, the owner or operator shall comply with paragraph (c) of this section;

(iv) Section 63.167 shall not apply; instead, the owner or operator shall comply with paragraph (d) of this section;

(v) Section 63.168 shall not apply; instead, the owner or operator shall comply with paragraph (e) of this section;

(vi) Section 63.170 shall not apply; instead, the owner or operator shall comply with § 63.1254;

(vii) Section 63.181 shall not apply; instead, the owner or operator shall comply with paragraph (g) of this section; and

(viii) Section 63.182 shall not apply; instead, the owner or operator shall comply with paragraph (h) of this section.

(3) The owner or operator shall comply with §§ 63.164, 63.165, 63.166, 63.169, 63.177, and 63.179 in their entirety, except that when these sections reference other sections of subpart H of this part, the references shall mean those sections as specified in paragraphs (b)(2) and (4) of this section. Section 63.164 applies to compressors. Section 63.165 applies to pressure relief devices in gas/vapor service. Section 63.166 applies to sampling connection systems. Section 63.169 applies to pumps, valves, connectors, and agitators in heavy liquid service; instrumentation systems; and pressure relief devices in liquid service. Section 63.177 applies to general alternative means of emission limitation. Section 63.179 applies to alternative means of emission limitation for enclosed-vented process units.

(4) The owner or operator shall comply with §§ 63.171, 63.172, 63.174, 63.178, and 63.180 with the differences specified in paragraphs (b)(4)(i) through (vi) of this section.

(i) Section 63.171, shall apply, except § 63.171(a) shall not apply. Instead, delay of repair of equipment for which leaks have been detected is allowed if one of the following conditions exists:

(A) The repair is technically infeasible without a process shutdown. Repair of this equipment shall occur by the end of the next scheduled process shutdown.

(B) The owner or operator determines that repair personnel would be exposed to an immediate danger if attempting to repair without a process shutdown. Repair of this equipment shall occur by the end of the next scheduled process shutdown.

(ii) Section 63.172, shall apply for closed-vent systems used to comply with this section, and for control devices used to comply with this section only, except:

(A) Section 63.172(k) and (l) shall not apply. The owner or operator shall instead comply with paragraph (f) of this section.

(B) Owners or operators may, instead of complying with the provisions of § 63.172(f), design a closed-vent system to operate at a pressure below atmospheric pressure. The system shall be equipped with at least one pressure gage or other pressure measurement device that can be read from a readily accessible location to verify that negative pressure is being maintained in the closed-vent system when the associated control device is operating.

(iii) Section 63.174, shall apply except:

(A) Section 63.174(f), (g), and (h) shall not apply. Instead of § 63.174(f), (g), and (h), the owner or operator shall comply with paragraph (f) of this section. Section 63.174(b)(3) shall not apply. Instead of § 63.174(b)(3), the owner or operator shall comply with paragraphs (b)(3)(iii)(B) through (F) of this section.

(B) If the percent leaking connectors in a group of processes was greater than or equal to 0.5 percent during the initial monitoring period, monitoring shall be performed once per year until the percent leaking connectors is less than 0.5 percent.

(C) If the percent leaking connectors in the group of processes was less than 0.5 percent, but equal to or greater than 0.25 percent, during the initial or last required monitoring period, the owner or operator may elect to monitor once every 4 years. An owner or operator may comply with the requirements of this paragraph by monitoring at least 40 percent of the connectors in the first 2 years and the remainder of the connectors within the next 2 years. The percent leaking connectors will be calculated for the total of all required monitoring performed during the 4-year period.

(D) Except as provided in paragraph (b)(4)(iii)(B) of this section, if leaking connectors comprise at least 0.5 percent but less than 1.0 percent of the connectors during the last monitoring period, the owner or operator shall monitor at least once every 2 years for the next monitoring period. At the end of that 2-year monitoring period, the owner or operator shall monitor once per year if the percent leaking connectors is greater than or equal to 0.5 percent; if the percent leaking connectors is less than 0.5 percent, the owner or operator shall monitor in accordance with paragraph (b)(4)(iii)(C) or (F) of this section, as appropriate.

(E) If an owner or operator determines that 1 percent or greater of the connectors in a group of processes are leaking, the owner or operator shall monitor the connectors once per year. The owner or operator may elect to use the provisions of paragraph (b)(4)(iii)(C), (D), or (F) of this section, as appropriate, after a monitoring period in which less than 1 percent of the connectors are determined to be leaking.

(F) The owner or operator may elect to perform monitoring once every 8 years if the percent leaking connectors in the group of processes was less than 0.25 percent during the initial or last required monitoring period. An owner or operator shall monitor at least 50 percent of the connectors in the first 4 years and the remainder of the connectors within the next 4 years. If the percent leaking connectors in the first 4 years is equal to or greater than 0.35 percent, the monitoring program shall revert at that time to the appropriate monitoring frequency specified in paragraph (b)(4)(iii)(C), (D), or (E) of this section.

(iv) Section 63.178, shall apply except:

(A) Section 63.178(b), requirements for pressure testing, may be applied to all processes (not just batch processes) and to supply lines between storage and processing areas.

(B) For pumps, the phrase "at the frequencies specified in Table 1 of this subpart" in § 63.178(c)(iii) shall mean "quarterly" for the purposes of this subpart.

(v) Section 63.180 shall apply except § 63.180(b)(4)(ii)(A) through (C) shall not apply. Instead, calibration gases shall be a mixture of methane and air at a concentration of approximately, but less than, 10,000 parts per million methane for agitators; 2,000 parts per million for pumps; and 500 parts per

million for all other equipment, except as provided in § 63.180(b)(4)(iii).

(vi) When §§ 63.171, 63.172, 63.174, 63.178, and 63.180 reference other sections in subpart H of this part, the references shall mean those sections specified in paragraphs (b)(2) and (b)(4)(i) through (v) of this section, as applicable.

(c) * * *

(2)(i) *Monitoring.* Each pump and agitator subject to this section shall be monitored quarterly to detect leaks by the method specified in § 63.180(b) except as provided in § 63.177, § 63.178(b) paragraph (f) of this section, and paragraphs (c)(5) through (9) of this section.

(4) * * *

(iv) * * *

P = number of pumps found leaking as determined through periodic monitoring as required in paragraphs (c)(2)(i) and (ii) of this section

P_T = total pumps in organic HAP service, including those meeting the criteria in paragraphs (c)(5) and (6) of this section

P_S = number of pumps in a continuous process leaking within 1 quarter of startup during the current monitoring period

(5) * * *

(vi) * * *

(B) If indications of liquids dripping from the pump/agitator seal exceed the criteria established in paragraph (c)(5)(vi)(A) of this section, or if, based on the criteria established in paragraph (c)(5)(vi)(A) of this section, the sensor indicates failure of the seal system, the barrier fluid system, or both, a leak is detected.

(C) When a leak is detected, it shall be repaired as soon as practicable, but not later than 15 calendar days after it is detected, except as provided in paragraph (b)(4)(i) of this section.

* * * * *

(6) Any pump/agitator that is designed with no externally actuated shaft penetrating the pump/agitator housing is exempt from the requirements of paragraphs (c)(1) through (3) of this section.

(7) Any pump/agitator equipped with a closed-vent system capable of capturing and transporting any leakage from the seal or seals back to the process or to a control device that complies with the requirements of paragraph (b)(4)(ii) of this section is exempt from the requirements of paragraphs (c)(2) through (5) of this section.

* * * * *

(9) If more than 90 percent of the pumps in a group of processes meet the criteria in either paragraph (c)(5) or (6) of this section, the group of processes is exempt from the requirements of paragraph (c)(4) of this section.

(d) * * *

(1)(i) Each open-ended valve or line shall be equipped with a cap, blind flange, plug, or a second valve, except as provided in § 63.177 and paragraphs (d)(4) through (6) of this section.

(ii) The cap, blind flange, plug, or second valve shall seal the open end at all times except during operations requiring process fluid flow through the open-ended valve or line, or during maintenance or repair. The cap, blind flange, plug, or second valve shall be in place within 1 hour of cessation of operations requiring process fluid flow through the open-ended valve or line, or within 1 hour of cessation of maintenance or repair. The owner or operator is not required to keep a record documenting compliance with the 1-hour requirement.

* * * * *

(e) * * *

(2) For existing and new affected sources, all valves subject to this section shall be monitored, except as provided in paragraph (f) of this section and in § 63.177 by no later than 1 year after the compliance date.

(3) *Monitoring.* The owner or operator of a source subject to this section shall monitor all valves, except as provided in paragraph (f) of this section and in § 63.177 at the intervals specified in paragraph (e)(4) of this section and shall comply with all other provisions of this section, except as provided in paragraph (b)(4)(i) of this section, § 63.178(b) and § 63.179.

(i) The valves shall be monitored to detect leaks by the method specified in § 63.180(b).

* * * * *

(6) * * *

(ii) * * *

$\%V_L$ = percent leaking valves as determined through periodic monitoring required in paragraphs (e)(2) through (4) of this section.

* * *

* * * * *

(7) * * *

(iii) * * *

(A) The monitoring shall be conducted as specified in § 63.180(b) and (c) as appropriate, to determine whether the valve has resumed leaking.

(B) Periodic monitoring required by paragraphs (e)(2) through (4) of this section may be used to satisfy the requirements of paragraph (e)(7)(iii) of this section, if the timing of the monitoring period coincides with the time specified in paragraph (e)(7)(iii) of this section. Alternatively, other monitoring may be performed to satisfy the requirements of paragraph (e)(7)(iii) of this section, regardless of whether the timing of the monitoring period for periodic monitoring coincides with the time specified in paragraph (e)(7)(iii) of this section.

(C) If a leak is detected by monitoring that is conducted pursuant to paragraph (e)(7)(iii) of this section, the owner or operator shall follow the provisions of paragraphs (e)(7)(iii)(C)(*1*) and (*2*) of this section to determine whether that valve must be counted as a leaking valve for purposes of paragraph (e)(6) of this section.

(*1*) If the owner or operator elects to use periodic monitoring required by paragraphs (e)(2) through (4) of this section to satisfy the requirements of paragraph (e)(7)(iii) of this section, then the valve shall be counted as a leaking valve.

(*2*) If the owner or operator elects to use other monitoring prior to the periodic monitoring required by paragraphs (e)(2) through (4) of this section to satisfy the requirements of paragraph (e)(7)(iii) of this section, then the valve shall be counted as a leaking valve unless it is repaired and shown by periodic monitoring not to be leaking.

* * * * *

(9) * * * Instead, the owner or operator shall monitor each valve in organic HAP service for leaks once each quarter, or comply with paragraph (e)(4)(iii) or (iv) of this section, except as provided in paragraph (f) of this section.

(f) *Unsafe to monitor/inspect, difficult to monitor/inspect, and inaccessible equipment.* (1) Equipment that is designated as unsafe to monitor, unsafe to inspect, difficult to monitor, difficult to inspect, or inaccessible is exempt from the monitoring requirements as specified in paragraphs (f)(1)(i) through (iv) of this section provided the owner or operator meets the requirements specified in paragraph (f)(2), (3), or (4) of this section, as applicable. All equipment must be assigned to a group of processes. Ceramic or ceramic-lined connectors are subject to the same requirements as inaccessible connectors.

(i) For pumps and agitators, paragraphs (c)(2), (3), and (4) of this section do not apply.

(ii) For valves, paragraphs (e)(2) through (7) of this section do not apply.

(iii) For connectors, § 63.174(b) through (e) and paragraphs (b)(3)(iii)(B) through (F) of this section do not apply.

(iv) For closed-vent systems, § 63.172(f)(1) and (2), and § 63.172(g) do not apply.

(2) *Equipment that is unsafe to monitor or unsafe to inspect.* (i) Valves, connectors, agitators, and pumps may be designated as unsafe to monitor if the owner or operator determines that monitoring personnel would be exposed to an immediate danger as a consequence of complying with the monitoring requirements referred to in paragraphs (f)(1)(i) through (iii) of this section.

(ii) Any part of a closed-vent system may be designated as unsafe to inspect if the owner or operator determines that monitoring personnel would be exposed to an immediate danger as a consequence of complying with the monitoring requirements referred to in paragraph (f)(1)(iv) of this section.

(iii) The owner or operator of equipment that is designated as unsafe to monitor must have a written plan that requires monitoring of the equipment as frequently as practicable during safe to monitor times, but not more frequently than the periodic monitoring schedule otherwise applicable to the group of processes in which the equipment is located.

(iv) For any parts of a closed-vent system designated as unsafe to inspect, the owner or operator must have a written plan that requires inspection of the closed-vent systems as frequently as practicable during safe to inspect times, but not more frequently than annually.

(3) *Equipment that is difficult to monitor or difficult to inspect.* (i) A valve, agitator, or pump may be designated as difficult to monitor if the owner or operator determines that the valve, agitator, or pump cannot be monitored without elevating the monitoring personnel more than 2 meters above a support surface, or it is not accessible in a safe manner when it is in organic HAP service.

(ii) Any part of a closed-vent system may be designated as difficult to inspect if the owner or operator determines that the equipment cannot be inspected without elevating the monitoring personnel more than 2 meters above a support surface, or it is not accessible in a safe manner when it is in organic HAP service.

(iii) At an existing source, any valve, agitator or pump within a group of processes that meets the criteria of paragraph (f)(3)(i) of this section may be designated as difficult to monitor, and any parts of a closed-vent system that meet the requirements of paragraph (f)(3)(ii) of this section may be designated as difficult to inspect. At a new affected source, an owner or operator may designate no more than 3 percent of valves as difficult to monitor.

(iv) The owner or operator of valves, agitators, or pumps designated as difficult to monitor must have a written plan that requires monitoring of the equipment at least once per calendar year or on the periodic monitoring schedule otherwise applicable to the group of processes in which the equipment is located, whichever is less frequent. For any part of a closed-vent system designated as difficult to inspect, the owner or operator must have a written plan that requires inspection of the closed-vent system at least once every 5 years.

(4) *Inaccessible, ceramic, or ceramic-lined connectors.* (i) A connector may be designated as inaccessible if it is:

(A) Buried;

(B) Insulated in a manner that prevents access to the connector by a monitor probe;

(C) Obstructed by equipment or piping that prevents access to the connector by a monitor probe;

(D) Unable to be reached from a wheeled scissor-lift or hydraulic-type scaffold which would allow access to equipment up to 7.6 meters (25 feet) above the ground; or

(E) Not able to be accessed at any time in a safe manner to perform monitoring. Unsafe access includes, but is not limited to, the use of a wheeled scissor-lift on unstable or uneven terrain, the use of a motorized man-lift basket in areas where an ignition potential exists, or access would require near proximity to hazards such as electrical lines, or would risk damage to equipment.

(ii) A connector may be designated as inaccessible if it would require elevating the monitoring personnel more than 2 meters above a permanent support surface or would require the erection of scaffold.

(iii) At an existing source, any connector that meets the criteria of paragraph (f)(4)(i) or (ii) of this section may be designated as inaccessible. At a new affected source, an owner or operator may designate no more than 3 percent of connectors as inaccessible.

(iv) If any inaccessible, ceramic, or ceramic-lined connector is observed by visual, audible, olfactory, or other means to be leaking, the leak shall be repaired as soon as practicable, but no later than 15 calendar days after the leak is detected, except as provided in paragraph (b)(3)(i) of this section.

(v) Any connector that is inaccessible or that is ceramic or ceramic-lined is exempt from the recordkeeping and reporting requirements of paragraphs (g) and (h) of this section.

(g) * * *

(2) *General recordkeeping.* Except as provided in paragraph (g)(5)(i) of this section and in paragraph (a)(9) of this section, the following information pertaining to all equipment subject to the requirements in this section shall be recorded:

(i)(A) A list of identification numbers for equipment (except connectors that are subject to paragraph (f)(4) of this section) subject to the requirements of this section. Except for equipment subject to the recordkeeping requirements in paragraphs (g)(2)(ii) through (viii) of this section, equipment need not be individually identified if, for a particular type of equipment, all items of that equipment in a designated area or length of pipe subject to the provisions of this section are identified as a group, and the number of subject items of equipment is indicated. The list for each type of equipment shall be completed no later than the completion of the initial survey required for that component. The list of identification numbers shall be updated, if needed, to incorporate equipment changes identified during the course of each monitoring period within 90 calendar days, or by the next Periodic Report, following the end of the monitoring period for the type of equipment component monitored, whichever is later.

* * * * *

(vi) A list of equipment designated as unsafe to monitor/inspect or difficult to monitor/inspect under paragraph (f) of this section and a copy of the plan for monitoring or inspecting this equipment.

* * * * *

(viii) For equipment that the owner or operator elects to monitor as provided under § 63.178(c), a list of equipment added to batch product processes since the last monitoring period required in § 63.178(c)(3)(ii) and (iii). This list must be completed for each type of equipment within 90 calendar days, or by the next Periodic Report, following the end of the monitoring period for the type of equipment monitored, whichever is later. Also, if the owner or operator elects to adjust monitoring frequency by the time in use, as provided in § 63.178(c)(3)(iii), records demonstrating the proportion of the time during the calendar year the equipment is in use in a manner subject to the provisions of this section are required. Examples of suitable documentation are records of time in use for individual pieces of equipment or average time in use for the process unit.

(3) *Records of visual inspections.* For visual inspections of equipment subject to the provisions of paragraphs (c)(2)(iii)

and (c)(5)(iv) of this section, the owner or operator shall document that the inspection was conducted and the date of the inspection. * * *

(4) *Monitoring records.* When each leak is detected as specified in paragraph (c) of this section and § 63.164, paragraph (e) of this section and § 63.169, and §§ 63.172 and 63.174, the following information shall be recorded and kept for 5 years (at least 2 years onsite, with the remaining 3 years either onsite or offsite):

* * * * *

(iv) The maximum instrument reading measured by Method 21 of 40 CFR part 60, appendix A, after the leak is successfully repaired or determined to be nonrepairable.

(v) * * *

(A) The owner or operator may develop a written procedure that identifies the conditions that justify a delay of repair. The written procedures shall be included either as part of the startup/shutdown/malfunction plan, required by § 63.1259(a)(3), or in a separate document that is maintained at the plant site. Reasons for delay of repair may be documented by citing the relevant sections of the written procedure.

* * * * *

(5) *Records of pressure tests.* The owner or operator who elects to pressure test a process equipment train or supply lines between storage and processing areas to demonstrate compliance with this section is exempt from the requirements of paragraphs (g)(2), (3), (4), and (6) of this section.

* * *

* * * * *

(6) *Records of compressor and relief device compliance tests.* * * *

* * * * *

(7) *Records for closed-vent systems.* The owner or operator shall maintain records of the information specified in paragraphs (g)(7)(i) through (iii) of this section for closed-vent systems and control devices subject to the provisions of paragraph (b)(4)(ii) of this section.

* * *

* * * * *

(h) * * *

(2) *Notification of compliance status report.* * * *

(i) * * *

(B) Number of each equipment type (e.g., valves, pumps) in organic HAP service, excluding equipment in vacuum service.

* * * * *

(iv) Section 63.9(j) shall not apply to the Notification of Compliance Status report described in this paragraph (h)(2).

(3) * * *

(ii) For equipment complying with the provisions of paragraphs (b) through (g) of this section, except paragraph (b)(3)(iv) of this section and § 63.179 the summary information listed in paragraphs (h)(3)(ii)(A) through (L) of this section for each monitoring period during the 6-month period.

* * * * *

(C) Separately, the number of pumps and agitators for which leaks were detected as described in paragraph (c)(2) of this section, the total number of pumps and agitators monitored, and, for pumps, the percent leakers;

(D) Separately, the number of pumps and agitators for which leaks were not repaired as required in paragraph (c)(3) of this section;

* * * * *

(iv) Any revisions to items reported in earlier Notification of Compliance Status report, if the method of compliance has changed since the last report.

8. Section 63.1256 is amended by:

a. Revising paragraphs (a)(1)(i)(A) and (B);

b. Revising paragraph (a)(3);

c. Revising paragraph (a)(5) introductory text;

d. Revising paragraph (a)(5)(ii)(C);

e. Adding paragraph (a)(5)(ii)(D);

f. Adding paragraph (b)(6)(i);

g. Revising paragraphs (d)(2) introductory text and paragraph (d)(2)(i);

h. Revising paragraph (g)(8)(ii);

i. Revising paragraph (g)(11)(ii); and

j. Revising paragraph (g)(12).

The revisions and additions read as follows:

§ 63.1256 Standards: Wastewater.

(a) * * *

(1) * * *

(i) * * *

(A) The wastewater stream contains partially soluble HAP compounds at an annual average concentration greater than 1,300 ppmw, and the total soluble and partially soluble HAP load in all wastewater from the PMPU exceeds 0.25 Mg/yr.

(B) The wastewater stream contains partially soluble and/or soluble HAP compounds at an annual average concentration of 5,200 ppmw, and the total soluble and partially soluble HAP load in all wastewater from the PMPU exceeds 0.25 Mg/yr.

* * * * *

(3) *Exemptions from wastewater requirements.* (i) The following wastewaters are not subject to the wastewater provisions of this subpart:

(A) Stormwater from segregated sewers;

(B) Water from fire-fighting and deluge systems, including testing of such systems;

(C) Spills;

(D) Water from safety showers; and

(E) Samples of a size not greater than reasonably necessary for the method of analysis that is used.

(ii) *Maintenance wastewater.* Each owner or operator of a source subject to this subpart shall comply with the requirements of paragraphs (a)(3)(ii)(A) through (D) of this section for maintenance wastewater containing partially soluble or soluble HAPs listed in Tables 2 and 3 of this subpart.

(A) The owner or operator shall prepare a description of maintenance procedures for management of wastewater generated from the emptying and purging of equipment in the process during temporary shutdowns for inspections, maintenance, and repair (*i.e.*, a maintenance turnaround) and during periods which are not shutdowns (*i.e.*, routine maintenance). The descriptions shall:

(*1*) Specify the process equipment or maintenance tasks that are anticipated to create wastewater during maintenance activities; and

(*2*) Specify the procedures that will be followed to properly manage the wastewater and minimize organic HAP emissions to the atmosphere; and

(*3*) Specify the procedures to be followed when clearing materials from process equipment.

(B) The owner or operator shall modify and update the information required by paragraph (a)(3)(ii)(A) of this section as needed following each maintenance procedure based on the actions taken and the wastewater generated in the preceding maintenance procedure.

(C) The owner or operator shall implement the procedures described in paragraphs (a)(3)(ii)(A) and (B) of this section as part of the startup, shutdown, and malfunction plan required under § 63.6(e)(3).

(D) The owner or operator shall maintain a record of the information required by paragraphs (a)(3)(ii)(A) and (B) of this section as part of the startup, shutdown, and malfunction plan required under § 63.6(e)(3).

* * * * *

(5) *Offsite treatment or onsite treatment not owned or operated by the source.* The owner or operator may elect to transfer affected wastewater streams or a residual removed from such affected wastewater to an onsite treatment operation not owned or operated by the owner or operator of the source generating the wastewater or

residual, or to an offsite treatment operation.

* * * * *

(ii) * * *

(C) Section 63.6(g); or

(D) If the affected wastewater streams or residuals removed from affected wastewater streams received by the transferee contain less than 50 ppmw of partially soluble HAP, then the transferee must, at a minimum, manage and treat the affected wastewater streams and residuals in accordance with one of the following:

(*1*) Comply with paragraph (g)(10) of this section and cover the waste management units up to the activated sludge unit; or

(*2*) Comply with paragraphs (g)(11)(i), (ii), and (h) of this section and cover the waste management units up to the activated sludge unit; or

(*3*) Comply with paragraph (g)(10) of this section provided that the owner or operator of the affected source demonstrates that less than 5 percent of the total soluble HAP is emitted from waste management units up to the activated sludge unit; or

(*4*) Comply with paragraphs (g)(11)(i), (ii), and (h) of this section provided that the owner or operator of the affected source demonstrates that less than 5 percent of the total soluble HAP is emitted from waste management units up to the activated sludge unit.

* * * * *

(b) * * *

(6) * * *

(i) The owner or operator shall measure the seal gaps or inspect the wastewater tank within 30 calendar days of the determination that the floating roof is unsafe.

* * * * *

(d) * * *

(2) *Filling of large containers.* Pumping affected wastewater or a residual removed from affected wastewater into a container with a capacity greater than or equal to 0.42 m^3 shall be conducted in accordance with the conditions in paragraphs (d)(2)(i) and (ii) of this section.

(i) Comply with any one of the procedures specified in paragraphs (d)(2)(i)(A), (B), or (C) of this section.

(A) Use a submerged fill pipe. The submerged fill pipe outlet shall extend to no more than 6 inches or within two fill pipe diameters of the bottom of the container while the container is being filled.

(B) Locate the container within an enclosure with a closed-vent system that routes the organic HAP vapors vented from the container to a control device.

(C) Use a closed-vent system to vent the displaced organic vapors vented from the container to a control device or back to the equipment from which the wastewater is transferred.

* * * * *

(g) * * *

(8) * * *

(ii) *Percent mass removal/destruction option.* The owner or operator shall reduce, by removal or destruction, the mass of total partially soluble HAP compounds by 99 percent or more. The removal destruction efficiency shall be determined by the procedures specified in § 63.1257(e)(2)(ii) or (iii)(C) for noncombustion, nonbiological treatment processes; § 63.1257(e)(2)(ii) or (iii)(D) for combustion processes; § 63.1257(e)(2)(iii)(F) for open biological treatment processes; and § 63.1257(e)(2)(ii) or (iii)(G) for closed biological treatment processes.

* * * * *

(11) * * *

(ii) For open biological treatment processes, compliance shall be determined using the procedures specified in § 63.1257(e)(2)(iii)(E). For closed aerobic biological treatment processes, compliance shall be determined using the procedures specified in § 63.1257(e)(2)(ii), (iii)(E), or (iii)(G). For closed anaerobic biological treatment processes, compliance shall be determined using the procedures specified in § 63.1257(e)(2)(ii) or (iii)(G).

* * * * *

(12) *Percent mass removal/destruction option for soluble HAP compounds at new sources.* The owner or operator of a new source shall reduce, by removal or destruction, the mass flow rate of total soluble HAP from affected wastewater by 99 percent or more. The removal/destruction efficiency shall be determined by the procedures in § 63.1257(e)(2)(ii) or (iii)(C) for noncombustion, nonbiological treatment processes; § 63.1257(e)(2)(ii) and (iii)(D) for combustion processes; § 63.1257(e)(2)(iii)(F) for open biological treatment processes; and § 63.1257(e)(2)(ii) or (iii)(G) for closed biological treatment processes.

* * * * *

9. Section 63.1257 is amended by:

a. Revising paragraph (a)(3);

b. Revising paragraph (a)(5);

c. Revising paragraph (b)(6) introductory text;

d. Revising paragraph (b)(6)(iii);

e. Adding a new sentence at the end of paragraph (b)(8)(i)(A) introductory text;

f. Revising paragraph (b)(8)(i)(A)(*3*)(*i*);

g. Revising paragraph (b)(10) introductory text;

h. Revising paragraphs (b)(10)(i) and (ii);

i. Redesignating paragraphs (b)(10)(iii) through (v) as paragraphs (b)(10)(iv) through (vi) and revising redesignated paragraphs (b)(10)(iv) introductory text and (b)(10)(v);

j. Adding paragraph (b)(10)(iii);

k. Revising the second sentence in paragraph (c)(1) introductory text;

l. Revising paragraph (c)(3)(v);

m. Revising paragraphs (d)(1)(i) through (iii);

n. Revising equation 13 and the definitions of the terms "$(P_i)_{Tn}$" and "MW_i" for Equations 13 through 17 in paragraph (d)(2)(i)(C)(*1*);

o. Removing the definitions of the terms "(P_i^*)" and "(P_j^*)" for Equations 13 through 17 in paragraph (d)(2)(i)(C)(*1*) and adding definitions for the terms "P_i^*" and "P_j^*" for Equations 13 through 17 in paragraph (d)(2)(i)(C)(*1*);

p. Removing the last sentence in paragraph (d)(2)(i)(C)(2)(i);

q. Revising paragraph (d)(2)(i)(C)(*4*) introductory text;

r. Revising paragraph (d)(2)(i)(C)(*4*)(*ii*);

s. Revising the definition of the term "x_j" after Equation 24 in paragraph (d)(2)(i)(D)(2);

t. Revising paragraphs (d)(2)(i)(D)(*3*) and (*4*);

u. Revising paragraph (d)(2)(i)(E);

v. Revising paragraph (d)(2)(i)(H);

w. Adding a new sentence between the third and fourth sentences in paragraph (d)(2)(ii);

x. Revising paragraph (d)(3) introductory text;

y. Revising paragraph (d)(3)(ii)(A);

z. Adding paragraph (d)(3)(iii);

aa. Removing the definition of the term "P" following Equation 45 in paragraph (e)(2)(iii)(C)(*3*) and adding in its place the definition of the term "ρ"" in paragraph (e)(2)(iii)(C)(*3*);

bb. Revising "Equation 44" to read "Equation 46" in the first sentence in paragraph (e)(2)(iii)(C)(*5*);

cc. Removing the definition of the term "π" for Equation 47 in paragraph (e)(2)(iii)(D)(*3*) and revising the definition of the term "ρ"" for Equation 47 in paragraph (e)(2)(iii)(D)(*3*);

dd. Adding the definition of the term "ρ" for Equation 47 in paragraph (e)(2)(iii)(D)(*3*);

ee. Revising paragraph (e)(2)(iii)(E)(*3*) introductory text;

ff. Revising "Equation 49" to read "Equation 50" in the first sentence in paragraph (e)(2)(iii)(E)(*3*)(*ii*);

gg. Revising the definitions of the terms "QMW_a, QMW_b" and "QMG_b" for Equation 51 in paragraph (e)(2)(iii)(G)(*3*);

hh. Revising the first sentence in paragraph (f)(1)(iii)(B);

ii. Revising paragraph (f)(2)(ii)(A); and

jj. Redesignating paragraphs (h)(2)(i) and (h)(3) as paragraphs (h)(3) and (4), revising redesignated paragraph (h)(3), and removing Equation 61 from redesignated paragraph (h)(4).

The revisions and additions read as follows:

§ 63.1257 Test methods and compliance procedures.

(a) * * *

(3) *Outlet concentration correction for supplemental gases.* (i) *Combustion devices.* Except as provided in § 63.1258(b)(5)(ii)(A), for a combustion device used to comply with an outlet concentration standard, the actual TOC, organic HAP, and hydrogen halide and halogen must be corrected to 3 percent oxygen if supplemental gases, as defined in § 63.1251, are added to the vent stream or manifold. The integrated sampling and analysis procedures of Method 3B of 40 CFR part 60, appendix A, shall be used to determine the actual oxygen concentration ($\%O_{2d}$). The samples shall be taken during the same time that the TOC or total organic HAP or hydrogen halides and halogen samples are taken. The concentration corrected to 3 percent oxygen (C_d) shall be computed using Equation 7A of this subpart:

$$C_c = C_m\left(\frac{17.9}{20.9 - \%O_{2d}}\right) \quad \text{(Eq. 7A)}$$

Where:

C_c = concentration of TOC or total organic HAP or hydrogen halide and halogen corrected to 3 percent oxygen, dry basis, ppmv

C_m = total concentration of TOC or total organic HAP or hydrogen halide and halogen in vented gas stream, average of samples, dry basis, ppmv

$\%O_{2d}$ = concentration of oxygen measured in vented gas stream, dry basis, percent by volume

(ii) *Noncombustion devices.* Except as provided in § 63.1258(b)(5)(ii)(B), if a control device other than a combustion device is used to comply with a TOC, organic HAP, or hydrogen halide outlet concentration standard, the owner or operator must correct the actual concentration for supplemental gases using Equation 7B of this subpart; process knowledge and representative operating data may be used to determine the fraction of the total flow due to supplemental gas.

$$C_a = C_m\left(\frac{V_s + V_a}{V_a}\right) \quad \text{(Eq. 7B)}$$

Where:

C_a = corrected outlet TOC, organic HAP, and hydrogen halides and halogens concentration, dry basis, ppmv

C_m = actual TOC, organic HAP, and hydrogen halides and halogens concentration measured at control device outlet, dry basis, ppmv

V_a = total volumetric flow rate of all gas streams vented to the control device, except supplemental gases

V_s = total volumetric flow rate of supplemental gases

* * * * *

(5) *Initial compliance with alternative standard.* Initial compliance with the alternative standards in §§ 63.1253(d) and 63.1254(c) for combustion devices is demonstrated when the outlet TOC concentration is 20 ppmv or less, and the outlet hydrogen halide and halogen concentration is 20 ppmv or less. Initial compliance with the alternative standards in §§ 63.1253(d) and 63.1254(c) for noncombustion devices is demonstrated when the outlet TOC concentration is 50 ppmv or less, and the outlet hydrogen halide and hydrogen concentration is 50 ppmv or less. To demonstrate initial compliance, the owner or operator shall be in compliance with the monitoring provisions in § 63.1258(b)(5) on the initial compliance date. The owner or operator shall use Method 18 to determine the predominant organic HAP in the emission stream if the TOC monitor is calibrated on the predominant HAP.

* * * * *

(b) * * *

(6) The following methods are specified for concentration measurements:

* * * * *

(iii) Method 26 or 26A of appendix A of part 60 shall be used to determine hydrogen chloride, hydrogen halide and halogen concentrations in control device efficiency determinations or in the 20 ppmv outlet hydrogen halide concentration standard.

* * * * *

(8) * * *

(i) * * *

(A) * * * The owner or operator must consider all relevant factors, including load and compound-specific characteristics in defining absolute worst-case conditions.

* * * * *

(*3*) * * *

(*i*) Periods when the stream contains the highest combined VOC and HAP load, in lb/hr, described by the emission profiles in paragraph (b)(8)(ii) of this section;

* * * * *

(10) *Wastewater testing.* Wastewater analysis shall be conducted in accordance with paragraph (b)(10)(i), (ii), (iii), (iv), or (v) of this section.

(i) *Method 305.* Use procedures specified in Method 305 of 40 CFR part 63, appendix A, and comply with requirements specified in paragraph (b)(10)(vi) of this section.

(ii) *Method 624, 625, 1624, or 1625.* Use procedures specified in Method 624, 625, 1624, or 1625 of 40 CFR part 136, appendix A, and comply with requirements in paragraph (b)(10)(vi) of this section.

(iii) *Method 8260 or 8270.* Use procedures specified in Method 8260 or 8270 in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods," EPA Publication No. SW-846, Third Edition, September 1986, as amended by Update I, November 15, 1992. As an alternative, an owner or operator may use any more recent, updated version of Method 8260 or 8270 approved by the EPA. For the purpose of using Method 8260 or 8270 to comply with this subpart, the owner or operator must maintain a formal quality assurance program consistent with either Section 8 of Method 8260 or Method 8270, and this program must include the following elements related to measuring the concentrations of volatile compounds:

(A) Documentation of site-specific procedures to minimize the loss of compounds due to volatilization, biodegradation, reaction, or sorption during the sample collection, storage, and preparation steps.

(B) Documentation of specific quality assurance procedures followed during sampling, sample preparation, sample introduction, and analysis.

(C) Measurement of the average accuracy and precision of the specific procedures, including field duplicates and field spiking of the material source before or during sampling with compounds having similar chemical characteristics to the target analytes.

(iv) *Other EPA methods.* Use procedures specified in the method, validate the method using the procedures in paragraph (b)(10)(iv)(A) or (B) of this section, and comply with the procedures in paragraph (b)(10)(vi) of this section.

* * * * *

(v) *Methods other than an EPA method.* Use procedures specified in the method, validate the method using the procedures in paragraph (b)(10)(iv)(A) of this section, and comply with the requirements in paragraph (b)(10)(vi) of this section.

* * * * *

(c) * * *

(1) * * * Initial compliance with the outlet concentration requirement of § 63.1253(d) is demonstrated by fulfilling the requirements of paragraph (a)(5) of this section.

* * * * *

(3) * * *

(v) When the phrase "the maximum true vapor pressure of the total organic HAP's in the stored liquid falls below the values defining Group 1 storage vessels specified in table 5 or table 6 of this subpart" is referred to in § 63.120(b)(1)(iv), the phrase "the maximum true vapor pressure of the total organic HAP in the stored liquid falls below 13.1 kPa" shall apply for the purposes of this subpart.

* * * * *

(d) * * *

(1) * * *

(i) Initial compliance with § 63.1254(a)(2)(i) is demonstrated when the actual emissions of HAP from the sum of all process vents within a process is less than or equal to 900 kg/yr. Initial compliance with § 63.1254(a)(2)(ii) is demonstrated when the actual emissions of HAP from the sum of all process vents in compliance with § 63.1254(a)(2)(i) is less than or equal to 1,800 kg/yr. Uncontrolled HAP emissions and controlled HAP emissions shall be determined using the procedures described in paragraphs (d)(2) and (3) of this section.

(ii) Initial compliance with the percent reduction requirements in § 63.1254(a)(1)(i), § 63.1254(a)(3), and § 63.1254(b) is demonstrated by:

(A) Determining controlled HAP emissions using the procedures described in paragraph (d)(3) of this section, and uncontrolled HAP emissions determined using the procedures described in paragraph (d)(2) of this section, and demonstrating that the reductions required by § 63.1254(a)(1)(i), § 63.1254(a)(3), and § 63.1254(b) are met; or

(B) Controlling the process vents using a device meeting the criteria specified in paragraph (a)(4) of this section.

(iii) Initial compliance with the outlet concentration requirements in § 63.1254(a)(1)(ii)(A), § 63.1254(a)(3), and § 63.1254(b)(1) is demonstrated when the outlet TOC concentration is 20 ppmv or less and the outlet hydrogen halide and halogen concentration is 20 ppmv or less. The owner or operator shall demonstrate compliance by fulfilling the requirements in paragraph (a)(6) of this section.

* * * * *

(2) * * *

(i) * * *

(C) * * *

(*1*) * * *

$$E = \frac{\sum_{i=1}^{n}\left((P_i^*)(x_i)(MW_i)\right)}{760 - \sum_{j=1}^{m}\left((P_j^*)(x_j)\right)} \times \Delta\eta \quad \text{(Eq. 13)}$$

* * * * *

P_i^* = vapor pressure of each HAP in the vessel headspace at any temperature between the initial and final heatup temperatures, mmHg

P_j^* = vapor pressure of each condensable VOC (including HAP) in the vessel headspace at any temperature between the initial and final heatup temperatures, mmHg

* * *

$(P_i)_{Tn}$ = partial pressure of each HAP in the vessel headspace at initial (T1) and final (T2) temperature

MW_i = molecular weight of the individual HAP * * *

* * * * *

(*4*) If the vessel contents are heated to the boiling point, emissions must be calculated using the procedure in paragraphs (d)(2)(i)(C)(*4*)(*i*) and (*ii*) of this section.

* * * * *

(*ii*) While boiling, the vessel must be operated with a properly operated process condenser. An initial demonstration that a process condenser is properly operated is required for some process condensers, as described in paragraph (d)(2)(iii) of this section.

(D) * * *

(*2*) * * *

x_j = mole fraction of each condensable (including HAP) in the liquid phase

* * * * *

(*3*) The average ratio of moles of noncondensable to moles of an individual HAP in the emission stream is calculated using Equation 25 of this subpart; this calculation must be repeated for each HAP in the emission stream:

$$n_{Ri} = \frac{\left(\frac{P_{nc1}}{(P_i^*)(x_i)} + \frac{P_{nc2}}{(P_i^*)(x_i)}\right)}{2} \quad \text{(Eq. 25)}$$

Where:

n_{Ri} = average ratio of moles of noncondensable to moles of individual HAP

P_{nc1} = initial partial pressure of the noncondensable gas, as calculated using Equation 23 of this subpart

P_{nc2} = final partial pressure of the noncondensable gas, as calculated using Equation 24 of this subpart

P_i^* = vapor pressure of each individual HAP

x_i = mole fraction of each individual HAP in the liquid phase

n = number of HAP compounds

i = identifier for a HAP compound

(*4*) The mass of HAP emitted shall be calculated using Equation 26 of this subpart:

$$E = (V_{nc1} - V_{nc2}) \times \frac{P_{atm}}{RT} \times \sum_{i-1}^{n} \frac{MW_i}{n_{Ri}} \quad \text{(Eq. 26)}$$

Where:

E = mass of HAP emitted

V_{nc1} = initial volume of noncondensable gas in the vessel, as calculated using Equation 21 of this subpart

V_{nc2} = final volume of noncondensable gas in the vessel, as calculated using Equation 22 of this subpart

n_{Ri} = average ratio of moles of noncondensable to moles of individual HAP, as calculated using Equation 25 of this subpart

P_{atm} = atmospheric pressure, standard

R = ideal gas law constant

T = temperature of the vessel, absolute

MW_i = molecular weight of each HAP

* * * * *

(E) *Vacuum systems.* Emissions from vacuum systems may be calculated using Equation 33 of this subpart if the air leakage rate is known or can be approximated.

$$E = \frac{(La)(t)}{MW_{nc}}\left(\frac{\sum_{i=1}^{n} P_i MW_i}{P_{system} - \sum_{j=1}^{m} P_j}\right) \quad \text{(Eq. 33)}$$

Where:

E = mass of HAP emitted

P_{system} = absolute pressure of receiving vessel or ejector outlet conditions, if there is no receiver

P_i = partial pressure of the HAP at the receiver temperature or the ejector outlet conditions
P_j = partial pressure of condensable (including HAP) at the receiver temperature or the ejector outlet conditions
La = total air leak rate in the system, mass/time
MW_{nc} = molecular weight of noncondensable gas
t = time of vacuum operation
MWi = molecular weight of the individual HAP in the emission stream, with HAP partial pressures calculated at the temperature of the receiver or ejector outlet, as appropriate

* * * * *

(H) *Empty vessel purging.* Emissions from empty vessel purging shall be calculated using Equation 36 of this subpart (Note: The term $e^{-Fv/v}$ can be assumed to be 0):

* * * * *

(ii) * * * Modified versions of the engineering evaluation methods in paragraphs (d)(2)(i)(A) through (H) may be used if the owner or operator demonstrates that they have been used to meet other regulatory obligations and they do not affect applicability assessments or compliance determinations under this subpart GGG.

* * *

* * * * *

(3) *Controlled emissions.* An owner or operator shall determine controlled emissions using the procedures in either paragraph (d)(3)(i) or (ii) of this section.

* * * * *

(ii) * * *

(A) The performance test shall be conducted by performing emission testing on the inlet and outlet of the control device following the test methods and procedures of § 63.1257(b). Concentrations shall be calculated from the data obtained through emission testing according to the procedures in paragraph (a)(2) of this section.

* * * * *

(iii) *Initial compliance demonstration for condensers.*

(A) *Air pollution control devices.* During periods in which a condenser functions as an air pollution control device, controlled emissions shall be calculated using the emission estimation equations described in paragraph (d)(3)(i)(B) of this section.

(B) *Process condensers.* During periods when the condenser is operating as a process condenser, the owner or operator is required to demonstrate that the process condenser is properly operated if the process condenser meets either of the criteria described in paragraphs (d)(2)(iii)(B)(*1*) and (*2*) of this section. The owner or operator must either measure the condenser exhaust gas temperature and show it is less than the boiling or bubble point of the substance(s) in the vessel, or perform a material balance around the vessel and condenser to show that at least 99 percent of the material vaporized while boiling is condensed. The initial demonstration shall be conducted for all appropriate operating scenarios and documented in the Notification of Compliance report described in § 63.1260(f).

(*1*) The process condenser is not followed by an air pollution control device; or

(*2*) The air pollution control device following the process condenser is not a condenser or is not meeting the alternative standard of § 63.1254(c).

* * * * *

(e) * * *
(2) * * *
(iii) * * *
(C) * * *
(*3*) * * *

ρ= density of the wastewater, kg/m^3

* * * * *

(D) * * *
(*3*) * * *

ρ= density of the wastewater stream, kg/m^3

* * * * *

p = number of runs

* * * * *

(E) * * *

(*3*) *Destruction efficiency.* The owner or operator shall comply with the provisions in either paragraph (e)(2)(iii)(E)(*3*)(*i*) or (*ii*) of this section. Compliance is demonstrated if the destruction efficiency, E, is equal to or greater than 95 percent.

* * * * *

(G) * * *
(*3*) * * *

QMW_a, QMW_b = mass flow rate of partially soluble and/or soluble HAP compounds in wastewater entering (QMW_a) and exiting (QMW_b) the treatment process, kilograms per hour (as calculated using Equations 44 and 45)
QMG_b = mass flow rate of partially soluble and/or soluble HAP compounds in vented gas stream exiting the control device, kg/hr

* * * * *

(f) * * *
(1) * * *
(iii) * * *

(B) For batch processes, the annual factor shall be calculated either every 10 batches for the 12-month period preceding the 10th batch (10-batch rolling average) or a maximum of once per month, if the number of batches is greater than 10 batches per month. * * *

(2) * * *
(ii) * * *

(A) The mass of HAP calculated using Equation 55 of this subpart:

$$M = [kg/kg]_b (0.75 - P_R)(M_{prod}) \quad \text{(Eq. 55)}$$

Where:

$[kg/kg]_b$ = the baseline production-indexed HAP consumption factor, in kg/kg
M_{prod} = the annual production rate, in kg/yr
M = the annual reduction required by add-on controls, in kg/yr
P_R = the fractional reduction in the annual kg/kg factor achieved using pollution prevention where P_R is ≥0.5

* * * * *

(h) * * *

(3) Equations 60 and 61 of this subpart shall be used to calculate total HAP emissions:

$$E_{TU} = \sum_{i=1}^{n} E_{Ui} \quad \text{(Eq. 60)}$$

$$E_{TC} = \sum_{i=1}^{n} E_{Ci} \quad \text{(Eq. 61)}$$

Where:

E_{Ui} = yearly uncontrolled emissions from process i
E_{Ci} = yearly actual emissions for process i
E_{TU} = total yearly uncontrolled emissions
E_{TC} = total yearly actual emissions
n = number of processes included in the emissions average

* * * * *

10. Section 63.1258 is amended by:
a. Revising paragraph (b)(5);
b. Revising paragraph (b)(6)(iii);
c. Revising the first sentence in paragraph (b)(8) introductory text; and
d. Revising paragraph (c).

The revisions read as follows:

§ 63.1258 Monitoring requirements.

* * * * *

(b) * * *

(5) *Monitoring for the alternative standards.* (i) For control devices that are used to comply with the provisions of § 63.1253(d) or 63.1254(c), the owner or operator shall monitor and record the outlet TOC concentration and the outlet hydrogen halide and halogen concentration every 15 minutes during the period in which the device is

functioning in achieving the HAP removal required by this subpart. A TOC monitor meeting the requirements of Performance Specification 8 or 9 of appendix B of part 60 shall be installed, calibrated, and maintained according to § 63.8. The owner or operator need not monitor the hydrogen halide and halogen concentration if, based on process knowledge, the owner or operator determines that the emission stream does not contain hydrogen halides or halogens.

(ii) An owner or operator complying with the alternative standard using control devices in which supplemental gases are added to the vents or manifolds must either correct for supplemental gases as specified in § 63.1257(a)(3) or comply with the requirements of paragraph (b)(5)(ii)(A) or (B) of this section.

(A) *Provisions for combustion devices.* As an alternative to correcting for supplemental gases as specified in § 63.1257(a)(3), the owner or operator may monitor residence time and firebox temperature according to the requirements of paragraphs (b)(5)(ii)(A)(*1*) and (*2*) of this section. Monitoring of residence time may be accomplished by monitoring flowrate into the combustion chamber.

(*1*) If complying with the alternative standard instead of achieving a control efficiency of 95 percent or less, the owner or operator must maintain a minimum residence time of 0.5 seconds and a minimum combustion chamber temperature of 760°C.

(*2*) If complying with the alternative standard instead of achieving a control efficiency of 98 percent or less, the owner or operator must maintain a minimum residence time of 0.75 seconds and a minimum combustion chamber temperature of 816°C.

(B) *Provisions for dense gas systems.* As an alternative to correcting for supplemental gases as specified in § 63.1257(a)(3), for noncombustion devices used to control emissions from dense gas systems, as defined in § 63.1251, the owner or operator shall monitor flowrate as specified in paragraphs (b)(5)(ii)(B)(*1*) through (*4*) of this section.

(*1*) Use Equation 63 of this subpart to calculate the system flowrate setpoint at which the average concentration is 5,000 ppmv TOC:

$$F_s = \frac{721 \times E_{am}}{5{,}000} \qquad \text{(Eq. 63)}$$

Where:

F_s = system flowrate setpoint, scfm
E_{am} = annual emissions entering the control device, lbmols/yr

(*2*) Annual emissions used in Equation 63 of this subpart must be based on the actual mass of organic compounds entering the control device, as calculated from the most representative emissions inventory data submitted within the 5 years before the Notification of Compliance Status report is due. The owner or operator must recalculate the system flowrate setpoint once every 5 years using the annual emissions from the most representative emissions inventory data submitted during the 5-year period after the previous calculation. Results of the initial calculation must be included in the Notification of Compliance Status report, and recalculated values must be included in the next Periodic report after each recalculation. For all calculations after the initial calculation, to use emissions inventory data calculated using procedures other than those specified in § 63.1257(d), the owner or operator must submit the emissions inventory data calculations and rationale for their use in the Notification of Process Change report or an application for a part 70 permit renewal or revision.

(*3*) In the Notification of Compliance Status report, the owner or operator may elect to establish both a maximum daily average operating flowrate limit above the flowrate setpoint and a reduced outlet concentration limit corresponding to this flowrate limit. The owner or operator may also establish reduced outlet concentration limits for any daily average flowrates between the flowrate setpoint and the flowrate limit. The correlation between these elevated flowrates and the corresponding outlet concentration limits must be established using Equation 64 of this subpart:

$$C_a = \frac{F_s}{F_a} \times 50 \qquad \text{(Eq. 64)}$$

Where:

C_a = adjusted outlet concentration limit, dry basis, ppmv
50 = outlet concentration limit associated with the flowrate setpoint, dry basis, ppmv
F_s = system flowrate setpoint, scfm
F_a = actual system flowrate limit, scfm

(*4*) The owner or operator must install and operate a monitoring system for measuring system flowrate. The flowrate into the control device must be monitored and recorded at least once every hour. The system flowrate must be calculated as the average of all values measured during each 24-hour operating day. The flowrate monitoring device must be accurate to within 5 percent of the system flowrate setpoint, and the flowrate monitoring device must be calibrated annually.

(C) *Flow rate evaluation for noncombustion devices.* To demonstrate continuous compliance with the requirement to correct for supplemental gases as specified in § 63.1257(a)(3)(ii) for noncombustion devices, the owner or operator must evaluate the volumetric flow rate of supplemental gases, V_s, and the volumetric flow rate of all gases, V_a, each time a new operating scenario is implemented based on process knowledge and representative operating data. The procedures used to evaluate the flow rates, and the resulting correction factor used in Equation 7B of this subpart, must be included in the Notification of Compliance Status report and in the next Periodic report submitted after an operating scenario change.

(6) * * *

(iii) Each loss of all pilot flames for flares.

* * * * *

(8) *Violations.* Exceedances of parameters monitored according to the provisions of paragraphs (b)(1)(ii), (iv) through (ix), and (b)(5)(ii)(A) and (B) of this section, or excursions as defined by paragraphs (b)(7)(i) through (iii) of this section, constitute violations of the operating limit according to paragraphs (b)(8)(i), (ii), and (iv) of this section.

* * *

* * * * *

(c) *Monitoring for emission limits.* The owner or operator of any affected source complying with the provisions of § 63.1254(a)(2) shall demonstrate continuous compliance with the 900 and 1,800 kg/yr emission limits by calculating daily 365-day rolling summations of emissions. For any owner or operator opting to switch compliance strategy from the 93 percent control requirement to the annual mass emission limit method, as described in § 63.1254(a)(1)(i), the rolling summations, beginning with the first day after the switch, must include emissions from the past 365 days.

* * * * *

11. Section 63.1259 is amended by:

a. Revising paragraph (a)(3)(i);

b. Revising paragraph (a)(3)(iii);

c. Revising paragraph (b)(4);

d. Revising paragraphs (b)(5)(i) and (b)(5)(ii);

e. Removing paragraph (b)(6), redesignating paragraphs (b)(7) through (b)(11) as paragraphs (b)(6) through (b)(10), and revising the redesignated paragraphs (b)(6) and (b)(9); and

f. Adding paragraphs (b)(11) and (12).

The revisions and additions read as follows:

§ 63.1259 Recordkeeping requirements.

(a) * * *

(3) * * *

(i) The owner or operator shall record the occurrence and duration of each malfunction of the process operations or of air pollution control equipment used to comply with this subpart, as specified in § 63.6(e)(3)(iii).

* * * * *

(iii) For each startup, shutdown, or malfunction, the owner or operator shall record all information necessary to demonstrate that the procedures specified in the affected source's startup, shutdown, and malfunction plan were followed, as specified in § 63.6(e)(3)(iii), and shall record all maintenance performed on the air pollution control equipment, as specified in § 63.10(b)(2)(iii); alternatively, the owner or operator shall record any actions taken that are not consistent with the plan, as specified in § 63.6(e)(3)(iv).

* * * * *

(b) * * *

(4) For purposes of compliance with the annual mass limits of § 63.1254(a)(2) and § 63.1254(b)(2), daily records of the rolling annual total emissions.

(5) * * *

(i) For processes or process vents that are in compliance with the percent reduction requirements of § 63.1254(a)(1), (a)(3), or § 63.1254(b)(1) and containing vents controlled to less than the percent reduction requirement, the following records are required:

(A) Standard batch uncontrolled and controlled emissions for each process;

(B) Actual uncontrolled and controlled emissions for each nonstandard batch; and

(C) A record whether each batch operated was considered a standard batch.

(ii) For processes in compliance with the annual mass limits of § 63.1254(a)(2) or § 63.1254(b)(2), the following records are required:

(A) The number of batches per year for each batch process;

(B) The operating hours per year for continuous processes;

(C) Standard batch uncontrolled and controlled emissions for each process;

(D) Actual uncontrolled and controlled emissions for each nonstandard batch;

(E) A record whether each batch operated was considered a standard batch.

(6) Wastewater concentration per POD or process, except as provided in § 63.1256(a)(1)(ii).

* * * * *

(9) Description of worst-case operating conditions as required in § 63.1257(b)(8).

* * * * *

(11) If the owner or operator elects to comply with § 63.1253(b) or (c) by installing a floating roof, the owner or operator must keep records of each inspection and seal gap measurement in accordance with § 63.123(c) through (e) as applicable.

(12) If the owner or operator elects to comply with the vapor balancing alternative in § 63.1253(f), the owner or operator must keep records of the DOT certification required by § 63.1253(f)(2) and the pressure relief vent setting and the leak detection records specified in § 63.1253(f)(5).

* * * * *

12. Section 63.1260 is amended by:

a. Adding paragraphs (e)(6) and (7);

b. Revising paragraph (g)(1)(ii);

c. Revising paragraph (g)(2)(vii);

d. Adding paragraph (g)(2)(viii);

e. Adding a new sentence after the first sentence in paragraph (h)(1) introductory text; and

f. Revising the reference "§ 63.10(d)(4)(ii)" to read "§"63.10(d)(5)(ii)" in the last sentence in paragraph (i).

The revisions and additions read as follows:

§ 63.1260 Reporting requirements.

* * * * *

(e) * * *

(6) Data and other information supporting the determination of annual average concentrations by process simulation as required in § 63.1257(e)(1)(ii).

(7) Bench scale or pilot-scale test data and rationale used to determine annual average concentrations as required in § 63.1257(e)(1)(ii)(C).

* * * * *

(g) * * *

(1) * * *

(ii) Quarterly reports shall be submitted when the source experiences an exceedance of a temperature limit monitored according to the provisions of § 63.1258(b)(1)(iii) or an exceedance of the outlet concentration monitored according to the provisions of § 63.1258(b)(1)(x) or § 63.1258(b)(5). Once an affected source reports quarterly, the affected source shall follow a quarterly reporting format until a request to reduce reporting frequency is approved. If an owner or operator submits a request to reduce the frequency of reporting, the provisions in § 63.10(e)(3)(ii) and (iii) shall apply, except that the phrase "excess emissions and continuous monitoring system performance report and/or summary report" shall mean "Periodic report" for the purposes of this section.

* * * * *

(2) * * *

(vii) Each new operating scenario which has been operated since the time period covered by the last Periodic report. For each new operating scenario, the owner or operator shall provide verification that the operating conditions for any associated control or treatment device have not been exceeded, and that any required calculations and engineering analyses have been performed. For the initial Periodic report, each operating scenario for each process operated since the compliance date shall be submitted.

(viii) If the owner or operator elects to comply with the provisions of § 63.1253(b) or (c) by installing a floating roof, the owner or operator shall submit the information specified in § 63.122(d) through (f) as applicable. References to § 63.152 from § 63.122 shall not apply for the purposes of this subpart.

(h) * * *

(1) * * * For the purposes of this section, a process change means the startup of a new process, as defined in § 63.1251. * * *

* * * * *

13. Section 63.1261 is revised to read as follows:

§ 63.1261 Delegation of Authority.

(a) This subpart can be administered by EPA, or a delegated authority such as a State, local, or tribal agency. If the Administrator has delegated authority to a State, local, or tribal agency, then that agency has the authority to administer and enforce this subpart. To find out if this subpart is delegated to a State, local, or tribal agency, the appropriate EPA Regional Office should be contacted.

(b) In delegating implementation and enforcement authority of this subpart to a State, local, or tribal agency under 40 CFR part 63, subpart E, the authorities contained in paragraph (c) of this section are retained by the Administrator and are not transferred to the State, local, or tribal agency.

(c) The authorities that will not be delegated to State, local, or tribal agencies are as follows:

(1) Approval of alternatives to the emission standards in §§ 63.1252 through 63.1256 under § 63.6(g).

(2) Approval of major alternatives to test methods under § 63.1257 as defined in § 63.90.

(3) Approval of major alternatives to monitoring under § 63.1258 as defined in § 63.90.

(4) Approval of major alternatives to recordkeeping and reporting under §§ 63.1259 and 63.1260 as defined in § 63.90.

14. Table 1 to subpart GGG is amended by:

a. Revising the column heading "Comments" to read "Explanation";

b. Revising the entries "63.5(b)(3)," "63.7(a)(1)," "63.9(h)," "63.9(j)," "63.9(a)–(d)," "63.9(e)," "63.9(g)(1)," "63.9(g)(3)," "63.10(a)," "63.10(b)(1)," "63.10(b)(3)," and "63.10(c)–(d)(2);"

c. Removing the entry "63.7(a)(2)(i–ix)" and adding in its place the entry "63.7(a)(2)(i)–(ix);"

d. Removing the entry "63.8(b)(3)–(c)(3)" and adding in its place the entry "63.8(b)(3)–(c)(4);"

e. Removing the entry "63.8(c)(4–5)" and adding in its place the entry "63.8(c)(5);"

f. Removing the entry "63.8(c)6)–(8)" and adding in its place the entry "63.8(c)(6)–(8)."

The revisions and additions read as follows:

TABLE 1.—TO SUBPART GGG. GENERAL PROVISIONS APPLICABILITY TO SUBPART GGG

General provisions reference	Summary of requirements	Applies to subpart GGG	Explanation and comments
63.5(b)(3)	New construction/reconstruction	Yes	Except for changes and additions authorized under § 52.2454 of this title. However, the requirement to submit the Precompliance report at least 90 days before the compliance date still applies
63.7(a)(1)	Performance testing requirements	Yes	Subpart GGG also specifies required testing and compliance procedures
63.7(a)(2)(i–ix)		Yes	Except substitute "150 days" instead of "180 days."
63.8(b)(3)–(c)(4)	CMS requirements	Yes	§ 63.1259 also specifies recordkeeping for CMS.
63.8(c)(5)	COMS operation requirements	No.	
63.8 (c)(6–8)	CMS calibration and malfunction provisions	No	Calibration procedures are provided in § 63.1258.
63.9(a)–(d)	Notification requirements—Applicability and general information.	Yes	§ 63.1260(b) also specifies initial notification requirement.
63.9(e)	Notification of performance test	Yes	§ 63.1260(l) also specifies notification requirement for performance test.
63.9(g)(1)	Additional notification requirements for sources with CMS.	Yes	§ 63.1260 (d) also specifies notification requirement for performance evaluation.
63.9(g)(3)	Notification that criterion to continue use of alternative to relative accuracy testing has been exceeded.	Yes	§ 63.1260(d) also specifies notification requirement for performance evaluation.
63.9(h)	Notification of compliance status	Yes	Specified in § 63.1260(f). Due 150 days after compliance date.
63.9(j)	Change in information provided	No	Subpart GGG specifies procedures for notification of changes.
63.10(a)	Recordkeeping requirements	Yes.	
63.10(b)(1)	Records retention	Yes	Also stated in § 63.1259.
63.10(b)(3)	Records retention for sources not subject to relevant standard.	Yes	Also stated in § 63.1259 (a)(2).
63.10(c)–(d)(2)	Other recordkeeping and reporting provisions	Yes	Also stated in § 63.1259 (a)(4).

15. Table 5 to subpart GGG is revised to read as follows:

TABLE 5. TO SUBPART GGG.—CONTROL REQUIREMENTS FOR ITEMS OF EQUIPMENT THAT MEET THE CRITERIA OF § 63.1252(F)

Item of equipment	Control requirement[a]
Drain or drain hub	(a) Tightly fitting solid cover (TFSC); or (b) TFSC with a vent to either a process or to a control device meeting the requirements of § 63.1256(h)(2); or

TABLE 5. TO SUBPART GGG.—CONTROL REQUIREMENTS FOR ITEMS OF EQUIPMENT THAT MEET THE CRITERIA OF § 63.1252(F)—Continued

Item of equipment	Control requirement[a]
	(c) Water seal with submerged discharge or barrier to protect discharge from wind.
Manhole[b]	(a) TFSC; or (b) TSFC with a vent to either a process or to a control device meeting the requirements of § 63.1256(h)(2); or (c) If the item is vented to the atmosphere, use a TFSC with a properly operating water seal at the entrance or exit to the item to restrict ventilation in the collection system. The vent pipe shall be at least 90 cm in length and not exceeding 10.2 cm in nominal inside diameter.
Lift station	(a) TFSC; or (b) TFSC with a vent to either a process or to a control device meeting the requirements of § 63.1256(h)(2); or (c) If the lift station is vented to the atmosphere, use a TFSC with a properly operating water seal at the entrance or exit to the item to restrict ventilation in the collection system. The vent pipe shall be at least 90 cm in length and not exceeding 10.2 cm in nominal inside diameter. The lift station shall be level controlled to minimize changes in the liquid level.
Trench	(a) TFSC; or (b) TFSC with a vent to either a process or to a control device meeting the requirements of § 63.1256(h)(2); or (c) If the item is vented to the atmosphere, use a TFSC with a properly operating water seal at the entrance or exit to the item to restrict ventilation in the collection system. The vent pipe shall be at least 90 cm in length and not exceeding 10.2 cm in nominal inside diameter.
Pipe	Each pipe shall have no visible gaps in joints, seals, or other emission interfaces.
Oil/Water separator	(a) Equip with a fixed roof and route vapors to a process or equip with a closed-vent system that routes vapors to a control device meeting the requirements of § 63.1256(h)(2); or (b) Equip with a floating roof that meets the equipment specifications of § 60.693(a)(1)(i), (a)(1)(ii), (a)(2), (a)(3), and (a)(4).
Tank	Maintain a fixed roof and consider vents as process vents.[c]

[a] Where a tightly fitting solid cover is required, it shall be maintained with no visible gaps or openings, except during periods of sampling, inspection, or maintenance.
[b] Manhole includes sumps and other points of access to a conveyance system.
[c] A fixed roof may have openings necessary for proper venting of the tank, such as pressure/vacuum vent, j-pipe vent.

Medicare Program; Prospective Payment System and Consolidated Billing for Skilled Nursing Facilities—Update

AGENCY: Health Care Financing Administration (HCFA), HHS.

ACTION: Notice of proposed rulemaking.

SUMMARY: This proposed rule sets forth updates to the payment rates used under the prospective payment system (PPS) for skilled nursing facilities (SNFs), for fiscal year 2001. Furthermore, it specifically proposes changes to the SNF PPS case-mix methodology. Annual updates to the PPS rates are required by section 1888(e) of the Social Security Act, as amended by the Medicare, Medicaid and State Child Health Insurance Program Balanced Budget Refinement Act of 1999, related to Medicare payments and consolidated billing for SNFs. In addition, this proposed rule sets forth certain conforming revisions to the regulations that are necessary in order to implement amendments made to the Act by section 103 of the Medicare, Medicaid and State Child Health Insurance Program Balanced Budget Refinement Act of 1999.

DATES: We will consider comments if we receive them at the appropriate address, as provided below, no later than 5 p.m. on June 9, 2000.

ADDRESSES: Mail written comments (1 original and 3 copies) to the following address: Health Care Financing Administration, Department of Health and Human Services, Attention: HCFA–1112–P, P.O. Box 8013, Baltimore, MD 21244–8013.

If you prefer, you may deliver your written comments (1 original and 3 copies) to one of the following addresses:

Room 443–G, Hubert H. Humphrey Building, 200 Independence Avenue, SW., Washington, DC 20201, or

Room C5–15–03, 7500 Security Boulevard, Baltimore, MD 21244–8150.

Because of staffing and resource limitations, we cannot accept comments by facsimile (FAX) transmission. In commenting, please refer to file code HCFA–1112–P. Comments received timely will be available for public inspection as they are received, generally beginning approximately 3 weeks after publication of a document, in Room 443–G of the Department's office at 200 Independence Avenue, SW., Washington, DC, on Monday through Friday of each week from 8:30 to 5 p.m. (phone: (202) 690–7061).

FOR FURTHER INFORMATION CONTACT:

Dana Burley, (410) 786–4547 or Sheila Lambowitz, (410) 786–7605 (for information related to the case-mix classification methodology).

John Davis, (410) 786–0008 (for information related to the Wage Index).

Bill Ullman, (410) 786–5667 (for information related to consolidated billing).

Steve Raitzyk, (410) 786–4599 (for information related to the facility-specific transition rates).

Bill Ullman, (410) 786–5667 and Susan Burris (410) 786–6655 (for general information).

SUPPLEMENTARY INFORMATION: *Copies:* To order copies of the **Federal Register** containing this document, send your request to: New Orders, Superintendent of Documents, P.O. Box 371954, Pittsburgh, PA 15250–7954. Please specify the date of the issue requested and enclose a check or money order payable to the Superintendent of Documents, or enclose your Visa or Master Card number and expiration date. Credit card orders can also be placed by calling the order desk at (202) 512–1800 (or toll free at 1–888–293–6498) or by faxing to (202) 512–2250. The cost for each copy is $8. As an alternative, you can view and photocopy the **Federal Register** document at most libraries designated as Federal Depository Libraries and at many other public and academic libraries throughout the country that receive the **Federal Register**.

To assist readers in referencing sections contained in this document, we are providing the following table of contents.

2. RUG–Based Imputation Method
3. State and Year-Based Imputation Method

In addition, because of the many terms to which we refer by abbreviation in this rule, we are listing these abbreviations and their corresponding terms in alphabetical order below:

ADL—Activity of Daily Living
BBA—Balanced Budget Act of 1997
BBRA—Balanced Budget Refinement Act of 1999
BLS—(U.S.) Bureau of Labor Statistics
CPI—Consumer Price Index
HCFA— Health Care Financing Administration
HCPCS—HCFA Common Procedure Coding System
IFC—Interim Final Rule with Comments
MDS—Minimum Data Set
MSA—Metropolitan Statistical Area
PPI—Producer Price Index
PPS—Prospective Payment System
PRM—Provider Reimbursement Manual

RUG—Resource Utilization Group
SCHIP—State Child Health Insurance Program
SNF—Skilled Nursing Facility

I. Background

A. Current System for Payment of Skilled Nursing Facility Services Under Part A of the Medicare Program

Section 4432 of the Balanced Budget Act of 1997 (BBA) (Pub. L. 105–33) mandated the implementation of a per diem prospective payment system (PPS) for skilled nursing facilities (SNFs), covering all costs (routine, ancillary, and capital) of covered SNF services furnished to beneficiaries under Part A of the Medicare program, effective for cost reporting periods beginning on or after July 1, 1998. The SNF PPS payment methodology features a case-mix adjustment that utilizes data from the comprehensive assessment process required for every SNF beneficiary in order to group them clinically in terms of their degree of resource intensity. The case-mix adjustment is designed to ensure that the amount of the PPS per diem payment is appropriate to the individual beneficiary's actual condition, and is sufficient to purchase the full range of care and services that a beneficiary with a particular clinical profile would typically be expected to require. We are setting forth this proposed rule in accordance with section 1888(e)(4)(H)(ii) of the Social Security Act (the Act), which requires us to publish each year in the **Federal Register** any changes in the case-mix classification system that we use to make the case-mix adjustment. Although we are not proposing any other changes in the overall PPS payment methodology at present, we are nonetheless including a detailed discussion of the overall payment methodology in section I.C. below, in order to provide a context for the proposed changes to the case-mix classification system. In addition, we are incorporating revisions based on the Medicare, Medicaid and State Child Health Insurance Program (SCHIP) Balanced Budget Refinement Act of 1999 (BBRA). Major elements of the system were implemented in an interim final rule that was published in the **Federal Register** on May 12, 1998 (63 FR 26252), and in a final rule that was published in the **Federal Register** on July 30, 1999 (64 FR 41644). These elements are discussed in greater detail in section I.C. below, and include:

- *Rates:* Per diem Federal rates were established for urban and rural areas using allowable costs from fiscal year (FY) 1995 cost reports. These rates also included an estimate of the cost of services that, before July 1, 1998, had been paid under Part B but furnished to Medicare beneficiaries in a SNF during a Part A covered stay. Rates are case-mix adjusted using a refined classification system (Resource Utilization Groups, version III (RUG–III)) based on beneficiary assessments (using the Minimum Data Set (MDS) 2.0). The proposed refinement to the RUG classification system is based on critical analysis which examined various options to account more precisely for the variation in non-therapy ancillary services in our payments and the care needs of medically complex patients. The proposed RUG refinement includes the addition of new categories and incorporation of an ancillary index, as discussed in further detail in section II.B. In addition, the Federal rates are adjusted by the hospital wage index to account for geographic variation in wages. At this time, data for the FY 2001 hospital wage index is not yet available; therefore, the index applied in this proposed rule is the same index used in the July 30, 1999 update notice. We will be updating the wage index in the final rule using the latest hospital wage data. Further, the rates are adjusted annually using an SNF market basket index. Lastly, as a result of section 101 of the BBRA, for SNF services furnished on or after April 1, 2000, and before the later of October 1, 2000, or implementation by the Secretary of Health and Human Services of a refined RUG system, per diem adjusted payments are increased by 20 percent for 15 RUGs falling under categories for Extensive Services, Special Care, Clinically Complex, High Rehabilitation and Medium Rehabilitation. This 20 percent increase serves solely as a temporary, interim adjustment to the payment rates and RUG–III classification system as published in the final rule of July 30, 1999, until we have had the opportunity to implement the case-mix refinements proposed in this rule. At that point, the temporary adjustment afforded by the 20 percent increase will no longer be applicable, as payment will be made in accordance with the newly-refined RUGs. The RUG–III groups to which this adjustment applies are: SE3, SE2, SE1, SSC, SSB, SSA, CC2, CC1, CB2, CB1, CA2, CA1, RHC, RMC and RMB. In addition, for FY 2001 and FY 2002, the adjusted Federal per diem payment to a facility is increased by 4 percent in each year, calculated exclusive of the 20 percent RUG rate increase.
- *Transition:* The SNF PPS includes a 3-year, phased transition that blends a facility-specific payment rate with the Federal case-mix adjusted rate. The blend used changes for each cost reporting period after a facility migrates to the new system. For most facilities, the facility-specific rate is based on allowable costs from FY 1995. As a result of section 102 of the BBRA of 1999, SNFs may elect immediate transition to the Federal rate on or after December 15, 1999 for cost reporting periods beginning on or after January 1, 2000. There is no such election for cost reporting periods beginning before January 1, 2000. SNFs may elect immediate transition up to 30 days after the start of their cost reporting period.
- *Coverage:* The PPS statute did not change Medicare's fundamental requirements for SNF coverage. However, because RUG–III classification is based, in part, on the beneficiary's need for skilled nursing care and therapy, we have attempted where possible to coordinate claims review procedures with the outputs of beneficiary assessment and RUG–III classifying activities. For example, we believe that when an initial Medicare required (5-day) assessment, properly completed, places the beneficiary in one of the upper RUG–III classifications that we designate as representing a covered level of SNF care (see section II.E. of this preamble), this provides the basis for us to assume that the beneficiary needed such care upon admission and at least up until the assessment reference date for the initial Medicare-required assessment. We will, however, continue to make individual review determinations for claims of those individuals who classify in one of the lower RUG–III categories.
- *Consolidated Billing:* The statute includes a billing provision that requires a SNF to submit consolidated Medicare bills for its beneficiaries for virtually all services that are covered under either Part A or Part B. The statute excludes a small list of services (primarily those of physicians and certain other types of practitioners). As discussed later in this preamble, section 103 of the BBRA has identified certain additional services for exclusion, effective April 1, 2000.

As noted above, an interim final rule implementing the SNF PPS was published in the **Federal Register** on May 12, 1998, for which the comment period was initially scheduled to close on July 13, 1998. A subsequent notice extended the public comment period for an additional 60 days (July 13, 1998, (63 FR 37498)), and a second notice reopened the comment period for another 30 days (November 27, 1998 (63 FR 65561)). In addition, a correction notice was published October 5, 1998 (63 FR 53301) that made a number of

minor technical and editorial corrections to the interim final rule. In the July 30, 1999, final rule we responded to the public comments received on the interim final rule and made a number of modifications in the regulation. This final rule was followed by a correction notice published on November 4, 1999 (64 FR 60122), which made a technical correction to the final rule's preamble. Also on July 30, 1999, we issued an update notice (64 FR 41684), followed by a correction notice published on October 5, 1999 (64 FR 54031). We have also issued several Program Memoranda on claims processing and billing under the SNF PPS that are available on the SNF PPS home page at the HCFA website on the Internet, at the following location: <www.hcfa.gov/Medicare/snfpps.htm>

B. Requirements of the Balanced Budget Act of 1997 for Updating the Prospective Payment System for Skilled Nursing Facilities

As described above, section 1888(e)(4)(H) of the Act requires that we publish in the **Federal Register**:

1. The unadjusted Federal per diem rates to be applied to days of covered SNF services furnished during the FY.

2. The case-mix classification system to be applied with respect to these services during the FY.

3. The factors to be applied in making the area wage adjustment with respect to these services.

In addition, in the July 30, 1999 final rule, we indicated that we would announce any changes to the guidelines for Medicare level of care determinations related to Part A SNF services or to the RUG–III classifications.

This proposed rule updates the rates as mandated by the Medicare statute.

C. The Medicare, Medicaid and State Child Health Insurance Program (SCHIP) Balanced Budget Refinement Act of 1999

As a result of enactment of the BBRA, there are several new provisions that result in adjustments to the PPS for SNFs. The following highlights the major provisions involving the PPS for SNFs:

Temporary Increase in Payment for Certain High Cost Residents

As noted previously, section 101 of the BBRA provides for a temporary, 20 percent increase in the per diem adjusted payment rates for 15 specified RUGs, falling under categories for Extensive Services, Special Care, Clinically Complex, High Rehabilitation and Medium Rehabilitation. The specific RUC–III groups to which this adjustment applies are: SE3, SE2, SE1, SSC, SSB, SSA, CC2, CC1, CB2, CB1, CA2, CA1, RHC, RMC, and RMB. The statute provides that the 20 percent increase takes effect with SNF services that are furnished on or after April 1, 2000, and continues until the later of October 1, 2000, or implementation by the Secretary of a refined RUG system. Thus, the 20 percent increase serves solely as a temporary, interim adjustment to the payment rates and RUG–III classification system as published in the final rule of July 30, 1999, until we have implemented the case-mix refinements that we now propose elsewhere in this document, which we expect to accomplish by October 1, 2000. Once we have implemented the case-mix refinements, the temporary adjustment afforded by the 20 percent increase will no longer be applicable, as we will then make payment in accordance with the newly-refined RUGs.

For FY 2001 and FY 2002, section 101 of the BBRA also provides for an across-the-board increase in the adjusted Federal per diem payment rates by 4 percent in each year, calculated exclusive of the 20 percent RUG rate increase discussed above. Unlike the 20 percent increase, which is targeted at certain particular RUG–III groups, this 4 percent increase will apply equally to all RUG groups.

Election For Immediate Transition to Federal Rate

As noted earlier, under section 102 of the BBRA, all SNFs may now elect to bypass the transition and be paid based upon 100 percent of the Federal rate. This election applies to cost reporting periods beginning on or after January 1, 2000. There is no such election for cost reporting periods beginning before January 1, 2000. SNFs may make this election beginning on or after December 15, 1999 and up to 30 days after the start of their cost reporting periods. An election to bypass the transition is effective for all subsequent periods and cannot be rescinded once it is effective. Further information can be found in Program Memorandum A–99–53.

Special Payment Adjustment for Certain SNFs

Section 155 of the BBRA provides that PPS payments to certain SNF providers located in Baldwin or Mobile County, Alabama, will be based on 100 percent of their facility specific rates for cost reporting periods that begin in FY 2000 or FY 2001. In addition, it requires that the facility specific portion of their payment rate be calculated using data from their cost reporting period beginning in FY 1998. In order to be eligible for this special payment, a SNF must meet the following criteria: began participation in the Medicare program before January 1, 1995; have at least 80 percent of the total inpatient days of the facility in the cost reporting period beginning in FY 1998 comprised of persons entitled to Medicare; and, be located in Baldwin or Mobile County, Alabama.

Special SNF PPS Payment Provisions for SNFs with Certain Types of Patient Populations

Section 105 of the BBRA adds paragraph (12) to section 1888(e) of the Act and permits certain SNFs to receive 50 percent of the facility specific rate and 50 percent of the Federal per diem rate, effective from November 29, 1999, until September 30, 2001. In order to be eligible, a SNF must: have been certified as an SNF under Medicare prior to July 1, 1992; be a hospital-based facility; and, in the cost reporting period beginning in FY 1998, have had a patient population, eligible for Part A benefits, of which at least 60 percent were "immuno-compromised secondary to an infectious disease," with "specific diagnoses specified by the Secretary." The statute gives the Secretary the authority to specify the diagnosis associated with this provision, and we believe the legislative history provides some guidance concerning the application of this provision. The House Ways and Means Committee report (H. Rep. 106–436, Part 1 at 47) indicates that this provision is directed at facilities that serve "* * * very specialized patients * * * whose medical conditions are not well-accounted for in the RUG classification system." The Senate Finance Committee Report (S. Rep. 106–199 at 8) indicates the need to study "* * * alternative payment methods for skilled nursing facilities that specialize in providing care to extremely high cost, chronically ill populations * * *" such as "a facility that exclusively specializes in caring for AIDS patients * * *" In light of this general Congressional intent, we believe that the scope of this provision should be limited and propose that this provision be applied to human immunodeficiency virus (HIV) as coded in ICD–9–CM with the following code: 042.

Provision for Part B Add-Ons for Facilities Participating in the Nursing Home Case-Mix and Quality (NHCMQ) Demonstration Project

Under prior law, section 1888(e)(3) of the Act provided for an add-on to the

payment rates for Part B services furnished during the course of a Part A covered stay for those facilities that did not participate in the demonstration that preceded SNF PPS. However, the Act did not provide for a similar add-on for facilities that did participate in the demonstration project. Therefore, section 104 of the BBRA amended section 1888(e)(3) to provide that SNFs that had participated in the Nursing Home Case Mix and Quality Demonstration (NHCMQ) project are eligible for the inclusion of a Part B add-on amount in their facility specific PPS rates. This provision is effective as if included in the enactment of the BBA and, therefore, applies to all cost reporting periods subject to the PPS transition.

For the purpose of computing facility specific rates, the base year for providers participating in the NHCMQ demonstration project is calendar year 1997 rather than FY 1995 (which is the base year for SNFs not participating in the demonstration project). Therefore, the Part B add-on amounts for the demonstration SNFs will be calculated using data from the appropriate periods in 1997. Because of the time period necessary for us to compute these amounts, existing Part B data from 1995 will be updated for inflation and used as the bases for payment on an interim basis until we can develop the final amounts using the 1997 data, at which point earlier payments will be adjusted to reflect the correct data.

Exclusion of Certain Additional Services from the SNF PPS Bundle and Consolidated Billing

The original SNF PPS legislation in the BBA identified several service categories that were excluded from the SNF consolidated billing requirement, as well as from the bundled Part A payment made under the SNF PPS itself. Effective with services furnished on or after April 1, 2000, section 103(a) of the BBRA has amended section 1888(e)(2)(A) to exclude certain additional types of services from the consolidated billing requirement, thus allowing these services to be billed separately to Part B. Section 103(b) of the BBRA has also amended section 1888(e)(4)(G) to provide for a corresponding proportional reduction in Part A SNF payments, beginning with FY 2001. We discuss these additional excluded service categories in section V. of this preamble, on consolidated billing.

D. Skilled Nursing Facility Prospective Payment—General Overview

The Medicare SNF PPS was implemented for cost reporting periods beginning on or after July 1, 1998. Under the PPS, SNFs are paid through per diem prospective case-mix adjusted payment rates applicable to all covered SNF services. These payment rates cover all the costs of furnishing covered skilled nursing services (that is, routine, ancillary, and capital-related costs) other than costs associated with approved educational activities. Covered SNF services include posthospital SNF services for which benefits are provided under Part A and all items and services that, before July 1, 1998, had been paid under Part B (other than physician and certain other services specifically excluded under the BBA) but furnished to Medicare beneficiaries in a SNF during a Part A covered stay. (For a complete discussion of these provisions, see the May 12, 1998 interim final rule (63 FR 26252)).

1. Payment Provisions—Federal Rate

The statute sets forth a fairly prescriptive methodology for calculating the amount of payment under the SNF PPS. The PPS utilizes per diem Federal payment rates based on mean SNF costs in a base year updated for inflation to the first effective period of the PPS. We developed the Federal payment rates using allowable costs from hospital-based and freestanding SNF cost reports for reporting periods beginning in FY 1995. The data used in developing the Federal rates also incorporate an estimate of the amounts that would be payable under Part B for covered SNF services to individuals who were receiving Part A covered services in an SNF. In developing the rates for the initial period, we updated costs to the first effective year of PPS (15-month period beginning July 1, 1998) using a SNF market basket index, and standardized for facility differences in case-mix and for geographic variations in wages. Providers that received "new provider" exemptions from the routine cost limits were excluded from the database used to compute the Federal payment rates. In addition, costs related to payments for exceptions to the routine cost limits were excluded from the database used to compute the Federal rates. In accordance with the formula prescribed in the BBA, we set the Federal rates at a level equal to the weighted mean of freestanding costs plus 50 percent of the difference between the freestanding mean and weighted mean of all SNF costs (hospital-based and freestanding) combined. We compute and apply separately the payment rates for facilities located in urban and rural areas. In addition, we adjust the portion of the Federal rate attributable to wage related costs by a wage index.

The Federal rate also incorporates adjustments to account for facility case-mix using a classification system that accounts for the relative resource utilization of different patient types. This classification system, RUG–III, utilizes beneficiary assessment data (from the Minimum Data Set or MDS) completed by SNFs to assign beneficiaries into one of 178 groups. The May 12, 1998 interim final rule (63 FR 26252) has a complete and detailed description of the original (44 group) RUG–III classification system. A detailed discussion of the proposed changes to the RUG classification system is found in Section II.B. of this proposed rule.

The Federal rates reflected in this notice update the rates in the July 30, 1999 update notice (64 FR 41684) by a factor equal to the SNF market basket index minus 1 percentage point. According to section 1888(e)(4)(E)(ii) of the Act, for FYs 2001 and 2002, we will update the rate by adjusting the current rates by the SNF market basket change minus 1 percentage point. For subsequent FYs, we will adjust the rates by the applicable SNF market basket change.

2. Payment Provisions—Transition Period

Beginning with a provider's first cost reporting period beginning on or after July 1, 1998, there is a transition period covering three cost reporting periods. During the transition period, SNFs receive a payment rate comprising a blend between the Federal rate and a facility-specific rate based on each facility's FY 1995 cost report. Under section 1888(e)(2)(E)(ii) of the Act, SNFs that received their first payment from Medicare on or after October 1, 1995 receive payment according to the Federal rates only.

For SNFs subject to transition, the composition of the blended rate varies depending on the year of transition. For the first cost reporting period beginning on or after July 1, 1998, we make payment based on 75 percent of the facility-specific rate and 25 percent of the Federal rate. In the next cost reporting period, the rate consists of 50 percent of the facility-specific rate and 50 percent of the Federal rate. In the following cost reporting period, the rate consists of 25 percent of the facility-specific rate and 75 percent of the Federal rate. For all subsequent cost

reporting periods, we base payments entirely on the Federal rates.

As noted earlier, in accordance with section 102 of the BBRA, SNFs that would otherwise be subject to the statutory three-year, phased transition from facility-specific to Federal rates, may elect to bypass the transition and go directly to the full Federal rate. This amendment applies to elections made on or after December 15, 1999, except that no election will be effective for a cost reporting period beginning before January 1, 2000; an election is effective for a cost reporting period beginning no earlier than 30 days before the date of the election.

3. Payment Provisions—Facility-Specific Rate

For most facilities, we compute the facility-specific payment rate utilized for the transition using the allowable costs of SNF services for cost reporting periods beginning in FY 1995 (cost reporting periods beginning on or after October 1, 1994 and before October 1, 1995). Included in the facility-specific per diem rate is an estimate of the amount that would be payable under Part B for covered SNF services furnished during FY 1995 to individuals who were beneficiaries of the facility and receiving Part A covered services. The facility-specific rate, in contrast to the Federal rates, includes amounts paid to SNFs for exceptions to the routine cost limits. In addition, we also take into account "new provider" exemptions from the routine cost limits, but only to the extent that routine costs do not exceed 150 percent of the routine cost limit.

We update the facility-specific rate for each cost reporting period after FY 1995 to the first cost reporting period beginning on or after July 1, 1998 (the initial period of the PPS) by a factor equal to the SNF market basket percentage increase minus 1 percentage point. For FYs 1998 and 1999, we updated this rate by a factor equal to the SNF market basket increase minus 1 percentage point, and in each subsequent year, we will update it by the applicable SNF market basket increase.

Appeals Rights

In enacting SNF PPS, Congress imposed limitations on the rights of SNFs to appeal their new payment rates (section 1888(e)(8) of the Social Security Act). Similar to the hospital PPS, the new SNF system begins with a transition period, wherein a portion of the payment rates (that is, the facility-specific rate) is based upon the facilities' costs in a base period (cost reporting periods beginning in 1995). The facility-specific portion of the rate phases out over the course of a three year cost reporting transition period, after which the SNFs will be paid on a fully Federal rate. The statutory language removes the Federal portion of the rate from administrative and judicial review, while allowing for a limited review of the facility-specific portion of the rate related to an SNFs Part A historical costs from the 1995 base year. The language of the interim final rule with comment and the Medicare Provider Reimbursement Manual (PRM) contemplate situations where adjustments are made to the reimbursement amounts allowable in the base year that are used to set the facility-specific portion of a provider's PPS rate. Adjustments may be made in the cost report settlement process and/or providers may have appealed specific cost report adjustments. Where adjustments are made to the base year costs either through final settlement of the cost report or as a result of an appeal of the base year Notice of Program Reimbursement (NPR), such adjustments may be applied to the facility-specific portion of the PPS rate for any cost years that are open or are within the time periods subject to reopening under the regulations at 42 CFR 405.1885. Additionally, providers may challenge the facility-specific portion of their rates by appealing the facility-specific rate notice they receive from their fiscal intermediary before the start of SNF PPS. The fiscal intermediaries will apply any adjustments resulting from a successful challenge to this rate notice to all open transition years. Providers may also challenge their facility-specific rates by appealing their transition year NPRs. Adjustments obtained through a NPR challenge will only be applied to the year under appeal. Moreover, in accordance with the judicial review prohibitions contained in section 1888(e)(8)(B) of the Act, all reviews of facility-specific rates are limited to challenges relating to specific Medicare Part A costs in the base year.

II. Update of Payment Rates Under the Prospective Payment System for Skilled Nursing Facilities

A. Federal Prospective Payment System

This rule sets forth a proposed schedule of Federal prospective payment rates applicable to Medicare Part A SNF services beginning October 1, 2000. The schedule incorporates per diem Federal rates designed to provide Part A payment for all costs of services furnished to a beneficiary of an SNF during a Medicare-covered stay.

1. Cost and Services Covered by the Federal Rates

The Federal rates apply to all costs (that is, routine, ancillary, and capital related costs) of covered SNF services other than costs associated with operating approved educational activities as defined in § 413.85. Under section 1888(e)(2) of the Act, covered SNF services include posthospital SNF services for which benefits are provided under Part A (the hospital insurance program), as well as all items and services (other than those services excluded by statute) that, before July 1, 1998, were paid under Part B (the supplementary medical insurance program) but furnished to Medicare beneficiaries in a SNF during a Part A covered stay. (These excluded service categories are discussed in greater detail in section V.B.2. of the May 12, 1998 interim final rule (63 FR 26295–97). Also, as mentioned previously, section 103 of the BBRA has identified certain additional types of services for exclusion from the SNF PPS bundle, and has provided for a corresponding proportional reduction in Part A SNF payments beginning with FY 2001.).

2. Methodology Used for the Calculation of the Federal Rates

The methodology to compute the unadjusted Federal rates incorporates several changes since we published the final rule on July 30, 1999 (64 FR 41684). First, to facilitate the incorporation of our proposed refinement to the case mix classification system, we are creating a new component of the payment rates to account for non-therapy ancillary services. This component is being created by moving the non-therapy ancillary costs used in establishing the nursing case-mix component of the payment rates to a separate component. For the payment rates associated with urban areas, 43.4 percent of the nursing case mix component is related to non-therapy ancillary services (including Part B services). For the payment rates associated with rural areas, 42.7 percent of the nursing case mix component is related to non-therapy ancillary services (including Part B services). These percentages were previously identified in a **Federal Register** notice dated November 27, 1998 (63 FR 65561). This new component of the payment rates is presented in Tables 1 and 2 of this proposed rule.

In addition, in accordance with section 103 of the BBRA, the Federal rates will be adjusted to reflect the

exclusion of certain items and services from consolidated billing, as explained previously. The complexity and time necessary for computing the numeric adjustment itself does not allow us to present it in this proposed rule. However, we describe the general methodology that we plan to use later in this preamble (in the discussion of the PPS Rate Tables). As required by the statute, the rates are updated using the latest market basket percentage minus 1 percentage point. For a complete description of the multi-step process, see the May 12, 1998 interim final rule. In addition, based on section 101 of the BBRA, we have provided for a 4 percent increase in the adjusted Federal rate for FY 2001. This 4 percent adjustment is not reflected in the rate tables (Tables 1, 2, 5, and 6 of this proposed rule). In accordance with the statute, it is applied after all adjustments (wage and case-mix). See the example in Section III; Table 9, of this proposed rule.

The SNF market basket is used to adjust each per diem component of the Federal rates forward to reflect cost increases occurring between the midpoint of the Federal FY beginning October 1, 1999 and the midpoint of the Federal FY beginning October 1, 2000, and ending September 30, 2001, to which the payment rates apply. In accordance with section 1888(e)(4)(B) of the Act, the payment rates are updated between FY 2000 and FY 2001 by a factor equivalent to the annual market basket index percentage increase minus 1 percentage point. This factor is equal to 1.01833. Tables 1 and 2 below reflect the updated components of the unadjusted Federal rates.

TABLE 1.—UNADJUSTED FEDERAL RATE PER DIEM: URBAN

Rate component	Nursing case-mix	Medical ancillary	Therapy case-mix	Therapy non-case mix	Non-case-mix
Per Diem Amount	$64.49	$49.45	$85.79	$11.32	$58.25

TABLE 2.—UNADJUSTED FEDERAL RATE PER DIEM: RURAL

Rate component	Nursing case-mix	Medical ancillary	Therapy case-mix	Therapy non-case mix	Non-case-mix
Per Diem Amount	$62.50	$46.58	$99.11	$12.10	$59.32

B. Case-Mix Adjustment and Options

As required by the BBA, HCFA must publish the SNF PPS case-mix classification methodology applicable for the next Federal FY before August 1 of each year. This proposed rule discusses options for refinements to the RUG–III system, describes ongoing research and analyses, shares the initial results that we propose be incorporated into the Medicare PPS system effective October 1, 2000, and solicits comments from all interested parties. During the next 60 days, comments will be reviewed and considered, additional analyses will be conducted, and final decisions will be made on the need for, and types of, RUG–III refinements to be implemented. A final rule will then be promulgated before August 1, 2000.

Research Goals

We commissioned a study to review the RUG–III classification system with particular emphasis on the care needs of medically complex Medicare beneficiaries and the variation in non-therapy ancillary services within RUG–III categories. This project is a major priority for us, the provider industry, and others. The initial research identified potential refinements to the system that we propose to implement effective October 1, 2000.

A key part of this research was the exploration of potential refinements to the Extensive Services category. Previous research showed that the Extensive category is associated with the highest per diem non-therapy ancillary costs of any of the RUG–III categories. The research also indicated that, while the Extensive Services category did capture a disproportionate share of high cost beneficiaries, there was considerable variance in costs within this category as well as within other categories. In the current project, additional studies were conducted to extend the analysis of non-therapy ancillary costs and within-group variance to other RUG–III categories.

The researchers focused on the following analyses to identify options, and the results were used to develop the proposed RUG–III refinements discussed in this rule:

1. Evaluate the ability of the current RUG–III system to predict variance in drug, respiratory or other non-therapy ancillary costs.

2. Evaluate the ability of specific MDS items to predict variance in non-therapy ancillary costs, and identify the MDS items most closely associated with differences in non-therapy ancillary costs.

3. Design/test potential refinements to the RUG–III methodology.

A detailed description of the methodology used to conduct these analyses is included in the Technical Appendix A to this proposed rule.

Data Sources

Since ensuring the equity and accuracy of the SNF PPS has been, and continues to be, a major HCFA priority, the studies were initiated shortly after the introduction of the new payment system. In fact, the research was conducted before actual PPS claims and acuity data became available. For this reason, the analyses described here were conducted using a large cross-linked research data base that included clinical assessment data collected from the Federally-mandated MDS, drug information, our claims data, and organizational data on nursing home providers. The data sets used in the analyses are described below:

Minimum Data Set (MDS)

MDS data were collected from 6 states: Kansas, Maine, Mississippi, Ohio, South Dakota, and Texas. (As explained in Technical Appendix A, we were unable to utilize data from a seventh state, New York, due to that state's use of an all-inclusive payment rate.) These states were selected because the MDS data had been collected and used for rate-setting purposes prior to the start of the Medicare SNF PPS (either through the HCFA Case-Mix Demonstration Project or for state Medicaid payment systems), and provided a greater number of MDS records over a longer period of time than available from any other source. In addition, previous demonstration

project reliability studies and state validation activities indicated a generally high level of data accuracy.

MDS data used in this study were for calendar years 1995, 1996 and 1997 (except for Texas, where data were only available for 1997), and included assessments for Medicare beneficiaries, Medicaid recipients and private pay patients. While some states required MDS assessments for all beneficiaries admitted to the SNF regardless of the length of stay, most of the assessments were prepared following the Federal guidelines in effect at the time; that is, assessments required by day 14 of the SNF admission.

MDS Drug Data

Facilities participating in the HCFA Case-Mix Demonstration project submitted medications data as part of their MDS assessments. In addition, several of the states, including Maine, South Dakota, and Ohio, required the medications data with every MDS, regardless of payor source. The medications reported on the MDSs were collected from seven states, the six states used for this study, plus New York (see Technical Appendix A for details on the use of New York data).

Up to 18 medications administered during the assessment reference period can be reported on an MDS record. The MDS drug data were cleansed and verified through a combination of manual examination (by either a clinical pharmacist or physician) and computerized reclassification of National Drug Codes (NDC). The data were then ordered into therapeutic groups for easier analysis.

SNF Claims

All SNF Medicare claims spanning the years 1995 through 1997 were downloaded from the HCFA Data Center and matched to MDS files. The files were constructed so that there are multiple observations per SNF stay if multiple MDS assessments were performed.

Staff Time Measurement (STM) Study Data

This analysis incorporated HCFA STM Study data (combined 1995 and 1997). The May 12, 1998 interim final rule described the STM Study, and the methodology used to incorporate the STM data into Medicare PPS rate-setting. These data were used to impute staff time costs for the observations used in this study.

On-Line Survey Certification and Reporting System (OSCAR) Data

The OSCAR data provide facility-level information, such as the results from annual survey inspections and information regarding facility type. OSCAR data from 1991 through 1998 were linked serially into a longitudinal file. The analytic database constructed for this research has been merged to this longitudinal OSCAR file through the linking of facility identifiers, using the OSCAR information from the survey dates closest to the MDS assessment data.

Case Mix Research Findings

While maintaining the general structure of RUG–III, we found that the two most viable ways to refine the system are by adding new categories and end splits to the system, and by developing a new index system to reflect the variation of non-therapy ancillary service costs. Adoption of these refinements will add additional groups to the case-mix system, somewhat increasing its complexity. This proposed change also may introduce some initial uncertainty for providers, who would have to become familiar with the refined system and modify existing operational and support systems.

In evaluating a particular change, we first identified the drawbacks of that change (for example, added complexity of the RUG–III model and time and effort required by providers, contractors, and beneficiaries to assimilate the change). Then, to evaluate the overall desirability of the potential change, we weighed these drawbacks against the benefits, such as the expected improvement in payment and clinical accuracy. In addition, we evaluated potential refinements in terms of possible incentives and disincentives related to access, quality and cost-effectiveness of SNF care. We incorporated this analysis into our evaluation of potential RUG–III refinements.

After careful review and extensive analysis, we then identified several possible RUG–III refinements that will improve the accuracy of SNF PPS payments. One such refinement is the development of new categories for beneficiaries who qualify for both the RUG–III Rehabilitation and Extensive Services categories. As expected, our analyses indicated that ancillary costs were much higher for Medicare beneficiaries in the Extensive Services category than for those in other categories. There are also a significant number of beneficiaries who would classify into the Extensive Services category based on clinical conditions but who, because they are also receiving rehabilitation services, classify into one of the Rehabilitation categories instead (due to the hierarchical logic of the RUG–III classification system). These beneficiaries carry with them the same non-therapy ancillary costs associated with their complex clinical needs even though they are classified into a RUG–III Rehabilitation category.

The high costs for beneficiaries in the Extensive Services category suggest that the payment rate for Extensive Services should be increased. However, increasing the payment rate without further adjustments could adversely affect provider incentives to provide therapy to beneficiaries requiring Extensive Services. Therefore, we expanded the scope of the proposed refinement to include a new category for beneficiaries who qualify for both Extensive Services and a RUG–III Rehabilitation category.

Our research findings showed little or no correlation between the groups within the Extensive Services category (that is, SE1, SE2, SE3) and the level of rehabilitation services used. For this reason, the structure for the new hierarchy level proposed here would mirror that of the existing Rehabilitation categories. Thus, we would add to the current RUG–III model fourteen (14) new "Rehabilitation and Extensive Services" sub-categories that use the same Rehabilitation sub-category and ADL splits as the current system (See Table 4 for the proposed RUG–III structure).

The second component of the proposed refinement is the development of a separate "non-therapy ancillary" index based on clinical variables on the MDS. We tested MDS items to identify clinical conditions and services that are predictive of non-therapy ancillary costs. First, we analyzed each MDS variable independently, and identified all MDS items that had a significant positive relationship (at the 5 percent level) with per diem non-therapy ancillary costs. Next, we identified combinations of MDS items that were associated with significant cost differences. We then evaluated variables for clinical validity and potential incentive effects. For example, we rejected consideration of indwelling catheters as case-mix adjustors due to the potential negative incentive factors associated with their use in the index. See Table 3 for a list of MDS items that were found to be associated with significant differences in ancillary costs.

Once we identified the critical predictive variables, we investigated a

number of index model approaches. We developed weighted and unweighted versions of a non-therapy ancillary index. Both versions improved the variance prediction of the case-mix system. The unweighted index model assigns a non-therapy ancillary level based on a count of the variables (selected MDS items) associated with non-therapy ancillary costs. Under the weighted index model, different weights are assigned to the selected MDS items based on the difference in costs associated with the item. In this study, the researchers assigned the weights based on quantitative analysis of the data. With both indices, thresholds were determined to form subgroups which vary logically in cost. However, these cost variations relate to the research data base, and need to be verified against the national MDS/Medicare claims data base.

The grouping logic used for the refined RUG–III is very similar to that currently used. The same 108 MDS items that are used to classify beneficiaries into the 44 RUG–III groups will be used to classify beneficiaries into the refined RUG–III subcategories in either the unweighted or weighted index models. It is only at the last level of classification that additional MDS items are considered. The MDS items used for the last step of classification include some of the 108 items that are used for the first level of classification in addition to some others, either alone or in combinations.

The last step to grouping using the unweighted index model (UWIM) that we are proposing is based on a count of clinical variables, up to a maximum of 11. There are 11 "domains," some of which are comprised of multiple MDS clinical variables. The clinical conditions and services that define the domains are shown in Table 3. Within a domain, any one clinical variable, or combination of variables, satisfies the criteria for being included in the count for classification into one of the refined RUG–III groups. For example, the first domain is "Parenteral/IV feeding with greater than 76 percent total calories." In order for the domain to be counted for determining the final step in RUG–III classification in the UWIM, the MDS items K5a and K6a must be coded to reflect the receipt by the beneficiary of at least 76 percent of total nutrition received via parenteral or IV feeding in the previous 7 days.

Other domains are comprised of many more MDS items than the parenteral/IV feeding domain. An example of this is the domain entitled, "Oxygen and either pneumonia or respiratory infection with fever, or pneumonia or respiratory infection, chronic obstructive pulmonary disease, congestive heart failure, coronary artery disease with shortness of breath." This domain will only count once toward classification even though it is possible for a beneficiary to have values for all of these clinical conditions. As soon as the grouper software identifies that one combination of MDS items' values is present on the MDS that satisfies this domain, it will credit the case with a count of 1 in addition to whatever other domain criteria are satisfied by the MDS.

The identified clinical variables are used for classification of every Medicare MDS in the Clinically Complex category and above, regardless of the other qualifying conditions and services reported on the MDS. This means that a beneficiary who has a count of 2 of the relevant clinical variables, will classify into the "3" level of the particular refined RUG–III subcategory for which he or she qualifies. As described above, the "3" level signifies a count of 1 or 2 of the clinical variables used for determining the non-therapy ancillary end split.

For example, a beneficiary who has pneumonia, an ADL sum score of 8, dehydration, a fever, and a surgical wound that requires twice daily dressing changes, will classify to the Special Care category. Within the Special Care category, the ADL score of 8 will classify this beneficiary into the "SC" subcategory. The count of the items that are used to make the final classification is 2, as the pneumonia and the wound care with dressing changes are the two clinical variables that will affect classification of this beneficiary to the SC3 group.

TABLE 3.—MDS ITEMS ASSOCIATED WITH DIFFERENCES IN ANCILLARY CHARGES—REFINED VARIABLE LIST FOLLOWING CLINICAL INPUT

MDS items domains	Percent of sample	Regression coefficient	Standard error	t–Statistic
Parenteral/IV with >76 percent total calories	1	153.97	14.63	10.53
Tracheostomy	1	109.87	16.57	6.63
Suctioning	2	106.76	10.23	10.43
IV Medication	15	77.33	3.71	20.86
Oxygen and either pneumonia or resp. inf. with fever, or pneumonia or resp. inf., COPD, CHF, CAD with SOB	44	26.42	2.60	10.17
Pneumonia	10	25.64	4.06	6.32
Tube feeding with >76 percent total calories	6	23.21	4.33	5.36
Respiratory Infection	7	18.81	4.87	3.87
Application of dressing with/with-out topical medication and presence of ulcers or other skin lesions/ wounds	5	13.38	5.15	2.60
Skin wound/ulcer care	25	7.01	2.77	2.53
Stage 4 Pressure Ulcer	4	6.87	3.09	2.22

Notes: N = 8,087 (Based on analysis of test sample only—20 percent of observations)
Data Source: Medicare MDS and SNF Claims Data 1995–1997, excluding ME, OH, SD.

Using the selected MDS items, we calculated a non-therapy ancillary index score for each MDS and classified them to the appropriate non-therapy ancillary level. We are including a more detailed description of the non-therapy ancillary index methodology in Technical Appendix A.

An index model can differ with respect to the RUG-III categories to which the model is applied. Two options that we considered were to apply the index model only to the Extensive Services category (including beneficiaries in rehabilitation who also qualify for Extensive Services) or to apply the index option to a broader group of RUG-III categories. The research indicated very little difference in ancillary costs for beneficiaries in the

Impaired Cognition, Behavior and Physical Function categories. Differences in ancillary costs were identified within the Rehabilitation, Clinically Complex, Special Care, and Extensive Services groups. For this reason, we propose to apply the non-therapy ancillary index model to all residents in the Clinically Complex category or above (where over 90 percent of Medicare patients fall). In addition, we propose to apply a single non-therapy ancillary index factor to each of the lower levels of the RUG-III model (that is, Impaired Cognition, Behavior, and Physical Function).

Index models can also be applied differently across RUG-III levels. The most straightforward method is to apply a fixed dollar amount for each level of the index. In this case, the add-on for a non-therapy ancillary index score of 3 would be the same regardless of the beneficiary's RUG-III group. Separate indices can also be calculated for each level of the hierarchy. In this case, the dollar amount of the non-therapy ancillary index level of 3 would be different for beneficiaries in different levels of the RUG-III hierarchy, for example, clinically complex, special care, rehabilitation, etc. Separate indices are more appropriate when there is significant inter-group variance. Using the research data base, we found significant variation. In projecting rates for both the UWIM (Tables 5 and 6) and WIM 2 (Technical Appendix A, Tables 6.1 and 6.2) models, we calculated separate index values for each of the 8 proposed hierarchy levels. This approach will be analyzed and evaluated using the national PPS/MDS data base.

Finally, index models can also differ with respect to the number of non-therapy ancillary index groups that are used. Six groups were developed for the weighted index model. Four groups were used for the unweighted model. The weighted index model performs slightly better than its unweighted counterpart. However, it adds a significant level of complexity both in terms of the number of additional RUG-III variations and the addition of a new type of MDS scoring methodology based on cost instead of clinical criteria. In addition, as stated above, the weighted index model break points are not representative of national ancillary costs.

On the other hand, the unweighted index model relies on a count of MDS items to differentiate among index levels, an approach similar to that used currently in RUG-III for classification into the Extensive Services category. At this phase of our analysis, we have concluded that the added complexity of the weighted model offsets any benefits gained. Therefore, we are proposing the unweighted non-therapy ancillary index model that will be applied to the combined Rehabilitation/Extensive Services, Rehabilitation, Extensive Services, Special Care and Clinically Complex categories of the RUG-III hierarchy.

Adopting a new Extensive Services with Rehabilitation category and adding a non-therapy ancillary index component will require modifications to the naming conventions used to identify each RUG-III group. Based on these recommendations, we have updated the RUG-III structure to incorporate the proposed refinements, as displayed in Table 4. These proposed RUG-III groups are based upon the existing 3 digit RUG-III coding structure, but will designate the non-therapy ancillary level as well as the RUG-III category.

The first letter of the RUG-III code defines the hierarchy level. First, a new hierarchy level is being added to recognize beneficiaries needing a combination of Extensive and Rehabilitation Services. The codes used to reflect the hierarchy level are also being expanded to identify separately each level of Rehabilitation (that is, Ultra High, Very High, High, Medium and Low) either in combination with Extensive Services or separately.

RUG CODE—FIRST LETTER

Hierarchy	Code
Extensive with Rehabilitation:	
Ultra High	J
Very High	K
High	L
Medium	M
Low	N
Rehabilitation:	
Ultra High	U
Very High	V
High	W
Medium	X
Low	Y
Extensive Services	E
Special Services	S
Clinically Complex	C
Impaired Cognition	I
Behavior	B
Reduced Physical Function	P

The second letter of the proposed RUG–III coding structure is an alpha character that indicates the final group assigned after the RUG–III end-splits (that is, ADLs, depression, restorative nursing) have been calculated.

The third digit of the proposed RUG–III coding structure will indicate the non-therapy ancillary index level. In the unweighted non-therapy ancillary model, there are 4 levels determined by the number of MDS non-therapy ancillary qualifying items (See Table 4 for the complete list of qualifiers.)

Index level	Number qualifiers met
5	6 or more.
4	3–5.
3	1–2.
2	0.
1	Regular—for impaired cognition behavior and physical function categories.

For example, under the current RUG–III model, a beneficiary whose MDS reflects an ADL sum score of 11, a tracheostomy, suctioning, pneumonia, IV medications and receipt of 380 minutes per week of physical therapy, would group into the RHB rehabilitation group.

In the refined RUG-III model with the unweighted non-therapy ancillary index, this beneficiary would group into the LB4 group with the first digit, L, indicating a combination of Extensive Services and High Rehabilitation, the second digit, B, indicating the ADL level of 11, and the third digit, 4, indicating the non-therapy ancillary level for a beneficiary with 4 qualifiers. See Table 4 for a crosswalk from the current RUG-III groups to the new groups.

In Example 2, we will show the proposed classification for a beneficiary who receives no rehabilitation services. This beneficiary is a quadriplegic, who has an ADL sum score of 17, a stage 4 pressure ulcer, treatment for the pressure ulcer, pneumonia, and daily respiratory therapy. This beneficiary currently classifies into the Special Care category, into the SSC group. In the refined classification system he or she will group into the SA4 group, showing that he or she is in the Special Care category, with an ADL sum score of 17–18, and 3–5 of the MDS non-therapy ancillary qualifiers.

A naming convention has also been established for the weighted model. The first 2 digits are the same as for the unweighted model. The third digit, the non-therapy ancillary indicator, uses alpha characters A through F, with "F" as the lowest ancillary level.

TABLE 4.—RUG REFINEMENT CROSSWALK

Current RUG–III group	Description of category	Non-therapy ancillary split	Refined RUG–III group
	Rehab: At least 720 minutes/week in 1 disciplines, one discipline at least 5 days/week Extensive: At least one of the following: IV feeding in last 7 days, IV medications in last 14 days, suctioning in last 14 days, tracheostomy care in last 14 days, ventilator/respirator in last 14 days ADL Sum Score: 16–18	6	JA5

Additional Research Plans

As noted above, we performed the RUG–III refinement analyses on a research data base rather than on PPS Medicare claims and MDS data. The research data base was appropriate and extremely useful in testing hypotheses, and identifying areas where refinements could be introduced. However, research data always have limitations, and HCFA and contractor staff have identified several areas of concern. Fortunately, since actual PPS claims and MDS data are now available, we are already conducting additional analyses of the unweighted and weighted models to address these concerns and validate the research findings.

For this proposed rule, we have developed Tables 5 and 6 to illustrate the application of the proposed refinement to the RUG–III classification system on the FY 2001 Federal per diem rates. In addition, for comparison purposes, we have developed rate tables for the WIM2 model that are shown in Technical Appendix A (Tables 6.1 and 6.2). However, in reviewing these tables, it is important to recognize the following limitations:

The nursing index is a critical factor in accurately calibrating the system to link payment to acuity levels. The nursing indices shown in Tables 5 through 6 assume that the distribution of the actual Medicare population is the same as the distribution of the research data base. We are now reworking these calculations using national PPS data to ensure accurate calibration of the system.

Using the actual PPS data base also adjusts for a second data limitation: the extent to which MDS data reflects short stay patients. The research data base utilized MDS assessments from 1995 through 1997, a period when MDSs were often not completed for beneficiaries who were in a SNF for less than 14 days. By contrast, the PPS data base includes short-stay beneficiaries, and we will take any special needs of this population into account by using actual PPS data to validate the initial findings.

In addition, the methodology used to adjust non-therapy ancillary charges to cost used the older, non-therapy ancillary charges and facility cost-to-charge ratios. In developing the PPS data base, we will use PPS claims data and the latest available cost-to-charge ratios.

Using the smaller research data base, it was not always possible to obtain a

large number of observations in some of the RUG–III groups to fully determine ancillary costs with the necessary level of precision. For that small number of RUG–III groups, the researchers imputed ancillary costs, and applied these imputed costs to the non-therapy ancillary index used in the rate-setting projections. Using the national PPS data base will allow better differentiation between the non-therapy ancillary index levels for the new, combined Rehabilitation and Extensive Services categories, particularly in index levels 2 and 3 of the unweighted model (and B and C of the weighted model.) (See Tables 5 and 6 for the UWIM model and Technical Appendix A Tables 6.1 and 6.2 for the WIM2 model.)

Finally, we will continue the process of identifying possible negative incentives associated with MDS items used in the non-therapy ancillary index. We will carefully evaluate each item before incorporating it into the final index. Then, we will develop methods to monitor coding practices and to identify changes in coding patterns for use in medical review, quality assurance and program integrity activities. We will issue clarifications, through Program Memoranda and other appropriate means, of MDS requirements needed to maintain the integrity of the RUG–III system.

Using the national PPS data base, we will recalculate the distribution of the beneficiary population across RUG–III categories, including the proposed combined Rehabilitation and Extensive Services category. Then, we will perform the necessary analyses and sensitivity tests to compare the results with those derived from the research data base. We will reevaluate program options (for example, unweighted vs. weighted non-therapy ancillary index, etc.) based on the additional analyses, and modify the proposed refinements as needed. We expect these final analyses to be available in late Spring 2000, and we plan to incorporate them in the final rule to be issued before August 1, 2000.

PPS Rate Tables

We are confident that the additional analyses based on national data will confirm the need for refinements in the RUG–III model by adding the new combined Extensive and Rehabilitation Service groups and by creating a new non-therapy ancillary index. However, it is very likely the values of some of the model components (for example, average ancillary cost by RUG–III group, frequency distribution by RUG–III group, relative weights, etc.) will be further refined through use of the national data base. For this reason, it is important to understand that the values contained in these tables will likely change in the final rule.

While we are confident that these research findings are based on sound methodology, it is certainly possible that additional testing will identify new issues or support variations of the models to those presented here. We remain open to suggestions during the comment period and will carefully evaluate the validation analyses before proceeding to final rulemaking. To illustrate the impact of these proposed changes based on the best data currently available, we have developed rate Tables 5 and 6 using the unweighted model. (For an additional discussion of the weighted model, including a schedule of rates, see Technical Appendix A.) These projections should not be viewed as final nursing indices, non-therapy ancillary indices, or payment rates.

Further, as noted above, we based the non-therapy ancillary indices on the mean adjusted derived cost (that is, charges adjusted by facility ancillary cost-to-charge ratios) of non-therapy ancillary services. Mean costs were calculated separately for each of the eight proposed levels of the RUG–III hierarchy. For the research data base, we used the cost-to-charge ratio applicable to the service date of the claim. For the follow up analyses using actual PPS claims data, we are using the most recent available cost-to-charge ratio. We expect that using the newer cost-to-charges ratios will enhance the accuracy of the calculations. However, due to the lag time between SNF PPS claims submission and cost report processing, it is impossible to match the claims service dates perfectly with the cost report period used for the cost-to-charge ratios. For the SNF PPS data base, we are proposing to use approximately 9 months of claims data starting from January 1, 1999, the date almost all providers became subject to PPS. The cost reports for calendar year 1999 are not due until April 2000.

Finally, the research findings in this proposed rule include the use of "imputed" data in situations where the cell size (for example, number of records meeting the criteria for a specific RUG–III group, etc.) was too small for accurate measurement. When using the national data base, we expect that the relevant data cells will be adequately populated and that all analyses used in developing the final rule will be based on actual rather than imputed data.

These tables reflect two adjustments in particular. First, our nursing and therapy staff time indices (combined 1995 and 1997 staff time data) currently used to establish PPS rates have been adjusted to reflect the new combined Extensive Services with Rehabilitation categories. Second, we have adjusted the nursing case mix component of the rate to remove the non-therapy ancillary component that is part of the current nursing index used in PPS rate-setting. We will need to adjust one or both of these components based on the additional analyses.

We integrated these proposed refinements into the rate-setting methodology, and we list the estimated per diem Federal rates for 178 separate RUG–III classification groups in Tables 5 and 6. We list the case-mix adjusted payment rates separately for urban and rural SNFs (178 each), with the corresponding case-mix index values. These tables list the rates in total and by component. The application of the wage index, described later in this section, is the final adjustment applied to the projected Federal rates in these tables.

In accordance with section 101 of the BBRA, we will make a four percent upward adjustment to the adjusted per diem Federal rate for FY 2001. This estimated adjustment is shown in Table 9.

Finally, these projected rates do not reflect the BBRA requirement (section 103) to reduce the Part A SNF payment rates to account for those services that are newly excluded from consolidated billing and, thus, will be separately billable to Part B by the supplier. As mentioned in section II.A.2. above, because of the complexity of the process and the amount of time needed to implement this requirement, we are unable at present to adjust the proposed rates to reflect this. However, we will make these adjustments prospectively in the final rule establishing payment rates for FY 2001, using the methodology described below.

In order to compute the level of this adjustment, we propose to determine the per diem amount of allowed charges associated with the specific HCPCS codes identified in the statute (and later in this rule) using the same 1995 data on Part B services used in establishing the Federal rates. These data are described in detail in section II.A.2.b of the May 12, 1998 interim final rule (63 FR 26251) and final rule (64 FR 41644) associated with the implementation of the SNF PPS. The per diem amount will be subtracted from the non-therapy ancillary component of the Federal rates shown in Tables 5 and 6 of this rule. We expect this adjustment to be minimal.

Summary of Proposed RUG–III Refinements

Based on the research described here, we are proposing the addition of new RUG–III groups to recognize the needs of Medicare beneficiaries with both heavy medical and rehabilitation needs and the development of an unweighted index model that would account more precisely for the variation in non-therapy ancillary services. Since the research shows substantial ancillary cost variation in the Rehabilitation and Extensive Services, Rehabilitation, Extensive Services, Special Care, and Clinically Complex categories, we have proposed four ancillary index levels to capture variation in ancillary costs accurately. Since beneficiaries in the Impaired Cognition, Behavior, and Physical Function categories exhibited a much smaller ancillary cost variation, we calculated a single ancillary add-on amount. The ancillary add-on amounts were calculated separately for each of the eight proposed RUG–III categories.

The refinements will achieve important improvements in the PPS model, and allow for more accurate payment rates. In addition, after further analysis and review of public comments, we may adjust these proposed refinements further to reflect actual PPS experience.

Collection of Medication Data

In the interim final rule published in the **Federal Register** on May 12, 1998, we stated that we would require facilities to complete and include MDS Section U with their Medicare MDS submissions beginning October 1, 1999. Subsequently, in the final rule published in the **Federal Register** on July 30, 1999, we announced a delay of that requirement and stated our intention to require completion of Section U beginning October 1, 2000. However, we are currently unable to implement the collection of medication data on the MDS beginning October 1, 2000. Accordingly, we will not require completion and submission of Section U of the MDS beginning October 1, 2000, as we had planned. We are currently examining issues related to the implementation of this requirement and we plan to address this matter when we implement the SNF PPS payment update for FY 2001.

C. Wage Index Adjustment to Federal Rates

Section 1888(e)(4)(G)(ii) of the Act requires that we provide for adjustments to the Federal rates to account for differences in area wage levels using an "appropriate" wage index as determined by the Secretary. In addition, it is our intent to evaluate a wage index based specifically on SNF data once it becomes available. The SNF wage data are currently being collected and evaluated to determine if we can utilize them in the future. If a wage index based on SNF data is developed, we will publish it for comment. However, in the interim, many commenters urged us to incorporate the latest wage data available. We continue to believe that, until a wage index based on SNF wage data is collected and analyzed, the hospital wage index's wage data provide the best available measure of comparable wages that should be paid by SNFs. We believe, since hospitals and SNFs compete in the same labor market area, that the use of this index's wage data results in an appropriate adjustment to the labor portion of SNF costs based on an appropriate wage index, as required under section 1888(e) of the Act.

For rates addressed in this proposed rule, we are using wage index values that are based on hospital wage data from cost reporting periods beginning in FY 1996, the same wage data as used to compute the FY 2000 wage index values for the inpatient hospital PPS. We will incorporate updated wage data in the final rule for the FY 2001 SNF PPS update.

The computation of the wage index is similar to past years in that we incorporate the latest data and methodology used to construct the hospital wage index (see the discussion in the May 12, 1998 interim final rule (63 FR 26274)). The wage index adjustment is applied to the labor-related portion of the Federal rate, which is 77.663 percent of the total rate. The schedule of Federal rates below shows the Federal rates by labor-related and non-labor-related components.

As discussed above and in the interim final rule, until an appropriate wage index based specifically on SNF data is available, we will use the latest available hospital wage index data in making annual updates to the payment rates. In making these annual updates, section 1888(e)(4)(G)(ii) of the Act requires that the application of this wage index be made in a manner that does not result in aggregate payments that are greater or less than would otherwise be made in the absence of the wage adjustment. In this third PPS year (Federal rates effective October 1, 2000), we are updating the wage index applicable to SNF payments using the most recent hospital wage data and applying an adjustment to fulfill the budget neutrality requirement. This requirement will be met by multiplying each of the per diem rate components by the ratio of the volume weighted mean wage adjustment factor (using the wage index from the previous year) to the volume weighted mean wage adjustment factor, using the wage index for the FY beginning October 1, 2000. The same volume weights are used in both the numerator and denominator and will be derived from 1997 Medicare Provider Analysis and Review File (MedPAR) data. The wage adjustment factor used in this calculation is defined as the labor share of the rate component multiplied by the wage index plus the non-labor share. The budget neutrality factor for FY 2001 is multiplied by each of the Federal rate components. This factor will be established when the updated wage data for the FY 2001 hospital wage index is available and set forth in the final rule establishing the FY 2001 SNF PPS rates.

PA1	118.89	34.20	153.09
PB1	116.46	33.50	149.96
PC1	115.49	33.22	148.71
PD1	113.07	32.52	145.59
PE1	112.58	32.38	144.96
PF1	106.27	30.57	136.84
PG1	105.78	30.43	136.21
PH1	105.30	30.29	135.59
PI1	103.84	29.87	133.71
PJ1	103.84	29.87	133.71

For any RUG–III group, to compute a wage-adjusted Federal payment rate, the labor-related portion of the payment rate is multiplied by the SNF's appropriate wage index factor. The wage index factor has not been updated since the publication of the July 30, 1999 update notice (64 FR 41684). The product of that calculation is added to the corresponding non-labor-related component. The resulting amount is the Federal rate applicable to a beneficiary in that RUG–III group for that SNF.

D. Updates to the Federal Rates

In accordance with section 1888(e)(4)(E) of the Act, the proposed payment rates listed here have been updated by the SNF market basket minus 1 percentage point, which equals 1.01833 percent. For each succeeding FY, we will publish the rates in the **Federal Register** before August 1 of the year preceding the affected Federal FY.

For the current FY (FY 2001), and for FY 2002, section 1888(e)(4)(E)(ii) of the Act requires the rates to be increased by a factor equal to the SNF market index change minus 1 percentage point. For subsequent FYs, this section requires the rates to be increased by the applicable SNF market basket index increase.

E. Relationship of RUG–III Classification System to Existing Skilled Nursing Facility Level-of-Care Criteria

As discussed in II.B above, we are proposing a number of refinements in the RUGs classifications in this notice. Further, regulations at § 413.345 provide that the information included in each update of the Federal payment rates in the **Federal Register** will include the designation of those specific RUGs under the classification system that represent the required SNF level of care, as provided in § 409.30. Accordingly, we hereby propose to designate the following RUG–III classifications for this purpose: all groups within the Rehabilitation and Extensive category; all groups within the Ultra High Rehabilitation category; all groups within the Very High Rehabilitation category; all groups within the Medium Rehabilitation category; all groups within the Low Rehabilitation category; all groups within the Extensive Services category; and, all groups within the Clinically Complex category.

III. Three-Year Transition Period

Under sections 1888(e)(1) and (2) of the Act, during a facility's first three cost reporting periods that begin on or after July 1, 1998 (that is, the transition period), the facility's PPS rate will be equal to the sum of a percentage of an adjusted facility-specific per diem rate and a percentage of the adjusted Federal per diem rate, as discussed in Section I.D.2. above. After the transition period, the PPS rate will equal the adjusted Federal per diem rate. The transition period payment method will not apply to SNFs that first received Medicare payments (interim or otherwise) on or after October 1, 1995 under present or previous ownership, or to those facilities choosing to bypass the transition in accordance with section 102 of the BBRA; these facilities will be paid based on 100 percent of the Federal rate.

The facility-specific per diem rate is the sum of the facility's total allowable Part A Medicare costs and an estimate of the amounts that would be payable under Part B for covered SNF services for cost reporting periods beginning in FY 1995 (base year). The base year cost report used to compute the facility-specific per diem rate in the transition period may be settled (either tentative or final) or as-submitted for Medicare payment purposes. Under section 1888(e)(3) of the Act, any adjustments to the base year cost report made as a result of settlement or other action by the fiscal intermediary, including cost limit exceptions and exemptions, or results of an appeal, will result in a revision to the facility-specific per diem rate. The instructions for calculating the facility-specific per diem rate are described in detail in the May 12, 1998 interim final rule. In order to implement section 104 of the BBRA, for providers that received payment under the RUG–III demonstration during a cost reporting period that began in calendar year 1997, we will determine their facility-specific per diem rate using the methodology described below.

It is possible that some providers participated in the demonstration but did not have a cost reporting period that began in calendar year 1997. For those providers, we will determine their

facility-specific per diem rate by using the calculations outlined in the May 12, 1998 **Federal Register** interim final rule (63 FR 26251, section III. (A)(1)(a), (b), or (c)). As with the facility-specific per diem applicable to other providers, the allowable costs will be subject to change based on the settlement of the cost report used to determine the total payment under the demonstration. In addition, we derive a special market basket inflation factor to adjust the 1997 costs to the midpoint of the rate setting period (October 1, 2000 to September 30, 2001.)

Step 1—Determine the aggregate payment during the cost reporting period that began in calendar year 1997—RUG–III payment plus routine capital costs plus ancillary costs (other than occupational therapy, physical therapy, and speech pathology).

Step 2—Divide the amount in Step 1, by the applicable total inpatient days for the cost reporting period.

Step 3—Adjust the amount in Step 2, by 1.094828 (inflation factor).

Step 4—Add the amount determined in step 3, to the appropriate Part B add-on amount determined according to Program Memorandum transmittal no. A–99–53 (December 1999).

The amount in Step 4 is the facility-specific rate that is applicable for the facility's first cost reporting period beginning on or after October 1, 2000.

Computation of the Skilled Nursing Facility Prospective Payment System Rate During the Transition:

For the first three cost reporting periods beginning on or after July 1, 1998 (the transition period), an SNF's payment under the PPS is the sum of a percentage of the facility-specific per diem rate and a percentage of the adjusted Federal per diem rate. Under section 1888(e)(2)(C) of the Act, for the first cost reporting period in the transition period, the SNF payment will be the sum of 75 percent of the facility-specific per diem rate and 25 percent of the Federal per diem rate. For the second cost reporting period, the SNF payment will be the sum of 50 percent of the facility-specific per diem rate and 50 percent of the Federal per diem rate. For the third cost reporting period, the SNF payment will be the sum of 25 percent of the facility-specific per diem rate and 75 percent of the Federal per diem rate. For all subsequent cost reporting periods beginning after the transition period, the SNF payment will be equal to 100 percent of the Federal per diem rate. An example is given below computing the SNF PPS rate and SNF payment.

Example of computation of adjusted PPS rates and SNF payment:

Using the XYZ SNF described in Table 9, the following shows the adjustments made to the facility-specific per diem rate and the Federal per diem rate to compute the provider's actual per diem PPS payment in the transition period. XYZ's 12-month cost reporting period begins October 1, 2000. (This is the provider's second cost reporting period under the transition.)

STEP 1

Compute:	
Facility-specific per diem rate	$570.00
Market Basket Adjustment (Table 10.C)	x 1.13320
Adjusted facility-specific rate	$645.92

Step 2

Compute Federal per diem rate:

TABLE 9

[SNF XYZ from above is located in State College, PA with a wage index of 0.9138.]

RUG group	Labor portion*	Wage index	Adjusted labor	Nonlabor portion*	Adjusted rate	4 percent adjustment	Medicare days	Payment
VA5	$264.10	0.9138	$241.33	$75.96	$317.29	$329.98	50	$16,499
WA5	232.28	0.9138	212.26	66.81	279.07	290.23	50	14,512
Total							100	31,011

*From Table 7.

STEP 3

Apply transition period percentages:	
Facility-specific per diem rate $645.92 × 100 days =	$64,592
Times transition percentage (50 percent)	.50
Actual facility-specific PPS payment	32,296
Federal PPS payment	31,011
Times transition percentage (50 percent)	.50
Actual Federal PPS payment	15,506

STEP 4

Compute total PPS payment:	
XYZ's total PPS payment ($32,296 + $15,506)	47,802

IV. The Skilled Nursing Facility Market Basket Index

Section 1888(e)(5)(A) of the Act requires the Secretary to establish an SNF market basket index (input price index) that reflects changes over time in the prices of an appropriate mix of goods and services included in the SNF PPS. This rule incorporates the latest estimates of the SNF market basket index at the time of this proposed rule. The final rule will incorporate updated

projections based on the latest available projections as of that point in time. Accordingly, as described below, we have developed a SNF market basket index that encompasses the most commonly used cost categories for SNF routine services, ancillary services, and capital-related expenses. In the May 12, 1998 **Federal Register**, we included a complete discussion on rebasing the SNF market basket to FY 1992, and revising the index to include capital and ancillary costs. There are 21 separate cost categories and respective price proxies. These cost categories were illustrated in Tables 4.A, 4.B, and Appendix A, found in the May 12, 1998 **Federal Register**.

Each year we calculate a revised labor-related share based on the relative importance of labor-related cost categories in the input price index. Table 10.A below summarizes the updated labor-related share for FY 2001.

TABLE 10.A—FY 2001 LABOR-RELATED SHARE

Cost category	FY 2000 relative importance	FY 2001 relative importance
Wages and Salaries	56.647	56.744
Employee Benefits	12.321	12.405
Nonmedical Professional Fees	1.959	1.953
Labor-Intensive Services	3.738	3.733
Capital-related	2.880	2.826
Total	77.545	77.663

The forecasted rates of growth used to compute the projected SNF market basket percentages, described in the next section, are shown in Table 10.B.

TABLE 10.B—SKILLED NURSING FACILITY TOTAL COST MARKET BASKET, FORECASTED CHANGE, 1997–2002

Fiscal years beginning October 1	Skilled nursing facility total cost market basket
October 1996, FY 1997	2.4
October 1997, FY 1998	2.8
October 1998, FY 1999	2.8
October 1999, FY 2000	3.1
October 2000, FY 2001	2.8
October 2001, FY 2002	2.9
Forecasted Average: 2000–2002	2.9

Use of the Skilled Nursing Facility Market Basket Percentage:

Section 1888(e)(5)(B) of the Act defines the SNF market basket percentage as the percentage change in the SNF market basket index, described in the previous section, from the midpoint of the prior FY (or period) to the midpoint of the current FY (or other period) involved. The facility-specific portion and Federal portion of the SNF PPS rates addressed in this proposed rule are based on cost reporting periods beginning in the base year, Federal FY 1995. For the Federal rates, the percentage increases in the SNF market basket index will be used to compute the update factors occurring between the midpoint of FY 2000 and the midpoint of FY 2001. We used the Standard & Poor's DRI CC, 4th quarter 1999 historical and forecasted percentage increases of the revised and rebased SNF market basket index for routine, ancillary, and capital-related expenses, described in the previous section, to compute the update factors. Finally, the update factors, as described below, will be used to adjust the base year costs for computing the facility-specific portion and Federal portion of the SNF PPS rates.

A. Facility-Specific Rate Update Factor

Under section 1888(e)(3)(D)(i) of the Act, for the facility-specific portion of the SNF PPS rate, we will update a facility's base year costs up to the corresponding cost reporting period beginning October 1, 2000, and ending September 30, 2001, by the SNF market basket percentage. We took the following steps to develop the 12-month cost reporting period facility-specific rate update factors shown in Table 10.C.

For the facility rate, we developed factors to inflate data from cost reporting periods beginning October 1, 1994, through September 30, 1995, to the corresponding cost reporting period beginning in FY 2001. According to section 1888(e)(3)(D) of the Act, the years through FY 1999 were inflated at a rate of market basket minus 1 percentage point, while FY 2000 and FY 2001 are to be inflated at the full market basket rate of increase.

1. We first determined the total growth from the midpoint of each 12-month cost reporting period that began during the period from October 1, 1994, through September 30, 1995, to the midpoint of the corresponding period beginning in FY 2001.

2. From this total growth, we determined the average annual growth rate for each time span.

3. We subtracted 1 percentage point from each average annual growth rate through FY 1999.

4. These reduced average annual growth rates were converted to cumulative growth rates, using market basket minus one for the first four years, and with full market basket for the final two years. (For example, if the time span were for 9 years, we would inflate at the market basket minus 1 percentage point annual rate for 7 years and at annual market basket rate for 2 additional years).

TABLE 10.C—UPDATE FACTORS[1] FOR FACILITY-SPECIFIC PORTION OF THE SNF PPS RATES—ADJUST TO 12-MONTH COST REPORTING PERIODS BEGINNING ON OR AFTER OCTOBER 1, 2000 AND BEFORE OCTOBER 1, 2001 FROM COST REPORTING PERIODS BEGINNING IN FY 1995 (BASE YEAR)

If 12-month cost reporting period in initial period begins	Adjust from 12-month cost reporting period in base year that begins	Using update factor of
October 1, 2000	October 1, 1994	1.13320
November 1, 2000	November 1, 1994	1.13302
December 1, 2000	December 1, 1994	1.13276
January 1, 2001	January 1, 1995	1.13260
February 1, 2001	February 1, 1995	1.13273
March 1, 2001	March 1, 1995	1.13315
April 1, 2001	April 1, 1995	1.13363
May 1, 2001	May 1, 1995	1.13391
June 1, 2001	June 1, 1995	1.13401
July 1, 2001	July 1,1995	1.13411

TABLE 10.C—UPDATE FACTORS [1] FOR FACILITY-SPECIFIC PORTION OF THE SNF PPS RATES—ADJUST TO 12-MONTH COST REPORTING PERIODS BEGINNING ON OR AFTER OCTOBER 1, 2000 AND BEFORE OCTOBER 1, 2001 FROM COST REPORTING PERIODS BEGINNING IN FY 1995 (BASE YEAR)—Continued

If 12-month cost reporting period in initial period begins	Adjust from 12-month cost reporting period in base year that begins	Using update factor of
August 1, 2001	August 1, 1995	1.13443
September 1, 2001	September 1, 1995	1.13497

B. Federal Rate Update Factor

To update each facility's costs up to the common period, we:

1. Determined the total growth from the average market basket level for the period of October 1, 1999 through September 30, 2000 to the average market basket level for the period of October 1, 2000 through September 30, 2001.

2. Calculated the rate of growth between the midpoints of the two periods.

3. Calculated the annual average rate of growth for number 2, above.

4. Subtracted 1 percentage point from this annual average rate of growth.

5. Using the annual average minus 1 percentage point rate of growth, determined the cumulative growth between the midpoints of the two periods specified above.

This revised update factor was used to compute the Federal portion of the SNF PPS rate shown in Tables 1 and 2.

V. Consolidated Billing

Section 4432(b) of the BBA sets forth a consolidated billing requirement applicable to all SNFs providing Medicare services. SNF consolidated billing is a comprehensive billing requirement (similar to the one that has been in effect for inpatient hospital services for well over a decade), under which the SNF itself is responsible for billing Medicare for virtually all of the services that its beneficiaries receive. As with hospital bundling, the law contains a list of services (primarily those of physicians and certain other types of medical practitioners) that are excluded from SNF consolidated billing and, thus, can be separately billed to Part B directly by the outside entity that furnishes them to the Medicare beneficiary (see section 1888(e)(2)(A)(ii) of the Act).

Section 103(a)(2) of the BBRA added section 1888(e)(2)(A)(iii) to the Act to provide for the exclusion of certain additional types of services from SNF consolidated billing, effective with services furnished on or after April 1, 2000. The original statutory exclusions enacted by the BBA consisted of a number of broad service categories, and encompassed all of the individual services that fall within those categories. By contrast, the additional exclusions enacted in the BBRA apply only to certain specified, individual services within a number of broader service categories that otherwise remain subject to consolidated billing. Within the affected service categories—that is, chemotherapy items and their administration, radioisotope services, and customized prosthetic devices—the exclusion applies only to those individual services that are specifically identified by HCPCS code in the legislation itself, while all other services within those broader categories remain subject to consolidated billing. See Table 11, Post-BBA Consolidated Billing Exclusions. We have issued Program Memorandum (PM) no. AB–00–18 (March 2000), which lists the HCPCS codes of those particular services identified by the BBRA as excluded from consolidated billing.

TABLE 11.—POST-BBA CONSOLIDATED BILLING EXCLUSIONS

Exclusion	Exclusion authority	Effective date	Comments
Chemotherapy & Administration	Section 103 of BBRA; section 1888(e)(2)(A) (iii) (II) and (III) of the Act.	4/1/2000	Only applies to those HCPCS codes specified in legislation; Excluded regardless of whether they are furnished in a hospital or nonhospital setting.
Radioisotope Services	Section 103 of BBRA; section 1888(e)(2)(A) (iii) (IV) of the Act.	4/1/2000	Only applies to those HCPCS codes specified in legislation; Excluded regardless of whether they are furnished in a hospital or nonhospital setting.
Customized prosthetic devices	Section 103 of BBRA; section 1888(e)(2)(A) (iii) (V) of the Act.	4/1/2000	Only applies to those HCPCS codes specified in legislation; Excluded regardless of whether they are furnished in a hospital or nonhospital setting.
Ambulance Services furnished in conjunction with Part B Dialysis services.	Section 103 of BBRA; section 1888(e)(2)(A) (iii) (I) of the Act.	4/1/2000	Subject to the medical necessity requirements that apply to ambulance services generally.
Outpatient hospital services that HCFA has identified (see Program Memorandum A–98–;37, 11/1998) as being beyond the general scope of SNF care plans, along with associated ambulance services: • Cardiac catheterization; • CT scans; • Magnetic resonance imaging (MRIs);	§ 411.15(p)(2)(x) and (p)(3)(iii), as promulgated in the SNF PPS Interim Final Rule (5/12/1998).	7/1/1998	Excluded from consolidated billing only when furnished in the outpatient hospital setting.

TABLE 11.—POST-BBA CONSOLIDATED BILLING EXCLUSIONS—Continued

Exclusion	Exclusion authority	Effective date	Comments
• Ambulatory surgery involving the use of an operating room; • Emergency services; • Radiation therapy; • Angiography; • Venous and lymphatic procedures			

The BBRA Conference report (H.R. Conf. Rep. No. 106–479 at 854) characterizes the individual services that this legislation targets for exclusion as "* * * high-cost, low probability events that could have devastating financial impacts because their costs far exceed the payment [SNFs] receive under the prospective payment system * * *." According to the conferees, section 103(a) "is an attempt to exclude from the PPS certain services and costly items that are provided infrequently in SNFs * * *." Some chemotherapy drugs, which are relatively inexpensive and are administered routinely in SNFs, were excluded from this provision [and thus continue to be subject to consolidated billing requirements]. Id.

Further, we note that the exceptionally costly and intensive outpatient hospital services, such as magnetic resonance imaging (MRIs) and cardiac catheterization, that we identified previously under the regulations at § 411.15(p)(3)(iii) (see the preamble discussion in the May 12, 1998 interim final rule at 63 FR 26298–99, and in the July 30, 1999 final rule at 64 FR 41675–76) are excluded from consolidated billing only when furnished in the outpatient hospital setting. By contrast, as indicated in Table 11, the services identified in section 103 of the BBRA are excluded regardless of whether they are furnished in a hospital or nonhospital setting.

In addition, section 103(a)(2) of the BBRA excludes from consolidated billing those ambulance services that are furnished to an SNF beneficiary in conjunction with dialysis services that are covered under Part B. We note that Part B dialysis services themselves are already excluded from consolidated billing (see regulations at 42 CFR 411.15(p)(2)(vii)), as are those ambulance services that are furnished to a beneficiary who is not considered an SNF "resident" for consolidated billing purposes (see § 411.15(p)(2)(x))—for example, a beneficiary who receives one of the excluded outpatient hospital services under § 411.15(p)(3)(iii). The BBRA Conference Committee report further indicates that the newly excluded ambulance services (that is, those needed to transport a SNF resident who receives Part B dialysis services offsite at a certified dialysis facility) still remain subject to the overall medical necessity requirement that applies to ambulance services generally; that is, that ambulance coverage is available only in those situations where the use of other means of transportation is medically contraindicated. (H.R. Conf. Rep. No. 106–479 at 854.)

Further, we note that the statutory exclusion of those ambulance services that are furnished to SNF residents in conjunction with Part B dialysis services does not extend to ambulance services furnished to SNF residents in conjunction with any of the other types of services that this section of the BBRA identifies as excluded. For example, when a SNF resident is temporarily transported offsite via ambulance to receive a type of chemotherapy that is excluded by the BBRA, the ambulance services themselves remain subject to the SNF consolidated billing provision, and are not separately billable to Part B.

Section 103 of the BBRA also gives the Secretary the authority to designate additional, individual services for exclusion within each of the specified service categories. The BBRA Conference report notes that "* * * [n]ew, extremely costly items may come into use or codes may change over time", H.R. Conf. Rep. No. 106–479 at 854 and the discretionary authority provided in the BBRA affords the Secretary the flexibility to revise the exclusion list as warranted by changing conditions that may occur in the future. For example, we note that the BBRA's conference agreement requests the GAO to conduct a review, by July 1, 2000, of the appropriateness of the codes that this legislation has designated for exclusion from consolidated billing. We will carefully consider the GAO's findings to determine whether further refinements in the exclusion list are warranted.

Also, we note that the BBRA made a number of technical corrections in the provisions of the BBA. One of these corrections, section 321(g)(2) of the BBRA, has revised the statute at section 1833(h)(5)(A)(iii) of the Act to make it clear that clinical diagnostic tests furnished to a SNF resident are subject to the consolidated billing requirement.

Finally, while we have implemented consolidated billing in connection with services furnished to SNF residents during Medicare-covered stays, we have not yet implemented so-called "Part B" consolidated billing, in connection with services furnished to SNF residents who are in noncovered stays. As we explained in the July 30, 1999 final rule, the overriding need to accomplish systems renovations in time to achieve Year 2000 (Y2K) compliance forced us to delay certain other projects that involved significant systems modifications of their own, including the implementation of this aspect of consolidated billing. Now that the Y2K-related systems changes have been completed, we have been able to resume work on these other projects. In this context, we have been reexamining some of the operational implications of consolidated billing that are specific to implementing the "Part B" aspect of this provision.

For example, under regulations at § 411.15(p)(3)(iv), if a beneficiary leaves the SNF and then returns within 24 hours of departure, his or her status as an SNF "resident" (for consolidated billing purposes) continues during the absence, regardless of whether the SNF has effected a formal discharge. This would make the SNF responsible for billing Medicare for any services that a beneficiary receives during a temporary absence of up to 24 hours, other than those that are specifically excluded (see the preamble discussion in the SNF PPS interim final rule (63 FR 26298 through 26299, May 12, 1998)). Since consolidated billing is currently in effect only for those SNF stays that are covered by Part A and paid by the PPS, this essentially means that such a beneficiary remains a SNF "resident" after leaving the SNF only if he or she then returns to the SNF by midnight, thus making the day of departure a covered Part A day. However, once

consolidated billing is fully implemented, this will effectively convert the policy regarding services furnished during a beneficiary's temporary absence from the current "midnight rule" to the full "24 hour rule" described in the regulations.

As explained in the SNF PPS interim final rule, we initially established a 24-hour window in the regulations in order to prevent a SNF from being able to unbundle a particular service merely by sending a beneficiary offsite briefly to receive the service as an outpatient of a hospital or clinic. However, we note that SNFs basically have a financial incentive to unbundle such services only in connection with a resident whose stay is covered under Part A, since unbundling the service would mean that it could be paid separately under Part B, rather than out of the global per diem amount that Part A pays the SNF for the covered stay itself. By contrast, a resident who is in a noncovered stay does not qualify for comprehensive coverage of the entire institutional package of care under Part A, but only for Part B coverage of the individual medical and other health services specified in section 1861(s) of the Act. This means that when a SNF resident is in a noncovered stay, Part B would pay individually for each covered medical or other health service furnished to that resident, regardless of whether the SNF or an outside supplier submits the bill.

Thus, as the financial incentives for unbundling are associated with covered stays, we believe that it may be appropriate to have a standard with regard to SNF "resident" status that, in actual practice, is not more stringent for noncovered stays. We could revise the regulations at § 411.15(p)(3)(iv) to provide for continuing a beneficiary's "resident" status during a temporary absence only if he or she returns by midnight of the day of departure. This would, in effect, utilize the same standard that currently applies to covered stays for noncovered stays as well, and we invite comments on the appropriateness of such a revision.

As a point of clarification, we note that the phrase "midnight of the day of departure" refers to the midnight that immediately follows the actual moment of departure, rather than to the midnight that immediately precedes it (see, for example, the discussion of a "leave of absence" in section 3103.3 of the Medicare Intermediary Manual, Part 3 (HCFA Pub. 13–3), which indicates that the day a patient returns to the hospital from a leave of absence "* * * is counted as an inpatient day if he is present *at midnight of that day*" (emphasis added)). Thus, under this policy, a patient "day" begins at 12:01 A.M., and midnight of a particular day occurs at the very end of that day rather than at the very beginning. For example, under the "midnight rule," if a beneficiary begins a leave of absence from the SNF at 10:00 A.M. on July 1 but subsequently returns to the SNF by 12:00 A.M. that night, the beneficiary would continue to be considered a "resident" of the SNF, for consolidated billing purposes, during his or her absence. By contrast, if the beneficiary does not return to the SNF until 1:00 A.M. on the morning of July 2, his or her "resident" status, for consolidated billing purposes, would end as of 10:00 A.M. on July 1, and would not resume until the actual point of readmission to the SNF (that is, as of 1:00 A.M. on July 2).

VI. Provisions of the Proposed Rule

The provisions of this proposed rule are as follows:

- In § 411.15, paragraph (p)(2)(vii) would be revised to exclude from consolidated billing those ambulance services that are furnished to an SNF resident in conjunction with dialysis services that are covered under Part B.
- In § 411.15, paragraph (p)(2) would also be revised to list the additional services that the BBRA has excluded from consolidated billing.
- In § 411.15, paragraph (p)(3)(iv), the phrase "within 24 consecutive hours" would be revised to read "by midnight of the day of departure".
- In § 489.20, paragraph (s) would be revised to list the additional services that BBRA has excluded from consolidated billing, and a conforming change would be made in § 489.21(h).
- In § 489.20, paragraph (s)(7) would be revised to exclude from consolidated billing those ambulance services that are furnished to an SNF resident in conjunction with dialysis services that are covered under Part B.
- Section 489.20(s)(11) and § 411.15(p)(2)(xi), would be revised to reflect editorial revisions in the paragraphs concerning the transportation costs of electrocardiogram equipment.

VII. Collection of Information Requirements

This document does not impose information collection and recordkeeping requirements. Consequently, it need not be reviewed by the Office of Management and Budget under the authority of the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 et.seq.).

VIII. Response to Comments

Because of the large number of items of correspondence we normally receive on **Federal Register** documents published for comment, we are not able to acknowledge or respond to them individually. We will consider all comments we receive by the date and time specified in the **DATES** section of this preamble, and, if we proceed with a subsequent document, we will respond to the comments in the preamble to that document.

IX. Regulatory Impact Analysis

We have examined the impacts of this rule as required by Executive Order (EO) 12866, the Unfunded Mandates Reform Act (UMRA) (Pub. L. 104–4), the Regulatory Flexibility Act (RFA) (Pub. L. 96–354), and the Federalism Executive Order (EO) 13132.

Executive Order 12866 directs agencies to assess costs and benefits of available regulatory alternatives and, when regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). A regulatory impact analysis (RIA) must be prepared for major rules with economically significant effects ($100 million or more annually). This notice is a major rule as defined in Title 5, United States Code, section 804(2), because we estimate its impact will be to increase the payments to SNFs by approximately $900 million in FY 2001. The update set forth in this notice applies to payments in FY 2001. Accordingly, the analysis that follows describes the impact of this one year only. In accordance with the requirements of the Act, we will publish a notice for each subsequent FY that will provide for an update to the payment rates and include an associated impact analysis.

The UMRA also requires (in section 202) that agencies prepare an assessment of anticipated costs and benefits before developing any rule that may result in an annual expenditure by State, local, or tribal governments, in the aggregate, or by the private sector, of $100 million or more in any given year. This rule will have no consequential effect on State, local, or tribal governments. We believe the private sector cost of this rule falls below these thresholds as well.

Executive Order 13132 (effective November 2, 1999), establishes certain requirements that an agency must meet when it promulgates regulations that impose substantial direct compliance costs on State and local governments,

preempts State law, or otherwise have Federalism implications. As stated above, this rule will have no consequential effect on State and local governments.

The RFA requires agencies to analyze options for regulatory relief of small entities. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and governmental agencies. Most SNFs and most other providers and suppliers are small entities, either by virtue of their nonprofit status or by having revenues of $5 million or less annually. For purposes of the RFA, all States and tribal governments are not considered to be small entities, nor are intermediaries or carriers. Individuals and States are not included in the definition of a small entity. The policies contained in this rule would update the SNF PPS rates by increasing the payment rates published in the July 30, 1999 notice, but will not have a significant effect upon small entities.

In addition, section 1102(b) of the Act requires us to prepare a regulatory impact analysis if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 604 of the RFA. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of a Metropolitan Statistical Area and has fewer than 50 beds. We are not preparing a rural impact statement since we have determined, and the Secretary certifies, that this notice will not have a significant economic impact on the operations of a substantial number of small rural hospitals.

A. Background

This notice sets forth proposed updates of the SNF PPS rates contained in the update notice, published on July 30, 1999. Table 13 below, presents the projected effects of the policy changes in the SNF PPS update notice, as well as statutory changes effective for FY 2001, on various SNF categories. We estimate the effects of each policy change by estimating payments while holding all other payment variables constant. We use the best data available, but we do not attempt to predict behavioral responses to our policy changes, and we do not make adjustments for future changes in such variables as days or case-mix.

This analysis incorporates the latest estimates of growth in service use and payments under the Medicare SNF benefit based on Medicare claims from 1998. Some of the data used for this analysis are the same data used to develop the impact analysis associated with the SNF PPS update notice promulgated on July 30, 1999 (64 FR 41684). These data were used to estimate the effects of changing only one payment variable at a time. We have also utilized MDS 2.0 data from the States used for the RUG–III refinement research (described in section 2.B earlier) to illustrate the effect of case mix refinements on the classification of the patient population in the study States. In addition, we are unable at this time to demonstrate the distributional impact of these case mix refinements on facility payments but anticipate doing so in the final rule planned for later this year.

We have used the best avaliable data on SNF case mix in calculating the FY 2001 impact for this proposed rule; however, we note that the data currently available on Medicare SNF claims and MDS 2.0 do not reflect the refined case mix classification system and case-mix indices proposed in this rule. While we still have only a partial database of SNF PPS claims and MDS 2.0 data at the present time due to the phased-in manner in which SNFs came into the PPS, we are confident that sufficient national data reflecting the distribution of payments and service days under the new RUG–III classification model can be assembled before promulgation of the final rule associated with this update. While the refinement to the case-mix classification system results in no greater or lesser aggregate payments to SNFs under the Medicare SNF PPS, we believe it is important to estimate the potential distributional impact of incorporating the refined RUG–III case-mix groups and indices. Consequently, for the final rule implementing the FY 2001 SNF PPS rates, we anticipate using such a national data base of SNF PPS claims and MDS 2.0 data to estimate more accurately the impact of this update, including the distributional effect of the case-mix refinements on payments for different facility types and locations. However, based on the data currently available, we believe that the method we have used to develop the impact analysis for this proposed rule offers the most accurate estimate of the FY 2001 update to the SNF PPS.

For this proposed rule, we have attempted to convey a sense of the effect of the case-mix refinements on the classification of residents in SNFs. Below, we have prepared Table 12 which displays the distribution of patients in the six-state sample used to develop the case-mix refinements, as shown for both the existing RUG–III groups and for the refined model proposed in this rule. This table details a comparison of the distribution of an identical group of Medicare patients across both the existing and proposed RUG–III classification models. In addition, Table 6, in Technical Appendix A accompanying this rule, illustrates a comparison of the distribution of this same group of patients across the existing RUG–III system and the alternate ancillary index refinement approach (WIM2) discussed earlier in this proposed rule.

We note that certain events may combine to limit the scope or accuracy of our impact analysis, because such an analysis is future-oriented and, thus, very susceptible to forecasting errors due to other changes in the forecasted impact time period. Some examples of such possible events are newly legislated general Medicare program funding changes by the Congress, or changes specifically related to SNFs. In addition, changes to the Medicare program may continue to be made as a result of the BBA. Although these changes may not be specific to SNF PPS, due to the nature of the Medicare program the changes may interact, and the complexity of the interaction of these changes could make it very difficult to predict accurately the full scope of the impact upon SNFs.

B. Impact of This Proposed Rule

As stated previously in this preamble, the aggregate increase in payments associated with this update is estimated to be $900 million. There are three areas of change that produce this increase for facilities—

1. The effect of the Federal transition, that results in many facilities being paid 75 percent at the Federal rate and 25 percent at the facility-specific rate instead of the current 50 percent Federal rate and 50 percent facility-specific rate. There is also the additional effect of the BBRA option to bypass the transition and be paid according to 100 percent of the Federal rate;

2. The implementation of various other provisions in the BBRA; and,

3. The total change in payments from FY 2000 levels to FY 2001 levels. This includes all of the previously noted changes in addition to the effect of the update to the rates.

As seen in table 13 below, some of these areas result in increased aggregate payments and others tend to lower them. The breakdown of the various categories of data in the table are as follows:

In column one, the first row of the table includes the effects on all facilities. The next six rows show the effects on facilities split by hospital-based versus freestanding and urban versus rural. The rest of the table shows the effects on urban versus rural status by census region.

The second column in the table shows the number of facilities in the impact database. The third column shows the effect of the transition to the Federal rates. It includes the impact of the normal progression of facilities in the transition to new cost reporting periods

and, therefore, blended payment amounts (that is, facility-specific versus Federal rates) as well as those facilities that, as a result of the BBRA, elect to bypass the transition and go immediately to the full Federal rate). This change has an overall effect of raising payments by .3 percent, with most of the increase coming from freestanding facilities. There are several regions that have decreased payments due to this provision, but the majority (and most populous) of the regions evidence higher payments, with the largest increase being in the New England and mid-Atlantic regions for both urban and rural facilities.

We estimate that approximately 51 percent of SNFs currently under the transition will elect to be paid based on 100 percent of the Federal rate. Of these facilities, we estimate 22 percent are hospital-based and 78 percent are freestanding.

The fourth column shows the projected effect of the 4 percent add-on to the adjusted Federal rate mandated by the BBRA. As expected, this provision results in an increase in payments for all facilities. However, as seen in the table, the varying effect of the SNF PPS transition results in a distributional impact of this provision. In addition, since this increase only applies to the Federal portion of the payment rate, the effect on total expenditures is less than 4 percent.

The fifth column of the table shows the effect of the update to the Federal and facility-specific payment rates. It reflects an update to the Federal rates of 1.833 percent, which is equivalent to the market basket increase minus 1 percentage point, as required by law. In addition, it reflects an update to the facility-specific rates of 2.833 percent, which is equivalent to the full market basket increase for this period. For this analysis, it is assumed that payments will increase by 2.0 percent in total if there are no behavioral changes by the facilities. As can be seen from this table, the effects of the update itself do not vary significantly by specific types of providers or by location.

The sixth column of the table shows the effect of all of the changes on the FY 2001 payments. This includes all of the previous changes, including the update to this year's payment rates by the market basket. Therefore, it is assumed that payments will increase by 5.8 percent in total, assuming facilities do not change their care delivery and billing practices in response. As can be seen from this table, the combined effects of all of the changes vary much more widely by specific types of providers and by location. For example, freestanding facilities enjoy more significant payment increases due to the policy changes, while the effects of the transition tend to diminish the increase for hospital-based providers.

TABLE 13.—PROJECTED IMPACT OF FY 2001 UPDATE TO THE SNF PPS

	Number of facilities	Transition to federal rates (percent)	Add on to federal rates (percent)	Update change (percent)	Total FY 2001 change (percent)
Total	9037	0.3	3.4	2.0	5.8
Urban	6300	0.0	3.4	2.0	5.5
Rural	2737	1.4	3.5	1.9	6.9

Mountain	303	−4.6	3.0	2.1	0.3
Pacific	1070	−2.5	3.2	2.0	2.6
Rural by region:					
New England	88	6.0	3.9	1.9	12.2
Middle Atlantic	144	4.0	3.7	1.9	9.9
South Atlantic	373	0.6	3.5	2.0	6.2
East North Central	561	2.6	3.6	1.9	8.3
East South Central	255	−0.4	3.4	2.0	5.0
West North Central	581	3.9	3.6	1.9	9.7
West South Central	354	−3.2	3.2	2.0	1.9
Mountain	204	0.2	3.4	2.0	5.7
Pacific	151	1.7	3.6	1.9	7.4

Notes:
1. The effects of the various changes are not additive.
2. The percent differences illustrated in this table are measured against the policies and payment rates in effect for FY 2000 as described in the SNF PPS Notice published on July 30, 1999 (64 FR 42684).
3. This table reflects Federal payment rates based on the case-mix methodology and wage index used for FY 2000. As explained in the text, the FY 2001 wage index and national case-mix data based on the refined RUG–III model are not currently available, but will be for the final rule.

In the final rule implementing the SNF PPS update for FY 2001, we will revise the estimates listed in Table 13 to reflect the final FY 2001 payment rates as well as the latest available data on estimates of program growth in services and expenditures. Table 13 will also incorporate two additional columns showing the projected distributional effect of the refined case-mix classification system based on actual MDS 2.0 data and updated wage index

across the various facility types and locations, as discussed earlier. We will also indicate the impact of the reduction in the Federal rates to account for the new services excluded from consolidated billing under section 103 of the BBRA.

As discussed earlier in this rule, Section 101 of the BBRA provides for a 20 percent positive adjustment to the adjusted Federal rates associated with 15 RUG–III groups for the period of April 1, 2000 through October 1, 2000. In addition, it provides for a four percent positive adjustment to the Federal rates associated with all RUG–III categories for FY 2001 and FY 2002, regardless of whether refinements to the case-mix adjustment are implemented. However, were we not to implement case-mix refinements such as those proposed in this rule for FY 2001, the Federal rates for this period would be based on the existing RUG–III model currently in use and maintain the 20 percent adjustments to the 15 specified RUG–III groups. As indicated in Table 13, the effect of this proposed rule will be an increase in expenditures of 900 million dollars (or +5.8 percent) over the payment rates and policies as described in the SNF PPS Notice published on July 30, 1999 (64 FR 41684). However, were we not to implement case-mix refinements, the effect of this BBRA provision would be a larger increase in expenditures equaling 1.9 billion dollars (or +12.5 percent). At the present time, we are unable to illustrate the distributional impact of maintaining this 20 percent add-on, but will attempt to develop the data to allow us to do so for the final rule associated with the FY 2001 update. It is important to note that such a result would also have negative consequences for the beneficiary. Section 101 of the BBRA provides the 20 percent add-on for certain RUG–III rehabilitation groups, resulting in higher payments for such groups even though they are associated with a lower intensity of service than other rehabilitation groups. This results in a perverse incentive where some facilities may choose to provide less rehabilitation services to beneficiaries in order to receive the higher payments. Because this provision of the law takes effect on April 1, 2000, it may already be resulting in a reduction of needed services. Adoption of the refinements proposed in this rule would eliminate this perverse incentive.

As noted previously, we are proposing the addition of new RUG–III categories to recognize the needs of Medicare beneficiaries with both heavy medical and rehabilitation needs and to account more precisely for the variation in non-therapy ancillary services. The refinements will achieve important improvements in the PPS and allow for more accurate payment rates, thus meeting our responsibility to provide for equitable payments to providers while ensuring access to quality SNF care for Medicare beneficiaries. In evaluating the different options, it is important to analyze the overall impact of implementing a refined case-mix system. Adoption of any of these refinements will increase the complexity of the PPS and may introduce some initial uncertainty for providers, who would have to become familiar with the refined system and modify existing operational and support systems. As discussed in section II.B of this proposed rule, we propose adoption of the UWIM model because we believe it best represents an appropriate balance between improvements in the accuracy of our payments and the complexity and uncertainty which results from changes of this nature.

Finally, in accordance with the provisions of Executive Order 12866, this notice was reviewed by the Office of Management and Budget.

X. Federalism

We have reviewed this final rule under the threshold criteria of Executive Order 13132, Federalism, and we have determined that it does not significantly affect the rights, roles, and responsibilities of States.

List of Subjects

42 CFR Part 411

Kidney diseases, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 489

Health facilities, Medicare, Reporting and recordkeeping requirements.

For the reasons set forth in the preamble, 42 CFR chapter IV would be amended as follows:

PART 411—EXCLUSIONS FROM MEDICARE AND LIMITATIONS ON MEDICARE PAYMENT

A. Part 411 is amended as set forth below:

1. The authority citation for part 411 continues to read as follows:

Authority: Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395hh).

Subpart A—General Exclusions and Exclusion of Particular Services

2. Section 411.15 is amended by:

A. Republishing the introductory text.

B. Revising paragraphs (p)(2)(vii) and (p)(2)(xi).

C. Adding new paragraphs (p)(2)(xii), (p)(2)(xiii), (p)(2)(xiv), and (p)(2)(xv).

D. Revising paragraph (p)(3)(iv).

§ 411.15 Particular services excluded from coverage.

The following services are excluded from coverage.

* * * * *

(p) *Services furnished to SNF residents.* * * *

(2) *Exceptions.* The following services are not excluded from coverage:

* * * * *

(vii) Dialysis services and supplies, as defined in section 1861(s)(2)(F) of the Act, and those ambulance services that are furnished in conjunction with them.

* * * * *

(xi) The transportation costs of electrocardiogram equipment (HCPCS code R0076), but only with respect to those electrocardiogram test services furnished during 1998.

(xii) Those chemotherapy items identified, as of July 1, 1999, by HCPCS codes J9000–J9020; J9040–J9151; J9170–J9185; J9200–J9201; J9206–J9208; J9211; J9230–J9245; and J9265–J9600.

(xiii) Those chemotherapy administration services identified, as of July 1, 1999, by HCPCS codes 36260–36262; 36489; 36530–36535; 36640; 36823; and 96405–96542.

(xiv) Those radioisotope services identified, as of July 1, 1999, by HCPCS codes 79030–79440.

(xv) Those customized prosthetic devices (including artificial limbs and their components) identified, as of July 1, 1999, by HCPCS codes L5050–L5340; L5500–L5611; L5613–L5986; L5988; L6050–L6370; L6400–6880; L6920–L7274; and L7362–L7366, which are delivered for a resident's use during a stay in the SNF and intended to be used by the resident after discharge from the SNF.

(3) *SNF resident defined.* * * *

(iv) The beneficiary is formally discharged (or otherwise departs) from the SNF, unless the beneficiary is readmitted (or returns) to that or another SNF by midnight of the day of departure.

* * * * *

PART 489—PROVIDER AGREEMENTS AND SUPPLIER APPROVAL

B. Part 489 is amended to read as follows:

1. The authority citation for part 489 continues to read as follows:

Authority: Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395hh).

Subpart B—Essentials of Provider Agreements

2. Section 489.20 is amended by:

A. Republishing the introductory text and paragraph (s) introductory text.

B. Revising paragraphs (s)(7) and (s)(11).

C. Adding new paragraphs (s)(12), (s)(13), (s)(14), and (s)(15).

§ 489.20 Basic commitments.

The provider agrees to the following:

* * * * *

(s) In the case of an SNF, either to furnish directly or make arrangements (as defined in § 409.3 of this chapter) for all Medicare-covered services furnished to a resident (as defined in § 411.15(p)(3) of this chapter) of the SNF, except the following:

* * * * *

(7) Dialysis services and supplies, as defined in section 1861(s)(2)(F) of the Act, and those ambulance services that are furnished in conjunction with them.

* * * * *

(11) The transportation costs of electrocardiogram equipment (HCPCS code R0076), but only with respect to those electrocardiogram test services furnished during 1998.

(12) Those chemotherapy items identified, as of July 1, 1999, by HCPCS codes J9000–J9020; J9040–J9151; J9170–J9185; J9200–J9201; J9206–J9208; J9211; J9230–J9245; and J9265–J9600.

(13) Those chemotherapy administration services identified, as of July 1, 1999, by HCPCS codes 36260–36262; 36489; 36530–36535; 36640; 36823; and 96405–96542.

(14) Those radioisotope services identified, as of July 1, 1999, by HCPCS codes 79030–79440.

(15) Those customized prosthetic devices (including artificial limbs and their components) identified, as of July 1, 1999, by HCPCS codes L5050–L5340; L5500–L5611; L5613–L5986; L5988; L6050–L6370; L6400–6880; L6920–L7274; and L7362–L7366, which are delivered for a resident's use during a stay in the SNF and intended to be used by the resident after discharge from the SNF.

(Catalog of Federal Domestic Assistance Program No. 93.773, Medicare—Hospital Insurance Program; and No. 93.774, Medicare—Supplementary Medical Insurance Program)

Dated: March 20, 2000.

Nancy-Ann Min DeParle,

Administrator, Health Care Financing Administration.

Approved: March 27, 2000.

Technical Appendix A—Technical Features of the RUG–III Refinements Analyses

The purpose of the research discussed in this proposed rule is to develop potential refinements to the PPS that would better ensure accurate and equitable payment. An analytic (or research) data base consisting of linked MDS assessments and Medicare claims data was developed, and used to perform the analyses described in this proposed rule.

A. Creation of Analytic Sample

In creating the analytic sample used to develop and test potential refinements, we were guided by the desire to have a large, representative sample and the need to exclude assessments likely to contain reporting errors. Our original sample included 733,300 MDS assessments from seven States, representing the years 1995 through 1997. We then reduced this sample through implementation of the following exclusion criteria:

1. Exclude all assessments from New York. All assessments from New York were excluded from analyses that used Medicare claims data because many facilities in the State billed SNF stays using an all-inclusive rate. Because these facilities did not use the revenue codes that we used to measure prescription drug, respiratory therapy or other non-therapy ancillary charges, measured ancillary charges for most New York beneficiaries were zero in some or all of the revenue codes analyzed for this study. The exclusion of New York results in the removal of 525,215 of the 733,300 total MDS assessments from our analytic sample.

2. Exclude all assessments for which a cost-to-charge ratio could not be calculated. Medicare cost report data were used to calculate the facility-specific ratio of Total Part A allowed cost to total Part A charges for each facility in each year. Facilities missing Medicare cost reports for at least two years between 1995 and 1997 were excluded because we were not able to calculate cost-to-charge ratios for the facility. This resulted in the exclusion of 93,314 additional assessments.

3. Exclude all facilities for which the correlation between a measure of drug costs calculated from Section U and one calculated from Medicare claims data was less than zero. We used drug charge data derived from Medicare claims in the refinement analyses, but used the Section U data to identify facilities with unreliable drug cost data. For facilities that have a negative correlation between the two drug cost measures, there is a concern about inaccurate reporting on either claims or MDS assessments at the facility level, and these facilities were excluded. This step resulted in the exclusion of 10,915 MDS assessments.

4. Exclude all beneficiaries with per diem ancillary charges greater than $1,000. Two hundred fifty-three (253) observations with per diem total ancillary charges greater than $1,000 were excluded from the refinement analyses. Summary measures of statistical performance such as R-squared are typically sensitive to outliers, and these extreme values were judged unlikely to be accurate. In addition, such values have disproportionate leverage in the design of potential refinements. The exclusion of extreme outliers in refinement analyses does not mean that their costs cannot be considered when determining payment rates.

The resulting analytic sample included 103,603 assessments, which were assigned randomly to either the test or validation samples. We assigned approximately 60 percent of this sample—61,929 assessments—to the test sample which was used to develop and test potential refinements. The remaining 41,674 assessments comprised the validation sample.

B. Characteristics of the Sample

Table 1 shows the sociodemographic characteristics of the sample stratified by an aggregate of the RUG–III categories. The majority of beneficiaries were female (65 percent), with little variation in the proportion across the RUG–III categories. Beneficiaries classified in the Behavior category were less likely to be male (37 percent) and those in the Physical Function categories were the least likely to be male (30 percent). The majority of beneficiaries were white, of non-Hispanic origin (84 percent). Approximately nine percent of beneficiaries were black and 2 percent were Hispanic. Overall, nearly one quarter of the beneficiaries were severely cognitively impaired. Among beneficiaries classified in a Rehabilitation category, 35 percent were moderately impaired and 14 percent were severely cognitively impaired. The distribution of cognitive impairment among those classified as Reduced Physical Function was similar to that of the Rehabilitation category. Beneficiaries classified as Extensive Services or Special Care also had a similar distribution of cognitive impairment level. Approximately one third of each were moderately impaired. Thirty-nine percent of beneficiaries were classified as dependent in activities of daily living and only 7 percent with no limitations. Beneficiaries in the Behavior category were most likely to have only minimal limitations in physical functioning (28 percent). Beneficiaries classified in the Clinically Complex (14 percent), Cognitively Impaired (13 percent), or Physical Function (14 percent) categories were also more likely to have minimal limitations relative to the other RUG–III categories. Beneficiaries in the Extensive Services (58 percent) and Special Care (56 percent) categories were most likely to be classified as dependent in activities of daily living.

The active clinical diagnoses documented for beneficiaries in the sample are shown

stratified by RUG–III group on Table 1.1. Cardiovascular diseases were common in beneficiaries. Overall, 20 percent of beneficiaries had coronary artery disease. Cardiac arrhythmia was present in 14 percent of beneficiaries. Overall, nearly one quarter of beneficiaries had congestive heart failure and 9 percent had peripheral vascular diseases. On average, 43 percent of beneficiaries had documented hypertension. While the distribution of beneficiaries with coronary artery disease appeared similar across RUG–III groups, congestive heart failure and arrhythmia were more common in the Extensive Services, Special Care, and Clinically Complex categories. For most of the cardiovascular conditions, beneficiaries in the Impaired Cognition category were less likely to have these diseases relative to other RUG–III categories. A similar, but attenuated pattern was noted for beneficiaries in the Behavior category.

Neurological diseases were also common. Overall, 9 percent of beneficiaries had Alzheimer's disease documented. Twenty-eight percent had other dementia documented. Nearly one quarter of beneficiaries had an active clinical diagnosis of stroke and 6 percent had Parkinson's disease. While the proportion of beneficiaries with Parkinson's disease did not vary by RUG–III group, the proportion with other neurological conditions varied substantially by RUG–III group. Beneficiaries in the Impaired Cognition group were more likely to have Alzheimer's disease (22 percent) and other dementia (54 percent) documented and less likely to have had a stroke (15 percent) compared to other RUG–III groups. Similar to the Impaired Cognition group, beneficiaries in the Behavior category were more likely to have other dementia (41 percent) and less likely to have had a stroke (12 percent) compared to other RUG–III groups, but this category had a similar proportion of beneficiaries with Alzheimer's disease. The distribution of neurological conditions among beneficiaries classified as Extensive Services, Special Care, and Clinically Complex was similar. A third of beneficiaries classified as Extensive Services and Special Care had non-Alzheimer's dementia and one quarter had suffered a stroke.

Only 5 percent of beneficiaries had anxiety and 16 percent had depression documented as a diagnosis on the MDS. Across RUG–III groups, the proportion of beneficiaries with anxiety and depression was similar. However, the prevalence of anxiety (8 percent) and depression (22 percent) was higher in the Behavior category. Twelve percent of beneficiaries had cataracts and 7 percent had glaucoma. These conditions did not vary substantially by RUG–III group. Overall, septicemia was rare (1 percent), and only 8 percent of beneficiaries had pneumonia, while 17 percent had urinary tract infections. Beneficiaries in the Extensive Services category were more likely to have septicemia (2 percent), pneumonia (17 percent), and urinary tract infections (24 percent) compared to other RUG–III categories. Other diagnoses and conditions were common. Twenty-one percent of beneficiaries had allergies, 19 percent had anemia, 22 percent had arthritis, 22 percent had diabetes, and 12 percent had cancer. Beneficiaries in the Rehabilitation, Extensive Services, Special Care, and Clinically Complex categories were more likely to have these conditions relative to the Impaired Cognition and Behavioral Problem categories. The prevalence of hypothyroidism (10 percent) did not vary by RUG–III group.

Pooling across all States and the three years, there is little variation by RUG–III group in total daily drug cost as measured by Section U. Median costs within the Rehabilitation groups range from approximately $6.50 (Low Rehabilitation) to approximately $9.00 (Ultra-high Rehabilitation) whereas the lowest costs of medications were experienced by the Impaired Cognition category (approximately $3.00). The groups with the higher interquartile range (approximately $13) were the Extensive Services categories and some of the Rehabilitation groups (for example, RVC was approximately $12). The Impaired Cognition category also demonstrated the least variation in costs of medications, with an interquartile range of approximately $5.

To better understand which classes of drugs may be driving costs, we classified the drugs according to fourteen major therapeutic classes. The most expensive therapeutic drug classes are anti-infective agents (Median: $6.53) and biologics (Median: $9.73). The least expensive therapeutic drug classes are analgesics (Median: $0.10) and nutritional products (Median: $0.18). The proportion of beneficiaries within each of the major RUG–III categories are shown in Table 1.2. Variations in medication use across RUG–III groups were apparent for many medication classes and corresponded to observed variations in the active clinical diagnoses shown by RUG–III group in Table 1.1. Beneficiaries were least likely to be on biologics (1 percent) and anti-neoplastics (2 percent), regardless of RUG–III class. The majority of beneficiaries were on at least one cardiovascular medication, with substantial variation across RUG–III groups. Beneficiaries in the Rehabilitation category (67 percent) and in the Clinically Complex category (64 percent) were the most likely to be receiving at least one cardiovascular medication. Beneficiaries in the Impaired Cognition (47 percent) and Behavior (53 percent) categories were the least likely to be receiving cardiovascular medications.

Similar trends were observed across RUG–III groups for both gastrointestinal agents and endocrine/metabolic agents. More than half of beneficiaries had taken at least one gastrointestinal agent with beneficiaries in the Rehabilitation categories (67 percent) the most likely to use gastrointestinal products and beneficiaries in the Impaired Cognition or Behavioral Problem categories the least likely to receive these drugs (approximately 50 percent). With endocrine and metabolic agents, over one third of beneficiaries in the Rehabilitation, Extensive Services, Special Care, and Clinically Complex categories received these drugs, relative to approximately 25 percent of other RUG–III groups. Beneficiaries in the Rehabilitation, Extensive Services, Special Services, and Clinically Complex categories were most likely to be on anti-infective agents, with over 25 percent of beneficiaries in each on these medications. Among these RUG–III groups, beneficiaries in the the Extensive Services categories were the most likely to be taking anti-infective agents (39 percent). Less than 15 percent of beneficiaries in other RUG–III groups received these drugs.

Overall, 47 percent received at least one analgesic. Impaired Cognition (32 percent) and Behavior beneficiaries (39 percent) were less likely to receive analgesics than those in the Rehabilitation category (60 percent). Similar trends were apparent with hematological agents (approximately 20 percent Impaired Cognition vs. approximately 35 percent in the Rehabilitation groups), and topical agents (approximately 20 percent vs. approximately 37 percent in the Special Care groups). Conversely, beneficiaries in the Impaired Cognition (approximately 46 percent) and Behavior (over 50 percent) categories were more likely to receive CNS drugs relative to the other RUG–III groups (approximately 33 percent).

The highest proportion of total costs due to anti-infective use is found in the Extensive Services and Clinically Complex groups, with approximately 50 percent of drug costs attributable to the anti-infective agents. Use of biologics was relatively infrequent (approximately 1.2 percent) and the proportion of drug costs due to these agents was highly variable among the users, regardless of RUG–III group. Among people receiving anti-neoplastic medications (approxmiately 2.2 percent of beneficiaries), these agents accounted for one quarter of their total daily drug cost (Median: 27 percent; 25th percentile: 13 percent; 75th percentile: 49 percent). Regardless of RUG–III group, this measure is highly variable. While nearly one third of all beneficiaries received an endocrine medication, these agents only accounted for 8 percent of the total daily drug costs among users. Cardiovascular medications accounted for 18 percent of the total daily drug cost, which varies slightly across RUG–III group (+/– approximately 4 percent). There appears to be slightly less variation in this measure among the Extensive Services, Special Care, and Clinically Complex groups as compared to other RUG–III categories. Among the 19 percent of beneficiaries using respiratory medications, 12 percent of their drug costs were due to these agents. Higher median proportions and greater variability occurred at the end splits within the aggregate RUG–III categories. A similar pattern is observed among users of gastrointestinal agents. These medications accounted for only 13 percent (median) of the total daily costs. This measure is highly variable, regardless of RUG–III group. Only 5 percent of beneficiaries had used a genitourinary medication, accounting for only 13 percent of total drug costs (median value). This measure varied slightly across RUG–III groups.

TABLE 1.—SOCIODEMOGRAPHIC CHARACTERISTICS OF RESIDENTS OF SNF STAYS BY RUG–III GROUP

C. Test and Validation Samples

The recursive strategies employed by stepwise regression, AID, and other fitting techniques may produce over-optimistic measures of variance explanation. For that reason, assessment of the explanatory power of alternative models required use of data that were not used in forming the models themselves. We selected at random 60 percent of the sample for use as a test sample and the remaining 40 percent for use as a validation sample. Refinements to RUG–III were developed based solely on analysis of the test sample and evaluated solely on their performance with the validation sample. Since aberrations in the test sample that may have influenced the design of refinements were absent in the validation sample, any unsupported features of the proposed models should be exposed by this approach.

D. Creation of Measure of Non-therapy Ancillary Charges From SNF Claims

Medicare Part A SNF claims were used to measure the perdiem ancillary charges. For ancillary charges developed using Medicare claims data, it was not possible to identify items with a date of service that corresponds to the period covered by the MDS assessment (used to establish the RUG–III classification). Per diem charges were calculated using Medicare claims with a covered date within a specified range of a date covered by MDS assessment. Operationally, per diem charges are derived by the sum of the charges of the ancillary therapies divided by the number of days covered by claims.

We then estimated the costs of non-therapy ancillaries, using revenue codes as extracted from the claims data. First, we identified target revenue codes and categorized charges into these conceptually meaningful categories. The categories and their related revenue codes included the following: prescription drugs/pharmacy (250–259), drugs requiring ID (630–639), IV therapy (260–269), medical and surgical supplies (270–270; 620–622), respiratory services (410–419), laboratory (300–309), oxygen (600–604), and dialysis (820–829, 830–839, 880–889).

1. Cost-to-Charge Multiplier

It is important to note that the actual ancillary costs for beneficiaries in the sample are not observed. The covered charges reported in claims are routinely discounted by the intermediary responsible for processing on the basis of audited reasonable cost. Inclusion of ancillary charges without further adjustment in our measure of per diem ancillary charges would overstate the true level of reimbursable costs, since these charges are routinely discounted before payment under the present system.

Using the appropriate annual SNF cost report (that is, the cost report for the service period covered by the claim), conversion factors were computed for each SNF included in the research data base. To be as consistent as possible, we calculated one average discount factor (the ratio of total Part A allowed cost to total Part A charges) for each facility in each year. This discount factor was applied to the facility's ancillary charges before analysis to approximate the costs of ancillary services.

E. Analysis and Findings—RUG–III Refinements

As shown by previous research and confirmed in this study, the RUG–III Extensive Services groups are associated with the highest per diem non-therapy ancillary charges of any of the RUG–III classifications, including the rehabilitation categories. For the purposes of this project, ancillary costs were divided into three categories: medications (by far the most critical predictor of overall ancillary costs), respiratory therapy, and other ancillaries. This research also showed significantly higher non-therapy ancillary costs and intra-group variance related to the variety of ancillary supplies and services needed to treat the various acute and severe health conditions characterizing beneficiaries who classify into the Extensive Services category. Figures 1 through 3 compare the mean, per diem costs of ancillary services for beneficiaries in the Extensive Services category with those of beneficiaries in other RUG–III categories.

Another key to more accurate accounting of the cost(s) associated with treating Extensive Services beneficiaries is disentangling some of the overlap between the Extensive Services and Rehabilitation categories. Under the current PPS system, the payment rate (under an index maximization approach) is the same for beneficiaries who qualify for both Extensive Services and one of the top three rehabilitation categories (Ultra High, Very High and High Rehabilitation) as for those beneficiaries who qualify only for one of the top three rehabilitation categories. Using this research data base, we found a significant number of beneficiaries qualifying for both Extensive Services and Rehabilitation.

Figure 2: Comparison of Respiratory Therapy Costs by RUG-III Category

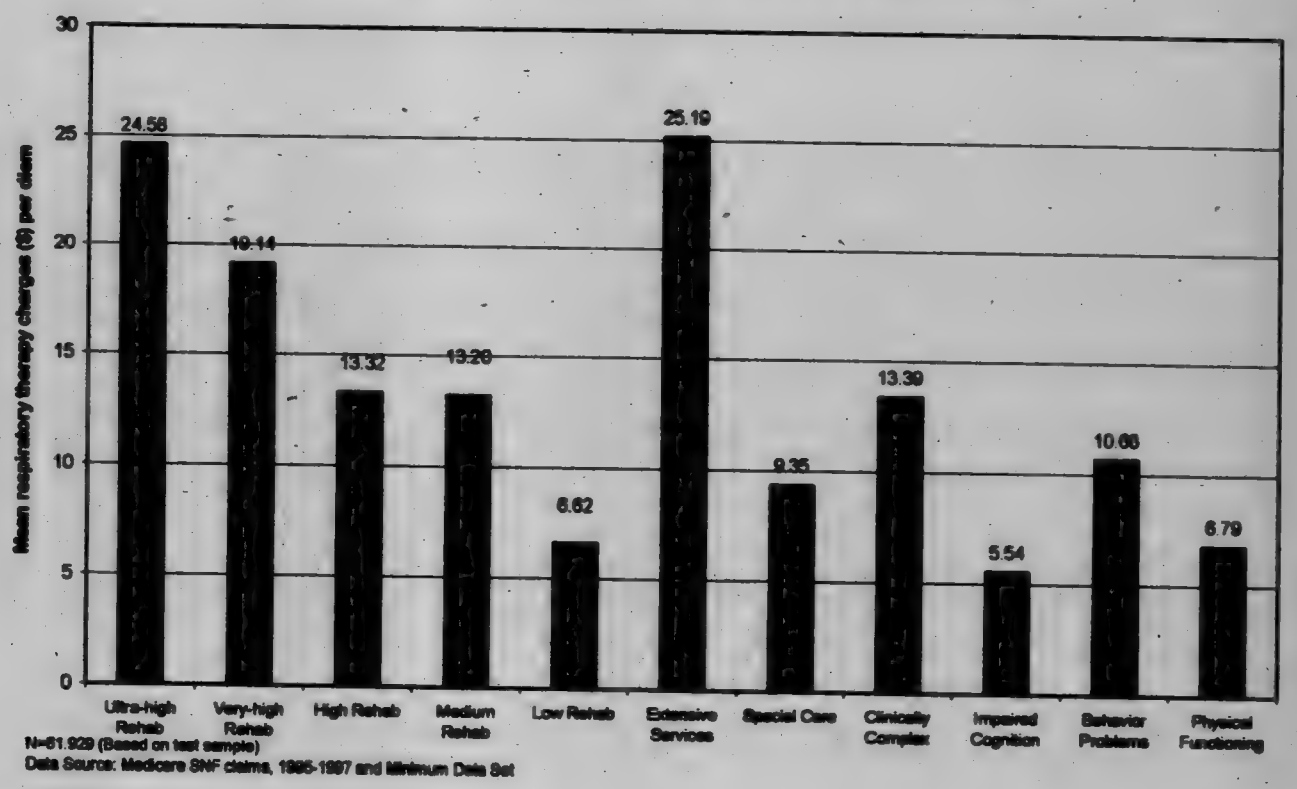

Figure 3 : Comparison of Other Non-therapy Ancillary Costs by RUG-III Category

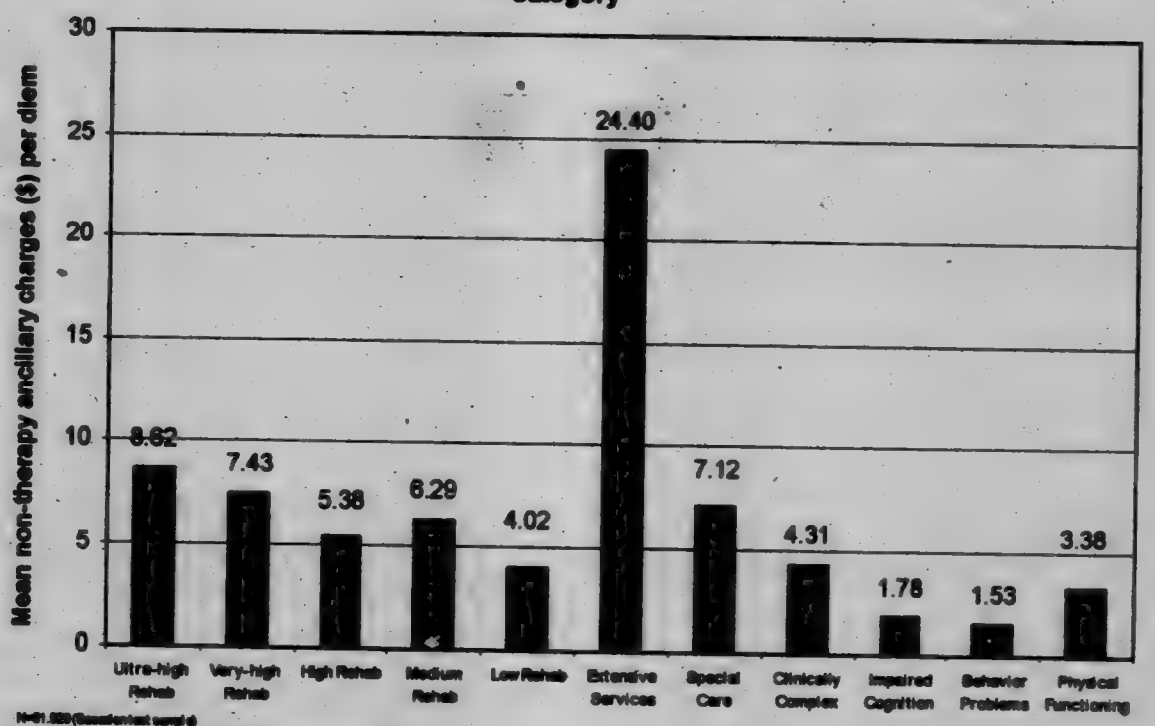

BILLING CODE 4120-03-C

1. Costs for Beneficiaries Who Qualify for Both Extensive Services and Rehabilitation

As shown in Figures 4 through 7, across all three ancillary categories, costs were significantly higher for beneficiaries who qualified for both Extensive Services and Rehabilitation compared to those who qualify only for a Rehabilitation category. Therefore, we considered whether those qualifying for both categories should be separately identified.

- Across all five Rehabilitation categories, mean prescription drug costs were approximately double for beneficiaries who qualified for both Extensive Services and Rehabilitation, compared to those who qualified only for Rehabilitation. (See Figure 4 for comparison of drug charges across all five Rehabilitation categories based on whether the beneficiary also qualified for Extensive Services.)
- A similar pattern was observed for respiratory therapy. Across all five rehabilitation categories, respiratory therapy costs were more than twice as high for beneficiaries who also qualified for Extensive Services as for those who qualified only for Rehabilitation (Figure 5).
- Other non-therapy ancillary costs were considerably higher for beneficiaries who qualified for both Rehabilitation and Extensive Services than for those who qualified for Rehabilitation but not Extensive Services (Figure 6).
- Total average ancillary charges for beneficiaries who qualified for both Rehabilitation and Extensive Services were also significantly higher than for those qualifying only for rehabilitation (Figure 7).

Based on these results, it makes sense, for statistical, incentive-related, and clinical reasons, to consider potential refinements which reflect the higher costs of beneficiaries in the Rehabilitation categories who also qualify for Extensive Services.

Data Source: Medicare SNF claims, 1995-1997 and Minimum Data Set

BILLING CODE 4120-03-C

These cost differences suggested that a potential refinement could be based on interactions between existing RUG–III categories. Such a change could be implemented in either of two ways:

- A new terminal split within the current RUG–III Rehabilitation groups based on whether the beneficiary also qualified for Extensive Services. These changes would be reflected in changes in the Case Mix Index (CMI) for nursing in calculating payments for the Rehabilitation categories.
- A new RUG–III category for beneficiaries who qualify for both Extensive Services and Rehabilitation. The new category (which could be called "Rehabilitation and Extensive Services") would be at the top of the hierarchical case-mix system.

2. Non-Therapy Ancillary Index Models

In addition, variations in non-therapy ancillary costs could be addressed through several types of index model-based refinements. There are a number of ways that index model-based refinements can be implemented:

- The models can be based on an unweighted count of the number of index model variables present or on a weighted index that assigns a relative cost factor to each of the index model variables.
- The index models can differ with respect to the RUG–III categories to which the model is applied.
- The index models can differ with respect to the number of index groups that are used.
- The index models can also vary based on the thresholds used to define groups. For the weighted index model, beneficiaries were classified based on their predicted costs.
- The index model can be applied separately to each major category; that is, each level of the RUG–III hierarchy.

In our analysis of ancillary costs, the results did not indicate strong interaction effects. There were two implications of this finding. First, the variables effects were principally additive and models which develop indexes are indicated. Second, the appropriate approach was to use regression analysis to form indexes, rather than PC-Group to identify tree models. (It should be noted that PC-Group still has some unique capabilities, employed later, to help identify optimal thresholds for an index.)

One way an index model could be used is in an "add-on" system for predicting non-therapy ancillary charges. RUG–III could be used for predicting staff time costs and the non-therapy ancillary index would be "added-on" to determine the total payment rate for beneficiaries with given characteristics. The motivation for this approach is that RUG–III has been well tested and validated for predicting staff time costs, but was not designed to capture variance in non-therapy ancillary charges. Although such a system can be described as consisting of two components, it could easily be implemented as an integrated system, as though the non-therapy ancillary component defined a new set of end-splits to RUG–III.

The index model approach allowed for a large number of items to be considered simultaneously in determining payment rates, including additional measures of severity that are not reflected in RUG–III. We designed both weighted and unweighted versions of a non-therapy ancillary index for each level of the RUG–III hierarchy, and showed that both versions resulted in large improvements in the proportion of the variance predicted by the case-mix system and some improvement in the system's ability to identify high-cost beneficiaries. The weighted version allowed items that predict much higher costs (such as receipt of IV medications) to have more impact on predicted costs than less-influential items such as shortness of breath. For this study, the weights were assigned by the researchers based on a combination of expert opinion and a comparison of cost data for the various MDS items. The weighted index model exhibited enhanced explanatory power, but at the cost of additional complexity and subjectivity.

F. Model Performance

We tested a number of potential refinements, but selected only the most powerful alternative from each type for presentation here. The most promising types of potential refinements are summarized in Table 2, and discussed below.

1. RUG–III CMI Adjustment: This potential refinement improved the ability of the case-mix system to capture variance in ancillary and total costs. Changes to the CMI alone (that is, changes to the payment rates associated with different groups but no changes to the case-mix system) will reduce the proportion of beneficiaries for whom costs are greater than payment, but will not affect the proportion of variance in costs captured by the case-mix system. The current RUG–III methodology accounted for about 6 percent of the variance in ancillary charges and 11 percent of the variance in total costs (See Table 2).

TABLE 2.—STATISTICAL PERFORMANCE OF POTENTIAL RUG–III REFINEMENTS–MODEL DESCRIPTION

Model description	Number of groups	R-squared validation sample (test sample)		Min/Max δ	Specificity and sensitivity analyses validation sample	
		Ancillary charges (percent)	Total costs (percent)		Specificity ★ (percent)	Sensitivity ◆
RUG–III—(CMI changes only)	44	5.9 (6.5)	11.0 (11.2)	111/239	91.7	26.1%
RUG III (version 2001) RUG–III with new category "Extensive Services and Rehabilitation".	58	7.8 (8.3)	13.7 (13.7)	116/355	91.5	27.8
WIM 1—Weighted index model applied to Extensive Services (includes new category "Extensive Services and Rehabilitation").	58 plus a six-group ancillary add-on system.	11.2 (12.5)	16.8 (17.6)	114/458	91.5	31.7%
WIM 2—Weighted index model applied to Extensive Services beneficiaries (includes new category "Extensive Services and Rehabilitation") and to Rehabilitation, Special Care, and Clinically Complex.	58 plus a six-group ancillary add-on system.	13.4 (14.2)	19.0 (19.4)	111/456	92.3	32.2%
UWIM—Unweighted index model applied to Extensive Services (includes new category "Extensive Services and Rehabilitation") and to Rehabilitation, Special Care, and Clinically Complex.	58 plus a four-group ancillary add-on system.	10.9 (12.6)	17.1 (18.0)	104/447	92.0	30.8%

Notes:
▲: Predicted total costs for the lowest and highest reimbursed groups in the refined case mix system.
†: Note that all index model-based refinements also include the "Extensive Services and Rehabilitation" category.
★: Specificity is measured as the proportion of beneficiaries who are not in the top 10 percent of predicted ancillary charges and also not in the top 10 percent in terms of actual ancillary charges.
◆: Sensitivity is measured as the proportion of beneficiaries in the top 10 percent in terms of both predicted and actual ancillary charges.
Data sources: Medicare claims, Minimum Data Set 1995–1997.

2. RUG–III (proposed, version 2001): Adding the new Extensive Services and Rehabilitation categories resulted in small improvements in statistical performance. The validation sample R-squared increased to 7.8 percent for ancillary charges, an increase of about 2 percent relative to RUG–III, and to 13.7 percent for total costs. However, the improvements associated solely with a change in the RUG–III (proposed, version 2001) methodology were substantially less than those produced by the other potential refinements that incorporated a combination of RUG–III and index model-based refinements.

In conducting this analysis, new CMIs had to be constructed. For this research, the CMIs were developed from the same 1995 through 1997 staff time measurement studies that were used to construct the indices used under the current RUG–III methodology. (See Table 3)

3. Weighted Index Model (WIM1): Under WIM1, Extensive Services beneficiaries (including those in the new Extensive Services and Rehabilitation categories) would receive an ancillary "add-on" based on the beneficiary's predicted, per diem ancillary costs for the index model qualifiers. The ancillary index has 6 groups with break points at costs at the 50th percentile or below, from the 51st through 75th percentile, from the 76th through 90th percentile, from the 91st through 95th percentile, from the 96th through 98th percentile, and the 99th percentile. The break points were calculated separately for each level of the RUG–III hierarchy.

Application of WIM1 resulted in some improvement relative to RUG–III (proposed, version 2001). For the validation sample, the model accounted for 11 percent of the variance in ancillary charges and 17 percent of the variance in total costs. Nearly 32 percent of beneficiaries in the top 10 percent of ancillary charges were also in the top 10 percent in terms of predicted costs, compared to 27.8 percent for RUG–III (proposed, version 2001).

4. Weighted Index Model 2 (WIM2): Model WIM2 extends the use of the non-therapy ancillary index to 40 RUG–III (proposed, version 2001) groups (14 Rehabilitation/ Extensive Services, 3 Extensive Services, 14 Rehabilitation, 3 Special Care and 6 Clinically Complex groups), and accounted for 19 percent of the variance in total costs and 13 percent of the variance in ancillary charges. This was more than twice the R-squared of the existing RUG–III or the proposed RUG–III (version 2001) alone. The range of payments was similar to that of WIM1. Using WIM2, 32 percent of beneficiaries in the top 10 percent in terms of actual ancillary charges were also in the top 10 percent in terms of predicted ancillary charges.

Table 4 shows the distribution of Medicare beneficiaries in the 6 non-therapy ancillary index levels by RUG–III (proposed version 2001) category. The cut-off points used to define these groups are the same as for WIM1.

In the Regulatory Impact Analysis, we showed the distributional impact of these case mix refinements using the UWIM model proposed in this rule. Table 6 shows the distributional shifts of beneficiaries between the existing RUG–III model and the WIM2 Option. In addition, Tables 6.1 and 6.2 show the projected rates using the WIM2 model. (See Table 12 in the Proposed rule for the UWIM model.)

5. Unweighted Index Model (UWIM): This model is the unweighted counterpart to WIM2. While this model performed better than the current RUG–III and proposed RUG–III (version 2001) models, it was slightly outperformed by WIM2. However, we regard the unweighted model as preferable to WIM2, for two reasons. First, it is relatively simple, and employs a more familiar methodology similar to that used in classifying beneficiaries into the Extensive Services groups. Second, in developing the weighted models, the researchers had to rely more heavily on imputed data to develop the number of index levels, and the cut-off points. Therefore, even though the WIM models appear to have slightly more predictive power, they are based upon more subjective criteria. However, the WIM models are subject to additional testing using the full PPS data base, and, based on the results, this model may be reconsidered.

UWIM accounted for 11 percent of the variance in ancillary charges and 17 percent of the variance in total costs. The sensitivity and specificity of the model were slightly less than for WIM2. Using UWIM, beneficiaries are split into four groups based on the number of index model variables present.

Number of qualifiers	Ancillary level
0	2
1–2	3
3–5	4
6 or more	5

Table 5 shows the distribution of Medicare beneficiaries in the 4 non-therapy ancillary index levels by RUG–III (proposed, version 2001) category.

RUG III Category	Nursing Index	Medical Ancil-lary Index	Therapy Index	Nursing Component	Med. Ancillary Component	Therapy Component	Therapy Non-Case-Mix Component	Non-Case-Mix Component	Total Rate
PHR	0.49	0.64		$30.63	$29.81		$12.10	$59.32	$131.86
PIR	0.46	0.64		$28.75	$29.81		$12.10	$59.32	$129.98
PJR	0.46	0.64		$28.75	$29.81		$12.10	$59.32	$129.98

BILLING CODE 4120-03-c

The models described here focus on those upper RUG–III categories that are reflective of the skilled care needs of Medicare beneficiaries. However, since there are a small number of beneficiaries in the research data base who may be classified into one of the lower RUG–III levels, we also applied the WIM and UWIM models to the Impaired Cognition, Behavior, and Physical Function categories. Almost all the beneficiaries in these three levels of the RUG–III hierarchy

grouped into the two lowest non-therapy ancillary index levels. In fact, in the UWIM model, 90 percent of the Impaired Cognition, 87.8 percent of the Behavior and 85 percent of the Physical Function observations fell into the lowest level of the non-therapy ancillary index. In these analyses, we did find a relationship between costs and the index value for these beneficiaries. However, including these groups in the model resulted in minimal additional improvement in statistical performance (See Table 7).

While these groups have not been included in the refinements proposed in this rule, we will include these RUG–III categories in additional analyses using the full PPS data base. Based on the results, we will review the applicability of the non-therapy ancillary index to the Impaired Cognition, Behavior, and Physical Function categories.

TABLE 7.—STATISTICAL PERFORMANCE OF POTENTIAL RUG–III REFINEMENTS—MODEL DESCRIPTION

Model description	Number of groups	R-squared validation sample (test sample)	
		Ancillary charges (percent)	Total costs (percent)
UWIM—Unweighted index model applied to Extensive Services residents (includes new category "Extensive Services and Rehabilitation") jkand to Rehabilitation, Special Care, and Clinically Complex residents.	58 plus a four-group ancillary add-on system.	10.9 −12.6	17.1 −18.0
UWIM–ALL-Unweighted index model applied to all residents (including new "Extensive Services and Rehabilitation" category).	58 plus a four-group ancillary add-on system.	10.9 −12.7	17.1 −18.2

Data sources: Medicare claims, Minimum Data Set 1995–1997.

G. RUG–III Medications Data

Although the bulk of the development and analysis of potential RUG–III refinements to date have been based on Medicare claims data, the Section U drug cost data holds unique promise as a source of detailed information on the drug use of particular beneficiaries. In the coming months, once the characteristics of these new data are more fully understood, we plan to use Section U drug cost data to analyze the behavior of high-cost individuals as well as the potential effects of case mix refinements.

1. Creation of MDS-Based Drug Cost Measures

The following types of pricing are available in the Medispan Master Drug Data Base: Average wholesale price (AWP), Direct Price, Wholesaler Acquisition Cost, HCFA Federal Financial Participation (FFP) limit price, Average AWP, and the generic equivalent average price. While we translated the medications listed on the MDS with NDC codes to therapeutic classes and sub-classes, we needed to cross-link the two data systems to identify the cost of the medications. We used the average wholesale price (AWP) for medication costs for several reasons. The AWP is a national figure and not subject to regional influence resulting from purchasing contracts and other local market factors. This helps to account for the cost of dispensing. Using AWP is conservative when the price of a medication is relatively low or high, and AWP is not subject to institutional cost-shifting. Additionally, AWP, compared to other pricing options, was found to yield the lowest amount of missing cost data.

In evaluating the drug regimens of beneficiaries in our sample, we realized that because of the way some drugs are packaged, the AWP price may reflect a price for multiple doses. Examples include injectables, inhalants, elixirs, and other drugs that indicated a multi-day supply in the drug description. We generated a printout of all potential problems of this sort. A clinical pharmacist reviewed the potential appropriateness of multiple use and long-acting dosage forms and unique treatment regimens for bundling. The Physician Desk Reference, the Red Book and other sources were used in addition to the documented AWP to determine a likely constant by which to divide the cost for each potential problem. In many instances, not enough information was available to make an appropriate estimate. In these cases, the drug cost remained as indicated by the AWP.

While we were able to successfully map NDC codes to drug names (nested within therapeutic classes and sub-classes), successfully matching to a drug cost required more information. Specifically, assigning an AWP to a drug requires both the strength of the drug administered and complete information regarding the frequency with which the medication was administered. Unfortunately, many of the NDC codes included in the MDS data did not include information regarding strength.[1] For example, we may know that a beneficiary received aspirin, but we do not know if it was 80 mg, 325 mg, or some other strength. As a result, we have substantial missing cost data. Because of the extent of missing data, we opted to impute the drug costs as opposed to excluding cases for which we did not have complete drug cost information. Analyses of the extent of missing data revealed that missing data did not vary by RUG group, State, year, or type of medication.

Nonetheless, by imputing missing drug costs, we have introduced random variations in the data that were not generated by the underlying process that we are attempting to model. Consequently, variables that explain variance in non-missing data will have no explanatory power for imputed data. The coefficients on these variables will, therefore, be biased toward zero. This bias will be small if the proportion of total variance attributable to imputation is small. However, variables explicitly or implicitly used in the imputation process may have explanatory power with regard to the imputed values. For example, if the RUG group is implicitly used as part of the imputation process, it theoretically could explain more of the variance in the dependent variable simply because RUG was used as part of the imputation algorithm. The coefficients of the variables used to impute cost data may be amplified relative to other coefficients in the explanatory models. Depending on the correlation between the RUG groups and other variables, these coefficients will also be biased in unpredictable ways. This problem could be small if the between-group variance is small (overall variance can be broken down into between-group and within-group components). Given the potential for introducing bias in our models, we opted to create two imputation algorithms.

2. RUG-Based Imputation Method

We assigned drug costs based on NDC codes recorded on Section U of the MDS evaluation forms using the following algorithm. First, if the NDC code was listed among the approximately 150,000 codes tracked by Medispan, we used the pricing information collected by Medispan. If the NDC code was not listed, but the exact name of the generic drug was listed, we calculated pricing as follows. In those instances where the RUG code (as calculated for our recording purposes and provided on the "raw" data files) was observed among beneficiaries using the drug, if only one cost was associated with the drug, it was used. If multiple costs were associated, the most likely cost was chosen based on the distribution of observed costs among beneficiaries. If the RUG code was not observed, we applied the process to a pooled distribution over all of the medication codes observed among all of the MDS records for all of the beneficiaries. If we could not match the exact generic name, we sought a match for the leading words in the generic name, and if matched, we applied the same approach (that is, selecting the most likely drug cost based on the RUG distribution). In cases where no reasonable match could be found, no price was assigned to the medication. This algorithm was iterative over the observed distribution among beneficiaries.

[1] The MDS instruction manual references NDC codes which do not contain drug strength information.

3. State and Year-Based Imputation Method

Because of our concerns regarding bias, we implemented a similar, but alternative algorithm to estimate the drug costs based on data contained in Section U of the MDS. We thought that missing data might vary systematically by State owing to differing data collection procedures (and software) among States. Further, we considered that coding of drugs might have improved over time. If both assumptions were true, the pattern of missing data would vary systematically through time and place. It follows that an imputation method based on time and place would be reasonable. If the NDC code was not listed among the 150,000 Medispan codes, but the exact name of the generic drug was listed, we calculated pricing as follows. If only one cost was associated with the drug within a given State and year, it was used. If multiple costs were associated, we chose the most likely cost based on the distribution of observed costs among beneficiaries. If we could not match the exact generic name, we sought a match for the leading words in the generic name, and if matched, we applied the same approach (that is, selecting the most likely drug cost using the State and year). In cases where no reasonable match could be found, no price was assigned to the medication. As with the RUG-based imputation measure, this algorithm was iterative over the observed distribution among beneficiaries.

During the course of initial analyses, we noted discrepancies between costs as measured by MDS Section U and costs as measured by SNF claims. The discrepancies between the Section U-based drug cost measure and the drug cost measure estimated from SNF claims may be due to several factors. The pharmacy cost detail codes used from the SNF claim include treatments that would not necessarily be included on the Section U according to the MDS instructions. For example, radiation treatment supplies and other procedure-related drug supplies are clearly not included on Section U. Furthermore, while applying the cost to charge ratio for pharmacy charges might appear to estimate "costs", this adjustment may only capture the administrative step-down from the facility cost report since, in all but the largest facilities, consultant pharmacy firms supply all drugs to beneficiaries. The charge to the facility includes both its "cost" (from the pharmaceutical firm or supplier) as well as the value-added labor of the facility's consultant pharmacists who perform its drug utilization review, along with any mark-up that the consultant pharmacy contractor applies. These charges for services provided represent "costs" to the facility, and so applying the facility cost to charge ratio only discounts its administrative step-down. Finally, in most States and areas, the typical practice in nursing homes is for a new admission to have a 30-day blister pack ordered for each specified drug the resident was taking upon admission to the nursing home. Since most residents came from the hospital where drugs are dispensed daily, they generally arrive at the nursing home with less than a one-day supply of medications. As a result, the transition and ordering of medications must be very quick. In turn, the "charge" for the drug will, in many instances, include drugs that may have already been changed by the 14th day of the stay, when the MDS Section U would be completed. The net result of this practice of delivering and billing for a full 30-day supply is a higher observed cost than would be produced by estimating per diem drug cost based on an enumeration of the drugs received.

Thus, we believe that Section U-based drug cost measures may eventually provide further insight into drug utilization patterns in the SNF population as these potential sources of data inconsistency yield to further analysis. However, in view of the delay in implementing the collection of medication data on the MDS, and given the current need to address and resolve these issues before proceeding, the analysis of potential RUG-III refinements described in this report was based on SNF claims data.

REMINDERS

The items in this list were editorially compiled as an aid to Federal Register users. Inclusion or exclusion from this list has no legal significance.

RULES GOING INTO EFFECT APRIL 10, 2000

AGRICULTURE DEPARTMENT

Agricultural Marketing Service

Onions (Vidalia) grown in—
- Georgia; published 3-9-00

AGRICULTURE DEPARTMENT

Food and Nutrition Service

Child nutrition programs:
- National school lunch, school breakfast, summer food service, and child and adult care food programs; vegetable protein products requirements modification; published 3-9-00

CONSUMER PRODUCT SAFETY COMMISSION

Flammable Fabrics Act:
- Carpets and rugs; surface flammability standards; laundering procedure; published 3-10-00
- Children's sleepwear (sizes 0-6X and 7-14); flammability standards; laundering procedure; published 3-10-00
- Mattresses and mattress pads; flammability standards; laundering procedure; published 3-10-00

ENVIRONMENTAL PROTECTION AGENCY

Air pollution control; new motor vehicles and engines:
- Tier 2 motor vehicle emission standards and gasoline sulfur control requirements; published 2-10-00
- Correction; published 2-28-00

Air pollution; standards of performance for new stationary sources:
- Municipal solid waste landfills; published 4-10-00

Air programs; approval and promulgation; State plans for designated facilities and pollutants:
- New Hampshire; published 2-8-00

Hazardous waste:
- Identification and listing—
  - Filter cake sludge; published 4-10-00

FEDERAL COMMUNICATIONS COMMISSION

Radio stations; table of assignments:
- Iowa; published 3-3-00
- New York; published 3-3-00

HEALTH AND HUMAN SERVICES DEPARTMENT

Food and Drug Administration

Federal Food, Drug, and Cosmetic Act:
- Current good manufacturing practice for finished pharmaceuticals and voluntaryfiling of cosmetic product ingredient composition statements
- CFR technical amendments; published 4-10-00

INTERIOR DEPARTMENT

Surface Mining Reclamation and Enforcement Office

Permanent program and abandoned mine land reclamation plan submissions:
- New Mexico; published 4-10-00

NUCLEAR REGULATORY COMMISSION

Spent nuclear fuel and high-level radioactive waste; independent storage; licensing requirements:
- Approved spent fuel storage casks; list additions; published 3-9-00

TRANSPORTATION DEPARTMENT

Coast Guard

Ports and waterways safety:
- Delaware Bay approaches; traffic separation scheme; published 3-10-00

TRANSPORTATION DEPARTMENT

Federal Aviation Administration

Air carrier certification and operations:
- Antidrug and alcohol misuse prevention programs for personnel engaged in specified aviation activities; published 4-10-00

Airworthiness directives:
- Eurocopter France; published 3-24-00
- General Electric Co.; published 2-10-00

COMMENTS DUE NEXT WEEK

AGRICULTURE DEPARTMENT

Agricultural Marketing Service

Livestock Mandatory Reporting Act:
- Livestock packers and products processors and importers; market reporting requirements; comments due by 4-17-00; published 3-17-00

Onions grown in—
- Texas; comments due by 4-17-00; published 2-16-00

Papayas grown in—
- Hawaii; comments due by 4-18-00; published 2-18-00

Perishable Agricultural Commodities Act; implementation:
- License and complaint filing fees increase; comments due by 4-17-00; published 2-15-00

Prunes (dried) produced in—
- California; comments due by 4-17-00; published 1-19-00

Spearmint oil produced in Far West; comments due by 4-17-00; published 2-17-00

AGRICULTURE DEPARTMENT

Animal and Plant Health Inspection Service

Animal welfare:
- Potentially dangerous animals; training and handling; policy statement; comments due by 4-18-00; published 2-18-00

Interstate transportation of animals and animal products (quarantine):
- Tuberculosis in cattle, bison, goats, and captive cervids—
  - State and zone designations; comments due by 4-21-00; published 3-7-00
  - State and zone designations; correction; comments due by 4-21-00; published 3-24-00

AGRICULTURE DEPARTMENT

Food and Nutrition Service

Child nutrition programs:
- Women, infants, and children; special supplemental nutrition program—
  - Certification integrity; comments due by 4-20-00; published 1-21-00

AGRICULTURE DEPARTMENT

Import quotas and fees:
- Sugar-containing products; tariff-rate quota licensing; comments due by 4-17-00; published 3-17-00

COMMERCE DEPARTMENT

National Oceanic and Atmospheric Administration

Fishery conservation and management:
- Magnuson-Stevens Act provisions—
  - Atlantic herring; comments due by 4-21-00; published 3-7-00

DEFENSE DEPARTMENT

Privacy Act; implementation; comments due by 4-17-00; published 2-16-00

ENVIRONMENTAL PROTECTION AGENCY

Air quality implementation plans:
- Interstate ozone transport reduction—
  - Nitrogen oxides emissions; stay of 8-hour portion of findings of significant contribution and rulemaking; comments due by 4-17-00; published 3-1-00

Air quality implementation plans; approval and promulgation; various States:
- California; comments due by 4-21-00; published 3-22-00
- Florida; comments due by 4-17-00; published 3-17-00
- New Mexico; comments due by 4-19-00; published 3-20-00
- Oregon; comments due by 4-21-00; published 3-22-00

FARM CREDIT ADMINISTRATION

Farm credit system:
- Disclosure to shareholders—
  - Annual reporting requirements; comments due by 4-17-00; published 3-17-00
- Loan policies and operations—
  - Loans to designated parties; approval; comments due by 4-17-00; published 3-17-00

FEDERAL COMMUNICATIONS COMMISSION

Radio stations; table of assignments:

Arizona; comments due by 4-17-00; published 3-3-00
California; comments due by 4-17-00; published 3-3-00
Indiana; comments due by 4-17-00; published 3-3-00

FEDERAL RESERVE SYSTEM

Bank holding companies and change in bank control (Regulation Y):
Financial holding company requirements—
Elections by foreign banks, etc.; comments due by 4-17-00; published 3-21-00

HEALTH AND HUMAN SERVICES DEPARTMENT

Food and Drug Administration

Food for human consumption:
Food labeling—
Trans fatty acids in nutrition labeling, nutrient content claims, and health claims; comments due by 4-17-00; published 2-16-00
Foods for human consumption:
Food labeling—
Dietary supplements; use of health claims based on authoritative statements; meeting; comments due by 4-19-00; published 3-16-00

INTERIOR DEPARTMENT

Fish and Wildlife Service

Endangered and threatened species:
Findings on petitions, etc.—
Yellow-billed cuckoo; comments due by 4-17-00; published 2-17-00
Mountain yellow-legged frog; southern California distinct vertebrate population segment; comments due by 4-19-00; published 3-20-00

INTERIOR DEPARTMENT

Surface Mining Reclamation and Enforcement Office

Abandoned mine land reclamation:
Fee collection and coal production reporting; OSM-1 Form; electronic filing; comments due by 4-17-00; published 2-15-00

VETERANS AFFAIRS DEPARTMENT

Adjudication; pensions, compensation, dependency, etc.:
Benefit claims decisions; review; comments due by 4-18-00; published 2-18-00
Claims based on tobacco product effects; comments due by 4-17-00; published 2-16-00
Board of Veterans Appeals:
Appeals regulations and rules of practice—
Subpoenas; clarification; comments due by 4-17-00; published 2-15-00

LIST OF PUBLIC LAWS

This is a continuing list of public bills from the current session of Congress which have become Federal laws. It may be used in conjunction with "PLUS" (Public Laws Update Service) on 202–523–6641. This list is also available online at http://www.nara.gov/fedreg.

The text of laws is not published in the **Federal Register** but may be ordered in "slip law" (individual pamphlet) form from the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402 (phone, 202–512–1808). The text will also be made available on the Internet from GPO Access at http://www.access.gpo.gov/nara/index.html. Some laws may not yet be available.

H.R. 1000/P.L. 106–181

Wendell H. Ford Aviation Investment and Reform Act for the 21st Century (Apr. 5, 2000; 114 Stat. 61)

Last List March 21, 2000

Public Laws Electronic Notification Service (PENS)

PENS is a free electronic mail notification service of newly enacted public laws. To subscribe, go to www.gsa.gov/archives/publaws-l.html or send E-mail to **listserv@www.gsa.gov** with the following text message:

SUBSCRIBE PUBLAWS-L Your Name.

Note: This service is strictly for E-mail notification of new laws. The text of laws is not available through this service. **PENS** cannot respond to specific inquiries sent to this address.

CFR CHECKLIST

This checklist, prepared by the Office of the Federal Register, is published weekly. It is arranged in the order of CFR titles, stock numbers, prices, and revision dates.

An asterisk (*) precedes each entry that has been issued since last week and which is now available for sale at the Government Printing Office.

A checklist of current CFR volumes comprising a complete CFR set, also appears in the latest issue of the LSA (List of CFR Sections Affected), which is revised monthly.

The CFR is available free on-line through the Government Printing Office's GPO Access Service at http://www.access.gpo.gov/nara/cfr/index.html. For information about GPO Access call the GPO User Support Team at 1-888-293-6498 (toll free) or 202-512-1530.

The annual rate for subscription to all revised paper volumes is $951.00 domestic, $237.75 additional for foreign mailing.

Mail orders to the Superintendent of Documents, Attn: New Orders, P.O. Box 371954, Pittsburgh, PA 15250–7954. All orders must be accompanied by remittance (check, money order, GPO Deposit Account, VISA, Master Card, or Discover). Charge orders may be telephoned to the GPO Order Desk, Monday through Friday, at (202) 512–1800 from 8:00 a.m. to 4:00 p.m. eastern time, or FAX your charge orders to (202) 512-2250.

Complete set (one-time mailing)		264.00	1996

[1] Because Title 3 is an annual compilation, this volume and all previous volumes should be retained as a permanent reference source.

[2] The July 1, 1985 edition of 32 CFR Parts 1–189 contains a note only for Parts 1–39 inclusive. For the full text of the Defense Acquisition Regulations in Parts 1–39, consult the three CFR volumes issued as of July 1, 1984, containing those parts.

[3] The July 1, 1985 edition of 41 CFR Chapters 1–100 contains a note only for Chapters 1 to 49 inclusive. For the full text of procurement regulations in Chapters 1 to 49, consult the eleven CFR volumes issued as of July 1, 1984 containing those chapters.

[5] No amendments to this volume were promulgated during the period January 1, 1998 through December 31, 1998. The CFR volume issued as of January 1, 1997 should be retained.

[7] No amendments to this volume were promulgated during the period April 1, 1998, through April 1, 1999. The CFR volume issued as of April 1, 1998, should be retained.

[8] No amendments to this volume were promulgated during the period July 1, 1998, through July 1, 1999. The CFR volume issued as of July 1, 1998, should be retained.

The **FEDERAL REGISTER** is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402 is the exclusive distributor of the official edition.

The **Federal Register** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see http://www.nara.gov/fedreg.

The seal of the National Archives and Records Administration authenticates the Federal Register as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge as one of the databases on GPO Access, a service of the U.S. Government Printing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6 a.m. each day the **Federal Register** is published and it includes both text and graphics from Volume 59, Number 1 (January 2, 1994) forward.

GPO Access users can choose to retrieve online **Federal Register** documents as TEXT (ASCII text, graphics omitted), PDF (Adobe Portable Document Format, including full text and all graphics), or SUMMARY (abbreviated text) files. Users should carefully check retrieved material to ensure that documents were properly downloaded.

On the World Wide Web, connect to the **Federal Register** at http://www.access.gpo.gov/nara. Those without World Wide Web access can also connect with a local WAIS client, by Telnet to swais.access.gpo.gov; or by dialing (202) 512-1661 with a computer and modem. When using Telnet or modem, type swais, then log in as guest with no password.

For more information about GPO Access, contact the GPO Access User Support Team by E-mail at gpoaccess@gpo.gov; by fax at (202) 512–1262; or call (202) 512–1530 or 1–888–293–6498 (toll free) between 7 a.m. and 5 p.m. Eastern time, Monday–Friday, except Federal holidays.

The annual subscription price for the **Federal Register** paper edition is $555, or $607 for a combined **Federal Register**, Federal Register Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the Federal Register Index and LSA is $220. Six month subscriptions are available for one-half the annual rate. The charge for individual copies in paper form is $8.00 for each issue, or $8.00 for each group of pages as actually bound; or $1.50 for each issue in microfiche form. All prices include regular domestic postage and handling. International customers please add 25% for foreign handling. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard or Discover. Mail to: New Orders, Superintendent of Documents, P.O. Box 371954, Pittsburgh, PA 15250–7954.

There are no restrictions on the republication of material appearing in the **Federal Register.**

How To Cite This Publication: Use the volume number and the page number. Example: 65 FR 12345.

Printed on recycled paper.

FEDERAL REGISTER WORKSHOP

THE FEDERAL REGISTER: WHAT IT IS AND HOW TO USE IT

FOR: Any person who uses the Federal Register and Code of Federal Regulations.

WHO: Sponsored by the Office of the Federal Register.

WHAT: Free public briefings (approximately 3 hours) to present:

1. The regulatory process, with a focus on the Federal Register system and the public's role in the development regulations.
2. The relationship between the Federal Register and Code of Federal Regulations.
3. The important elements of typical Federal Register documents.
4. An introduction to the finding aids of the FR/CFR system.

WHY: To provide the public with access to information necessary to research Federal agency regulations which directly affect them. There will be no discussion of specific agency regulations.

WASHINGTON, DC

WHEN: April 18, 2000, at 9:00 a.m.

WHERE: Conference Room, Suite 700
Office of the Federal Register
800 North Capitol Street, NW.
Washington, DC
(3 blocks north of Union Station Metro)

RESERVATIONS: 202–523–4538

Rules and Regulations

Federal Register
Vol. 65, No. 70
Tuesday, April 11, 2000

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents. Prices of new books are listed in the first FEDERAL REGISTER issue of each week.

MERIT SYSTEMS PROTECTION BOARD

5 CFR Part 1201

Practices and Procedures

AGENCY: Merit Systems Protection Board.

ACTION: Final rule.

SUMMARY: The Merit Systems Protection Board (MSPB or the Board) is amending its rules of practice and procedure to clarify what a party in a Board proceeding must do to get a copy of the hearing tape recording or written transcript, to provide that the official hearing record may be a video tape recording, and to comply with the President's Memorandum on Plain Language. The amendment also informs a non-party who wants a copy of a hearing tape recording or written transcript to send a request under the Board's Freedom of Information Act regulations (5 CFR part 1204). The purpose of the amendment is to guide parties to MSPB cases, representatives, and non-parties on the appropriate way to get copies of hearing tape recordings and written transcripts.

EFFECTIVE DATE: April 11, 2000.

FOR FURTHER INFORMATION CONTACT: Robert E. Taylor, Clerk of the Board, (202) 653–7200.

SUPPLEMENTARY INFORMATION: The Board's current rule at 5 CFR 1201.53(a) provides that a verbatim record of a hearing in a Board case must be prepared under the supervision of the judge. The amendment to this rule published today makes clear that a verbatim record, the single official record of the hearing, will be kept in the Board's copy of the appeal file. The amendment also makes clear that an audio tape recording, video tape recording, or written transcript will be the official hearing record. Under the Board's current rule at 5 CFR 1201.53(b), a copy of a hearing tape recording or written transcript is to be made available to a party upon request and upon payment of costs. The amendment to 5 CFR 1201.53(b) published today requires that parties send requests for copies of hearing tape recordings or written transcripts to the adjudicating regional or field office or to the Clerk of the Board as appropriate. Because the current rule at 5 CFR 1201.53(b) only states procedures for parties to request copies of hearing tape recordings or written transcripts, the amendment notifies non-parties that their requests for copies of hearing tape recordings or written transcripts are controlled by the Board's rules at 5 CFR part 1204 (Freedom of Information Act). In addition, the amendment provides that only hearing tape recordings or written transcripts prepared by the official hearing reporter will be accepted by the Board as the official record of the hearing. The amendment to 5 CFR 1201.53(c) clarifies procedures for parties to request an exception to payment of the cost for hearing tape recordings or written transcripts. The current rule at 5 CFR 1201.53(d) has been amended because it refers to written transcripts and the Board now tape records its hearings. The new section 5 CFR 1201.53(e) includes a revision of 5 CFR 1201.54 Thus, the current rule at 5 CFR 1201.54 has been removed.

The Board is publishing this rule as a final rule in accordance with 5 U.S.C. 1204(h).

List of Subjects in 5 CFR Part 1201

Administrative practice and procedure, Civil rights, Government employees.

Accordingly, the Board amends 5 CFR part 1201 as follows:

PART 1201—[AMENDED]

1. The authority citation for part 1201 continues to read as follows:

Authority: 5 U.S.C. 1204 and 7701, unless otherwise noted).

2. Section 1201.53 is revised to read as follows:

§ 1201.53 Record of proceedings.

(a) *Preparation.* A word-for-word record of the hearing is made under the judge's guidance. It is kept in the Board's copy of the appeal file and it is the official record of the hearing. Only hearing tape recordings or written transcripts prepared by the official hearing reporter will be accepted by the Board as the official record of the hearing. When the judge assigned to the case tape records a hearing (for example, a telephonic hearing in a retirement appeal), the judge is the "official hearing reporter" under this section.

(b) *Copies.* When requested and when costs are paid, a copy of the official record of the hearing will be provided to a party. A party must send a request for a copy of a hearing tape recording or written transcript to the adjudicating regional or field office, or to the Clerk of the Board, as appropriate. A request for a copy of a hearing tape recording or written transcript sent by a non-party is controlled by the Board's rules at 5 CFR part 1204 (Freedom of Information Act). Requests for hearing tape recordings or written transcripts under the Freedom of Information Act must be sent to the appropriate Regional Director, the Chief Administrative Judge of the appropriate MSPB Field Office, or to the Clerk of the Board at MSPB headquarters in Washington, DC.

(c) *Exceptions to payment of costs.* A party may not have to pay for a hearing tape recording or written transcript if he has a good reason. If a party believes he has a good reason and the request is made before the judge issues and initial decision, the party must sent the request for an exception to the judge. If the request is made after the judge issues an initial decision, the request must be sent to the Clerk of the Board. The party must clearly state the reason for the request in an affidavit or sworn statement.

(d) *Corrections to written transcript.* Corrections to the official written transcript may be made on motion by a party or on the judge's own motion. Motions for corrections must be filed within 10 days after the receipt of a written transcript. Corrections of the official written transcript will be made only when substantive errors are found and only with the judge's approval.

(e) *Official record.* Exhibits, the official hearing record, if a hearing is held, all papers filed, and all orders and decisions of the judge and the Board, make up the official record of the case.

§ 1201.54 (Removed)

3. Section 1201.54 is removed in its entirety.

Dated: April 5, 2000.

Robert E. Taylor,

Clerk of the Board.

BILLING CODE 7400–01–M

DEPARTMENT OF AGRICULTURE

Animal and Plant Health Inspection Service

9 CFR Part 91

[Docket No. 99–102–2]

Ports Designated for Exportation of Horses; Dayton, OH

AGENCY: Animal and Plant Health Inspection Service, USDA.

ACTION: Direct final rule; confirmation of effective date.

SUMMARY: On February 17, 2000, the Animal and Plant Health Inspection Service published a direct final rule. (See 65 FR 8013–8014, Docket No. 99–102–1.) The direct final rule notified the public of our intentions to amend the "Inspection and Handling of Livestock for Exportation" regulations by adding Dayton International Airport in Dayton, OH, as a port of embarkation and Instone Air Services, Inc., as the export inspection facility for equines for that port. We did not receive any written adverse comments or written notice of intent to submit adverse comments in response to the direct final rule.

EFFECTIVE DATE: The effective date of the direct final rule is confirmed as: April 17, 2000.

FOR FURTHER INFORMATION CONTACT: Dr. Morley Cook, Senior Staff Veterinarian, National Center for Import and Export, VS, APHIS, 4700 River Road Unit 39, Riverdale, MD 20737–1231; (301) 734–6479.

Authority: 21 U.S.C. 105, 112, 113, 114a, 120, 121, 134b, 134f, 136, 136a, 612, 613, 614, and 618; 46 U.S.C. 466a, and 466b; 49 U.S.C. 1509(d); 7 CFR 2.22, 2.80, and 371.2(d).

Done in Washington, DC, this 5th day of April 2000.

Bobby R. Acord,

Acting Administrator, Animal and Plant Health Inspection Service.

[FR Doc. 00–8936 Filed 4–10–00; 8:45 am]

BILLING CODE 3410–34–U

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 25

[Docket No. NM171, Special Conditions No. 25–160–SC]

Special Conditions: Airbus A300 Model B2–1A, B2–1C, B4–2C, B2K–3C, B4–103, B2–203, B4–203 Airplanes; High Intensity Radiated Fields (HIRF)

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final special conditions; request for comments.

SUMMARY: These special conditions are issued for Airbus A300 Model B2–1A, B2–1C, B4–2C, B2K–3C, B4–103, B2–203, B4–203 airplanes modified by Electronic Cable Specialists. These airplanes will have novel and unusual design features when compared to the state of technology envisioned in the airworthiness standards for transport category airplanes. The installation of Honeywell Classic Navigator Systems will use advanced electronics when compared to the Inertial Navigation Systems. The applicable type certification regulations do not contain adequate or appropriate safety standards for the protection of this system from the effects of high-intensity radiated fields (HIRF). These special conditions contain the additional safety standards that the Administrator considers necessary to establish a level of safety equivalent to that provided by the existing airworthiness standards.

DATES: The effective date of these special conditions is March 31, 2000. Comments must be received on or before May 26, 2000.

ADDRESSES: Comments on these special conditions may be mailed in duplicate to: Federal Aviation Administration, Transport Airplane Directorate, Attn: Rules Docket (ANM–114), Docket No. NM171, 1601 Lind Avenue SW., Renton, Washington, 98055–4056; or delivered in duplicate to the Transport Airplane Directorate at the above address. Comments must be marked: Docket No. NM171. Comments may be inspected in the Rules Docket weekdays, except Federal holidays, between 7:30 a.m. and 4:00 p.m.

FOR FURTHER INFORMATION CONTACT: Connie Beane, FAA, Standardization Branch, ANM–113, Transport Airplane Directorate, Aircraft Certification Service, 1601 Lind Avenue SW., Renton, Washington, 98055–4056; telephone (425) 227–2796; facsimile (425) 227–1149.

SUPPLEMENTARY INFORMATION:

Comments Invited

The FAA has determined that good cause exists for making these special conditions effective upon issuance; however, interested persons are invited to submit such written data, views, or arguments as they may desire. Communications should identify the docket and special conditions number and be submitted in duplicate to the address specified above. All communications received on or before the closing date for comments will be considered by the Administrator. These special conditions may be changed in light of the comments received. All comments submitted will be available in the Rules Docket for examination by interested persons, both before and after the closing date for comments. A report summarizing each substantive public contact with FAA personnel concerning this rulemaking will be filed in the docket. Persons wishing the FAA to acknowledge receipt of their comments submitted in response to this request must submit with those comments a self-addressed, stamped postcard on which the following statement is made: "Comments to Docket No. NM171." The postcard will be date stamped and returned to the commenter.

Background

On November 29, 1999, Electronic Cable Specialists, 5300 West Franklin Drive, Franklin, Wisconsin 53132, applied for a Supplemental Type Certificate (STC) to modify Airbus A300 Model B2–1A, B2–1C, B4–2C, B2K–3C, B4–103, B2–203, B4–203 airplanes approved under Type Certificate No. A35EU. These are transport category airplanes with twin engines, and a seating capacity of up to 267 passengers. The modification incorporates the installation of Honeywell Classic Navigator Systems. Each system consists of a Honeywell HT–9100 Navigation Management System, a Super Attitude Heading Reference System, and a Digital to Analog Adapter. These advanced systems use electronics to a far greater extent than the original Inertial Navigation Systems and may be more susceptible to electrical and magnetic interference. This disruption of signals could result in loss of attitude or present misleading information to the pilot.

Type Certification Basis

Under the provisions of 14 CFR 21.101, Electronic Cable Specialists must show that Airbus A300 Model B2–1A, B2–1C, B4–2C, B2K–3C, B4–103, B2–203, B4–203 airplanes, as changed, continue to meet the applicable

provisions of the regulations incorporated by reference in Type Certificate No. A35EU, or the applicable regulations in effect on the date of application for the change. The regulations incorporated by reference in the type certificate are commonly referred to as the "original type certification basis." The certification basis for the modified Airbus A300 Model B2–1A, B2–1C, B4–2C, B2K–3C, B4–103, B2–203, B4–203 airplanes includes 14 CFR part 25, dated February 1, 1965, as amended by Amendments 25–1 through 25–21.

If the Administrator finds that the applicable airworthiness regulations (i.e., part 25, as amended) do not contain adequate or appropriate safety standards for the Airbus A300 Model B2–1A, B2–1C, B4–2C, B2K–3C, B4–103, B2–203, B4–203 airplanes because of novel or unusual design features, special conditions are prescribed under the provisions of § 21.16.

In addition to the applicable airworthiness regulations and special conditions, the Airbus A300 Model B2–1A, B2–1C, B4–2C, B2K–3C, B4–103, B2–203, B4–203 airplanes must comply with the part 25 fuel vent and exhaust emission requirements of 14 CFR part 34 and the part 25 noise certification requirements of 14 CFR part 36.

Special conditions, as appropriate, are issued in accordance with § 11.49, as required by §§ 11.28 and 11.29(b), and become part of the type certification basis in accordance with § 21.101(b)(2).

Special conditions are initially applicable to the model for which they are issued. Should Electronic Cable Specialists apply at a later date for a supplemental type certificate to modify any other model already included on the same type certificate to incorporate the same novel or unusual design feature, these special conditions would also apply to the other model under the provisions of § 21.101(a)(1).

Novel or Unusual Design Features

The Airbus A300 Model B2–1A, B2–1C, B4–2C, B2K–3C, B4–103, B2–203, B4–203 airplanes will incorporate a new navigation system, which was not available at the time of certification of these airplanes, that performs critical functions. This system may be vulnerable to high intensity radiated fields (HIRF) external to the airplane.

Discussion

There is no specific regulation that addresses protection requirements for electrical and electronic systems from HIRF. Increased power levels from ground-based radio transmitters and the growing use of sensitive electrical and electronic systems to command and control airplanes have made it necessary to provide adequate protection.

To ensure that a level of safety is achieved equivalent to that intended by the regulations incorporated by reference, special conditions are needed for the Airbus A300 Model B2–1A, B2–1C, B4–2C, B2K–3C, B4–103, B2–203, B4–203 airplanes, which require that new electrical and electronic systems, such as the Honeywell Navigator Systems, that perform critical functions be designed and installed to preclude component damage and interruption of function due to both the direct and indirect effects of HIRF.

High-Intensity Radiated Fields

With the trend toward increased power levels from ground-based transmitters, plus the advent of space and satellite communications coupled with electronic command and control of the airplane, the immunity of critical digital avionics systems to HIRF must be established.

It is not possible to precisely define the HIRF to which the airplane will be exposed in service. There is also uncertainty concerning the effectiveness of airframe shielding for HIRF. Furthermore, coupling of electromagnetic energy to cockpit-installed equipment through the cockpit window apertures is undefined. Based on surveys and analysis of existing HIRF emitters, an adequate level of protection exists when compliance with the HIRF protection special condition is shown with either paragraph 1, or 2 below:

1. A minimum threat of 100 volts per meter root-mean-square (rms) electric field strength from 10 KHz to 18 GHz.

a. The threat must be applied to the system elements and their associated wiring harnesses without the benefit of airframe shielding.

b. Demonstration of this level of protection is established through system tests and analysis.

2. A threat external to the airframe of the following field strengths for the frequency ranges indicated. Both peak and average field strength components from the table are to be demonstrated.

Field Strength (volts per meter)		
Frequency	Peak	Average
10 kHz–100 kHz	50	50
100 kHz–500 kHz	50	50
500 kHz–2 MHz	50	50
2 MHz–30 MHz	100	100
30 MHz–70 MHz	50	50
70 MHz–100 MHz	50	50
100 MHz–200 MHz	100	100
200 MHz–400 MHz	100	100
400 MHz–700 MHz	700	50
700 MHz–1 GHz	700	100
1 GHz–2 GHz	2000	200
2 GHz–4 GHz	3000	200
4 GHz–6 GHz	3000	200
6 GHz–8 GHz	1000	200
8 GHz–12 GHz	3000	300
12 GHz–18 GHz	2000	200
18 GHz–40 GHz	600	200

The field strengths are expressed in terms of peak of the root-mean-square (rms) over the complete modulation period.

Applicability

As discussed above, these special conditions are applicable Airbus A300 Model B2–1A, B2–1C, B4–2C, B2K–3C, B4–103, B2–203, B4–203 airplanes modified by Electronic Cable Specialists. Should Electronic Cable Specialists apply at a later date for a supplemental type certificate to modify any other model included on the same type certificate to incorporate the same novel or unusual design feature, these special conditions would apply to that model as well under the provisions of § 21.101(a)(1).

Conclusion

This action affects only certain design features on Airbus A300 Model B2–1A, B2–1C, B4–2C, B2K–3C, B4–103, B2–203, B4–203 airplanes modified by Electronic Cable Specialists. It is not a rule of general applicability and affects only the applicant who applied to the FAA for approval of these features on the airplane.

The substance of the special conditions for this airplane has been subjected to the notice and comment procedure in several prior instances and has been derived without substantive change from those previously issued. It is unlikely that prior public comment would result in a significant change from the substance contained herein. For this reason, and because a delay would significantly affect the certification of the airplane, which is imminent, the FAA has determined that prior public notice and comment are unnecessary and impracticable, and good cause exists for adopting these special conditions upon issuance. The FAA is requesting comments to allow interested persons to submit views that may not have been submitted in response to the prior opportunities for comment described above.

List of Subjects in 14 CFR Part 25

Aircraft, Aviation safety, Reporting and recordkeeping requirements.

The authority citation for these special conditions is as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701, 44702, 44704.

The Special Conditions

Accordingly, pursuant to the authority delegated to me by the Administrator, the following special conditions are issued as part of the type certification basis Airbus A300 Model B2–1A, B2–1C, B4–2C, B2K–3C, B4–103, B2–203, B4–203 airplanes modified by Electronic Cable Specialists.

1. *Protection from Unwanted Effects of High-Intensity Radiated Fields (HIRF).* Each electrical and electronic system that performs critical functions must be designed and installed to ensure that the operation and operational capability of these systems to perform critical functions are not adversely affected when the airplane is exposed to high intensity radiated fields.

2. For the purpose of these special conditions, the following definition applies: *Critical Functions.* Functions whose failure would contribute to or cause a failure condition that would prevent the continued safe flight and landing of the airplane.

Issued in Renton, Washington, March 31, 2000.

Donald L. Riggin,

Acting Manager, Transport Airplane Directorate, Aircraft Certification Service, ANM–100.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. 99–NM–57–AD; Amendment 39–11667; AD 2000–07–13]

RIN 2120–AA64

Airworthiness Directives; Boeing Model 757–200 and –200PF Series Airplanes

AGENCY: Federal Aviation Administration, DOT.

ACTION: Final rule.

SUMMARY: This amendment adopts a new airworthiness directive (AD), applicable to certain Boeing Model 757–200 and –200PF series airplanes, that requires repetitive detailed visual inspections to detect loose fuse pins in the outboard beam attachment and forward trunnion support on the main landing gear (MLG) and to detect corrosion on the structure adjacent to the fuse pin; and corrective actions, if necessary. This amendment also requires eventual replacement of the fuse pins with new corrosion resistant steel (CRES) fuse pins, which constitutes terminating action for the repetitive inspections. This amendment is prompted by a report of damaged fuse pins caused by corrosion. The actions specified by this AD are intended to prevent corroded fuse pins, which could result in the MLG separating from the wing, and consequent damage to the airplane and possible rupture of the wing fuel tank.

DATES: Effective May 16, 2000.

The incorporation by reference of certain publications listed in the regulations is approved by the Director of the Federal Register as of May 16, 2000.

ADDRESSES: The service information referenced in this AD may be obtained from Boeing Commercial Airplane Group, P.O. Box 3707, Seattle, Washington 98124–2207.

This information may be examined at the Federal Aviation Administration (FAA), Transport Airplane Directorate, Rules Docket, 1601 Lind Avenue, SW., Renton, Washington; or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

FOR FURTHER INFORMATION CONTACT: James G. Rehrl, Aerospace Engineer, Airframe Branch, ANM–120S, FAA, Transport Airplane Directorate, Seattle Aircraft Certification Office, 1601 Lind Avenue, SW., Renton, Washington 98055–4056; telephone (425) 227–2783; fax (425) 227–1181.

SUPPLEMENTARY INFORMATION: A proposal to amend part 39 of the Federal Aviation Regulations (14 CFR part 39) to include an airworthiness directive (AD) that is applicable to certain Boeing Model 757–200 and –200PF series airplanes was published in the Federal Register on October 6, 1999 (64 FR 54227). That action proposed to require repetitive detailed visual inspections to detect loose fuse pins in the outboard beam attachment and forward trunnion support on the main landing gear (MLG) and to detect corrosion on the structure adjacent to the fuse pin; and corrective actions, if necessary. That action also proposed to require eventual replacement of the fuse pins with new corrosion resistant steel (CRES) fuse pins, which would constitute terminating action for the repetitive inspections.

Interested persons have been afforded an opportunity to participate in the making of this amendment. Due consideration has been given to the single comment received.

Request To Change Repetitive Inspection Interval

The commenter requests that the proposed repetitive inspection interval be changed from 3,000 flight cycles or 24 months (whichever occurs first) to either 36 months or to 3,000 flight cycles or 24 months (whichever is later). The commenter states that 3,000 flight cycles does not correspond to the 24-month calendar time. The commenter adds that 36 months would more closely reflect the amount of time it takes for its airplanes to accumulate 3,000 flight cycles.

The FAA does not concur with this request. This AD addresses corrosion of the fuse pins, which is a time-related phenomenon. Therefore, the critical element of the repetitive inspection interval in this case is the amount of calendar time that passes between inspections, rather than the number of flight cycles accumulated. Therefore, the FAA finds that the repetitive inspection interval of 3,000 flight cycles or 24 months, whichever occurs first, is appropriate to address the identified unsafe condition in a timely manner and to ensure an adequate level of safety. No change to the final rule is necessary.

Revised Service Information

Since the issuance of the proposed AD, the FAA has reviewed and approved Boeing Service Bulletin 757–57A0054, Revision 1, including Appendix A, both dated December 16, 1999. (The original issue of the service bulletin is referenced in the proposal as the appropriate source of service information for accomplishment of the actions required by this AD.) Revision 1 is essentially equivalent to the original issue; however, Revision 1 adds references to optional parts and changes certain compliance recommendations. Revision 1 recommends that, if the alloy steel fuse pins have already been replaced on an airplane that was four years (or more) old, the inspection of those pins can be extended to within four years or 6,000 flight cycles after installation. A new paragraph (b) has been added to the final rule to specify the revised compliance time for those particular airplanes.

The FAA also has revised the final rule to include Revision 1 of the service bulletin as an additional source of service information. Further, the FAA has revised references to the original

issue of the service bulletin to include Appendix A, dated November 5, 1998.

Conclusion

After careful review of the available data, including the comment noted above, the FAA has determined that air safety and the public interest require the adoption of the rule as proposed.

Cost Impact

There are approximately 805 airplanes of the affected design in the worldwide fleet. The FAA estimates that 350 airplanes of U.S. registry will be affected by this AD.

It will take approximately 1 work hour per airplane to accomplish the required inspection, and that the average labor rate is $60 per work hour. Based on these figures, the cost impact of the inspection required by this AD on U.S. operators is estimated to be $21,000, or $60 per airplane, per inspection cycle.

It will take approximately 440 work hours per airplane to accomplish the required replacement, at an average labor rate of $60 per work hour. The manufacturer has committed previously to its customers that it will bear the cost of replacement parts. As a result, the cost of those parts are not attributable to this AD. Based on these figures, the cost impact of the replacement required by this AD on U.S. operators is estimated to be $9,240,000, or $26,400 per airplane.

The cost impact figures discussed above are based on assumptions that no operator has yet accomplished any of the requirements of this AD action, and that no operator would accomplish those actions in the future if this AD were not adopted.

Regulatory Impact

The regulations adopted herein will not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, it is determined that this final rule does not have federalism implications under Executive Order 13132.

For the reasons discussed above, I certify that this action (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A final evaluation has been prepared for this action and it is contained in the Rules Docket. A copy of it may be obtained from the Rules Docket at the location provided under the caption **ADDRESSES.**

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration amends part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. Section 39.13 is amended by adding the following new airworthiness directive:

2000–07–13 Boeing: Amendment 39–11667. Docket 99–NM–57–AD.

Applicability: Model 757–200 and -200PF series airplanes, line numbers 1 through 806 inclusive; certificated in any category.

Note 1: This AD applies to each airplane identified in the preceding applicability provision, regardless of whether it has been modified, altered, or repaired in the area subject to the requirements of this AD. For airplanes that have been modified, altered, or repaired so that the performance of the requirements of this AD is affected, the owner/operator must request approval for an alternative method of compliance in accordance with paragraph (e) of this AD. The request should include an assessment of the effect of the modification, alteration, or repair on the unsafe condition addressed by this AD; and, if the unsafe condition has not been eliminated, the request should include specific proposed actions to address it.

Compliance: Required as indicated, unless accomplished previously.

To prevent corroded fuse pins, which could result in the main landing gear (MLG) separating from the wing, and consequent damage to the airplane and possible rupture of the wing fuel tank, accomplish the following:

Repetitive Inspections

(a) Perform a detailed visual inspection to detect loose fuse pins in the outboard beam attachment and forward trunnion support on the MLG and to detect corrosion on the structure adjacent to the fuse pin, in accordance with Boeing Alert Service Bulletin 757–57A0054, including Appendix A, dated November 5, 1998, or Boeing Service Bulletin 757–57A0054, Revision 1, including Appendix A, dated December 16, 1999; at the later of the times specified in paragraphs (a)(1) and (a)(2) of this AD. Thereafter, repeat the inspection at intervals not to exceed 3,000 flight cycles or 24 months, whichever occurs first, until accomplishment of paragraph (d) of this AD.

(1) Prior to 4 years since date of manufacture of the airplane; or

(2) Within 3,000 flight cycles or 24 months after the effective date of this AD, whichever occurs first.

Note 2: For the purposes of this AD, a detailed visual inspection is defined as: "An intensive visual examination of a specific structural area, system, installation, or assembly to detect damage, failure, or irregularity. Available lighting is normally supplemented with a direct source of good lighting at intensity deemed appropriate by the inspector. Inspection aids such as mirror, magnifying lenses, etc., may be used. Surface cleaning and elaborate access procedures may be required."

(b) For airplanes on which the alloy steel fuse pins were replaced prior to the effective date of this AD: Perform the initial inspection required by paragraph (a) of this AD within 4 years or 6,000 flight cycles after installation of the pins, whichever occurs later. Thereafter, accomplish the repetitive inspections required by paragraph (a) of this AD at the time specified in that paragraph.

Corrective Action

(c) If any loose fuse pin or corrosion on the structure adjacent to the fuse pin is detected during any inspection required by paragraph (a) of this AD, prior to further flight, perform the applicable corrective action [i.e., detailed visual inspections for cracks or corrosion, repair of discrepant parts, and replacement of fuse pin] in accordance with Boeing Alert Service Bulletin 757–57A0054, including Appendix A, dated November 5, 1998, or Boeing Service Bulletin 757–57A0054, Revision 1, including Appendix A, dated December 16, 1999. Replacement of an alloy steel fuse pin with a new corrosion resistant steel (CRES) fuse pin constitutes terminating action for the repetitive inspection requirements of paragraph (a) of this AD for that fuse pin only.

Terminating Action

(d) At the next scheduled MLG overhaul, or within 12 years after the effective date of this AD, whichever occurs first, replace all alloy steel fuse pins with new CRES fuse pins in the outboard beam attachment and forward trunnion support on the MLG in accordance with Boeing Alert Service Bulletin 757–57A0054, including Appendix A, dated November 5, 1998, or Boeing Service Bulletin 757–57A0054, Revision 1, including Appendix A, dated December 16, 1999. Accomplishment of the action specified in this paragraph constitutes terminating action for the repetitive inspection requirements of this AD.

Alternative Methods of Compliance

(e) An alternative method of compliance or adjustment of the compliance time that provides an acceptable level of safety may be used if approved by the Manager, Seattle Aircraft Certification Office (ACO), FAA,

Transport Airplane Directorate. Operators shall submit their requests through an appropriate FAA Principal Maintenance Inspector, who may add comments and then send it to the Manager, Seattle ACO.

Note 3: Information concerning the existence of approved alternative methods of compliance with this AD, if any, may be obtained from the Seattle ACO.

Special Flight Permits

(f) Special flight permits may be issued in accordance with sections 21.197 and 21.199 of the Federal Aviation Regulations (14 CFR 21.197 and 21.199) to operate the airplane to a location where the requirements of this AD can be accomplished.

Incorporation by Reference

(g) The actions shall be done in accordance with Boeing Alert Service Bulletin 757–57A0054, including Appendix A, dated November 5, 1998, or Boeing Service Bulletin 757–57A0054, Revision 1, including Appendix A, dated December 16, 1999. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies may be obtained from Boeing Commercial Airplane Group, P.O. Box 3707, Seattle, Washington 98124–2207. Copies may be inspected at the FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington; or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

(h) This amendment becomes effective on May 16, 2000.

Issued in Renton, Washington, on April 3, 2000.

Donald L. Riggin,

Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

BILLING CODE 4910–13–U

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. 99–NE–42–AD; Amendment 39–11650; AD 2000–06–09]

RIN 2120–AA64

Airworthiness Directives; Turbomeca Arrius 1A Series Turboshaft Engines

AGENCY: Federal Aviation Administration, DOT.

ACTION: Final rule.

SUMMARY: This amendment adopts a new airworthiness directive (AD), applicable to Turbomeca Arrius 1A series turboshaft engines, that requires installation of module TU63, which provides a separate supply of fuel for one of the 10 main injectors of the fuel injection system. This action is prompted by reports of unexpected power loss during test flights. The actions specified by this AD are intended to prevent unexpected power loss, which could result in an uncommanded in-flight engine shutdown, autorotation, and forced landing.

DATES: Effective June 12, 2000. The incorporation by reference of certain publications in this rule is approved by the Director of the Federal Register as of June 12, 2000.

ADDRESSES: The service information referenced in the rule may be obtained from Turbomeca, 40220 Tarnos, France; telephone (33) 05 59 64 40 00, fax (33) 05 59 64 60 80. This information may be examined at the FAA, New England Region, Office of the Regional Counsel, 12 New England Executive Park, Burlington, MA.

FOR FURTHER INFORMATION CONTACT: Glorianne Niebuhr, Aerospace Engineer, Engine Certification Office, FAA, Engine and Propeller Directorate, 12 New England Executive Park, Burlington, MA 01803–5299; telephone (781) 238–7132, fax (781) 238–7199.

SUPPLEMENTARY INFORMATION: A proposal to amend part 39 of the Federal Aviation Regulations (14 CFR part 39) to include an airworthiness directive (AD) that is applicable to Turbomeca Turboshaft Arrius 1A series turboshaft engines was published in the **Federal Register** on December 1, 1999 (64 FR 67206). That action proposed to require installation of module TU63, which provides a separate supply of fuel for one of the 10 main injectors of the fuel injection system. That action was prompted by reports of cracked injection wheels. That condition, if not corrected, could result in an unexpected power loss, which could result in an in-flight engine shutdown, autorotation, and a forced landing.

Comments Received

Interested persons have been afforded an opportunity to participate in the making of this amendment. No comments were received.

Economic Analysis

There are approximately 100 engines of the affected design in the worldwide fleet. The FAA estimates that nine engines installed on aircraft of US registry would be affected by this AD, that it would take approximately 1 work hour per engine to accomplish the actions, and that the average labor rate is $60 per work hour. Required parts would cost approximately $5,500 per engine. Based on these figures, the total cost impact of the AD on US operators is estimated to be $50,040. The manufacturer has advised the DGAC that they may provide module TU63 at no cost to the operator, thereby substantially reducing the cost impact of this rule.

Regulatory Impact

This rule does not have federalism implications, as defined in Executive Order 13132, because it would not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Accordingly, the FAA has not consulted with state authorities prior to publication of this rule.

For the reasons discussed above, I certify that this action (1) Is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A final evaluation has been prepared for this action and it is contained in the Rules Docket. A copy of it may be obtained from the Rules Docket at the location provided under the caption **ADDRESSES.**

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration amends part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. Section 39.13 is amended by adding the following new airworthiness directive:

2000–06–09 Turbomeca: Amendment 39–11650. Docket 99–NE–42–AD.

Applicability: Turbomeca Arrius 1A series turboshaft engines, installed on but not limited to Ecureuil AD355 series helicopters.

Note 1: This airworthiness directive (AD) applies to each engine identified in the preceding applicability provision, regardless

of whether it has been modified, altered, or repaired in the area subject to the requirements of this AD. For engines that have been modified, altered, or repaired so that the performance of the requirements of this AD is affected, the owner/operator must request approval for an alternative method of compliance in accordance with paragraph (c) of this AD. The request should include an assessment of the effect of the modification, alteration, or repair on the unsafe condition addressed by this AD; and, if the unsafe condition has not been eliminated, the request should include specific proposed actions to address it.

Compliance: Required as indicated, unless accomplished previously. To prevent unexpected power loss, which could result in an uncommanded in-flight engine shutdown, autorotation, and forced landing, accomplish the following:

Installation of Module TU63

(a) Install module TU63 in accordance with the Instructions for Incorporation of Turbomeca Arrius Service Bulletin (SB) No. 319 73 0016, Revision 1, dated December 22, 1997, at the earliest of the following after the effective date of this AD:

(1). The next shop visit, or
(2). Within 120 cycles-in-service, or
(3). Within 30 days.

Definition

(b) For the purpose of this AD, a shop visit is defined as whenever the engine is removed from the helicopter for maintenance.

Alternative Methods of Compliance

(c) An alternative method of compliance or adjustment of the compliance time that provides an acceptable level of safety may be used if approved by the Manager, Engine Certification Office. Operators shall submit their request through an appropriate FAA Principal Maintenance Inspector, who may add comments and then send it to the Manager, Engine Certification Office.

Note 2: Information concerning the existence of approved alternative methods of compliance with this airworthiness directive, if any, may be obtained from the Engine Certification Office.

Ferry Flights

(d) Special flight permits may be issued in accordance with sections 21.197 and 21.199 of the Federal Aviation Regulations (14 CFR 21.197 and 21.199) to operate the aircraft to a location where the requirements of this AD can be accomplished.

Incorporation by Reference

(e) The actions required by this AD shall be done in accordance with Turbomeca Arrius Service Bulletin (SB) No. 319 73 0016, Revision 1, dated December 22, 1997. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies may be obtained from Turbomeca, 40220 Tarnos, France; telephone (33) 05 59 64 40 00, fax (33) 05 59 64 60 80. This information may be examined at the FAA, New England Region, Office of the Regional Counsel, 12 New England Executive Park, Burlington, MA; or at the Office of the Federal Register, 800 North Capitol Street, NW, suite 700, Washington, DC.

(f) This amendment becomes effective on June 12, 2000.

Issued in Burlington, Massachusetts, on March 20, 2000.

David A. Downey,

Assistant Manager, Engine and Propeller Directorate, Aircraft Certification Service.

[FR Doc. 00–7456 Filed 4–10–00; 8:45 am]

BILLING CODE 4910–13–U

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. 99–NE–11–AD; Amendment 39–11652; AD 2000–06–11]

RIN 2120–AA64

Airworthiness Directives; Turbomeca Makila 1 Series Turboshaft Engines

AGENCY: Federal Aviation Administration, DOT.

ACTION: Final rule.

SUMMARY: This amendment adopts a new airworthiness directive (AD), applicable to Turbomeca Makila 1 series turboshaft engines, that requires a one-time visual inspection of the scavenge and lubrication systems for obstruction due to coke deposits, then reconditioning of the engine oil system prior to return to service. This amendment is prompted by a report of an in-flight engine shutdown due to roller bearings contaminated by certain types of detergent oil. The actions specified by the proposed AD are intended to prevent in-flight engine shutdown due to roller bearing failure following oil contamination.

DATES: Effective June 12, 2000. The incorporation by reference of certain publications in this rule is approved by the Director of the Federal Register as of June 12, 2000.

ADDRESSES: The service information referenced in the rule may be obtained from Turbomeca, 40220 Tarnos, France; telephone (33) 05 59 64 40 00, fax (33) 05 59 64 60 80. This information may be examined at the FAA, New England Region, Office of the Regional Counsel, 12 New England Executive Park, Burlington, MA.

FOR FURTHER INFORMATION CONTACT: Glorianne Niebuhr, Aerospace Engineer, Engine Certification Office, FAA, Engine and Propeller Directorate, 12 New England Executive Park, Burlington, MA 01803-5299; telephone (781) 238–7132, fax (781) 238–7199.

SUPPLEMENTARY INFORMATION: A proposal to amend part 39 of the Federal Aviation Regulations (14 CFR part 39) to include an airworthiness directive (AD) that is applicable to Turbomeca Makila 1 series turboshaft engines was published in the **Federal Register** on December 8, 1999 (64 FR 68642). That action proposed to require a one-time visual inspection of the scavenge and lubrication systems for obstruction due to coke deposits, then reconditioning of the engine oil system prior to return to service. That action was prompted by report of an in-flight engine shutdown due to roller bearings contaminated by certain types of detergent oil. That condition, if not corrected, could result in an in-flight engine shutdown due to roller bearing failure following oil contamination.

Comments Received

Interested persons have been afforded an opportunity to participate in the making of this amendment. No comments were received.

Economic Analysis

There are approximately 1,076 engines of the affected design in the worldwide fleet. The FAA estimates that 5 engines installed on aircraft of U.S. registry would be affected by this AD, that it would take approximately 14 work hours per engine to accomplish the actions, and that the average labor rate is $60 per work hour. Based on these figures, the total cost impact of the AD on U.S. operators is estimated to be $4,200.

Regulatory Impact

This rule does not have federalism implications, as defined in Executive Order 13132, because it will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Accordingly, the FAA has not consulted with state authorities prior to publication of this rule.

For the reasons discussed above, I certify that this action (1) Is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A final evaluation has been prepared for this action and it is contained in the Rules Docket. A copy

of it may be obtained from the Rules Docket at the location provided under the caption **ADDRESSES.**

List of Subjects 14 CFR Part 39

Air Transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration amends part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. Section 39.13 is amended by adding the following new airworthiness directive:

2000–06–11 Turbomeca: Amendment 39–11652. Docket 99–NE–11–AD.

Applicability: Turbomeca Makila 1A and 1A1 turboshaft engines, installed on but not limited to Aerospatiale AS 332 Super Puma, AS 532 Cougar, and SA 330 Puma helicopters.

Note 1: This airworthiness directive (AD) applies to each engine identified in the preceding applicability provision, regardless of whether it has been modified, altered, or repaired in the area subject to the requirements of this AD. For engines that have been modified, altered, or repaired so that the performance of the requirements of this AD is affected, the owner/operator must request approval for an alternative method of compliance in accordance with paragraph (b) of this AD. The request should include an assessment of the effect of the modification, alteration, or repair on the unsafe condition addressed by this AD; and, if the unsafe condition has not been eliminated, the request should include specific proposed actions to address it.

Compliance: Required as indicated, unless accomplished previously.

To prevent in-flight engine shutdown due to roller bearing failure following oil contamination, accomplish the following:

Inspection and Repair

(a) Within 25 hours time-in-service (TIS) after the effective date of this AD, accomplish the following:

(1) For engines that have been operated with 7.5 centistoke (cSt) oil for more than 100 hours TIS, and for engines whose operators can not show documentation that the engine has been operated with 7.5 cSt oil for 100 hours or less TIS, accomplish the following:

(i) Perform a one-time visual inspection of the scavenge and lubrication systems for obstruction due to coke deposits and repair as required, in accordance with section 2.A. and 2.B. of the 'Instructions for incorporation' section of Turbomeca Makila 1 Service Bulletin (SB) No. A298 71 0137, dated December 22, 1997.

(ii) Replace the oil with approved oil other than 7.5 cSt and then recondition and check the engine oil system in accordance with section 2.C. and 2.D.(1) Of Turbomeca Makila 1 SB No. A298 71 0137, dated December 22, 1997, prior to return to service.

(2) For engines that have been operated with 7.5 cSt oil for 100 hours or less TIS, replace the oil with approved oil other than 7.5 cSt and then recondition the engine oil system prior to return to service, in accordance with section 1.A.(2)(b) of Turbomeca Makila 1 SB No. A298 71 0137, dated December 22, 1997.

Alternative Method of Compliance

(b) An alternative method of compliance or adjustment of the compliance time that provides an acceptable level of safety may be used if approved by the Manager, Engine Certification Office. Operators shall submit their request through an appropriate FAA Principal Maintenance Inspector, who may add comments and then send it to the Manager, Engine Certification Office.

Note 2: Information concerning the existence of approved alternative methods of compliance with this airworthiness directive, if any, may be obtained from the Engine Certification Office.

Ferry Flights

(c) Special flight permits may be issued in accordance with sections 21.197 and 21.199 of the Federal Aviation Regulations (14 CFR 21.197 and 21.199) to operate the helicopter to a location where the requirements of this AD can be accomplished.

Incorporation by Reference

(d) The actions required by this AD shall be done in accordance with Turbomeca Makila 1 SB No. A298 71 0137, dated December 22, 1997. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies may be obtained from Turbomeca, 40220 Tarnos, France; telephone (33) 05 59 64 40 00, fax (33) 05 59 64 60 80. This information may be examined at the FAA, New England Region, Office of the Regional Counsel, 12 New England Executive Park, Burlington, MA; or at the Office of the Federal Register, 800 North Capitol Street, NW, suite 700, Washington, DC.

(e) This amendment becomes effective on June 12, 2000.

Issued in Burlington, Massachusetts, on March 21, 2000.

David A. Downey,

Manager, Engine and Propeller Directorate, Aircraft Certification Service.

[FR Doc. 00–7761 Filed 4–10–00; 8:45 am]

BILLING CODE 4910–13–U

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. 99–NE–33–AD; Amendment 39–11653; AD 2000–06–12]

RIN 2120–AA64

Airworthiness Directives; Turbomeca Artouste III Series Turboshaft Engines

AGENCY: Federal Aviation Administration, DOT.

ACTION: Final rule.

SUMMARY: This amendment adopts a new airworthiness directive (AD), applicable to Turbomeca Artouste III series turboshaft engines, that requires smoke emissions checks after every ground engine shutdown. If smoke is detected, this AD would require inspecting for fuel flow. If fuel flow is not detected, the engine may have injection wheel cracks, which would require removing the engine from service for repair. If fuel flow is detected, the engine may have a malfunctioning electric fuel cock, which would require removing the electric fuel cock from service and replacing it with a serviceable part. This action is prompted by reports of cracked injection wheels. The actions specified by this AD are intended to prevent injection wheel cracks, which could result in an in-flight engine shutdown.

DATES: Effective June 12, 2000. The incorporation by reference of certain publications in this rule is approved by the Director of the Federal Register as of June 12, 2000.

ADDRESSES: The service information referenced in the rule may be obtained from Turbomeca, 40220 Tarnos, France; telephone (33) 05 59 64 40 00, fax (33) 05 59 64 60 80. This information may be examined at the FAA, New England Region, Office of the Regional Counsel, 12 New England Executive Park, Burlington, MA.

FOR FURTHER INFORMATION CONTACT: Glorianne Niebuhr, Aerospace Engineer, Engine Certification Office, FAA, Engine and Propeller Directorate, 12 New England Executive Park, Burlington, MA 01803–5299; telephone (781) 238–7132, fax (781) 238–7199.

SUPPLEMENTARY INFORMATION: A proposal to amend part 39 of the Federal Aviation Regulations (14 CFR part 39) to include an airworthiness directive (AD) that is applicable to Turbomeca Turboshaft Artouste III series turboshaft engines was published in the **Federal Register** December 8, 1999 (64 FR 68644). That action proposed to require

smoke emissions checks after every ground engine shutdown. If smoke is detected, that action would require inspecting for fuel flow. If fuel flow is not detected, the engine may have injection wheel cracks, which would require removing the engine from service for repair. If fuel flow is detected, the engine may have a malfunctioning electric fuel cock, which would require removing the electric fuel cock from service and replacing it with a serviceable part. That action was prompted by reports of cracked injection wheels. That condition, if not corrected, could result in an in-flight engine shutdown.

Comments Received

Interested persons have been afforded an opportunity to participate in the making of this amendment. No comments were received on the proposal or the FAA's determination of the cost to the public. The FAA has determined that air safety and the public interest require the adoption of the rule as proposed.

Economic Analysis

There are approximately 2,279 engines of the affected design in the worldwide fleet. The FAA estimates that 184 engines installed on rotorcraft of U.S. registry would be affected by this AD, that it would take approximately 1 work hour per engine to accomplish the actions, and that the average labor rate is $60 per work hour. Required parts would cost approximately $3,500 per engine. Based on these figures, the total cost impact of the AD on U.S. operators is estimated to be $655,040.

Regulatory Impact

This rule does not have federalism implications, as defined in Executive Order 13132, because it will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Accordingly, the FAA has not consulted with state authorities prior to publication of this rule.

For the reasons discussed above, I certify that this action (1) Is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A final evaluation has been prepared for this action and it is contained in the Rules Docket. A copy of it may be obtained from the Rules Docket at the location provided under the caption **ADDRESSES.**

List of Subjects 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration amends part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. Section 39.13 is amended by adding the following new airworthiness directive:

2000–06–12 Turbomeca: Amendment 39–11653. Docket 99–NE–33–AD.

Applicability: Turbomeca Artouste III B-B1–D series turboshaft engines, installed on but not limited to Eurocopter SA 315 LAMA and SA 316 Alouette III helicopters.

Note 1: This airworthiness directive (AD) applies to each engine identified in the preceding applicability provision, regardless of whether it has been modified, altered, or repaired in the area subject to the requirements of this AD. For engines that have been modified, altered, or repaired so that the performance of the requirements of this AD is affected, the owner/operator must request approval for an alternative method of compliance in accordance with paragraph (c) of this AD. The request should include an assessment of the effect of the modification, alteration, or repair on the unsafe condition addressed by this AD; and, if the unsafe condition has not been eliminated, the request should include specific proposed actions to address it.

Compliance: Required as indicated, unless accomplished previously. To prevent injection wheel cracks, which could result in an in-flight engine shutdown, accomplish the following:

Smoke Check

(a) Following every engine ground shutdown, accomplish the following in accordance with Turbomeca Artouste III Service Bulletin (SB) No. 218 72 0099, dated September 14, 1998:

(1) After every flight, check for smoke emissions through the exhaust pipe, air intake, or turbine casing drain during rundown and after every engine shutdown. If a smoke emission has been noticed, check the fuel system before the next flight to identify the origin of the smoke emissions.

(2) If smoke is not detected, no action is required until the next engine ground shutdown.

(3) If smoke is detected, inspect for fuel flow in accordance with paragraph 2.B.(1) and 2.B.(2) of the referenced SB.

(i) If fuel flow is not detected, prior to further flight, remove the engine from service and replace with a serviceable engine.

(ii) If fuel flow is detected, remove the electric fuel cock from service and replace with a serviceable part in accordance with section 2.B.(4) and 2.B.(5) of the referenced SB .

(iii) Before entry into service, perform an engine ground run and check the fuel system again for smoke emissions through the exhaust pipe, air intake, or turbine casing drain during engine rundown and after shutdown; if smoke emissions still remain after replacement of the electric fuel cock, prior to further flight, remove the engine from service and replace with a serviceable engine.

(b) For the purpose of this AD, a serviceable engine is defined as an engine that does not exhibit smoke emissions.

Alternative Methods of Compliance

(c) An alternative method of compliance or adjustment of the compliance time that provides an acceptable level of safety may be used if approved by the Manager, Engine Certification Office. Operators shall submit their request through an appropriate FAA Principal Maintenance Inspector, who may add comments and then send it to the Manager, Engine Certification Office.

Note 2: Information concerning the existence of approved alternative methods of compliance with this airworthiness directive, if any, may be obtained from the Engine Certification Office.

Ferry Flights

(d) Special flight permits may be issued in accordance with §§ 21.197 and 21.199 of the Federal Aviation Regulations (14 CFR 21.197 and 21.199) to operate the rotorcraft to a location where the inspection requirements of this AD can be accomplished.

Incorporation by Reference

(e) The actions required by this AD shall be done in accordance with Turbomeca Artouste III Service Bulletin (SB) No. 218 72 0099, dated September 14, 1998. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies may be obtained from Turbomeca, 40220 Tarnos, France; telephone (33) 05 59 64 40 00, fax (33) 05 59 64 60 80. This information may be examined at the FAA, New England Region, Office of the Regional Counsel, 12 New England Executive Park, Burlington, MA; or at the Office of the Federal Register, 800 North Capitol Street, NW, suite 700, Washington, DC.

(f) This amendment becomes effective on June 12, 2000.

Issued in Burlington, Massachusetts, on March 21, 2000.

David A. Downey,

Assistant Manager, Engine and Propeller Directorate, Aircraft Certification Service.

RIN 2120–AA64

Airworthiness Directives; Boeing Model 737–100, –200, –200C, –300, –400, and –500 Series Airplanes

AGENCY: Federal Aviation Administration, DOT.

ACTION: Final rule.

SUMMARY: This amendment adopts a new airworthiness directive (AD), applicable to all Boeing Model 737–100, –200, –200C, –300, –400, and –500 series airplanes. This AD requires repetitive inspections to detect cracking of the lower corners of the door frame and cross beam of the forward cargo door, and corrective actions, if necessary. This AD also requires eventual modification of the outboard radius of the lower corners of the door frame and reinforcement of the cross beam of the forward cargo door, which would constitute terminating action for the repetitive inspections. This amendment is prompted by reports indicating that fatigue cracks have been detected in the lower corners of the door frame and cross beam of the forward cargo door. The actions specified by this AD are intended to prevent fatigue cracking of the lower corners of the door frame and cross beam of the forward cargo door, which could result in rapid depressurization of the airplane.

DATES: Effective May 16, 2000.

The incorporation by reference of certain publications listed in the regulations is approved by the Director of the Federal Register as of May 16, 2000.

ADDRESSES: The service information referenced in this AD may be obtained from Boeing Commercial Airplane Group, P.O. Box 3707, Seattle, Washington 98134–2207. This information may be examined at the Federal Aviation Administration (FAA), Transport Airplane Directorate, Rules Docket, 1601 Lind Avenue, SW., Renton, Washington; or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

FOR FURTHER INFORMATION CONTACT: Nenita Odesa, Aerospace Engineer, Airframe Branch, ANM–120S, FAA, Transport Airplane Directorate, Seattle Aircraft Certification Office, 1601 Lind Avenue, SW., Renton, Washington 98055–4056; telephone (425) 227–2557; fax (425) 227–1181.

SUPPLEMENTARY INFORMATION: A proposal to amend part 39 of the Federal Aviation Regulations (14 CFR part 39) to include an airworthiness directive (AD) that is applicable to all Boeing Model 737–100, –200, –200C, –300, –400, and –500 series airplanes was published in the **Federal Register** on August 20, 1999 (64 FR 45477). That action proposed to require repetitive inspections to detect cracking of the lower corners of the door frame and cross beam of the forward cargo door, and corrective actions, if necessary. That action also proposed to require eventual modification of the outboard radius of the lower corners of the door frame and reinforcement of the cross beam of the forward cargo door, which would constitute terminating action for the repetitive inspections.

Comments

Interested persons have been afforded an opportunity to participate in the making of this amendment. Due consideration has been given to the comments received.

Request To Allow Repair In Lieu of Replacement

Regarding the proposed requirement to replace any cracked door frame with a new door frame, one commenter questions whether there is no level of damage that can be repaired. The commenter states that it would be preferable for operators to repair a cracked door frame when possible, and only replace the door frame with a new door frame if damage is beyond repair limits.

The FAA infers that the commenter is requesting that paragraph (a)(2)(i) of the proposal be revised to allow repair of the door frame, in lieu of replacement of the door frame with a new door frame, when cracking is within repair limits. The FAA concurs with this request. The FAA finds that it may be possible for damage within certain limits to be repaired. However, no service information that defines allowable limits for repairable damage is available. Without established limits and defined repair procedures, all proposed repairs on the door frame must be approved by the FAA or an authorized Boeing Company Designated Engineering Representative (DER). The FAA has revised paragraph (a)(2)(i) and added paragraphs (a)(2)(i)(A) and (a)(2)(i)(B) to this final rule, to provide repair of a cracked door frame and replacement of a cracked door frame with a new door frame as two alternatives for compliance with paragraph (a)(2)(i) of this AD. (Operators should note that regardless of which alternative for compliance is accomplished, this AD requires installation of a cross beam repair and reinforcement modification of the cross beam, as specified in paragraph (a)(2)(i) of this AD, and modification of the repaired or replaced door frame, as specified in paragraph (a)(2)(ii) of this AD.)

Request To Increase Threshold for Terminating Action

One commenter requests that the compliance time for the terminating action be increased from four years, as proposed, to 75,000 total flight cycles, as required by AD 90–06–02, amendment 39–6489 (55 FR 8372, March 7, 1990). The commenter states that a compliance threshold based on calendar time, rather than on the total number of flight cycles, is inconsistent, because fatigue cracking is related to cabin pressurization cycles. Further, the commenter states that the proposed threshold of four years will cause unnecessary cost to operators that have relatively new or low-flight-cycle airplanes.

The FAA partially concurs with the commenter's request. The FAA does not concur that a threshold of 75,000 total flight cycles for accomplishment of the terminating action, as currently required by AD 90–06–02, provides an adequate level of safety. However, the FAA does concur that fatigue cracking is a function of pressurization cycles and, thus, a threshold based on flight cycles should be included for the terminating action. Therefore, paragraphs (c) and (d) of this final rule have been revised to specify accomplishment of the actions required by that paragraph within 4 years or 12,000 flight cycles after the effective date of this AD, whichever occurs later.

Request To Increase Compliance Time

For the initial inspections specified in paragraphs (a) and (b) of the proposal, one commenter requests, for certain airplanes, an increase in the proposed compliance time of one year or 4,500 flight cycles after the effective date of this AD, whichever occurs later, to prior to the accumulation of 12,000 total flight cycles on the cargo door. The commenter states that, "if an operator

has accurate accounting of the history of the cargo door, then the number of flight cycles for this door can be determined."

Another commenter requests that the compliance time for the initial inspections specified in paragraphs (a) and (b) of the proposal be increased to between 15,000 and 20,000 total flight cycles. That commenter states that a compliance time of one year or 4,500 flight cycles is "harsh for young aircraft." The commenter also claims that cracking in the door frames does not start until 20,000 to 30,000 total flight cycles.

The FAA does not concur with the commenters' requests to increase the compliance time for the inspections. In the preamble of the proposal, the FAA explained the difference between the compliance time stated in the service bulletin and the proposed compliance time by stating that the number of total flight cycles for an airplane may not be a good indicator of the number of total flight cycles for the forward cargo door. For example, a door may have been removed from an airplane with many total flight cycles and installed on an airplane with fewer total flight cycles. Also, the FAA has received a report indicating that a cracked door frame was found on an airplane that had accumulated 15,700 total flight cycles. This report contradicts the second commenter's claim that cracking of the door frames does not start until 20,000 to 30,000 total flight cycles. In view of the nature of the cracking and the severity of the unsafe condition addressed by this AD (rapid depressurization of the airplane), the FAA finds that it would be inappropriate to extend the compliance time for the actions required by this AD. No change to the final rule is necessary in this regard.

Request for Clarification on Replacement Door Frame

One commenter requests that paragraph (a)(2)(i) of the proposal be revised to specify a part number or modification status for the replacement door frame. The FAA infers that the commenter is stating that, by making the proposed paragraph (a)(2)(i) more specific, paragraph (a)(2)(ii) would be unnecessary and could be removed from the AD. The commenter states that it is not clear why a new door frame should have to be modified, and points out that no specific instructions are provided for modification of new door frames. The commenter also states that introduction of a new door frame that does not require additional modification [such as the modification described in paragraph (a)(2)(ii) of the proposal] is in order.

The FAA does not concur with the commenter's request. To date, the manufacturer has not issued service information that provides specific instructions on how to modify new door frames. Without such instructions, the FAA cannot provide specific instructions for modification of replaced door frames and, therefore, cannot revise paragraphs (a)(2)(i) and (a)(2)(ii) of this AD. The FAA anticipates that the manufacturer will issue a new revision of the service bulletin that, among other things, will include instructions for modification of replaced door frames. However, based on the nature of the cracking and the unsafe condition addressed by this AD, the FAA finds that it would be inappropriate to delay this AD until the manufacturer issues a new revision of the service bulletin.

With regard to the commenter's question of why it is necessary to modify new door frames, as stated in the preamble of the proposal, the FAA has received reports that cracks have been detected in redesigned door frames, though these frames were supposed to be less susceptible to fatigue cracking. No new design has been developed. Therefore, to prevent any more cracking, the FAA has determined that it is necessary to require a reinforcement modification on newly installed door frames. There is no door frame currently available that is acceptable for installation without such modification. No change to the final rule is necessary in this regard.

Conclusion

After careful review of the available data, including the comments noted above, the FAA has determined that air safety and the public interest require the adoption of the rule with the changes previously described. The FAA has determined that these changes will neither increase the economic burden on any operator nor increase the scope of the AD.

Cost Impact

There are approximately 3,100 Model 737–100, –200, –200C, –300, –400, and –500 series airplanes of the affected design in the worldwide fleet. The FAA estimates that 1,400 airplanes of U.S. registry will be affected by this AD, that it will take approximately 1 work hour per airplane to accomplish the required inspections, and that the average labor rate is $60 per work hour. Based on these figures, the cost impact of the inspections required by this AD on U.S. operators is estimated to be $84,000, or $60 per airplane, per inspection cycle.

It will take approximately 38 work hours per airplane to accomplish the required terminating modifications at an average labor rate of $60 per work hour. Required parts will cost $1,865 per airplane. Based on these figures, the cost impact of the terminating modifications required by this AD on U.S. operators is estimated to be $5,803,000, or $4,145 per airplane.

The cost impact figures discussed above are based on assumptions that no operator has yet accomplished any of the requirements of this AD action, and that no operator would accomplish those actions in the future if this AD were not adopted.

Regulatory Impact

The regulations adopted herein will not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, it is determined that this final rule does not have federalism implications under Executive Order 13132.

For the reasons discussed above, I certify that this action (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A final evaluation has been prepared for this action and it is contained in the Rules Docket. A copy of it may be obtained from the Rules Docket at the location provided under the caption **ADDRESSES**.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration amends part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. Section 39.13 is amended by adding the following new airworthiness directive:

2000–07–06 Boeing: Amendment 39–11660. Docket 99–NM–81–AD.

Applicability: All Model 737–100, –200, –200C, –300, –400, and –500 series airplanes; certificated in any category.

Note 1: This AD applies to each airplane identified in the preceding applicability provision, regardless of whether it has been modified, altered, or repaired in the area subject to the requirements of this AD. For airplanes that have been modified, altered, or repaired so that the performance of the requirements of this AD is affected, the owner/operator must request approval for an alternative method of compliance in accordance with paragraph (e) of this AD. The request should include an assessment of the effect of the modification, alteration, or repair on the unsafe condition addressed by this AD; and, if the unsafe condition has not been eliminated, the request should include specific proposed actions to address it.

Compliance: Required as indicated, unless accomplished previously.

To prevent fatigue cracking of the lower corners of the door frame and cross beam of the forward cargo door, which could result in rapid depressurization of the airplane, accomplish the following:

High Frequency Eddy Current Initial/ Repetitive Inspections

(a) Within 1 year or 4,500 flight cycles after the effective date of this AD, whichever occurs later, perform a high frequency eddy current (HFEC) inspection to detect cracking of the lower corners (forward and aft) of the door frame of the forward cargo door in accordance with Boeing 737 Nondestructive Test Manual, Part 6, Section 51–00–00, Figure 4 or Figure 23.

(1) If no cracking is detected, repeat the HFEC inspection thereafter at intervals not to exceed 4,500 flight cycles, until the requirements of paragraph (c) of this AD have been accomplished.

(2) If any cracking is detected during any inspection required by paragraph (a) of this AD, prior to further flight, accomplish the requirements of paragraphs (a)(2)(i) AND (a)(2)(ii) of this AD, which constitute terminating action for the repetitive inspections required by paragraph (a)(1) of this AD.

(i) Accomplish the requirements of paragraph (a)(2)(i)(A) OR (a)(2)(i)(B) of this AD, and install a cross beam repair and reinforcement modification of the cross beam in accordance with Boeing Service Bulletin 737–52–1100, Revision 2, dated March 31, 1994.

(A) Repair the door frame of the forward cargo door in accordance with a method approved by the Manager, Seattle Aircraft Certification Office (ACO), FAA, Transport Airplane Directorate; or in accordance with data meeting the type certification basis of the airplane approved by a Boeing Company Designated Engineering Representative (DER) who has been authorized by the Manager, Seattle ACO, to make such findings. For a repair or modification method to be approved by the Manager, Seattle ACO, as required by this paragraph; and paragraphs (a)(2)(ii), (b)(2), (b)(3)(ii), and (c)(2) of this AD; the Manager's approval letter must specifically reference this AD.

(B) Replace the door frame of the forward cargo door with a new door frame in accordance with Boeing Service Bulletin 737–52–1100, Revision 2, dated March 31, 1994.

(ii) Modify the repaired or replaced door frame of the forward cargo door in accordance with a method approved by the Manager, Seattle ACO, or in accordance with data meeting the type certification basis of the airplane approved by a Boeing Company DER who has been authorized by the Manager, Seattle ACO, to make such findings.

Detailed Visual Initial/Repetitive Inspections

(b) Within 1 year or 4,500 flight cycles after the effective date of this AD, whichever occurs later, perform a detailed visual inspection to detect cracking of the cross beam (*i.e.*, upper and lower chord and web sections) of the forward cargo door in accordance with Boeing Service Bulletin 737–52–1100, Revision 2, dated March 31, 1994.

Note 2: For the purposes of this AD, a detailed inspection is defined as: "An intensive visual examination of a specific structural area, system, installation or assembly to detect damage, failure or irregularity. Available lighting is normally supplemented with a direct source of good lighting at intensity deemed appropriate by the inspector. Inspection aids such as mirror, magnifying lenses, etc. may be used. Surface cleaning and elaborate access procedures may be required."

(1) If no cracking is detected, repeat the inspection thereafter at intervals not to exceed 4,500 flight cycles until the requirements of paragraph (c) of this AD have been accomplished.

(2) If any cracking is detected on the lower chord section of the cross beam during any inspection required by paragraph (b) of this AD, prior to further flight, repair in accordance with a method approved by the Manager, Seattle ACO, or in accordance with data meeting the type certification basis of the airplane approved by a Boeing Company DER who has been authorized by the Manager, Seattle ACO, to make such findings.

(3) If any cracking is detected on any area excluding the lower chord section of the cross beam (*i.e.*, upper chord and web section) during any inspection required by paragraph (b) of this AD, prior to further flight, accomplish the requirements of paragraph (b)(3)(i) or (b)(3)(ii), as applicable, of this AD, which constitute terminating action for the repetitive inspections required by paragraph (b)(1) of this AD.

(i) For airplanes with line numbers 1 through 1231: Install a cross beam repair and preventative modification of the outboard radius of the lower corners (forward and aft) of the door frame in accordance with Boeing Service Bulletin 737–52–1100, Revision 2, dated March 31, 1994.

Note 3: Due to implications and consequences associated with cracking, this AD does not allow the option of replacing the door frame as an alternative method of compliance to installing the preventative modification.

(ii) For airplanes with line numbers 1232 and subsequent: Install a cross beam repair and preventative modification of the outboard radius of the lower corners (forward and aft) of the door frame in accordance with a method approved by the Manager, Seattle ACO or in accordance with data meeting the type certification basis of the airplane approved by a Boeing Company DER who has been authorized by the Manager, Seattle ACO, to make such findings.

Terminating Action

(c) Within 4 years or 12,000 flight cycles after the effective date of this AD, whichever occurs later: Install the preventative modification of the outboard radius of the lower corners (forward and aft) of the door frame and the reinforcement modification of the cross beam of the forward cargo door in accordance with paragraph (c)(1) or (c)(2) of this AD, as applicable. Accomplishment of paragraph (c)(1) or (c)(2) of this AD, as applicable, constitutes terminating action for the repetitive inspections required by paragraphs (a)(1) and (b)(1) of this AD.

(1) For airplanes with line numbers 1 through 1231: Accomplish the preventative modification and the reinforcement modification in accordance with Boeing Service Bulletin 737–52–1100, Revision 2, dated March 31, 1994.

(2) For airplanes with line numbers 1232 and subsequent: Accomplish the preventative modification and the reinforcement modification in accordance with a method approved by the Manager, Seattle ACO or in accordance with data meeting the type certification basis of the airplane approved by a Boeing Company DER who has been authorized by the Manager, Seattle ACO, to make such findings.

Modifications Previously Accomplished

(d) For all airplanes on which modifications of the forward lower corner of the door frame and the cross beam of the forward cargo door were accomplished in accordance with Boeing Service Bulletin 737–52–1100, dated August 25, 1988, or Revision 1, dated July 20, 1989, or in accordance with the requirements of AD 90–06–02, amendment 39–6489: Within 4 years or 12,000 flight cycles after the effective date of this AD, whichever occurs later, install the reinforcement modification of the aft corner of the door frame of the forward cargo door in accordance with Boeing Service Bulletin 737–52–1100, Revision 2, dated March 31, 1994. Accomplishment of such modification constitutes terminating action for the repetitive inspections required by this AD.

Note 4: Accomplishment of Boeing Service Bulletin 737–52–1100, Revision 2, dated March 31, 1994, does not supersede the requirements of AD 90–06–02, amendment 39–6489.

Alternative Methods of Compliance

(e) An alternative method of compliance or adjustment of the compliance time that provides an acceptable level of safety may be

used if approved by the Manager, Seattle ACO. Operators shall submit their requests through an appropriate FAA Principal Maintenance Inspector, who may add comments and then send it to the Manager, Seattle ACO.

Note 5: Information concerning the existence of approved alternative methods of compliance with this AD, if any, may be obtained from the Seattle ACO.

Special Flight Permits

(f) Special flight permits may be issued in accordance with sections 21.197 and 21.199 of the Federal Aviation Regulations (14 CFR 21.197 and 21.199) to operate the airplane to a location where the requirements of this AD can be accomplished.

Incorporation by Reference

(g) Except as provided by paragraphs (a)(2)(i)(A), (a)(2)(ii), (b)(2), (b)(3)(ii), and (c)(2) of this AD; the actions shall be done in accordance with Boeing Service Bulletin 737–52–1100, Revision 2, dated March 31, 1994; and Boeing 737 Nondestructive Test (NDT) Manual, D6–37239, Part 6, Section 51–00–00, Figure 4 or Figure 23; dated August 5, 1997, as applicable. Boeing 737 NDT Manual contains the following list of effective pages:

Page No.	Revision level shown on page	Date shown on page
Title Page	Not Shown	Not Shown.
List of Effective Pages, Pages 1, 2.	Not Shown	Aug. 5, 1997.
List of Effective Pages, Page 2A.	Not Shown	Feb. 5, 1997.

This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies may be obtained from Boeing Commercial Airplane Group, P.O. Box 3707, Seattle, Washington 98134–2207. Copies may be inspected at the FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington; or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

(h) This amendment becomes effective on May 16, 2000.

Issued in Renton, Washington, on March 31, 2000.

Donald L. Riggin,

Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

RIN 2120–AA64

Airworthiness Directives; Industrie Aeronautiche e Meccaniche Model Piaggio P–180 Airplanes

AGENCY: Federal Aviation Administration, DOT.

ACTION: Final rule.

SUMMARY: This amendment adopts a new airworthiness directive (AD) that applies to all Industrie Aeronautiche e Meccaniche (I.A.M.) Model Piaggio P–180 airplanes. This AD requires repetitively inspecting the brake assembly rods and tubings for wear or damage, and replacing any worn or damaged parts. This AD is the result of mandatory continuing airworthiness information (MCAI) issued by the airworthiness authority for Italy. The actions specified by this AD are intended to prevent the brake hydraulic fluid from leaking because of the brake assembly rods contacting the brake valve tubing, which could result in the inability to adequately stop the airplane during ground operations.

DATES: Effective May 29, 2000.

The incorporation by reference of certain publications listed in the regulations is approved by the Director of the Federal Register as of May 29, 2000.

ADDRESSES: Service information that applies to this AD may be obtained from I.A.M. Rinaldo Piaggio S.p.A., Via Cibrario, 4 16154 Genoa, Italy. This information may also be examined at the Federal Aviation Administration (FAA), Central Region, Office of the Regional Counsel, Attention: Rules Docket No. 99–CE–65–AD, 901 Locust, Room 506, Kansas City, Missouri 64106; or at the Office of the Federal Register, 800 North Capitol Street, NW, suite 700, Washington, DC.

FOR FURTHER INFORMATION CONTACT: Mr. Randy Griffith, Aerospace Engineer, FAA, Small Airplane Directorate, 901 Locust, Room 301, Kansas City, Missouri 64106; telephone: (816) 329–4126; facsimile: (816) 329–4091.

SUPPLEMENTARY INFORMATION:

Events Leading to the Issuance of This AD

A proposal to amend part 39 of the Federal Aviation Regulations (14 CFR part 39) to include an AD that would apply to all I.A.M. Model Piaggio P–180 airplanes was published in the **Federal Register** as a notice of proposed rulemaking (NPRM) on December 22, 1999 (64 FR 71694). The NPRM proposed to require repetitively inspecting the brake assembly rods and tubings for wear or damage, and replacing any worn or damaged parts.

Accomplishment of the proposed inspections as specified in the NPRM would be required in accordance with Piaggio Service Bulletin (Mandatory) No.: SB–80–0107, Original Issue: April 30, 1999. Accomplishment of any necessary replacement as specified in the NPRM would be required in accordance with the maintenance manual.

The NPRM was the result of mandatory continuing airworthiness information (MCAI) issued by the airworthiness authority for Italy.

Interested persons have been afforded an opportunity to participate in the making of this amendment. No comments were received on the proposed rule or the FAA's determination of the cost to the public.

The FAA's Determination

After careful review of all available information related to the subject presented above, the FAA has determined that air safety and the public interest require the adoption of the rule as proposed except for minor editorial corrections. The FAA has determined that these minor corrections will not change the meaning of the AD and will not add any additional burden upon the public than was already proposed.

Cost Impact

The FAA estimates that 4 airplanes in the U.S. registry will be affected by this AD, that it will take approximately 3 workhours per airplane to accomplish the initial inspection, and that the average labor rate is approximately $60 an hour. Based on these figures, the total cost impact of the initial inspection on U.S. operators is estimated to be $720, or $180 per airplane.

These figures only take into account the cost of the initial inspection and do not take into account the costs of any replacements necessary or repetitive inspections. The FAA has no way of determining the number of parts that will need replacement or the number of inspections each owner/operator of the affected airplanes will incur.

Regulatory Impact

The regulations adopted herein will not have a substantial direct effect on

the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, it is determined that this final rule does not have federalism implications under Executive Order 13132.

For the reasons discussed above, I certify that this action (1) Is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A copy of the final evaluation prepared for this action is contained in the Rules Docket. A copy of it may be obtained by contacting the Rules Docket at the location provided under the caption **ADDRESSES**.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration amends part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. Section 39.13 is amended by adding a new airworthiness directive (AD) to read as follows:

2000–07–11 Industrie Aeronautiche E Meccaniche: Amendment 39–11665; Docket No. 99–CE–65–AD.

Applicability: Model Piaggio P–180 airplanes, all serial numbers, certificated in any category.

Note 1: This AD applies to each airplane identified in the preceding applicability provision, regardless of whether it has been modified, altered, or repaired in the area subject to the requirements of this AD. For airplanes that have been modified, altered, or repaired so that the performance of the requirements of this AD is affected, the owner/operator must request approval for an alternative method of compliance in accordance with paragraph (d) of this AD. The request should include an assessment of the effect of the modification, alteration, or repair on the unsafe condition addressed by this AD; and, if the unsafe condition has not been eliminated, the request should include specific proposed actions to address it.

Compliance: Required as indicated in the body of this AD, unless already accomplished.

To prevent the brake hydraulic fluid from leaking because of the brake assembly rods contacting the brake valve tubing, which could result in the inability to adequately stop the airplane during ground operations, accomplish the following:

(a) Within the next 150 hours time-in-service (TIS) after the effective date of this AD, and thereafter at intervals not to exceed 150 hours TIS, inspect the brake system assembly for wear or damage. Accomplish the inspection in accordance with the Accomplishment Instructions in Piaggio Service Bulletin (Mandatory) No.: SB–80–0107, Original Issue: April 30, 1999.

(b) If any worn or damaged parts are found during any inspection required by this AD, prior to further flight, replace the parts in accordance with the appropriate maintenance manual. The repetitive inspections required by paragraph (a) of this AD still apply after replacing any worn or damaged parts.

(c) Special flight permits may be issued in accordance with §§ 21.197 and 21.199 of the Federal Aviation Regulations (14 CFR 21.197 and 21.199) to operate the airplane to a location where the requirements of this AD can be accomplished.

(d) An alternative method of compliance or adjustment of the initial or repetitive compliance times that provides an equivalent level of safety may be approved by the Manager, Small Airplane Directorate, 901 Locust, Room 301, Kansas City, Missouri 64106. The request shall be forwarded through an appropriate FAA Maintenance Inspector, who may add comments and then send it to the Manager, Small Airplane Directorate.

Note 2: Information concerning the existence of approved alternative methods of compliance with this AD, if any, may be obtained from the Small Airplane Directorate.

(e) Questions or technical information related to Piaggio Service Bulletin (Mandatory) No.: SB–80–0107, Original Issue: April 30, 1999, should be directed to I.A.M. Rinaldo Piaggio S.p.A., Via Cibrario, 4 16154 Genoa, Italy. This service information may be examined at the FAA, Central Region, Office of the Regional Counsel, 901 Locust, Room 506, Kansas City, Missouri 64106.

(f) The inspections required by this AD shall be done in accordance with Piaggio Service Bulletin (Mandatory) No.: SB–80–0107, Original Issue: April 30, 1999. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies may be obtained from I.A.M. Rinaldo Piaggio S.p.A., Via Cibrario, 4 16154 Genoa, Italy. Copies may be inspected at the FAA, Central Region, Office of the Regional Counsel, 901 Locust, Room 506, Kansas City, Missouri, or at the Office of the Federal Register, 800 North Capitol Street, NW, suite 700, Washington, DC.

Note 3: The subject of this AD is addressed in Italian AD 99–219, dated June 22, 1999.

(g) This amendment becomes effective on May 29, 2000.

Issued in Kansas City, Missouri, on March 29, 2000.

Brian A. Hancock,

Acting Manager, Small Airplane Directorate, Aircraft Certification Service.

14 CFR Part 39

[Docket No. 99–NM–232–AD; Amendment 39–11662; AD 2000–07–08]

RIN 2120–AA64

Airworthiness Directives; Boeing Model 777 Series Airplanes

AGENCY: Federal Aviation Administration, DOT.

ACTION: Final rule.

SUMMARY: This amendment adopts a new airworthiness directive (AD), applicable to certain Boeing Model 777 series airplanes, that requires replacement of the clevis ends on the tie rods for the center stowage bin supports with improved clevis ends. This amendment is prompted by a report that, under ultimate load conditions, the aluminum clevis ends on the tie rods for the center stowage bin supports can break. The actions specified by this AD are intended to prevent broken tie rods, which could result in the center stowage bins dropping onto the passenger seats below, causing possible injury to the occupants.

DATES: Effective May 16, 2000.

The incorporation by reference of certain publications listed in the regulations is approved by the Director of the Federal Register as of May 16, 2000.

ADDRESSES: The service information referenced in this AD may be obtained from Boeing Commercial Airplane Group, PO Box 3707, Seattle, Washington 98124–2207. This information may be examined at the Federal Aviation Administration (FAA), Transport Airplane Directorate, Rules Docket, 1601 Lind Avenue, SW., Renton, Washington; or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

FOR FURTHER INFORMATION CONTACT: Julie Alger, Aerospace Engineer, Airframe Branch, ANM–120S, FAA, Transport

Airplane Directorate, Seattle Aircraft Certification Office, 1601 Lind Avenue S.W., Renton, Washington 98055–4056; telephone (425) 227–2779; fax (425) 227–1181.

SUPPLEMENTARY INFORMATION: A proposal to amend part 39 of the Federal Aviation Regulations (14 CFR part 39) to include an airworthiness directive (AD) that is applicable to certain Boeing Model 777 series airplanes was published in the Federal Register on October 27, 1999 (64 FR 57794). That action proposed to require replacement of the clevis ends on the tie rods for the center stowage bin supports with improved clevis ends.

Explanation of New Service Information

Since the issuance of the proposal, the FAA has reviewed and approved Boeing Service Bulletin 777–25–0120, Revision 1, dated March 16, 2000. Revision 1 of the service bulletin is substantially similar to the original issue (which was referenced in the proposal as the appropriate source of service information for accomplishment of the proposed actions) and adds no additional airplanes to the effectivity listing. Revision 1 clarifies certain procedures described in the service bulletin. Accomplishment of the actions specified in Revision 1 of the service bulletin is intended to adequately address the unsafe condition described previously. Therefore, paragraph (a) of this final rule has been revised to reference Revision 1 of the service bulletin as the appropriate source of service information for the accomplishment of the requirements of that paragraph. In addition, a new "NOTE 2" has been added to this AD (and other notes have been renumbered accordingly) to specify that replacement of clevis ends prior to the effective date of this AD in accordance with the original issue of the service bulletin is acceptable for compliance with paragraph (a) of this AD.

Explanation of Change to Applicability

Operators should note that Revision 1 of the service bulletin deletes three airplanes from the effectivity listing. The intent of the service bulletin was accomplished prior to delivery of those airplanes. Therefore, the applicability statement of this final rule has been revised accordingly.

Comments

Interested persons have been afforded an opportunity to participate in the making of this amendment. Due consideration has been given to the comments received.

No Objection to the Proposal

One commenter states that it has no objection to the proposed rule.

Compliance Time May Impact Service

One commenter states that it agrees with the proposed compliance time of four years. However, the commenter is concerned that the proposed replacement is intended to be accomplished during a scheduled maintenance visit, and, therefore, the replacement will not be accomplished on some airplanes for three or four years. The commenter also states that any change to the proposed time of compliance would impact service to the public. The commenter makes no specific request for a change to this AD.

The FAA acknowledges the commenter's point that the replacement required by this AD has the potential to impact service to the public. In developing an appropriate compliance time for this action, the FAA considered not only the manufacturer's recommendation (as specified in Boeing Service Bulletin 777–25–0120, dated February 11, 1999), but also the safety implications, parts availability, and normal maintenance schedules for timely accomplishment of the modification. In consideration of these items, the FAA has determined that four years represents an appropriate interval of time allowable wherein the modifications can be accomplished during scheduled maintenance intervals for the majority of affected operators, and an acceptable level of safety can be maintained. No change to the final rule is necessary in this regard.

Request To Increase Cost Estimate

One commenter estimates that the replacement of clevis ends specified in Boeing Service Bulletin 777–25–0120 will require 44 work hours instead of the 20 work hours estimated in the service bulletin. (The cost estimate in the NPRM for accomplishment of the replacement on Model 777–200 series airplanes is 12 work hours, excluding the time to gain access and close up.) The FAA infers that the commenter is requesting that the cost estimate be increased in the final rule.

The FAA does not concur with the commenter's request. The number of work hours necessary to accomplish the required actions, specified as 12 in the cost impact information below, was provided to the FAA by the manufacturer based on the best data available to date. This number represents the "direct" costs of the specific actions required by this AD: the time necessary to perform only the actions actually required by this AD. The FAA recognizes that, in accomplishing the requirements of any AD, operators may incur "incidental" costs in addition to the "direct" costs. The cost analysis in AD rulemaking actions, however, typically does not include incidental costs, such as the time required to gain access and close up; planning time; or time necessitated by other administrative actions. Because incidental costs may vary significantly from operator to operator, they are almost impossible to calculate. No change to the final rule is necessary in this regard.

Conclusion

After careful review of the available data, including the comments noted above, the FAA has determined that air safety and the public interest require the adoption of the rule with the changes previously described. The FAA has determined that these changes will neither increase the economic burden on any operator nor increase the scope of the AD.

Cost Impact

There are approximately 168 Model 777–200 and 16 Model 777–300 series airplanes of the affected design in the worldwide fleet.

The FAA estimates that 41 Model 777–200 airplanes of U.S. registry will be affected by this AD, that it will take approximately 12 work hours per airplane to accomplish the required replacement of clevis ends, and that the average labor rate is $60 per work hour. Required parts will cost approximately $15,938 per airplane. Based on these figures, the cost impact of the AD on U.S. operators is estimated to be $682,978, or $16,658 per airplane.

Currently, there are no Model 777–300 airplanes on the U.S. Register that will be affected by this AD. However, should an unmodified airplane be imported and placed on the U.S. Register in the future, it would take approximately 17 work hours per airplane to accomplish the actions required by this AD, at an average labor rate of $60 per work hour. Required parts would cost approximately $18,457 per airplane. Based on these figures, the cost impact of the replacement required by this AD on these airplanes is estimated to be $19,477 per airplane.

The cost impact figures discussed above are based on assumptions that no operator has yet accomplished any of the requirements of this AD action, and that no operator would accomplish those actions in the future if this AD were not adopted.

Regulatory Impact

The regulations adopted herein will not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, it is determined that this final rule does not have federalism implications under Executive Order 13132.

For the reasons discussed above, I certify that this action (1) Is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A final evaluation has been prepared for this action and it is contained in the Rules Docket. A copy of it may be obtained from the Rules Docket at the location provided under the caption "**ADDRESSES.**"

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration amends part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. Section 39.13 is amended by adding the following new airworthiness directive:

2000–07–06 Boeing: Amendment 39–11662. Docket 99–NM–232–AD.

Applicability: Model 777 series airplanes, line numbers 2 through 103 inclusive, 105 through 119 inclusive, 121 through 161 inclusive, 163 through 177 inclusive, and 179 through 186 inclusive; certificated in any category.

Note 1: This AD applies to each airplane identified in the preceding applicability provision, regardless of whether it has been modified, altered, or repaired in the area subject to the requirements of this AD. For airplanes that have been modified, altered, or repaired so that the performance of the requirements of this AD is affected, the owner/operator must request approval for an alternative method of compliance in accordance with paragraph (b) of this AD. The request should include an assessment of the effect of the modification, alteration, or repair on the unsafe condition addressed by this AD; and, if the unsafe condition has not been eliminated, the request should include specific proposed actions to address it.

Compliance: Required as indicated, unless accomplished previously.

To prevent broken tie rods, which could result in the center stowage bins dropping onto the passenger seats below, causing possible injury to the occupants, accomplish the following:

Replacement

(a) Within 4 years after the effective date of this AD, replace the aluminum clevis ends on the tie rods for the center stowage bin supports with new steel clevis ends, in accordance with the Accomplishment Instructions of Boeing Service Bulletin 777–25–0120, Revision 1, dated March 16, 2000.

Note 2: Accomplishment of the replacement of clevis ends with new steel clevis ends prior to the effective date of this AD in accordance with Boeing Service Bulletin 777–25–0120, dated February 11, 1999, is acceptable for compliance with paragraph (a) of this AD.

Alternative Methods of Compliance

(b) An alternative method of compliance or adjustment of the compliance time that provides an acceptable level of safety may be used if approved by the Manager, Seattle Aircraft Certification Office (ACO), FAA, Transport Airplane Directorate. Operators shall submit their requests through an appropriate FAA Principal Maintenance Inspector, who may add comments and then send it to the Manager, Seattle ACO.

Note 3: Information concerning the existence of approved alternative methods of compliance with this AD, if any, may be obtained from the Seattle ACO.

Special Flight Permits

(c) Special flight permits may be issued in accordance with sections 21.197 and 21.199 of the Federal Aviation Regulations (14 CFR 21.197 and 21.199) to operate the airplane to a location where the requirements of this AD can be accomplished.

Incorporation by Reference

(d) The replacement shall be done in accordance with Boeing Service Bulletin 777–25–0120, Revision 1, dated March 16, 2000. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies may be obtained from Boeing Commercial Airplane Group, P.O. Box 3707, Seattle, Washington 98124–2207. Copies may be inspected at the FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington; or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

Effective Date

(e) This amendment becomes effective on May 16, 2000.

Issued in Renton, Washington, on March 31, 2000.

Donald L. Riggin,

Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

Airworthiness Directives; Airbus Model A300 Series Airplanes

AGENCY: Federal Aviation Administration, DOT.

ACTION: Final rule.

SUMMARY: This amendment adopts a new airworthiness directive (AD), applicable to certain Airbus Model A300 series airplanes, that requires modification of wing center box angle fittings at frame 47. This amendment is prompted by issuance of mandatory continuing airworthiness information by a foreign civil airworthiness authority. The actions specified by this AD are intended to prevent reduced structural integrity of the wing center box angle fittings at frame 47 due to fatigue cracking.

DATES: Effective May 16, 2000.

The incorporation by reference of certain publications listed in the regulations is approved by the Director of the Federal Register as of May 16, 2000.

ADDRESSES: The service information referenced in this AD may be obtained from Airbus Industrie, 1 Rond Point Maurice Bellonte, 31707 Blagnac Cedex, France. This information may be examined at the Federal Aviation Administration (FAA), Transport Airplane Directorate, Rules Docket, 1601 Lind Avenue, SW., Renton, Washington; or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

FOR FURTHER INFORMATION CONTACT: Norman B. Martenson, Manager, International Branch, ANM–116, FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington 98055–4056; telephone (425) 227–2110; fax (425) 227–1149.

SUPPLEMENTARY INFORMATION: A proposal to amend part 39 of the Federal Aviation Regulations (14 CFR part 39) to

include an airworthiness directive (AD) that is applicable to certain Airbus Model A300 series airplanes was published in the **Federal Register** on January 27, 2000 (65 FR 4386). That action proposed to require modification of wing center box angle fittings at frame 47.

Comments

Interested persons have been afforded an opportunity to participate in the making of this amendment. Due consideration has been given to the single comment received.

The commenter states that it is not affected by the proposal.

Conclusion

After careful review of the available data, including the comment noted above, the FAA has determined that air safety and the public interest require the adoption of the rule as proposed.

Cost Impact

The FAA estimates that 38 airplanes of U.S. registry will be affected by this AD, that it will take approximately 430 work hours per airplane to accomplish the required modification, and that the average labor rate is $60 per work hour. Required parts will cost approximately $8,840 per airplane. Based on these figures, the cost impact of the AD on U.S. operators is estimated to be $1,316,320, or $34,640 per airplane.

The cost impact figure discussed above is based on assumptions that no operator has yet accomplished any of the requirements of this AD action, and that no operator would accomplish those actions in the future if this AD were not adopted.

Regulatory Impact

The regulations adopted herein will not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, it is determined that this final rule does not have federalism implications under Executive Order 13132.

For the reasons discussed above, I certify that this action (1) Is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A final evaluation has been prepared for this action and it is contained in the Rules Docket. A copy of it may be obtained from the Rules Docket at the location provided under the caption **ADDRESSES.**

List of Subjects 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration amends part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. Section 39.13 is amended by adding the following new airworthiness directive:

2000–07–07 Airbus Industrie: Amendment 39–11661. Docket 99–NM–205–AD.

Applicability: Model A300 series airplanes, as listed in Airbus Service Bulletin A300–53–0298, Revision 03, dated November 26, 1998; certificated in any category; except those on which Airbus Service Bulletin A300–53–0282 or Airbus Service Bulletin A300–53–0291 has been accomplished.

Note 1: This AD applies to each airplane identified in the preceding applicability provision, regardless of whether it has been modified, altered, or repaired in the area subject to the requirements of this AD. For airplanes that have been modified, altered, or repaired so that the performance of the requirements of this AD is affected, the owner/operator must request approval for an alternative method of compliance in accordance with paragraph (c) of this AD. The request should include an assessment of the effect of the modification, alteration, or repair on the unsafe condition addressed by this AD; and, if the unsafe condition has not been eliminated, the request should include specific proposed actions to address it.

Compliance: Required as indicated, unless accomplished previously.

To prevent reduced structural integrity of the wing center box angle fittings at frame (FR) 47, accomplish the following:

(a) Prior to the accumulation of the applicable threshold specified in the "MANDATORY TH" column of the table in paragraph 1.B.(4) of the service bulletin, or within 6,500 flight cycles after the effective date of this AD, whichever occurs later: Except as required by paragraph (b) of this AD, modify the wing center box angle fittings at FR 47 (including removing certain sealant and fasteners, performing rotating probe inspections to detect cracking, cold working certain fastener holes, installing new fasteners and sealant, and repairing damage), in accordance with Airbus Service Bulletin A300–53–0298, Revision 03, dated November 26, 1998.

Note 2: Operators should note that the area required to be modified by paragraph (a) of this AD remains subject to the requirements of AD 96–13–11, amendment 39–9679, after modification.

(b) Where Airbus Service Bulletin A300–53–0298, Revision 03, dated November 26, 1998, specifies that Airbus be contacted for repair instructions for certain damage conditions, this AD requires that such damage conditions be repaired prior to further flight in accordance with a method approved by either the Manager, International Branch, ANM–116, FAA, Transport Airplane Directorate; or the Direction Générale de l'Aviation Civile (DGAC) (or its delegated agent). For a repair method to be approved by the Manager, International Branch, ANM–116, as required by this paragraph, the Manager's approval letter must specifically reference this AD.

Alternative Methods of Compliance

(c) An alternative method of compliance or adjustment of the compliance time that provides an acceptable level of safety may be used if approved by the Manager, International Branch, ANM–116, FAA, Transport Airplane Directorate. Operators shall submit their requests through an appropriate FAA Principal Maintenance Inspector, who may add comments and then send it to the Manager, International Branch, ANM–116.

Note 3: Information concerning the existence of approved alternative methods of compliance with this AD, if any, may be obtained from the International Branch, ANM–116.

Special Flight Permits

(d) Special flight permits may be issued in accordance with sections 21.197 and 21.199 of the Federal Aviation Regulations (14 CFR 21.197 and 21.199) to operate the airplane to a location where the requirements of this AD can be accomplished.

Incorporation by Reference

(e) Except as provided by paragraph (b) of this AD, the modification shall be done in accordance with Airbus Service Bulletin A300–53–0298, Revision 03, dated November 26, 1998, which contains the following list of effective pages:

Page number	Revision level shown on page	Date shown on page
1–21, 32–40, 42–46, 67, 68, 71–74, 93, 94, 103–110, 151, 157–161, 205–214.	03	November 26, 1998.
22–31, 41, 47–55, 57–66, 69, 70, 75–92, 95–102, 152–156, 163–204, 215.	Original	October 14, 1993.
56, 102A, 102B, 111–150	1	March 17, 1994.

This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies may be obtained from Airbus Industrie, 1 Rond Point Maurice Bellonte, 31707 Blagnac Cedex, France. Copies may be inspected at the FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington; or at the Office of the Federal Register, 800 North Capitol Street, NW., Suite 700, Washington, DC.

Note 4: The subject of this AD is addressed in French airworthiness directive 1999–076–267(B), dated February 24, 1999.

(f) This amendment becomes effective on May 16, 2000.

Issued in Renton, Washington, on March 31, 2000.

Donald L. Riggin,

Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

Federal Aviation Administration

14 CFR Part 39

[Docket No. 99–NM–53–AD; Amendment 39–11666; AD 2000–07–12]

RIN 2120–AA64

Airworthiness Directives; Boeing Model 727 Series Airplanes

AGENCY: Federal Aviation Administration, DOT.

ACTION: Final rule.

SUMMARY: This amendment adopts a new airworthiness directive (AD), applicable to certain Boeing Model 727 series airplanes, that requires repetitive structural inspections of certain aging airplanes, and repair, if necessary. This amendment also provides for optional terminating action for the repetitive inspections. This amendment is prompted by reports of incidents involving fatigue cracking and corrosion in transport category airplanes that are approaching or have exceeded their economic design service goal. The actions specified by this AD are intended to prevent degradation of the structural capabilities of the affected airplanes. This AD relates to the recommendations of the Airworthiness Assurance Task Force assigned to review Model 727 series airplanes, which indicate that, to assure long term continued operational safety, various structural inspections should be accomplished.

DATES: Effective May 16, 2000.

The incorporation by reference of certain publications listed in the regulations is approved by the Director of the Federal Register as of May 16, 2000.

ADDRESSES: The service information referenced in this AD may be obtained from Boeing Commercial Airplane Group, P.O. Box 3707, Seattle, Washington 98124–2207. This information may be examined at the FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington. This information may be examined at the Federal Aviation Administration (FAA), Transport Airplane Directorate, Rules Docket, 1601 Lind Avenue, SW., Renton, Washington; or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

FOR FURTHER INFORMATION CONTACT: Walter Sippel, Aerospace Engineer, Airframe Branch, ANM–120S, FAA, Transport Airplane Directorate, Seattle Aircraft Certification Office, 1601 Lind Avenue, SW., Renton, Washington 98055–4056; telephone (425) 227–2774; fax (425) 227–1181.

SUPPLEMENTARY INFORMATION: A proposal to amend part 39 of the Federal Aviation Regulations (14 CFR part 39) to include an airworthiness directive (AD) that is applicable to certain Boeing Model 727 series airplanes was published in the **Federal Register** on June 25, 1999 (64 FR 34168). That action proposed to require repetitive structural inspections of certain aging airplanes, and repair, if necessary.

Comments

Interested persons have been afforded an opportunity to participate in the making of this amendment. Due consideration has been given to the comments received.

Support for the Proposal

The Air Transport Association (ATA) of America, on behalf of three of its members, indicates that these members generally support the proposal. One of those members states that it does not operate any Boeing Model 727–200 series airplanes, line numbers 1 through 1214; another member has no objections to the proposed rule; and another member has no objection to the intent of the proposed rule but proposes certain clarifications.

Requests To Correct References

Two commenters state that a number of incorrect references are cited in the proposed AD. The commenters recommend changing references from "AD 94–05–04" to "AD 90–06–09" in the "Other Relevant Rulemaking" and "Differences Between Proposed Rule and Service Bulletin" sections of the proposed AD, the applicability of the proposed AD, and paragraph (d) of the proposed AD [cited as paragraphs (g)(1) and (g)(2) in the final rule]. One of the commenters contends that Revision 3 of Boeing Service Bulletin 727–57–0127, dated August 24, 1989 (which is referenced in Boeing Document Number D6–54860), clearly references repetitive inspections at intervals of 14,000 flight cycles. However, the Boeing document only specifies an inspection in accordance with Note 2 of Revision 3 of the service bulletin, and Note 2 does not refer to the repetitive inspections. Another of the commenters contends that Revision 2 of the service bulletin, dated February 13, 1976, was cited in the Boeing document and was mandated by AD 94–07–08.

Although the "Other Relevant Rulemaking" and "Differences" sections are not included in the final rule, the FAA concurs that it is necessary to change all references from "AD 94–05–04" to "AD 90–06–09" because the proposed AD incorrectly referenced AD 94–05–04. However, with regard to the correct revision number of the service bulletin, the FAA points out that AD 94–07–08 specifies Revision 3 rather than Revision 2 of the service bulletin, and that Revision 2 of the service bulletin is relevant to AD 90–06–09. To clarify the applicability of the final rule,

the FAA has changed the AD reference, and clarified that the actions are to be accomplished for certain airplanes on which the modification specified by either Revision 2 or Revision 3 of the service bulletin has not been accomplished. In addition, the AD references are changed in paragraphs (g)(1) and (g)(2) of the final rule.

Request To Extend Compliance Time for Initial Inspection

The commenter states that the compliance time in paragraph (a) of the proposed AD should be extended. That compliance time assumes that all Model 727 series airplanes have exceeded the initial inspection threshold, as it requires the initial inspection within 2,000 flight cycles [a phase-in (grace) period] after the effective date of the AD. The commenter points out that Note 2 in Part III of the Accomplishment Instructions of Boeing Service Bulletin 727–57–0127, Revision 3, specifies a threshold of 16,000 flight cycles and a phase-in period if an airplane has exceeded that threshold. The commenter has reviewed the active fleet of Model 727 series airplanes and has found that, at the present time, there are 36 airplanes that have accumulated less than 14,000 total flight cycles. The commenter also states that if the initial inspection has been accomplished in accordance with AD 94–07–08, that AD also requires repetitive inspection intervals of 14,000 total flight cycles. Therefore, the commenter recommends extending the compliance time in paragraph (a) of the proposed AD.

The FAA concurs that the compliance time should be extended, and that whether the initial inspection has or has not been accomplished in accordance with AD 94–07–08 should be considered. Therefore, paragraph (a) of the final rule has been revised to specify the inspection requirements for those airplanes on which the initial inspection has not been accomplished in accordance with AD 94–07–08, and a new paragraph (b) has been added to specify the inspection requirements for those airplanes on which the initial inspection has been accomplished in accordance with AD 94–07–08. [Paragraphs (a)(1) and (a)(2) of the proposed AD have been renumbered as paragraphs (c) and (d) in the final rule.]

Request To Clarify Type of Inspection

One commenter states that although the proposed AD requires a "dye penetrant inspection," Revision 3 of the Boeing service bulletin only specifies a "penetrant inspection," and does not reference a Boeing process specification, Non-Destructive Test manual reference, or any other kind of reference as to the type of penetrant inspection (*e.g.*, dye or fluorescent) that should be performed.

The FAA acknowledges that clarification of the type of inspection is necessary. Paragraph (a)(1) of the proposed rule specifies a "dye penetrant inspection" in accordance with Boeing Service Bulletin 727–57–0127, Revision 3, and Boeing Standard Overhaul Practices Manual D6–51702, Chapter 20–20–02, Revision 79, dated March 1, 1999. Although the service bulletin specifies a "penetrant inspection," Figure 1 of the Standard Overhaul Practices Manual specifies a "fluorescent dye penetrant inspection (Type I)." Based on the type of inspection included in the manual, the FAA has clarified the type of inspection specified in the preamble and paragraph (c) of the final rule.

Request To Clarify Terminating Action Required by AD 94–07–08

One commenter states that operators have expressed concerns that another AD is being written to mandate the inspections required by Boeing Service Bulletin 727–57–0127 [Revision 3], when AD 94–07–08 currently mandates such inspections. However, the proposed AD does not state that it will supersede the inspection requirements of Service Bulletin 727–57–0127, as mandated by AD 94–07–08. Therefore, the commenter recommends adding a note to the proposed AD stating that "Upon incorporation of the requirements of this AD, the inspection requirements of Boeing Service Bulletin 727–57–0127 mandated by AD 94–07–08 may be deleted."

The FAA acknowledges the concern expressed by the commenter that the proposed AD requires inspections currently required by paragraph (a) of AD 94–07–08. In response, the FAA has clarified in paragraph (g)(1) of the final rule that accomplishment of the inspections required by this AD constitutes terminating action for the inspections required by paragraph (a) of AD 94–07–08, as specified in Boeing Service Bulletin 727–57–0127, Revision 3.

Request To Delete Reference to Corrosion

One commenter states that, although the summary of the proposed AD states that the AD was prompted by reports of incidents involving fatigue cracking and corrosion found on older airplane models, Boeing Service Bulletin 727–57–0127 only addresses fatigue cracking and does not address corrosion. The FAA infers that the commenter suggests deleting the reference to corrosion in the summary of the proposed rule.

The FAA does not concur. Although the service bulletin does not include a reference to corrosion and only includes a reference to fatigue cracking, the FAA points out that the Working Group's reference to Boeing Document Number D6–54860, "Aging Airplane Service Bulletin Structural Modification Program—Model 727," Revision C, dated December 11, 1989 (as cited in the Discussion paragraph of the proposed AD), was established to address problems associated with both fatigue cracking and corrosion. In light of this, the FAA considers that the reference to corrosion is appropriate, and no change to the final rule is necessary in this regard.

Request To Clarify Inspection Requirement for Airplanes in Groups 4 and 5

One commenter recommends revising "Other Relevant Rulemaking" in the proposed AD to clarify that AD 94–07–08 inadvertently omitted the requirement to mandate repetitive inspections for certain wing ribs on airplanes in groups 4 and 5, because Section 4 of Boeing Document Number D6–54860 references Revision 2 of Boeing Service Bulletin 727–57–0127. The commenter adds that Revision 3 of the service bulletin specifies an additional rib inspection for airplanes in groups 4 and 5 only, and no additional requirements for airplanes in groups 1, 2, 3, and 6.

Although "Other Relevant Rulemaking" is not included in the final rule, the FAA acknowledges that AD 94–07–08 inadvertently omitted a requirement for the repetitive inspections. However, the FAA points out that the commenter was mistaken in stating that Boeing Document Number D6–54860, references Revision 3 (rather than Revision 2) of the service bulletin. In addition, Revision 3 of the service bulletin does include the additional rib inspection for airplanes in groups 4 and 5. Therefore, no change to the final rule is necessary in this regard.

Request To Allow Later Revisions of Service Bulletins

One commenter states that, in the "Initial Inspection" section of the NPRM, the reference documents for accomplishing the dye penetrant and high frequency eddy current inspections include a specific revision number for the service bulletin. The commenter suggests adding "or later revisions" so that when future revisions are released, there will not be any confusion as to which revision to use.

The FAA does not concur with the request to revise the AD to reference later revisions of the service bulletin, because it cannot approve the use of a document that does not yet exist. In addition, when a service bulletin is referenced in an AD, the use of the phrase, "or later FAA-approved revisions," violates Office of the Federal Register regulations regarding approval of materials that are incorporated by reference. Therefore, the FAA has determined that it is necessary to specify a certain revision number for all service bulletins specified in the final rule. However, the FAA points out that operators may submit any requests to use a later service bulletin through an appropriate FAA Principal Maintenance Inspector, as provided for by paragraph (h) of this AD.

Request To Revise Inspection Intervals

One commenter recommends extending the inspection intervals in paragraph (b) of the proposed AD to give credit for the accomplishment of initial or previous inspections in accordance with AD 94–07–08, and basing the next required inspection interval on the date the previous inspection was accomplished.

The FAA does not concur that it is necessary to revise the inspection intervals required by paragraph (b) of the proposed AD [cited as paragraph (e) of the final rule] because paragraph (a) of the proposed AD [cited as paragraph (b) of the final rule] states that the initial inspection is required within 2,000 flight cycles after the effective date of this AD, "unless accomplished within the last 12,000 flight cycles in accordance with AD 94–07–08." Therefore, the proposed AD provides credit for a previous inspection that was accomplished within 12,000 flight cycles; as a result, the proposed AD allows operators to repeat the inspection within 14,000 flight cycles after the last inspection. No change to the final rule is necessary in this regard.

Explanation of Change Made to the Proposal

The FAA has revised paragraph (c) of the proposed rule that requires repair in accordance with Boeing Service Bulletin 727–57–0127, Revision 3. That paragraph, renumbered as paragraph (f) in the final rule, adds that repair also may be accomplished in accordance with a method approved by the FAA; or in accordance with data meeting the type certification basis of the airplane approved by a Boeing Company Designated Engineering Representative who has been authorized by the FAA to make such findings.

Conclusion

After careful review of the available data, including the comments noted above, the FAA has determined that air safety and the public interest require the adoption of the rule with the changes previously described. The FAA has determined that these changes will neither increase the economic burden on any operator nor increase the scope of the AD.

Cost Impact

There are approximately 975 Model 727 series airplanes of the affected design in the worldwide fleet. The FAA estimates that 538 airplanes of U.S. registry will be affected by this AD, that it will take approximately 300 work hours per airplane to accomplish the required inspections, and that the average labor rate is $60 per work hour. Based on these figures, the cost impact of the inspections required by this AD on U.S. operators is estimated to be $9,684,000, or $18,000 per airplane, per inspection cycle.

The cost impact figure discussed above is based on assumptions that no operator has yet accomplished any of the requirements of this AD action, and that no operator would accomplish those actions in the future if this AD were not adopted.

Should an operator elect to accomplish the optional terminating action rather than continue the repetitive inspections, it would take approximately 900 work hours per airplane to accomplish the modification, at an average labor rate of $60 per work hour. Required parts will cost approximately $31,144 per airplane. Based on these figures, the cost impact of this optional terminating action is estimated to be $85,144 per airplane.

Regulatory Impact

The regulations adopted herein will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 12612, it is determined that this final rule does not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

For the reasons discussed above, I certify that this action (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A final evaluation has been prepared for this action and it is contained in the Rules Docket. A copy of it may be obtained from the Rules Docket at the location provided under the caption **ADDRESSES**.

List of Subjects 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration amends part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. Section 39.13 is amended by adding the following new airworthiness directive:

2000–07–12 Boeing: Amendment 39–11666. Docket 99-NM–53-AD.

Applicability: Model 727–100, –100C, and –200 series airplanes, line numbers 1 through 1214 inclusive; certificated in any category; except those on which the modification specified by either Boeing Service Bulletin 727–57–0127, Revision 2, dated February 13, 1976, or Boeing Service Bulletin 727–57–0127, Revision 3, dated August 24, 1989, has been installed.

Note 1: This AD applies to each airplane identified in the preceding applicability provision, regardless of whether it has been otherwise modified, altered, or repaired in the area subject to the requirements of this AD. For airplanes that have been modified, altered, or repaired so that the performance of the requirements of this AD is affected, the owner/operator must request approval for an alternative method of compliance in accordance with paragraph (h) of this AD. The request should include an assessment of the effect of the modification, alteration, or repair on the unsafe condition addressed by this AD; and, if the unsafe condition has not been eliminated, the request should include specific proposed actions to address it.

Compliance: Required as indicated, unless accomplished previously.

To prevent degradation of the structural capabilities of the affected airplanes, accomplish the following:

Initial Inspection

(a) For those airplanes on which the initial inspection has not been accomplished in accordance with AD 94–07–08, amendment

39–8866: Prior to the accumulation of 16,000 total flight cycles or within 2,000 flight cycles after the effective date of this AD, whichever occurs later, accomplish the inspections required by either paragraph (c) or (d) of this AD.

(b) For those airplanes on which the initial inspection has been accomplished in accordance with AD 94–07–08, amendment 39–8866: Within 2,000 flight cycles after the effective date of this AD, unless accomplished within the last 12,000 flight cycles in accordance with AD 94–07–08, accomplish the inspections required by either paragraph (c) or (d) of this AD.

(c) Perform a fluorescent dye penetrant inspection (Type I) to detect cracking of certain wing ribs at the rib-to-stringer attachment in the areas specified in Boeing Service Bulletin 727–57–0127, Revision 3, dated August 24, 1989; in accordance with Boeing Standard Overhaul Practices Manual D6–51702, Chapter 20–20–02, Revision 79, dated March 1, 1999.

(d) Perform a high frequency eddy current inspection to detect cracking of certain wing ribs at the rib-to-stringer attachment in the areas specified in Boeing Service Bulletin 727–57–0127, Revision 3, dated August 24, 1989; in accordance with Boeing Commercial Jet Nondestructive Test Manual, Chapter 51–00–00, Part 6, dated August 5, 1997.

Repetitive Inspections and Corrective Action

(e) If no crack is detected during any inspection required by either paragraph (c) or (d) of this AD, repeat the applicable inspection thereafter at intervals not to exceed 14,000 flight cycles.

(f) If any crack is detected during any inspection required by either paragraph (c) or (d) of this AD, prior to further flight, repair in accordance with Boeing Service Bulletin 727–57–0127, Revision 3, dated August 24, 1989; or in accordance with a method approved by the Manager, Seattle Aircraft Certification Office (ACO), FAA Transport Airplane Directorate; or in accordance with data meeting the type certification basis of the airplane approved by a Boeing Company Designated Engineering Representative who has been authorized by the Manager, Seattle ACO, to make such findings. For a repair method to be approved by the Manager, Seattle ACO, as required by this paragraph, the Manager's approval letter must specifically reference this AD. Repeat the applicable inspection thereafter at intervals not to exceed 14,000 flight cycles, following accomplishment of the repair.

Terminating Action

(g)(1) Accomplishment of the actions required by this AD constitutes terminating action for the inspections required by paragraph (a) of AD 94–07–08, as specified in Boeing Service Bulletin 727–57–0127, Revision 3, dated August 24, 1989.

(2) Accomplishment of the structural modifications specified in either Boeing Service Bulletin 727–57–0127, Revision 2, dated February 13, 1976; or Revision 3, dated August 24, 1989; constitutes terminating action for the requirements of this AD.

Alternative Methods of Compliance

(h) An alternative method of compliance or adjustment of the compliance time that provides an acceptable level of safety may be used if approved by the Manager, Seattle ACO, FAA, Transport Airplane Directorate. An alternative method of compliance that provides an acceptable level of safety may be used if approved by the Manager, Seattle ACO.

Note 2: Information concerning the existence of approved alternative methods of compliance with this AD, if any, may be obtained from the Seattle ACO.

Special Flight Permits

(i) Special flight permits may be issued in accordance with §§ 21.197 and 21.199 of the Federal Aviation Regulations (14 CFR 21.197 and 21.199) to operate the airplane to a location where the requirements of this AD can be accomplished.

Incorporation by Reference

(j) Except as provided by paragraph (f) of this AD, the repairs shall be done in accordance with Boeing Service Bulletin 727–57–0127, Revision 3, dated August 24, 1989; as applicable. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies may be obtained from Boeing Commercial Airplane Group, P.O. Box 3707, Seattle, Washington 98124–2207. Copies may be inspected at the FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington; or at the Office of the **Federal Register**, 800 North Capitol Street, NW., suite 700, Washington, DC.

(k) This amendment becomes effective on May 16, 2000.

Issued in Renton, Washington, on March 31, 2000.

Donald L. Riggin,

Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

BILLING CODE 4910–13–U

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. 99–NM–40–AD; Amendment 39–11658; AD 2000–07–04]

RIN 2120–AA64

Airworthiness Directives; Dornier Model 328–100 Series Airplanes

AGENCY: Federal Aviation Administration, DOT.

ACTION: Final rule.

SUMMARY: This amendment adopts a new airworthiness directive (AD), applicable to certain Dornier Model 328–100 series airplanes, that requires repetitive tests of the flight idle backup system of the propeller control system; repetitive inspections to determine the level of wear of the pins and bushings of the cam followers on the power lever rods of the engine controls; and follow-on corrective actions, if necessary. This amendment also requires eventual replacement of the power lever and condition lever rods of the engine controls with new, improved parts, which constitutes terminating action for the repetitive tests and inspections. This amendment is prompted by issuance of mandatory continuing airworthiness information by a foreign civil airworthiness authority. The actions specified by this AD are intended to prevent failure of the flight idle backup system. In the event of failure of the primary propeller control system, such failure of the flight idle backup system could lead to uncommanded movement of the pitch of the propeller blade to below flight idle and into reverse thrust during flight, and consequent reduced controllability of the airplane.

DATES: Effective May 16, 2000.

The incorporation by reference of certain publications listed in the regulations is approved by the Director of the Federal Register as of May 16, 2000.

ADDRESSES: The service information referenced in this AD may be obtained from FAIRCHILD DORNIER, DORNIER Luftfahrt GmbH, P.O. Box 1103, D–82230 Wessling, Germany. This information may be examined at the Federal Aviation Administration (FAA), Transport Airplane Directorate, Rules Docket, 1601 Lind Avenue, SW., Renton, Washington; or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

FOR FURTHER INFORMATION CONTACT: Norman B. Martenson, Manager, International Branch, ANM–116, FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington 98055–4056; telephone (425) 227–2110; fax (425) 227–1149.

SUPPLEMENTARY INFORMATION: A proposal to amend part 39 of the Federal Aviation Regulations (14 CFR part 39) to include an airworthiness directive (AD) that is applicable to certain Dornier Model 328–100 series airplanes was published in the **Federal Register** on June 11, 1999 (64 FR 31520). That action proposed to require repetitive tests of the flight idle backup system of the propeller control system; repetitive inspections to determine the level of wear of the pins and bushings of the cam followers on the power lever rods of the engine controls; and follow-on corrective actions, if necessary. That action also proposed to require eventual

replacement of the power lever and condition lever rods of the engine controls with new, improved parts, which constitutes terminating action for the repetitive tests and inspections.

Comment Received

Interested persons have been afforded an opportunity to participate in the making of this amendment. Due consideration has been given to the single comment received.

The commenter, the manufacturer, requests that paragraph (a) of the proposed AD be revised. The commenter states that, by requiring FAA or Luftfahrt-Bundesamt (LBA) approval if any discrepancy is discovered during the flight idle backup test required by paragraph (a), the AD would impose an undue hardship against operators of Dornier Model 328–100 series airplanes. The commenter suggests that paragraph (a) be revised to specify that if any discrepancy is detected, the inspection required by paragraph (b) should be performed prior to further flight. The commenter further suggests that, if Type C wear is found during that inspection, the power lever microswitches should be adjusted or calibrated; if Type A or B wear is found, the rod should be replaced per paragraph (f) of the AD, or the pin and bushing should be replaced as specified in paragraph C, section 6, of Dornier Alert Service Bulletin ASB 328–76–024, Revision 1, dated August 5, 1998 (which was cited as the appropriate source of service information for accomplishment of the inspections).

The FAA partially concurs. The FAA concurs that, if any discrepancy is found during the test required by paragraph (a) of the AD, accomplishment of the inspection required by paragraph (b) of the AD prior to further flight, with applicable corrective actions, constitutes an acceptable alternative to immediate repair in accordance with an FAA- or LBA-approved method. The FAA does not concur with the request to revise paragraph (a) to require such action solely, since both methods constitute acceptable corrective actions. To require only accomplishment of paragraph (b), and follow-on actions, as the commenter suggests, would also necessitate a reopening of the comment period, and thus further delay issuance of the final rule.

However, the FAA has determined that such an option may be incorporated into the AD as an alternative method of compliance to the repair required by paragraph (a). A new paragraph (a)(2) has been included in the final rule to specify such an option, with the provision that adjustment or calibration of the power lever microswitches must also be accomplished if Type C wear is found. Regarding findings of Type A or B wear, the FAA considers the existing follow-on corrective actions specified in paragraphs (c) and (d) of the AD to be adequate [those actions are required depending on the type of wear found during the inspection required by paragraph (b) of the AD]. Additionally, since replacement of all rods with improved rods is already an acceptable terminating action for the requirements of the AD, as specified in paragraph (f) of the AD, operators may choose to accomplish such corrective action at an earlier time if desired. No change is made to the final rule in regard to findings of Type A or B wear.

Conclusion

After careful review of the available data, including the comment noted above, the FAA has determined that air safety and the public interest require the adoption of the rule with the change described previously. The FAA has determined that this change will neither increase the economic burden on any operator nor increase the scope of the AD.

Cost Impact

The FAA estimates that 50 airplanes of U.S. registry will be affected by this AD.

It will take approximately 1 work hour per airplane to accomplish the required test, and that the average labor rate is $60 per work hour. Based on these figures, the cost impact of the test required by this AD on U.S. operators is estimated to be $3,000, or $60 per airplane, per test cycle.

It will take approximately 1 work hour per airplane to accomplish the required inspection, at an average labor rate of $60 per work hour. Based on these figures, the cost impact of the inspection required by this AD on U.S. operators is estimated to be $3,000, or $60 per airplane, per inspection cycle.

It will take approximately 10 work hours per airplane to accomplish the required replacement, at an average labor rate of $60 per work hour. Required parts will be provided by the manufacturer at no cost to the operators. Based on these figures, the cost impact of the replacement required by this AD on U.S. operators is estimated to be $30,000, or $600 per airplane.

The cost impact figures discussed above are based on assumptions that no operator has yet accomplished any of the requirements of this AD action, and that no operator would accomplish those actions in the future if this AD were not adopted.

Regulatory Impact

The regulations adopted herein will not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, it is determined that this final rule does not have federalism implications under Executive Order 13132.

For the reasons discussed above, I certify that this action (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A final evaluation has been prepared for this action and it is contained in the Rules Docket. A copy of it may be obtained from the Rules Docket at the location provided under the caption **ADDRESSES.**"

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration amends part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. Section 39.13 is amended by adding the following new airworthiness directive:

2000–07–04 Dornier Luftfahrt GMBH: Amendment 39–11658. Docket 99–NM–40–AD.

Applicability: Model 328–100 series airplanes having serial numbers (S/N) 3005 through 3098 inclusive, and S/N 3100, 3103, 3104, 3106, 3107, 3109, and 3110, on which Dornier Service Bulletin SB–328–76–268, dated August 11, 1998, or Revision 1, dated December 9, 1998, has not been accomplished; certificated in any category.

Note 1: This AD applies to each airplane identified in the preceding applicability provision, regardless of whether it has been

otherwise modified, altered, or repaired in the area subject to the requirements of this AD. For airplanes that have been modified, altered, or repaired so that the performance of the requirements of this AD is affected, the owner/operator must request approval for an alternative method of compliance in accordance with paragraph (g) of this AD. The request should include an assessment of the effect of the modification, alteration, or repair on the unsafe condition addressed by this AD; and, if the unsafe condition has not been eliminated, the request should include specific proposed actions to address it.

Compliance: Required as indicated, unless accomplished previously.

To prevent failure of the flight idle backup system, which, in the event of failure of the primary propeller control system, could lead to uncommanded movement of the pitch of the propeller blade to below flight idle and into reverse thrust during flight, and consequent reduced controllability of the airplane, accomplish the following:

Flight Idle Backup Test

(a) Prior to the accumulation of 3,000 total flight hours, or within 3 days after the effective date of this AD, whichever occurs later, perform a test of the flight idle backup system of the propeller control system in accordance with Dornier Alert Service Bulletin ASB–328–76–024, Revision 1, dated August 5, 1998. If any discrepancy is detected, prior to further flight, accomplish the actions required by either paragraph (a)(1) or (a)(2) of this AD. Repeat the test thereafter at intervals not to exceed 1 day until accomplishment of the requirements of paragraph (c), (d), (e), or (f), as applicable.

(1) Repair in accordance with a method approved by either the Manager, International Branch, ANM–116, FAA, Transport Airplane Directorate; or the Luftfahrt-Bundesamt (LBA) (or its delegated agent). Or

(2) Accomplish the inspection required by paragraph (b) of this AD, and the applicable follow-on corrective actions required by paragraph (c), (d), or (e) of the AD; AND, if Type C wear is found during the inspection required by paragraph (b), prior to further flight, adjust or calibrate the power lever microswitches in accordance with Dornier Airplane Maintenance Manual JIC 76–11–05–820–000.

Inspection of Cam Followers of Power Lever Rods

(b) Prior to the accumulation of 3,000 total flight hours, or within 7 days after the effective date of this AD, whichever occurs later, perform a detailed visual inspection to determine the level of wear of the pins and bushings of the cam followers of the power lever rods of the engine controls, in accordance with Dornier Alert Service Bulletin ASB–328–76–024, Revision 1, dated August 5, 1998. Classify the level of wear for each power lever rod as specified in paragraphs (b)(1), (b)(2), and (b)(3) and accomplish the requirements of paragraph (c), (d), or (e) of this AD, as applicable, at the times specified in that paragraph.

(1) Type A wear: The bushing is worn such that the pin is visible in one or more locations.

(2) Type B wear: The bushing is worn, but the pin is not visible.

(3) Type C wear: The bushing is not worn.

Corrective Actions

(c) For power lever rods on which Type A wear is detected during the inspection required by paragraph (b) of this AD: Within 900 flight hours after accomplishment of that inspection, accomplish the requirements of paragraph (c)(1) or (c)(2) of this AD in accordance with Dornier Alert Service Bulletin ASB–328–76–024, Revision 1, dated August 5, 1998. Accomplishment of paragraph (c)(1) or (c)(2) terminates the tests required by paragraph (a) of this AD for that power lever rod only.

(1) Replace the power lever rod with a new power lever rod.

(2) Replace the pins and bushings with new pins and bushings, and accomplish paragraphs (c)(2)(i) and (c)(2)(ii) of this AD.

(i) Thereafter, accomplish follow-on inspections and corrective actions (i.e. inspections for wear or looseness of the replaced pins and bushings), at the times and in accordance with the Accomplishment Instructions of the alert service bulletin; and,

(ii) Within 900 flight hours after replacement of the pins and bushings, replace the power lever rod with a new power lever rod.

(d) For power lever rods on which Type B wear is detected during the inspection required by paragraph (b) of this AD: Thereafter, accomplish follow-on inspections and corrective actions at the times and in accordance with the Accomplishment Instructions of Dornier Alert Service Bulletin ASB–328–76–024, Revision 1, dated August 5, 1998, until the requirements of paragraph (f) of this AD are accomplished.

(e) For power lever rods on which Type C wear is detected during the inspection required by paragraph (b) of this AD: Determination of Type C wear terminates the tests required by paragraph (a) of this AD for that power lever rod only. Thereafter, accomplish follow-on inspections and corrective actions at the times and in accordance with the Accomplishment Instructions of Dornier Alert Service Bulletin ASB–328–76–024, Revision 1, dated August 5, 1998, until the requirements of paragraph (f) of this AD are accomplished.

Terminating Action

(f) Within 6 months after the effective date of this AD: Replace the power lever and condition lever rods of the engine controls with new, improved parts in accordance with Dornier Service Bulletin SB–328–76–268, Revision 1, dated December 9, 1998. Accomplishment of the replacement constitutes terminating action for the requirements of this AD.

Note 2: Replacement of the power lever and condition lever rods accomplished prior to the effective date of this AD in accordance with Dornier Service Bulletin SB–328–76–268, dated August 11, 1998, is considered acceptable for compliance with paragraph (f) of this AD.

Alternative Methods of Compliance

(g) An alternative method of compliance or adjustment of the compliance time that provides an acceptable level of safety may be used if approved by the Manager, International Branch, ANM–116. Operators shall submit their requests through an appropriate FAA Principal Maintenance. Inspector, who may add comments and then send it to the Manager, International Branch, ANM–116.

Note 3: Information concerning the existence of approved alternative methods of compliance with this AD, if any, may be obtained from the International Branch, ANM–116.

Special Flight Permits

(h) Special flight permits may be issued in accordance with §§ 21.197 and 21.199 of the Federal Aviation Regulations (14 CFR 21.197 and 21.199) to operate the airplane to a location where the requirements of this AD can be accomplished.

Incorporation by Reference

(i) Except as required by paragraphs (a)(1) and (a)(2) of this AD, the actions shall be done in accordance with Dornier Alert Service Bulletin ASB–328–76–024, Revision 1, dated August 5, 1998; and Dornier Service Bulletin SB–328–76–268, Revision 1, dated December 9, 1998; as applicable. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies may be obtained from Fairchild Dornier, Dornier Luftfahrt GmbH, P.O. Box 1103, D–82230 Wessling, Germany. Copies may be inspected at the FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington; or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

Note 4: The subject of this AD is addressed in German airworthiness directive 1998–344/3, dated February 11, 1999.

(j) This amendment becomes effective on May 16, 2000.

Issued in Renton, Washington, on March 31, 2000.

Donald L. Riggin,

Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

Amendment to Class E Airspace; Creston, IA

AGENCY: Federal Aviation Administration, DOT.

ACTION: Direct final rule; confirmation of effective date.

SUMMARY: This document confirms the effective date of a direct final rule which revises Class E airspace at Creston, IA.

DATE: The direct final rule published at 65 FR 5763 is effective on 0901 UTC, June 15, 2000.

FOR FURTHER INFORMATION CONTACT: Kathy Randolph, Air Traffic Division, Airspace Branch, ACE–520C, DOT Regional Headquarters Building, Federal Aviation Administration, 901 Locust, Kansas City, MO 64106; telephone: (816) 329–2525.

SUPPLEMENTARY INFORMATION: The FAA published this direct final rule with a request for comments in the **Federal Register** on February 7, 2000 (65 FR 5763). The FAA uses the direct final rulemaking procedure for a non-controversial rule where the FAA believes that there will be no adverse public comment. This direct final rule advised the public that no adverse comments were anticipated, and that unless a written adverse comment, or a written notice of intent to submit such an adverse comment, were received within the comment period, the regulation would become effective on June 15, 2000. No adverse comments were received, and thus this notice confirms that this direct final rule will become effective on that date.

Dated: Issued in Kansas City, MO on March 30, 2000.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

21 CFR Parts 870, 888, and 890

[Docket No. 99N–2210]

Cardiovascular, Orthopedic, and Physical Medicine Diagnostic Devices; Reclassification of Cardiopulmonary Bypass Accessory Equipment, Goniometer Device, and Electrode Cable Devices

AGENCY: Food and Drug Administration, HHS.

ACTION: Final rule.

SUMMARY: The Food and Drug Administration (FDA) is reclassifying from class I into class II the cardiopulmonary bypass accessory equipment device that involves an electrical connection to the patient, the goniometer device, and the electrode cable. FDA is also exempting these devices from the premarket notification requirements. FDA is reclassifying these devices on its own initiative based on new information. FDA is taking this action to establish sufficient regulatory controls that will provide reasonable assurance of the safety and effectiveness of these devices.

DATES: This regulation is effective May 11, 2000.

FOR FURTHER INFORMATION CONTACT: Heather S. Rosecrans, Center for Devices and Radiological Health (HFZ–404), Food and Drug Administration, 9200 Corporate Blvd., Rockville, MD 20850, 301–594–1190.

SUPPLEMENTARY INFORMATION:

I. Background (Proposed Rule)

On August 9, 1999 (64 FR 43114), FDA, on its own initiative, proposed to reclassify the following devices from class I to class II: (1) Cardiopulmonary bypass accessory equipment, when intended to be used in the cardiopulmonary bypass circuit to support, adjoin, or connect components, or to aid in the setup of the extracorporeal line; (2) the goniometer device, which is an AC-powered device, when intended to evaluate joint function by measuring and recording ranges of motion, acceleration, or forces exerted by a joint; and (3) the electrode cable device, which is an electrode cable device composed of strands of insulated electrical conductors laid together around a central core and intended for medical purposes to connect an electrode from a patient to a diagnostic machine.

In addition to general controls, FDA identified two special controls that FDA believes are adequate to control the risks to health described for these devices: (1) On May 9, 1997, FDA issued a final rule establishing a performance standard for electrode lead wires and patient cables. The agency determined that the performance standard is needed to prevent electrical connections between patients and electrical power sources. In the preamble to the May 9, 1997, final rule establishing this standard, FDA identified cardiopulmonary bypass accessory equipment, the goniometer, and the electrode cable as devices that would be subject to this standard after they were reclassified into class II; and (2) based on the available information, FDA also identified a guidance document entitled "Guidance on the Performance Standard for Electrode Lead Wires and Patient Cables." The guidance provides information on electrocution hazards posed by unprotected patient electrical connectors. The guidance is intended to help affected parties understand the steps needed to achieve compliance with the performance standard for electrode lead wires and patient cables.

Since May 11, 1998, electrode lead wires or patient cables have been required to comply with the ECG Cables and Lead Wires, ANSI/AAMI EC 53–1995 standard if they are intended for use with any of the following devices:

1. Breathing frequency monitors,
2. Ventilatory effort monitors (Apnea detectors),
3. Electrocardiographs (ECG's),
4. Radio frequency physiological signal transmitters and receivers,
5. Cardiac monitors,
6. Electrocardiograph electrodes (including pre-wired ECG electrodes),
7. Patient transducer and electrode cables (including connectors),
8. Medical magnetic tape recorders (e.g. Holter monitors),
9. Arrhythmia detectors and alarms,
10. Telephone electrocardiograph transmitters and receivers.

Manufacturers and users had an additional 2 years to prepare for the second phase of implementation of the standard. Beginning on May 9, 2000, any electrode lead wire or patient cable lead intended for use with any medical device must comply with the standard. The performance standard incorporates the specific requirements of international standard, IEC–60601, clause 56.3(c), which requires leads to be constructed in such a manner as to preclude patient contact with hazardous voltages or, for certain devices, contact with electrical ground. Design changes and labeling changes need to be

considered by manufacturers and importers of these devices. Adapters can be used to convert devices already in the marketplace so they can accept electrode wires and patient cables that comply with the new performance standard.

II. Comments

FDA invited interested persons to submit written comments on the proposed rule. FDA received one comment. The comment objected that the rule should not apply to battery-powered goniometers.

FDA agrees in part. Some battery-powered goniometers have cables and leads that connect them to displays and other devices. Because devices that use electrode lead wires and patient cables present the risk of electrocution to the patient, FDA believes that these devices should be in class II and subject to the standard. Goniometers that do not use electrode lead wires and patient cables will remain in class I and will be exempt from premarket notification. FDA is also revising the identification section in § 888.1500 (21 CFR 888.1500). Presently, it refers only to AC-powered devices. Since publication of that proposed rule, FDA has found several battery-powered goniometers to be substantially equivalent to the goniometer identified in § 888.1500(a). FDA is revising this section to include battery-powered devices.

III. Exemption From Premarket Notification

A. FDA Is Exempting These Devices From Premarket Notification

On November 21, 1997, the President signed into law the FDA Modernization Act (FDAMA) (Public Law 105–115). Section 206 of FDAMA, in part, added a new section 510(m) to the Federal Food, Drug, and Cosmetic Act (the act) (21 U.S.C. 360(m). Section 510(m)(1) of the act requires FDA, within 60 days after enactment of FDAMA, to publish in the **Federal Register** a list of each type of class II device that does not require a report under section 510(k) of the act to provide reasonable assurance of safety and effectiveness. Section 510(m) of the act further provides that a 510(k) will no longer be required for these devices upon the date of publication of the list in the **Federal Register**. FDA published that list in the **Federal Register** of January 21, 1998 (63 FR 3142). Section 510(m)(2) of the act provides that 1 day after the date of publication of the list under section 510(m)(1) of the act, FDA may exempt a device on its own initiative or upon petition of an interested person, if FDA determines that a 510(k) is not necessary to provide reasonable assurance of the safety and effectiveness of the device. FDA has determined that, for the devices proposed for class II in this rule, the special controls along with general controls other than premarket notification will provide reasonable assurance of the safety and effectiveness of these devices. Therefore, FDA is exempting these devices from the premarket notification requirements subject to the applicable limitations on exemptions.

B. Certain Cardiopulmonary Bypass Equipment Will Remain in Class I

FDAMA also added a new section 510(l) to the act which provides that a class I device is exempt from the premarket notification requirements under section 510(k) of the act, unless the device is intended for a use which is of substantial importance in preventing impairment of human health or it presents a potential unreasonable risk of illness or injury. FDA refers to the devices that meet these criteria as "reserved." In the **Federal Register** of February 2, 1998 (63 FR 5387), FDA published a list of devices it considered reserved and that require premarket notification and a list of devices it believed met the exemption criteria in FDAMA. FDA invited comments on the February 2, 1998, notice. In the **Federal Register** of November 12, 1998 (63 FR 63222), after reviewing the comments submitted on the February 2, 1998, **Federal Register** notice, FDA proposed to designate which devices require premarket notification, and which are exempt, subject to limitations, under notice and comment rulemaking proceedings under new section 510(l) of the act. One comment on the proposed rule stated that, for cardiopulmonary bypass accessory equipment, the "reserved" designation should be limited to accessory equipment that involves an electrical connection to the patient. FDA agrees with this comment and, on January 14, 2000 (65 FR 2296), FDA issued a final rule on exemptions from premarket notification to adopt this comment. In this rule, FDA stated that cardiopulmonary bypass accessory equipment that does not involve electrical connection to the patient is a class I device and is exempt from the premarket notification requirements.

IV. Environmental Impact

The agency has determined under 21 CFR 25.34(b) that this action is of a type that does not individually or cumulatively have a significant effect on the human environment. Therefore, neither an environmental assessment nor an environmental impact statement is required.

V. Analysis of Impacts

FDA has examined the impacts of the rule under Executive Order 12866 and the Regulatory Flexibility Act (5 U.S.C. 601–612) (as amended by subtitle D of the Small Business Regulatory Fairness Act of 1996 (Public Law 104–121)), and the Unfunded Mandates Reform Act of 1995 (Public Law 104–4). Executive Order 12866 directs agencies to assess all costs and benefits of available regulatory alternatives and, when regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety, and other advantages; distributive impacts; and equity). The agency believes that this rule is consistent with the regulatory philosophy and principles identified in the Executive Order. In addition, the rule is not a significant regulatory action as defined by the Executive Order and so is not subject to review under the Executive Order.

The Regulatory Flexibility Act requires agencies to analyze regulatory options that would minimize any significant impact of a rule on small entities. Based on the May 9, 1997 (62 FR 25477), **Federal Register**, a final rule was issued establishing a performance standard for electrode lead wires and patient cables, which included and applied to the cardiopulmonary bypass accessory equipment that involves an electrical connection to the patient, the goniometer, and the electrode cable. FDA's analysis determined that the imposition of the performance standard would not have a significant economic impact on a substantial number of small entities. This reclassification will have no economic effect other than the imposition of this standard. In addition, the rule will not impose costs of $100 million or more on either the private sector or State, local, and tribal governments in the aggregate, and therefore a summary statement or analysis under section 202(a) of the Unfunded Mandates Reform Act of 1995 is not required.

VI. Paperwork Reduction Act of 1995

FDA has determined that this rule contains no collections of information. Therefore, clearance from the Office of Management and Budget under the Paperwork Reduction Act of 1995 is not required.

List of Subjects in 21 CFR Parts 870, 888, and 890

Medical devices.

Therefore, under the Federal Food, Drug, and Cosmetic Act and under authority delegated to the Commissioner of Food and Drugs, 21 CFR parts 870, 888, and 890 are amended as follows:

PART 870—CARDIOVASCULAR DEVICES

1. The authority citation for 21 CFR part 870 continues to read as follows:

Authority: 21 U.S.C. 351, 360, 360c, 360e, 360j, 371.

2. Section 870.4200 is revised to read as follows:

§ 870.4200 Cardiopulmonary bypass accessory equipment.

(a) *Identification.* Cardiopulmonary bypass accessory equipment is a device that has no contact with blood and that is used in the cardiopulmonary bypass circuit to support, adjoin, or connect components, or to aid in the setup of the extracorporeal line, e.g., an oxygenator mounting bracket or system-priming equipment.

(b) *Classification.* (1) Class I. The device is classified as class I if it does not involve an electrical connection to the patient. The device is exempt from the premarket notification procedures in subpart E of part 807 of this chapter subject to § 870.9.

(2) Class II (special controls). The device is classified as class II if it involves an electrical connection to the patient. The special controls are as follows:

(i) The performance standard under part 898 of this chapter, and

(ii) The guidance document entitled "Guidance on the Performance Standard for Electrode Lead Wires and Patient Cables." The device is exempt from the premarket notification procedures in subpart E of part 807 of this chapter subject to § 870.9.

PART 888—ORTHOPEDIC DEVICES

3. The authority citation for 21 CFR part 888 continues to read as follows:

Authority: 21 U.S.C. 351, 360, 360c, 360e, 360j, 371.

4. Section 888.1500 is revised to read as follows:

§ 888.1500 Goniometer.

(a) *Identification.* A goniometer is an AC-powered or battery powered device intended to evaluate joint function by measuring and recording ranges of motion, acceleration, or forces exerted by a joint.

(b) *Classification.* (1) Class I (general controls) for a goniometer that does not use electrode lead wires and patient cables. This device is exempt from the premarket notification procedures of subpart E of part 807 of this chapter subject to § 888.9.

(2) Class II (special controls) for a goniometer that uses electrode lead wires and patient cables. The special controls consist of:

(i) The performance standard under part 898 of this chapter, and

(ii) The guidance entitled "Guidance on the Performance Standard for Electrode Lead Wires and Patient Cables." This device is exempt from the premarket notification procedures of subpart E of part 807 of this chapter subject to § 888.9.

PART 890—PHYSICAL MEDICINE DEVICES

5. The authority citation for 21 CFR part 890 continues to read as follows:

Authority: 21 U.S.C. 351, 360, 360c, 360e, 360j, 371.

6. Section 890.1175 is amended by revising paragraph (b) to read as follows:

§ 890.1175 Electrode cable.

* * * * *

(b) *Classification.* Class II (special controls). The special controls consist of:

(1) The performance standard under part 898 of this chapter, and

(2) The guidance document entitled "Guidance on the Performance Standard for Electrode Lead Wires and Patient Cables." This device is exempt from the premarket notification procedures of subpart E of part 807 of this chapter subject to § 890.9.

Dated: March 2, 2000.

Linda S. Kahan,

Deputy Director for Regulations Policy, Center for Devices and Radiological Health.

[FR Doc. 00–8850 Filed 4–10–00; 8:45 am]

BILLING CODE 4160–01–F

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[IN107–1a; FRL–6573–8]

Approval and Promulgation of Implementation Plan; Indiana Particulate Matter Rule

AGENCY: Environmental Protection Agency (EPA).

ACTION: Direct final rule.

SUMMARY: On February 3, 1999, the State of Indiana Department of Environmental Management (IDEM) submitted a site-specific State Implementation Plan (SIP) request to revise Particulate Matter (PM) emission limits for a facility owned by Central Soya Company, Inc., located in Indianapolis, Marion County, Indiana. Central Soya is converting its grain elevator from a processing to a storage facility. The SIP revision request reflects changes in emission limits resulting from the shutdown of various operations at the plant, and provides new emission limits reflecting the addition of new operations.

The projected PM emission decrease associated with the elimination of selected activities at the facility is 71.22 tons per year. The projected PM emission increases associated with the changes in operations at the facility is 14.81 tons per year. The overall change is a projected net decrease in PM emissions of approximately 56 tons per year from the facility. Because Indiana's Central Soya SIP revision request is consistent with the Clean Air Act and applicable policy, EPA is approving it.

DATES: This rule is effective on June 12, 2000, unless EPA receives adverse written comments by May 11, 2000. If adverse comment is received, EPA will publish a timely withdrawal of the rule in the **Federal Register** and inform the public that the rule will not take effect.

ADDRESSES: Written comments should be sent to: J. Elmer Bortzer, Chief, Regulation Development Section, Air Programs Branch (AR–18J), U.S. Environmental Protection Agency, 77 West Jackson Boulevard, Chicago, Illinois 60604. You can inspect copies of the State Plan submittal at the following address: U.S. Environmental Protection Agency, Region 5, Air and Radiation Division, 77 West Jackson Boulevard, Chicago, Illinois 60604. (We recommended that you contact Mark J. Palermo at (312) 886–6082 before visiting the Region 5 Office.)

FOR FURTHER INFORMATION CONTACT: John Paskevicz, Environmental Engineer, at (312) 886–6084.

SUPPLEMENTARY INFORMATION: Throughout this document wherever "we," "us" or "our" are used, we mean EPA. Also, whenever we refer to "Central Soya", we mean Central Soya Company, Incorporated, at 1102 West 18th Street in Marion County, Indianapolis, Indiana.

H. National Technology Transfer and Advancement Act
I. Petitions for Judicial Review

I. What Is EPA Approving in This Action?

EPA is approving a requested revision to Indiana SIP rule 326 IAC 6–1–12 for Central Soya, as submitted by Indiana to EPA with a letter dated February 3, 1999. The rule addresses particulate matter concentration and annual emission limits for a number of sources at Central Soya's Marion County, Indianapolis, Indiana facility. Indiana submitted additional technical support information on February 23, 1999. The revision reflects the elimination of old processes and the addition of new operations at the facility. We are approving mass rate limits reflected in both an annual rate, which represents a cap on the total emissions for that source, and a concentration limit in grains per dry standard cubic feet (grains/dscf).

II. The Indiana State Plan Requirement

What Pollutant Does This Revision Affect?

This revision provides for the reduction in emissions of particulate matter from the sources which are closed down, and an increase in emissions for additional sources. Particulate emissions should change from a total of 71.22 tons per year, the previously approved emission level, to 14.81 tons per year. This represents a net emissions decrease of approximately 56 tons of PM per year.

What Is the Existing State Requirement for This Source?

Prior to this SIP revision request, Central Soya had been subject to particulate matter emission limits for a boiler and a number of other sources and operations under 326 IAC 6–1–12(a). Those limits, as noted in the record of public hearing of the Air Pollution Control Board, are as follows:

Source description	Tons/year	Grains per dry standard cubic foot
Vogt Boiler	32.3	[1] 0.350
Toasting Feed Mill	5.0	0.013
Dry Soybean Meal	5.6	0.03
Soybean Meal Cooler	10.2	0.03
Pellet Cooler (South)	7.4	0.03
Feed Pellet Cooler (North)	9.0	0.034
Bean Bowl Storage	0.2	0.001
Conveyor System Aspiration	0.42	0.001
Truck Pit Receiving Area	1.1	0.006

[1] lb/MMBtu.

What Are the Changes Requested by Central Soya?

Central Soya asked the State to amend 326 IAC 6–1–12 to eliminate a number of sources and add several new sources. Central Soya has reported that the following sources (identified by point input I.D.) are no longer in operation: (01) Vogt Boiler; (02) Toasting Mill Feed; (03) Dry Soybean Mill; (04) Soybean Meal Cooler; (05) Pellet Cooler South; (06) Feed Pellet Cooler North; (08) Bean Bowl Storage; (09) Conveyor System Aspiration; and (10) Truck Pit. Central Soya has asked the State to delete these sources from the State rule.

Central Soya also requested that EPA approve the revised emission limits applicable to (09A) Elevator Gallery Belt Trippers; (09B) Elevator Gallery Belt Loaders (East and West); and (09C) Elevator Grain Dryer Conveying Legs. Central Soya also requested that the State add two other sources to the inventory: (10A) Elevator #1 Truck and Rail Receiving System and Basement, and (10B) Elevator #2 Truck and Rail Receiving System. The Indiana Air Pollution Control Board approved these changes on November 1, 1998.

What Are the Criteria for Approving Changes to Central Soya SIP Requirements?

The general criteria used by EPA to evaluate such emissions trades, or "bubbles," under the Clean Air Act are set out in the EPA's Emissions Trading Policy Statement (ETPS) (see 51 FR 43814, December 4, 1986). The ETPS allows a State to forego a modeling analysis in those trades where the "applicable net baseline emissions do not increase and in which the sum of the emissions increases, looking only at the increasing sources, totals less than 25 tons per year of particulate matter." EPA considers that such trades will have, at most, a "de minimis" impact on local air quality. 51 FR 43844.

In the case of Central Soya, Indiana also elected to perform a "Level II" modeling analysis under the ETPS. A Level II analysis must include emissions from the sources involved in the trade, and must demonstrate that the air quality impact of the trade does not exceed set significance levels. For PM, the significance levels are 10 micrograms per cubic meter ($\mu g/m^3$) for any 24-hour period, and 5 $\mu g/m^3$ for any annual period.

The modeling analysis submitted by the IDEM in support of the requested Central Soya SIP revision is consistent with a Level II analysis. The analysis shows that the SIP revision request will not cause or contribute to any exceedances of the PM NAAQS. The maximum modeled PM air quality impacts were 1.8 $\mu g/m^3$ in 24-hours, and 0.0 $\mu g/m^3$ on an annual basis. Therefore, IDEM has demonstrated that this SIP revision will not have a significant impact on air quality.

III. The Indiana Plan for Particulate Matter

Who Is Affected by This SIP Revision?

This revision reduces the emissions of particulate matter from selected sources in the Central Soya facility, as well as the facility as a whole. The reductions come about because of the change in operations at the plant. The State reports that the facility underwent a change from a processing plant to exclusively a storage facility. Citizens of Marion County living near the facility will benefit from the reductions because the net overall change should be a positive impact on air quality.

Did the Public Have an Opportunity To Comment on the Changes?

The State published a public notice on November 3, 1997, and December 23, 1997, to inform citizens that the revised plan was available for review and public

[1] See 56 FR 56694 (November 6, 1991). On June 9, 1999, EPA revoked the one-hour ozone standard for eastern Massachusetts. See 64 FR 30911 (June 9, 1999). EPA has proposed to reinstate that standard. See 64 FR 57424 (October 25, 1999).

comment. Indiana held two Air Pollution Control Board meetings on the Central Soya rule changes on December 3, 1997 and February 4, 1998. The State did not receive any adverse comment regarding these changes.

What Revisions Are We Approving?

Previous to this SIP revision request, Central Soya had been subject to particulate matter emission limits for a boiler and a number of other sources and operations under 326 IAC 6–1–12(a). These approved limits are noted in the record of public hearing of the Air Pollution Control Board.

Indiana has amended rule 326 IAC 6–1–12(a) to eliminate a number of sources, resulting in a reduction of annual particulate matter emissions from Central Soya. Indiana has added five sources to the rule. These are: Elevator Gallery Belt Trippers; Elevator Gallery Belt Loaders (East and West); Elevator Grain Dryer Conveying Legs; Elevator #1 Truck and Rail Receiving System and Basement; and Elevator #2 Truck and Rail Receiving System. The State-approved emission limits for the five new sources are listed in the following table:

Source description	Tons/year	Grains per dry standard cubic foot
Elevator Gallery Belt Tripper (East and West)	0.92	0.006
Elevator Gallery Belt Loaders (East and West)	0.70	0.006
Elevator Grain Dryer Conveying Legs	1.01	0.006
Elevator #1 Truck/Rail Receiving System and Basement	7.23	0.006
Elevator #2 Truck/Rail Receiving System	4.95	0.006

How Did Indiana Show That the Changes to the SIP Are Approvable?

The State's technical support document included a table of the changes in emissions at the Central Soya facility for the sources listed. These changes, as published in the November 1, 1998 Indiana Register, Volume 22, Number 2 (page 417), indicate that the decreases in PM emissions should total 71.22 tons per year and the increases should total 14.81 tons per year. This represents a net decrease in emissions of 56.41 tons per year.

The State also performed air emissions ambient modeling. The modeling shows that impacts are below the Level II significant impact levels of 10.0 $\mu g/m^3$ for the 24-hour and 5.0 $\mu g/m^3$ for the annual time averaged period.

IV. Review and Approval of the Indiana SIP Revision for Central Soya Company, Inc.

Why Is Indiana's SIP Revision Approvable?

The revision to this SIP is approvable because the changes requested by the State meet the requirements of the Clean Air Act and EPA's bubble policy, as noted above. Also, the emissions increases should have, at most, a "de minimis" impact on air quality as a result of the concurrent emissions reductions.

Are the Particulate Matter Air Quality Standards and Public Health Protected as a Result of the Approval of This SIP Submission?

The particulate matter air quality standard and public health should be protected by this SIP revision. The Clean Air Act and applicable policy permit changes to the State's implementation plan without the need for a detailed technical review under certain carefully circumscribed situations. These include emission changes in which there is a net reduction in emissions. This approach should ensure that ambient air quality standards will be attained and maintained, and public health protected. The request being approved today results in a net reduction in particulate matter emissions.

When Will This Rule Change Become Federally Enforceable?

This revision will become Federally enforceable on the effective date of this approval.

V. Final Rulemaking Action

In this rulemaking action, EPA approves the Central Soya Company, Incorporated SIP submission as a revision to the Indiana SIP. The revision eliminates a total of nine source operations and adds five new operations. It has the overall effect of reducing the emissions of particulate matter from the facility. The Indiana Air Pollution Control Board approved the revision and published it in the Indiana Register, Volume 22, Number 2, page 417, dated November 1, 1998. EPA is publishing this direct final approval without prior proposal because EPA views this as a noncontroversial revision and anticipates no adverse comments. However, in a separate document in this **Federal Register** publication, the EPA is proposing to approve the SIP revision should adverse written comments be filed. This action will be effective June 12, 2000, without further notice unless EPA receives relevant adverse written comment by May 11, 2000. Should the Agency receive such comments, it will publish a final rule informing the public that this direct final action will not take effect. Any parties interested in commenting on this action should do so at this time. If no comments are received, the public is advised that this action will be effective on June 12, 2000.

VI. Administrative Requirements

A. Executive Order 12866

The Office of Management and Budget (OMB) has exempted this regulatory action from Executive Order 12866, entitled "Regulatory Planning and Review."

B. Executive Order 13045

Protection of Children from Environmental Health Risks and Safety Risks (62 FR 19885, April 23, 1997), applies to any rule that: (1) is determined to be "economically significant" as defined under Executive Order 12866, and (2) concerns an environmental health or safety risk that EPA has reason to believe may have a disproportionate effect on children. If the regulatory action meets both criteria, the Agency must evaluate the environmental health or safety effects of the planned rule on children, and explain why the planned regulation is preferable to other potentially effective and reasonably feasible alternatives considered by the Agency.

This rule is not subject to Executive Order 13045 because it does not involve decisions intended to mitigate environmental health or safety risks.

C. Executive Order 13084

Under Executive Order 13084, EPA may not issue a regulation that is not required by statute, that significantly affects or uniquely affects the communities of Indian tribal governments, and that imposes substantial direct compliance costs on those communities, unless the Federal

government provides the funds necessary to pay the direct compliance costs incurred by the tribal governments, or EPA consults with those governments. If EPA complies by consulting, Executive Order 13084 requires EPA to provide to the Office of Management and Budget, in a separately identified section of the preamble to the rule, a description of the extent of EPA's prior consultation with representatives of affected tribal governments, a summary of the nature of their concerns, and a statement supporting the need to issue the regulation. In addition, Executive Order 13084 requires EPA to develop an effective process permitting elected officials and other representatives of Indian tribal governments "to provide meaningful and timely input in the development of regulatory policies on matters that significantly or uniquely affect their communities."

Today's rule does not significantly or uniquely affect the communities of Indian tribal governments. This action does not involve or impose any requirements that affect Indian Tribes. Accordingly, the requirements of section 3(b) of Executive Order 13084 do not apply to this rule.

D. Executive Order 13132

Federalism (64 FR 43255, August 10, 1999) revokes and replaces Executive Orders 12612 (Federalism) and 12875 (Enhancing the Intergovernmental Partnership). Executive Order 13132 requires EPA to develop an accountable process to ensure "meaningful and timely input by State and local officials in the development of regulatory policies that have federalism implications." "Policies that have federalism implications" is defined in the Executive Order to include regulations that have "substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government." Under Executive Order 13132, EPA may not issue a regulation that has federalism implications, that imposes substantial direct compliance costs, and that is not required by statute, unless the Federal government provides the funds necessary to pay the direct compliance costs incurred by State and local governments, or EPA consults with State and local officials early in the process of developing the proposed regulation. EPA also may not issue a regulation that has federalism implications and that preempts State law unless the Agency consults with State and local officials early in the process of developing the proposed regulation.

This rule will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government, as specified in Executive Order 13132, because it merely approves a state rule implementing a federal standard, and does not alter the relationship or the distribution of power and responsibilities established in the Clean Air Act. Thus, the requirements of section 6 of the Executive Order do not apply to this rule.

E. Regulatory Flexibility

The Regulatory Flexibility Act (RFA) generally requires an agency to conduct a regulatory flexibility analysis of any rule subject to notice and comment rulemaking requirements unless the agency certifies that the rule will not have a significant economic impact on a substantial number of small entities. Small entities include small businesses, small not-for-profit enterprises, and small governmental jurisdictions.

This rule will not have a significant impact on a substantial number of small entities because SIP approvals under section 110 and subchapter I, part D of the Clean Air Act do not create any new requirements but simply approve requirements that the State is already imposing. Therefore, because the Federal SIP approval does not create any new requirements, I certify that this action will not have a significant economic impact on a substantial number of small entities. Moreover, due to the nature of the Federal-State relationship under the Clean Air Act, preparation of flexibility analysis would constitute Federal inquiry into the economic reasonableness of state action. The Clean Air Act forbids EPA to base its actions concerning SIPs on such grounds. *Union Electric Co.*, v. *U.S. EPA*, 427 U.S. 246, 255–66 (1976); 42 U.S.C. 7410(a)(2).

F. Unfunded Mandates

Under sections 202 of the Unfunded Mandates Reform Act of 1995 ("Unfunded Mandates Act"), signed into law on March 22, 1995, EPA must prepare a budgetary impact statement to accompany any proposed or final rule that includes a Federal mandate that may result in estimated costs to State, local, or tribal governments in the aggregate; or to the private sector, of $100 million or more. Under section 205, EPA must select the most cost-effective and least burdensome alternative that achieves the objectives of the rule and is consistent with statutory requirements. Section 203 requires EPA to establish a plan for informing and advising any small governments that may be significantly or uniquely impacted by the rule.

EPA has determined that the approval action promulgated does not include a Federal mandate that may result in estimated costs of $100 million or more to either State, local, or tribal governments in the aggregate, or to the private sector. This Federal action approves pre-existing requirements under State or local law, and imposes no new requirements. Accordingly, no additional costs to State, local, or tribal governments, or to the private sector, result from this action.

G. Submission to Congress and the Comptroller General

The Congressional Review Act, 5 U.S.C. 801 *et seq.*, as added by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. Section 804, however, exempts from section 801 the following types of rules: rules of particular applicability; rules relating to agency management or personnel; and rules of agency organization, procedure, or practice that do not substantially affect the rights or obligations of non-agency parties. 5 U.S.C. 804(3). EPA is not required to submit a rule report regarding this action under section 801 because this is a rule of particular applicability.

H. National Technology Transfer and Advancement Act

Section 12 of the National Technology Transfer and Advancement Act (NTTAA) of 1995 requires Federal agencies to evaluate existing technical standards when developing a new regulation. To comply with NTTAA, EPA must consider and use "voluntary consensus standards" (VCS) if available and applicable when developing programs and policies unless doing so would be inconsistent with applicable law or otherwise impractical.

The EPA believes that VCS are inapplicable to this action. Today's action does not require the public to perform activities conducive to the use of VCS.

I. Petitions for Judicial Review

Under section 307(b)(1) of the Clean Air Act, petitions for judicial review of

this action must be filed in the United States Court of Appeals for the appropriate circuit by June 12, 2000. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this rule for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action. This action may not be challenged later in proceedings to enforce its requirements. (See section 307(b)(2).)

(c) * * *

(130) On February 3, 1999, Indiana submitted a site specific SIP revision request for the Central Soya Company, Incorporated, Marion County, Indiana. The submitted revision amends 326 IAC 6–1–12(a), and provides for revised particulate matter emission totals for a number of source operations at the plant. The revision reflects the closure of nine operations and the addition of five new ones, resulting in a net reduction in particulate matter emissions.

(i) *Incorporation by reference.* The entry for Central Soya Company, Incorporated contained in Indiana Administrative Code Title 326: Air Pollution Control Board, Article 6: Particulate Rules, Rule 1: Nonattainment Area Limitations, Section 12: Marion County. Subsection (a) amended at 22, Indiana Register 416, effective October 16, 1998.

BILLING CODE 6560–50–U

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[MA063–01–7200a; A–1–FRL–6574–7A]

Approval and Promulgation of Air Quality Implementation Plans; Massachusetts; Revised VOC Rules

AGENCY: Environmental Protection Agency (EPA).

ACTION: Direct final rule.

SUMMARY: EPA is approving two State Implementation Plan (SIP) revisions submitted by the Commonwealth of Massachusetts. These SIP submittals include revisions to regulations for controlling volatile organic compound (VOC) emissions, including emissions from marine vessel loading and consumer products. The intended effect of this action is to approve the revised regulations into the Massachusetts SIP. This action is being taken in accordance with the Clean Air Act (CAA).

DATES: This direct final rule is effective on June 12, 2000 without further notice, unless EPA receives adverse comment by May 11, 2000. If adverse comment is received, EPA will publish a timely withdrawal of the direct final rule in the **Federal Register** and inform the public that the rule will not take effect.

ADDRESSES: Comments may be mailed to David Conroy, Unit Manager, Air Quality Planning Unit (mail code CAQ), U.S. Environmental Protection Agency, Region I, One Congress Street, Suite 1100, Boston, MA 02114–2023. Copies of the documents relevant to this action are available for public inspection during normal business hours, by appointment at the Office Ecosystem Protection, U.S. Environmental Protection Agency, Region I, One Congress Street, 11th floor, Boston, MA and the Division of Air Quality Control, Department of Environmental Protection, One Winter Street, 8th Floor, Boston, MA 02108.

FOR FURTHER INFORMATION CONTACT: Anne E. Arnold, (617) 918–1047.

SUPPLEMENTARY INFORMATION: This section is organized as follows:

What action is EPA taking?

What are the CAA requirements for marine vessels?

How has Massachusetts addressed these CAA requirements?

What were the issues outlined in EPA's conditional approval of Massachusetts' marine vessel rule?

How has Massachusetts addressed these issues?

What revisions did Massachusetts make to its VOC definition?

How does Massachusetts' VOC definition compare to EPA's VOC definition?

What revisions did Massachusetts make to its consumer products rule?

Why is EPA approving Massachusetts' SIP submittals?

What is the process for EPA's approval of these SIP revisions?

What Action Is EPA Taking?

EPA is approving Massachusetts' revised 310 CMR 7.24(8) "Marine Volatile Organic Liquid Transfer" and incorporating this rule into the Massachusetts SIP. EPA is also approving definitions in 310 CMR 7.00 which are associated with the marine vessel rule. EPA is also approving Massachusetts' revised 310 CMR 7.00 definition of "volatile organic compound" and an amendment to Massachusetts' 310 CMR 7.25 "Best Available Controls for Consumer and Commercial Products" and incorporating these regulations into the Massachusetts SIP.

What Are the CAA Requirements for Marine Vessels?

Section 183(f) of the CAA requires EPA to promulgate reasonably available control technology (RACT) standards to reduce VOC emissions from the loading and unloading of tank vessels. Furthermore, on November 12, 1993 (58 FR 60021), marine vessels were added to the list of those categories for which EPA will promulgate a maximum achievable control technology (MACT) standard. On September 19, 1995 (60 FR 48388), EPA promulgated both RACT and MACT standards for marine tank vessels. Section 183(f)(4) of the CAA states that after EPA promulgates such standards, no State may adopt, or attempt to enforce, less stringent standards for tank vessels subject to EPA's regulation.

In addition, section 182(b)(1) of the amended CAA requires States with ozone nonattainment areas classified as moderate and above to develop reasonable further progress plans to reduce VOC emissions by 15 percent within these areas by 1996 when compared to 1990 baseline VOC emission levels. Also, section 182(b)(2)(C) of the CAA requires that RACT be implemented for all major VOC sources by May 31, 1995. Pursuant to the Clean Air Act Amendments of 1990, the Commonwealth of Massachusetts was designated as serious nonattainment for ozone.[1]

Therefore, in Massachusetts, sources with the potential to emit greater than

[1] See 56 FR 56694 (November 6, 1991). On June 9, 1999, EPA revoked the one-hour ozone standard for eastern Massachusetts. See 64 FR 30911 (June 9, 1999). EPA has proposed to reinstate that standard. See 64 FR 57424 (October 25, 1999).

50 tpy are considered major VOC sources. Furthermore, Massachusetts is located in the Northeast Ozone Transport Region (OTR). The entire Commonwealth is, therefore, subject to section 184(b) of the amended CAA. Section 184(b) requires that RACT be implemented for all major VOC sources (defined as 50 tons per year for sources in the OTR).

How Has Massachusetts Addressed These CAA Requirements?

In response to the above CAA requirements, Massachusetts adopted 310 CMR 7.24(8) to control VOC emissions from marine vessel transfer operations. On August 27, 1996 (61 FR 43973), EPA issued a conditional approval of Massachusetts' 310 CMR 7.24(8) marine vessel rule. EPA's conditional approval cited two outstanding issues associated with Massachusetts' regulation.

What Were the Issues Outlined in EPA's Conditional Approval of Massachusetts' Marine Vessel Rule?

EPA's conditional approval of Massachusetts' marine vessel rule cited the following two outstanding issues associated with this regulation: (1) a lack of monitoring requirements; and (2) emission limits for ballasting operations.

(1) Lack of Monitoring Requirements

Massachusetts' marine vessel rule requires that, upon initial startup of the air pollution control equipment, the owner or operator of a marine terminal conduct an initial performance test in order to demonstrate compliance. However, the initially adopted version of the rule did not require the facility to demonstrate continued compliance as is generally required of VOC sources. Specifically, as noted in EPA's conditional approval, the regulation should require that certain parameters be monitored continuously while marine vessel loading or ballasting operations are occurring and that records be kept of any periods of operation during which the previously established parameter boundaries are exceeded.[2]

(2) Emission Limits for Ballasting Operations

The marine vessel rule that Massachusetts initially adopted applies to the loading of an organic liquid and to ballasting operations. However, the emissions limitations of the rule do not apply to ballasting operations. EPA's conditional approval noted that, although EPA's national marine vessel rule does not apply to ballasting operations, the absence of emission limitations for ballasting operations in Massachusetts' rule is inconsistent with the VOC emission reductions claimed in Massachusetts' reasonable further progress (RFP) plan for the Boston-Worcester-Lawrence ozone nonattainment area. Specifically, Massachusetts 1990 base year inventory shows that uncontrolled marine vessel transfer operations result in 3.2 tons of VOC per summer day (tpsd), which includes 2.8 tpsd from ballasting and 0.4 tpsd from loading operations. Massachusetts' initial marine vessel rule SIP submittal states that ballasting emissions will be reduced by 2.1 tpsd. This statement assumes that ballasting operations are subject to a 95 percent control efficiency requirement (i.e., 0.95 control efficiency × 0.8 rule effectiveness × 2.8 tpsd uncontrolled = 2.1 tpsd reduction). Therefore, EPA's conditional approval stated that Massachusetts' marine vessel rule should require that ballasting operations be subject to the emission limitations stated in section 7.24(8)(c)(1)(B) of the rule.

How Has Massachusetts Addressed These Issues?

On October 17, 1997, Massachusetts submitted a SIP revision containing a revised version of its marine vessel rule 310 CMR 7.24(8). Massachusetts' revised marine vessel rule adequately addresses the two issues outlined in EPA's conditional approval.

(1) Lack of Monitoring Requirements

In Massachusetts' revised rule, a new provision has been added which requires emission control equipment to be monitored in accordance with the procedures specified in EPA's national marine vessel rule, specifically sections 63.564(e) through (j) of 40 CFR part 63, subpart Y. Massachusetts has, therefore, adequately addressed the issue of monitoring requirements.

The revised rule also includes a reference to the vapor-tightness pressure test procedures in EPA's national rule, specifically section 63.565(c)(1) of 40 CFR part 63, subpart Y. Previously, Massachusetts' rule required that these tests be "conducted in accordance with procedures specified by the DEP and EPA."

(2) Emission Limits for Ballasting Operations

In Massachusetts' revised rule, the requirement for marine terminal owners to install and operate equipment to control VOC emissions which result solely from ballasting operations has been rescinded. However, the revised rule states that, if a system is in place to control emissions from gasoline loading operations, then that system must also be used to control ballasting emissions. In such a case, ballasting emissions are subject to the emission limits of the rule.

Massachusetts' revision is acceptable since ballasting emissions in Massachusetts are now known to be less significant than originally estimated. As previously stated, Massachusetts had initially calculated uncontrolled ballasting emissions to be 2.8 tpsd. However, as reported in Massachusetts public hearing background document, industry data has subsequently shown that 1994 uncontrolled ballasting emissions were only 0.4 tpsd. Massachusetts plans to adjust future emissions inventory estimates of ballasting emissions to reflect this lower level of emissions.

In addition, as previously mentioned, EPA's national marine vessel rule does not apply to ballasting operations. In promulgating this rule, EPA noted that the U.S. Coast Guard has regulations which address ballasting and that "the relatively low amount of actual emissions associated with ballasting does not justify dual regulation of ballasting."

What Revisions Did Massachusetts Make to Its VOC Definition?

On July 30, 1996, Massachusetts submitted a SIP revision containing revisions to its 310 CMR 7.00 definition of the term "volatile organic compound." In the revised definition, acetone has been added to the list of compounds that are exempt from the definition of VOC because of their negligible photochemical reactivity. The revised definition also clarifies that the previously adopted exemption for volatile methyl siloxanes is specifically for "cyclic, branched, or linear, completely methylated siloxanes." EPA promulgated an exemption for acetone in its definition of VOC on June 16, 1995 (60 FR 31633) and an exemption for cyclic, branched, or linear, completely methylated siloxanes on October 5, 1994 (59 FR 50693).

[2] See the monitoring requirements of EPA's national marine vessel rule (especially sections 63.564 (e),(g), and (h)) and/or the monitoring requirements Massachusetts has imposed on other types of VOC sources (e.g., 310 CMR 7.18(2)(e)).

How Does Massachusetts' VOC Definition Compare to EPA's VOC Definition?

Massachusetts' revised VOC definition is consistent with EPA's VOC definition codified at 40 CFR 51.100(s), with the exception of more recent revisions to EPA's definition which were promulgated subsequent to Massachusetts' July 30, 1996 SIP submittal. EPA promulgated these additional revisions on October 8, 1996 (61 FR 52848), August 25, 1997 (62 FR 44900), and April 9, 1998 (63 FR 17331). These revisions add more compounds to the list of those exempted from the definition of VOC because of their negligible photochemical reactivity. Massachusetts' VOC definition also does not include an exemption for perchloroethylene which was promulgated by EPA on February 7, 1996 (61 FR 4588). As stated in EPA's exemption rulemakings, States are not obligated to exclude from control as a VOC those compounds that EPA has found to be negligibly reactive. However, EPA will no longer enforce measures controlling the exempted compounds as part of a federally-approved SIP. EPA's exemption rulemakings also state that a State may not take credit for controlling the EPA-exempted compounds in its ozone control strategy. Nor may reductions of EPA-exempted compounds be used as emission reduction credits or offsets to be traded against the emission of non-exempt compounds. Massachusetts is not taking credit for reductions of EPA-exempted compounds in its rate of progress plans and does not allow trading of exempt for non-exempt emissions.

What Revisions Did Massachusetts Make to Its Consumer Products Rule?

On July 30, 1996, Massachusetts submitted revisions to its 310 CMR 7.25 "Best Available Controls for Consumer and Commercial Products." In this rule, minor clarifications were made to the definition of the term "waterproofing sealer." The revised definition is consistent with EPA's national rule codified at 40 CFR part 59, subpart D "National VOC Emission Standards for Architectural Coatings."

Why Is EPA Approving Massachusetts' SIP Submittals?

EPA is approving Massachusetts' revised marine vessel rule because the Commonwealth has successfully addressed the issues outlined in EPA's earlier conditional approval. EPA is also approving Massachusetts revised VOC definition and clarifications to its consumer product rule because these revisions are consistent with current EPA guidance. Further information on Massachusetts' October 17, 1997 and July 30, 1996 SIP submittals and EPA's evaluation of these submittals can be found in a memorandum dated September 7, 1999 entitled "Technical Support Document—Massachusetts—Revised VOC Rules." Copies of this document are available, upon request, from the EPA Regional Office listed in the **ADDRESSES** section.

What Is the Process for EPA's Approval of These SIP Revisions?

The EPA is publishing this rule without prior proposal because the Agency views this as a noncontroversial amendment and anticipates no adverse comments. However, in the proposed rules section of this **Federal Register** publication, EPA is publishing a separate document that will serve as the proposal to approve the SIP revision should adverse comments be filed. This action will be effective June 12, 2000 without further notice unless the Agency receives adverse comments by May 11, 2000.

If the EPA receives such comments, then EPA will publish a document withdrawing the final rule and informing the public that the rule will not take effect. All public comments received will then be addressed in a subsequent final rule based on the proposed rule. The EPA will not institute a second comment period. Parties interested in commenting should do so at this time. If no such comments are received, the public is advised that this rule will be effective on June 12, 2000 and no further action will be taken on the proposed rule.

Nothing in this action should be construed as permitting or allowing or establishing a precedent for any future request for revision to any State Implementation Plan. Each request for revision to the State Implementation Plan shall be considered separately in light of specific technical, economic, and environmental factors and in relation to relevant statutory and regulatory requirements.

Final Action

EPA is approving Massachusetts' revised 310 CMR 7.24(8) "Marine Volatile Organic Liquid Transfer" and incorporating this rule into the Massachusetts SIP. EPA is also approving the following definitions in 310 CMR 7.00 which are associated with the marine vessel rule: "combustion device," "leak," "leaking component," "lightering or lightering operation," "loading event," "marine tank vessel," "marine terminal," "marine vessel," "organic liquid," and "recovery device." EPA is also approving Massachusetts' revised 310 CMR 7.00 definition of "volatile organic compound" and an amendment to Massachusetts' 310 CMR 7.25 "Best Available Controls for Consumer and Commercial Products" and incorporating these regulations into the Massachusetts SIP.

Administrative Requirements

Under Executive Order 12866 (58 FR 51735, October 4, 1993), this action is not a "significant regulatory action" and therefore is not subject to review by the Office of Management and Budget. This action merely approves state law as meeting federal requirements and imposes no additional requirements beyond those imposed by state law. Accordingly, the Administrator certifies that this rule will not have a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 et seq.). Because this rule approves pre-existing requirements under state law and does not impose any additional enforceable duty beyond that required by state law, it does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Public Law 104–4). For the same reason, this rule also does not significantly or uniquely affect the communities of tribal governments, as specified by Executive Order 13084 (63 FR 27655, May 10, 1998). This rule will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government, as specified in Executive Order 13132 (64 FR 43255, August 10, 1999), because it merely approves a state rule implementing a federal standard, and does not alter the relationship or the distribution of power and responsibilities established in the Clean Air Act. This rule also is not subject to Executive Order 13045 (62 FR 19885, April 23, 1997), because it is not economically significant.

In reviewing SIP submissions, EPA's role is to approve state choices, provided that they meet the criteria of the Clean Air Act. In this context, in the absence of a prior existing requirement for the State to use voluntary consensus standards (VCS), EPA has no authority to disapprove a SIP submission for failure to use VCS. It would thus be inconsistent with applicable law for EPA, when it reviews a SIP submission, to use VCS in place of a SIP submission

that otherwise satisfies the provisions of the Clean Air Act. Thus, the requirements of section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) do not apply. As required by section 3 of Executive Order 12988 (61 FR 4729, February 7, 1996), in issuing this rule, EPA has taken the necessary steps to eliminate drafting errors and ambiguity, minimize potential litigation, and provide a clear legal standard for affected conduct. EPA has complied with Executive Order 12630 (53 FR 8859, March 15, 1988) by examining the takings implications of the rule in accordance with the "Attorney General's Supplemental Guidelines for the Evaluation of Risk and Avoidance of Unanticipated Takings" issued under the executive order. This rule does not impose an information collection burden under the provisions of the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 et seq.).

The Congressional Review Act, 5 U.S.C. 801 et seq., as added by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. EPA will submit a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. A major rule cannot take effect until 60 days after it is published in the **Federal Register**. This action is not a "major rule" as defined by 5 U.S.C. 804(2).

Under section 307(b)(1) of the Clean Air Act, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by June 12, 2000. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this rule for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action. This action may not be challenged later in proceedings to enforce its requirements. (See section 307(b)(2).) Interested parties should comment in response to the proposed rule rather than petition for judicial review, unless the objection arises after the comment period allowed for in the proposal.

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Hydrocarbons, Incorporation by reference, Ozone, Reporting and recordkeeping.

Dated: March 24, 2000.

Mindy S. Lubber,

Regional Administrator, EPA New England.

Part 52 of Chapter I, Title 40 of the Code of Federal Regulations is amended as follows:

PART 52—[AMENDED]

1. The authority citation for part 52 continues to read as follows:

Authority: 42 U.S.C. 7401 et seq.

Subpart W—Massachusetts

§ 52.1119 [Amended]

2. Remove § 52.1119(a)(2).

3. Section 52.1120 is amended by adding paragraphs (c)(115) and (c)(121) to read as follows:

§ 52.1120 Identification of plan

* * * * *

(c) * * *

(115) Revisions to the State Implementation Plan submitted by the Massachusetts Department of Environmental Protection on October 17, 1997 and July 30, 1996.

(i) Incorporation by reference.

(A) 310 CMR 7.24(8) "Marine Volatile Organic Liquid Transfer" effective in the Commonwealth of Massachusetts on October 5, 1997.

(B) Definition of "volatile organic compound" in 310 CMR 7.00 "Definitions" effective in the Commonwealth of Massachusetts on June 28, 1996.

(C) Definition of "waterproofing sealer" in 310 CMR 7.25 "Best Available Controls for Consumer and Commercial Products" effective in the Commonwealth of Massachusetts on June 28, 1996.

(ii) Additional materials

(A) Nonregulatory portions of the submittal.

* * * * *

(121) Revisions to the State Implementation Plan submitted by the Massachusetts Department of Environmental Protection on January 11, 1995 and March 29, 1995.

(i) Incorporation by reference.

(A) Definitions of "combustion device," "leak," "leaking component," "lightering or lightering operation," "loading event," "marine tank vessel," "marine terminal," "marine vessel," "organic liquid," and "recovery device" in 310 CMR 7.00 "Definitions" effective in the Commonwealth of Massachusetts on January 27, 1995.

(ii) Additional materials.

(A) Nonregulatory portions of the submittal.

4. In § 52.1167, Table 52.1167 is amended by adding new entries to existing state citations for 310 CMR 7.00 and 310 CMR 7.25; and by adding new state citation 310 CMR 7.24(8).

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 82

[FRL–6575–7]

Protection of Stratospheric Ozone

AGENCY: Environmental Protection Agency.

ACTION: Notice of acceptability.

SUMMARY: This notice expands the list of acceptable substitutes for ozone-depleting substances (ODS) under the Environmental Protection Agency's (EPA) Significant New Alternatives Policy (SNAP) program.

EFFECTIVE DATE: April 11, 2000.

ADDRESSES: Information relevant to this notice is contained in Air Docket A–91–42, Central Docket Section, South Conference Room 4, Environmental Protection Agency, 401 M Street, SW., Washington, DC 20460, telephone: (202) 260–7548. The docket may be inspected between 8:00 a.m. and 5:30 p.m. weekdays. As provided in 40 CFR Part 2, a reasonable fee may be charged for photocopying.

FOR FURTHER INFORMATION CONTACT: Kelly Davis at (202) 564–2303 or fax (202) 565–2096, Environmental Protection Agency, Stratospheric Protection Division, Mail Code 6205J, Washington, DC 20460. Overnight or courier deliveries should be sent to the office location at 501 3rd Street, NW., Washington, DC 20001. The Stratospheric Protection Hotline can be reached at (800) 296–1996. Further information can be found at EPA's Ozone Depletion World Wide Web site at "http://www.epa.gov/ozone/title6/snap/".

SUPPLEMENTARY INFORMATION:

I. Section 612 Program
  A. Statutory Requirements
  B. Regulatory History
II. Listing of Acceptable Substitutes
  A. Refrigeration and Air Conditioning
  B. Foam Blowing
III. Additional Information
Appendix A—Summary of Acceptable Decisions

I. Section 612 Program

A. Statutory Requirements

Section 612 of the Clean Air Act authorizes EPA to develop a program for evaluating alternatives to ozone-depleting substances. EPA refers to this program as the Significant New Alternatives Policy (SNAP) program. The major provisions of section 612 are:

- *Rulemaking*—Section 612(c) requires EPA to promulgate rules making it unlawful to replace any class I (chlorofluorocarbon, halon, carbon tetrachloride, methyl chloroform, methyl bromide, and hydrobromofluorocarbon) or class II (hydrochlorofluorocarbon) substance with any substitute that the Administrator determines may present adverse effects to human health or the environment where the Administrator has identified an alternative that (1) reduces the overall risk to human health and the environment, and (2) is currently or potentially available.
- *Listing of Unacceptable/Acceptable Substitutes*—Section 612(c) also requires EPA to publish a list of the substitutes unacceptable for specific uses. EPA must publish a corresponding list of acceptable alternatives for specific uses.
- *Petition Process*—Section 612(d) grants the right to any person to petition EPA to add a substance to or delete a substance from the lists published in accordance with section 612(c). The Agency has 90 days to grant or deny a petition. Where the Agency grants the petition, EPA must publish the revised lists within an additional 6 months.
- *90-Day Notification*—Section 612(e) requires EPA to require any person who produces a chemical substitute for a class I substance to notify the Agency not less than 90 days before new or existing chemicals are introduced into interstate commerce for significant new uses as substitutes for a class I substance. The producer must also provide the Agency with the producer's unpublished health and safety studies on such substitutes.
- *Outreach*—Section 612(b)(1) states that the Administrator shall seek to maximize the use of federal research facilities and resources to assist users of class I and II substances in identifying and developing alternatives to the use of such substances in key commercial applications.
- *Clearinghouse*—Section 612(b)(4) requires the Agency to set up a public clearinghouse of alternative chemicals, product substitutes, and alternative manufacturing processes that are available for products and manufacturing processes which use class I and II substances.

B. Regulatory History

On March 18, 1994, EPA published rulemaking (59 FR 13044) which described the process for administering the SNAP program and issued EPA's first acceptability lists for substitutes in the major industrial use sectors. These sectors include: refrigeration and air conditioning; foam blowing; solvents cleaning; fire suppression and explosion protection; sterilants; aerosols; adhesives, coatings and inks; and tobacco expansion. These sectors compose the principal industrial sectors that historically consumed the largest volumes of ozone-depleting compounds.

As described in this original rule for the SNAP program, EPA does not believe that rulemaking procedures are required to list alternatives as acceptable with no limitations. Such listings do not impose any sanction, nor do they remove any prior license to use a substance. Consequently, by this notice EPA is adding substances to the list of acceptable alternatives without first requesting comment on new listings.

EPA does, however, believe that notice-and-comment rulemaking is required to place any substance on the list of prohibited substitutes, to list a substance as acceptable only under certain conditions, to list substances as acceptable only for certain uses, or to remove a substance from either the list of prohibited or acceptable substitutes.

Updates to these lists are published as separate notices of rulemaking in the **Federal Register**.

The Agency defines a "substitute" as any chemical, product substitute, or alternative manufacturing process, whether existing or new, intended for use as a replacement for a class I or class II substance. Anyone who produces a substitute must provide the Agency with health and safety studies on the substitute at least 90 days before introducing it into interstate commerce for significant new use as an alternative. This requirement applies to substitute manufacturers, but may include importers, formulators or end-users, when they are responsible for introducing a substitute into commerce.

A complete chronology of SNAP decisions and the appropriate **Federal Register** citations can be found at EPA's Ozone Depletion World Wide Web site at http://www.epa.gov/ozone/title6/snap/chron.html. This information is also available from the Air Docket (see **ADDRESSES** section above for contact information).

II. Listing of Acceptable Substitutes

This section presents EPA's most recent acceptable listing decisions for substitutes in the refrigeration and foams sectors. For copies of the full list of SNAP decisions in all industrial sectors, contact the EPA Stratospheric Protection Hotline at (800) 296–1996.

The sections below presents a detailed discussion of the substitute listing. The table summarizing today's listing decisions is in Appendix A. The comments contained in the table in Appendix A provide additional information, but are not legally binding under section 612 of the Clean Air Act. Thus, adherence to recommendations in the comments section of the table is not mandatory for use of a substitute. In addition, the comments should not be considered comprehensive with respect to other legal obligations pertaining to the use of the substitute. However, EPA strongly encourages users of acceptable substitutes to apply all comments to their use of these substitutes. In many instances, the comments simply refer to standardized operating practices that have already been identified in existing industry and/or building-code standards. Thus, many of the comments, if adopted, would not require significant changes in existing operating practices for the affected industry.

A. Refrigeration and Air Conditioning

1. Acceptable Substitutes

(a) Furan (C_4F_8O). *Furan is acceptable as a substitute for CFC-114 in retrofits of existing uranium isotope separation processing equipment.* Furan, a perfluorocarbon (PFC), does not contribute to stratospheric ozone depletion. The environmental characteristics of concern for this compound are its extremely high global warming potential and long atmospheric lifetime. Long atmospheric lifetimes make the warming effects of PFCs essentially irreversible. As a result, PFCs are included in the Climate Change Action Plan, which broadly instructs EPA to use section 612 of the CAA, as well as voluntary programs, to control emissions.

Despite these concerns, EPA has listed several PFCs as acceptable replacements for CFC-114 in uranium isotope separation processing. PFCs have physical and thermodynamic properties that make them the only viable alternatives to CFC-114 in this end-use that have been identified as of this time. PFCs offer high dielectric resistance, noncorrosivity, thermal stability, materials compatibility, chemical inertness, low toxicity, and nonflammability.

In this end-use, Furan may offer some advantages over other PFCs currently listed as acceptable. The most significant advantage may be that its vapor pressure is lower which results in lower leak rates and a reduced likelihood that new leaks will be created in the system. Another distinction between Furan and other alternatives examined relates to the relatively low molecular weight of the compound. The low molecular weight relative to the material being processed makes it easy to separate Furan from the process stream.

EPA is listing Furan as acceptable in retrofit and existing uranium isotope separation system designs only. For new equipment designs in this end-use, EPA believes other alternatives may exist or may be developed to meet the needs of newly designed systems. Users of Furan should note that if other alternatives become available, EPA may determine to list Furan as unacceptable due to the availability of other suitable substitutes. If EPA took such action, EPA could also consider whether to grandfather existing uses. EPA's 1994 SNAP rulemaking specifies the criteria EPA would use in making a decision to grandfather existing uses (59 FR 13057; March 18, 1994).

EPA urges industry to continue to search for other long-term alternatives for this end-use that do not have high GWPs and long atmospheric lifetimes. In cases where users must use PFCs, they should make every effort to minimize emissions. Users are also strongly encouraged to recover, recycle, and/or destroy these fluids during servicing and after the end of the equipment's useful life.

B. Foam Blowing

1. Acceptable Substitutes

(a) Saturated Light Hydrocarbons C3-C6. *Saturated Light Hydrocarbons C3-C6 are acceptable as a substitute for HCFC-141b in all foam end-uses, except as a HCFC replacement in spray foam applications. (Spray foam applications fall under the Rigid Polyurethane Spray and Commercial Refrigeration, and Sandwich Panels end-use.). Today's action does not affect previous decisions made by EPA to list specific hydrocarbon blowing agents as acceptable in spray foam. The acceptability of hydrocarbons as HCFC-141b replacements in spray foam applications will be determined on a product-by-product basis until standard industry practices/training become more established.* C3–C6 saturated light hydrocarbons are already acceptable substitutes for CFC-11 in all foam end-uses, and for HCFC-141b in some foam end-uses (rigid polyurethane and polyisocyanurate laminated boardstock, rigid polyurethane appliance, and polyurethane integral skin). Today's action expands the acceptable applications for C3-C6 saturated light hydrocarbons as substitutes for HCFCs in the following applications/end-uses: rigid polyurethane commercial refrigeration and sandwich panels, rigid polyurethane slabstock and other foams, polystyrene extruded insulation boardstock and billet, phenolic insulation board and bunstock, and polyolefin. Hydrocarbon blowing agents have no ozone depletion potential, low global warming potentials, and are low in toxicity. However, these agents are flammable and should be handled with proper precautions.

The flammability of hydrocarbon blowing agents are of particular concern in spray foam applications where a controlled factory environment is not possible. The potential for explosion or fire highlights the need for safety training. While training can not provide an absolute guarantee of safety, EPA believes that a comprehensive training program, if implemented properly, can adequately control risks associated with use of potentially flammable hydrocarbon-blown spray foam systems.

In December 1999, EPA listed Exxsol Blowing Agents, a specific hydrocarbon pentane blend, as acceptable in all foam end-uses (64 FR 68039) including spray foam. Draft training materials for spray foam applications were provided to EPA

and are available through the Air Docket (Docket A–91–42, Category IX–B, Background Documents for Notice 11). EPA may list other hydrocarbon blowing agents as acceptable for spray foam applications if companies wishing to distribute or use hydrocarbons in spray foam applications establish safety training programs. Interested parties should contact EPA.

III. Additional Information

Contact the Stratospheric Protection Hotline at (800) 296–1996, Monday–Friday, between the hours of 10:00 a.m. and 4:00 p.m. (EST). For more information on the Agency's process for administering the SNAP program or criteria for evaluation of substitutes, refer to the SNAP final rulemaking published in the **Federal Register** on March 18, 1994 (59 FR 13044). Notices and rulemakings under the SNAP program, as well as all EPA publications on protection of stratospheric ozone, are available from EPA's Ozone Depletion World Wide Web site at "http://www.epa.gov/ozone/title6/snap/" and from the Stratospheric Protection Hotline whose number is listed above.

List of Subjects in 40 CFR Part 82

Environmental protection, Administrative practice and procedure, Air pollution control, Reporting and recordkeeping requirements.

Dated: March 29, 2000.

Paul Stolpman,

Director, Office of Atmospheric Programs, Office of Air and Radiation.

APPENDIX A: SUMMARY OF ACCEPTABLE DECISIONS

End-use	Substitute	Decision	Comments
Refrigeration and Air Conditioning Sector			
Uranium Isotope Separation Processing (Retrofit).	Furan for CFC–114	Acceptable	EPA urges industry to continue to search for other long-term alternatives for this end-use that do not contain substances with such high GWPs and long atmospheric lifetimes. In cases where users must adopt PFCs, they should make every effort to minimize emissions. Users are also strongly encouraged to recover, recycle, and/or destroy these fluids during servicing and after the end of the equipment's useful life.
Foam Blowing			
All foam end-uses, except as a HCFC–141b replacement in spray foam applications (see comments).	Saturated Light Hydrocarbons C3–C6 for HCFC–141b.	Acceptable	Today's action does not affect previous decisions made by EPA to list specific hydrocarbon blowing agents as acceptable in spray foam. The acceptability of hydrocarbons as HCFC–141b replacements in spray foam applications will be determined on a product-by-product basis until standard industry practices/training become more established. EPA may list other hydrocarbon blowing agents as acceptable for spray foam applications if companies wishing to distribute or use hydrocarbons in spray foam applications establish safety training programs. Interested parties should contact EPA.

Medicare Program; Revisions to Payment Policies Under the Physician Fee Schedule for Calendar Year 2000

AGENCY: Health Care Financing Administration (HCFA), HHS.

ACTION: Correction of final rule with comment period.

SUMMARY: This document corrects technical errors that appeared in the final rule with comment period published in the **Federal Register** on November 2, 1999, entitled "Medicare Program; Revisions to Payment Policies Under the Physician Fee Schedule for Calendar Year 2000."

EFFECTIVE DATE: January 1, 2000.

FOR FURTHER INFORMATION CONTACT: Diane Milstead, (410) 786–3355.

SUPPLEMENTARY INFORMATION:

Background

In FR Doc. 99–28367 of November 2, 1999, (64 FR 59380), there were a number of technical errors. The errors relate to the omission of language discussing payment for pulse oximetry, temperature gradient studies and venous pressure determinations and the removal of the x-ray requirement before chiropractic manipulation; acceptance of the RUC recommendations for work relative value units (RVUs); RUC recommendations for CPT codes 17276 and 95165; a comment on codes in the "zero work" pool; discussion of CPT code 61862 and the correct billing procedures; and regulations text definitions concerning the coverage of prostate screening. Additionally there are various revisions to Addenda B and C.

The provisions in this correction notice are effective as if they had been included in the document published in the **Federal Register** on November 2, 1999, that is, January 1, 2000.

Discussion of Addenda B and C

1. On page 39626 of the July 22, 1999 proposed rule, we discussed revising the work RVUs for certain pediatric surgical services to reflect more appropriate data. We inadvertently omitted these work RVU changes from Addendum B of the November 2, 1999 final rule. Entries on the pages listed below are corrected as follows: Page 59451 for CPT code 21740; page 59476 for CPT codes 38550 and 38555; page 59477 for CPT code 39503; page 59479 for CPT codes 42810 and 42815; page 59480 for CPT codes 43305, 43310, 43312, and 43831; page 59482 for CPT codes 45120 and 45121; page 59483 for CPT codes 46715, 46716, 46730, 46735,

46740, and 46751; page 59484 for CPT codes 47700 and 47701; page 59485 for CPT codes 49215, 49495, 49580, 49600, 49605, and 49606; page 59488 for CPT code 51940; and page 59495 for CPT code 60280. These corrections are reflected in correction number 8 to follow.

2. On page 59421 of the November 2, 1999 final rule, we assigned 5.85 work RVUs to CPT code 61885. We inadvertently omitted this value from Addenda B and C. Entries on the pages listed below are corrected as follows: Page 59497 and page 59582 for CPT code 61885. These corrections are reflected in correction number 9 to follow.

3. In Addendum B, we assigned incorrect status indicators for the following CPT codes: Page 59553 for CPT codes 94760 and 94761; and page 59578 for HCFA Common Procedure Coding System (HCPCS) codes Q0183, Q0184, Q0185, Q0186, Q1001, Q1002, Q1003, Q1004, and Q1005. These corrections are reflected in correction number 10 to follow.

4. On page 39630 of the July 22, 1999 proposed rule, we discussed accepting the RUC work RVU recommendations for five CPT codes that were carrier priced for 1999. The status of these codes would also change from Carrier Priced (C) to Active (A) in the final rule. We inadvertently omitted the work RVUs, status indicator, and correct global indicator changes from Addendum B of the final rule. Entries on the pages listed below are corrected as follows: Page 59473 for CPT code 35500; page 59475 for CPT code 36823; page 59476 for CPT code 38792; page 59495 for CPT 60650 (renumbered from CPT code 56321 for which we accepted the RUC recommendation); page 59476 for CPT code 38120 (renumbered from CPT code 56345 for which we accepted the RUC recommendation); and page 59481 for CPT code 44201 (renumbered from CPT code 56347 for which we accepted the RUC recommendation). In addition, we failed to reflect the practice expense values assigned to these codes. These corrections are reflected in correction 11 to follow.

5. In Addendum B, we inadvertently published incorrect global periods for CPT codes 33968, 47560, 62263, 96570 and 96571. Entries on pages listed below are corrected as follows: Pages 59472 and 59582 for CPT code 33968; page 59484 for CPT code 47560; pages 59497 and 59582 for CPT code 62263; and pages 59556 and 59583 for CPT codes 96570 and 96571. These corrections are reflected in correction number 12 to follow.

6. On page 39629 of the July 22, 1999 proposed rule, we proposed changing ventricular assist device insertions, CPT codes 33975 and 33976, to an XXX global and reducing the work RVUs accordingly. In the November 2, 1999 final rule, in Addendum B, we changed the global periods to XXX but inadvertently failed to reduce the work RVUs as stated in the proposed rule. Entries on the page listed below are corrected as follows: Page 59472 for CPT codes 33975 and 33976. In addition, we failed to show the adjustments to the CPEP data made to accommodate the changing global periods. These corrections are reflected in correction number 13 to follow.

7. In Addendum B, we inadvertently assigned incorrect practice expense and malpractice RVUs to HCPCS codes G0102, G0104, G0105, and incorrect malpractice relative value units for CPT codes 59000 through 59899. Entries on the pages listed below are corrected as follows: Page 59571 for HCPCS codes G0102, G0104, and G0105; pages 59494 and 59495 for CPT codes 59000 through 59899. These corrections are reflected in correction number 14 to follow.

8. On pages 59448 and 59582 of Addendum B, we assigned an incorrect procedure status and global period to CPT code 20979. Entries on pages listed below are corrected as follows: Pages 59448 and 59582 for CPT code 20979. These corrections are reflected in correction number 15 to follow.

9. In Addendum B, we inadvertently assigned incorrect practice expense RVUs for HCPCS codes G0106, G0106–26, G0106–TC, G0120, G0120–26, G0120–TC, G0170, G0171 and CPT code 45378–53. Entries on pages listed below are corrected as follows: Page 59571 for HCPCS codes G0106, G0106–26, G0106–TC, G0120, G0120–26 and G0120–TC; page 59572 and page 59583 for G0170 and G0171; and page 59482 for CPT 45378–53. These corrections are reflected in correction number 16 to follow.

10. We incorrectly denoted that CPT code 40814 was not applicable in a non-facility setting. On page 59477 of Addendum B, the applicable practice expense values are included for the nonfacility setting for CPT code 40814. These corrections are reflected in correction number 17 to follow.

11. In Addendum B, we assigned incorrect practice expense and/or malpractice RVUs for HCPCS codes G0163, G0163–26, G0163–TC, G0164, G0164–26, G0164–TC, G0165, G0165–26, and G0165–TC. Entries on the pages listed below are corrected as follows: Page 59571 for HCPCS codes G0163, G0163–26, and G0163–TC and page 59572 for G0164, G0164–26, G0164–TC, G0165, G0165–26 and G0165–TC. These corrections are reflected in correction number 18 to follow.

Correction of Errors

In FR Doc. 99–28367 of November 2, 1999, make the following corrections:

1. On page 59395, second column, after the sixth full paragraph, add the following:

CPT code 17276, Destruction, malignant lesion, any method scalp, neck, hands, feet, genitalia; lesion diameter over 4.0cm

The RUC forwarded a recommendation for supplies. We accepted the recommendation but deleted what appeared to be duplicated gauze supplies."

2. On page 59398, first column, after the last paragraph insert the following:

"CPT Code 95165, professional services for the supervision and provision of antigens for allergen immunotherapy.

The nature of the RUC's recommendation regarding this code was significantly different than its recommendations regarding other codes. The RUC did not examine the direct expense inputs for code 95165 but commented on the definition of dose used for claims involving this code. Because the direct expense inputs have not been reviewed, we believe that it is not appropriate to revise the practice expense value at this time."

3. On page 59406, in the last line of column two, insert the words ", in Table 7," between the words "95956" and "should".

4. On page 59413, column three, after line 7, add the following:

"Result of Evaluation of Comments:

We are adopting our proposal to bundle payment for these services beginning January 2000 with the exception of code 94762, which we will continue to pay separately when continuous overnight monitoring is medically necessary as a separate procedure.

M. Removal of Requirement for X-ray Before Chiropractic Manipulation

We are conforming our regulations to section 4513(a) of the BBA that deleted the requirement that a spinal subluxation be demonstrated by an x-ray for a chiropractor to receive payment under Medicare Part B for manual manipulation of the spine to correct a subluxation.

Comment: We received one comment requesting we revise § 410.22 (Limitations on services of a chiropractor) to recognize chiropractors as physicians for purposes of ordering and furnishing diagnostic tests and other services and supplies related to manual manipulation for treatment of subluxation of the spine.

Response: We believe that extending the scope of services of the chiropractor to include other services, such as ordering and furnishing diagnostic tests, is inconsistent with section 1861(r) of the Act. Thus, we cannot implement this comment.

Comment: Two commenters expressed concern that the x-ray requirement has been removed without being replaced by clear"

5. On page 59418, in the third column, line 6 from the top, replace "69" with "85", and line 9, replace "31" with "15".

§ 410.39 [Corrected]

6. On page 59440, in the second column, § 410.39 is corrected by adding paragraphs (a)(4) and (a)(5) as follows:

§ 410.39 Prostate cancer screening tests: Conditions for and limitations on coverage.

* * * * *

(a) * * *

(4) A physician for purposes of this provision means a doctor of medicine or osteopathy (as defined in section 1861(r)(1) of the Act) who is fully knowledgeable about the beneficiary, and who would be responsible for explaining the results of the screening examination or test.

(5) A physician assistant, nurse practitioner, clinical nurse specialist, or certified nurse midwife for purposes of this provision means a physician assistant, nurse practitioner, clinical nurse specialist, or certified nurse midwife (as defined in sections 1861(aa) and 1861(gg) of the Act) who is fully knowledgeable about the beneficiary, and who would be responsible for explaining the results of the screening examination or test.

* * * * *

7. On page 59440, in the second and third columns, in § 410.39, paragraphs (b) and (d), add the phrase "as defined in paragraphs (a)(4) or (a)(5) of this section," after the word "midwife."

Addendum B [Corrected]

8. In the table of Addendum B, the following CPT codes are corrected to read as follows:

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 51

[CC Docket No. 96–98; FCC 99–238]

Revision of the Commission's Rules Specifying the Portions of the Nation's Local Telephone Networks that Incumbent Local Telephone Companies Must Make Available to Competitors

AGENCY: Federal Communications Commission.

ACTION: Final rule; correction.

SUMMARY: The Federal Communications Commission published in the **Federal Register** of January 18, 2000 (65 FR 2542) a report and order and final rule, 47 CFR 51.319, specifying which portions of their telephone networks incumbent local exchange carriers must make available to competitive telecommunications carriers as unbundled network elements. The document, as published, inadvertently removed a portion of 52.319 that the Commission added to the rule previously on January 10, 2000 (65 FR 1331) addressing the obligation of incumbent local exchange carriers to make available the high frequency portion of the local loop as a new network element. The purpose of this correction is to add this portion of the rule back into 47 CFR 51.319.

DATES: Effective on April 11, 2000.

FOR FURTHER INFORMATION CONTACT: Jodie Donovan-May, Policy and Program Planning Division, Common Carrier Bureau, at (202) 418–1580.

SUPPLEMENTARY INFORMATION: The Federal Communications Commission published a report and order and final rule in the **Federal Register** of January 18, 2000 (65 FR 2542). As published, this final rule inadvertently removed paragraph (h). The Commission had added paragraph (h) to § 51.310 in a report and order and final rule published in the **Federal Register** of January 10, 2000 (65 FR 1331). This correction adds paragraph (h) back into the Commission's final rule.

Specifically, in rule FR Doc. 00–1036 published on January 18, 2000 (65 FR 2542), make the following correction:

1. On page 2554, in the third column, in § 51.319, paragraph (h) is added to read as follows:

§ 51.319 Specific unbundling requirements.

* * * * *

(h) *High frequency portion of the loop.* (1) The high frequency portion of the loop network element is defined as the frequency range above the voiceband on a copper loop facility that is being used to carry analog circuit-switched voiceband transmissions.

(2) An incumbent LEC shall provide nondiscriminatory access in accordance with § 51.311 of these rules and section 251(c)(3) of the Act to the high frequency portion of a loop to any requesting telecommunications carrier for the provision of a telecommunications service conforming with § 51.230 of these rules.

(3) An incumbent LEC shall only provide a requesting carrier with access to the high frequency portion of the loop if the incumbent LEC is providing, and continues to provide, analog circuit-switched voiceband services on the particular loop for which the requesting carrier seeks access.

(4) *Control of the loop and splitter functionality.* In situations where a requesting carrier is obtaining access to the high frequency portion of the loop, the incumbent LEC may maintain control over the loop and splitter

equipment and functions, and shall provide to requesting carriers loop and splitter functionality that is compatible with any transmissfon technology that the requesting carrier seeks to deploy using the high frequency portion of the loop, as defined in this subsection, provided that such transmission technology is presumed to be deployable pursuant to § 51.230.

(5) *Loop conditioning.* (i) An incumbent LEC must condition loops to enable requesting carriers to access the high frequency portion of the loop spectrum, in accordance with §§ 51.319(a)(3), and 51.319(h)(1). If the incumbent LEC seeks compensation from the requesting carrier for line conditioning, the requesting carrier has the option of refusing, in whole, or in part, to have the line conditioned, and a requesting carrier's refusal of some or all aspects of line conditioning will not diminish its right of access to the high frequency portion of the loop

(ii) Where conditioning the loop will significantly degrade, as defined in § 51.233, the voiceband services that the incumbent LEC is currently providing over that loop, the incumbent LEC must either:

(A) Locate another loop that has been or can be conditioned, migrate the incumbent LEC's voiceband service to that loop, and provide the requesting carrier with access to the high frequency portion of the alternative loop; or

(B) Make a showing to the relevant state commission that the original loop cannot be conditioned without significantly degrading voiceband services on that loop, as defined in § 51.233, and that there is no adjacent or alternative loop available that can be conditioned or to which the customer's voiceband service can be moved to enable line sharing.

(iii) If the relevant state commission concludes that a loop cannot be conditioned without significantly degrading the voiceband service, the incumbent LEC cannot then or subsequently condition that loop to provide advanced services to its own customers without first making available to any requesting carrier the high frequency portion of the newly-conditioned loop.

(6) *Digital loop carrier systems.* Incumbent LECs must provide to requesting carriers unbundled access to the high frequency portion of the loop at the remote terminal as well as the central office, pursuant to § 51.319(a)(2) and § 51.319(h)(1).

(7) *Maintenance, repair, and testing.* (i) Incumbent LECs must provide, on a nondiscriminatory basis, physical loop test access points to requesting carriers at the splitter, through a cross-connection to the competitor's collocation space, or through a standardized interface, such as an intermediate distribution frame or a test access server, for the purposes of loop testing, maintenance, and repair activities.

(ii) An incumbent seeking to utilize an alternative physical access methodology may request approval to do so from the relevant state commission, but must show that the proposed alternative method is reasonable, nondiscriminatory, and will not disadvantage a requesting carrier's ability to perform loop or service testing maintenance or repair.

Federal Communications Commission.

Magalie Roman Salas,

Secretary.

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 73

[DA 00–584; MM Docket No. 98–196; RM–9304, RM–9492, RM–9548, RM–9547]

Radio Broadcasting Services; Texas and Oklahoma

AGENCY: Federal Communications Commission.

ACTION: Final rule.

SUMMARY: In response to counterproposals in this proceeding filed by First Broadcasting Management, LLC, KCYT–FM License Corporation; Gain-Air, Inc., WBAP/KSCS Operating, Ltd., Blue Bonnet Radio, Inc., Heftel Broadcasting Corporation, Metro Broadcasters-Texas, Inc., Jerry Snyder and Associates, Inc., and Hunt Broadcasting, this document granted multiple channel substitutions and changes of community of license in Cross Plains, Allen, Benbrook, Brownwood, Burkburnnett, Campbell, Clifton, Coleman, Commerce, Detroit, Graham, Granbury, Haskell, Kerens, Mason, Jacksboro, McKinney, Muenster, San Saba, Snyder, Terrell, Vernon, Waco, and Wichita Falls, TX; Alva, Anadarko, Antlers, Ardmore, Atoka, Comanche, Dickson, Duncan, Durant, Eldorado, Hugo, and Lone Grove, OK. *See* Supplementary Information. With this action, the proceeding is terminated.

DATES: Effective May 4, 2000.

FOR FURTHER INFORMATION CONTACT: Robert Hayne, Mass Media Bureau (202) 418–2177.

SUPPLEMENTARY INFORMATION: This is a synopsis of the *Report and Order* in MM Docket No. 98–198 adopted March 8, 2000, and released March 21, 2000. The full text of this decision is available for inspection and copying during normal business hours in the FCC Reference Center at Portals II, CY–A257, 445 12th Street, SW, Washington, DC. The complete text of this decision may also be purchased from the Commission's copy contractor, International Transcription Service, Inc., (202) 857–3805, 1231 20th Street, NW, Washington, DC 20036. Specifically, this document substitutes Channel 293A for Channel 294C at Muenster, Texas, and modifies the license of Station KXGM–FM to specify operation on Channel 294C. In order to accommodate Channel 294C at Muenster, it substitutes Channel 294C for Channel 296C1 at Granbury, Texas, reallots Channel 296C1 to Benbrook, Texas, and modifies the license of Station KDXT to specify operation on Channel 296C1 at Benbrook. It also substitutes Channel 294C2 for Channel 282C2 at Detroit, Texas, and substitutes Channel 284A for Channel 272A at Antlers, Oklahoma. It also substitutes Channel 295A for Channel 296A at McKinney, Texas, reallots Channel 296A to Campbell, Texas, and modifies the license of Station KZDF to specify operation on Channel 296A at Campbell. It substitutes Channel 294A for Channel 296C3 at Lone Grove, Oklahoma, and modifies the license of Station KYNZ to specify operation on Channel 263C3. To accommodate Channel 263C3 at Lone Grove, it substitutes Channel 296C3 for Channel 292A at Durant, Oklahoma, and modifies the license of Station KLBC to specify operation on Channel 292A. In order to accommodate Channel 296A at Campbell, it substitutes Channel 296A for Channel 295A at Terrell, Texas, reallots Channel 295A to Kerens, Texas, and modifies the license of Station KZDL to specify operation on Channel 295A at Kerens. The Channel 296C1 allotment at Benbrook requires the substitution of Channel 296C3 for Channel 234C3 at Graham, Texas, and modification of the license of Station KWKQ to specify operation on Channel 234C3; the substitution of Channel 296C3 for Channel 272C3 at Coleman, Texas, and the modification of the license of Station KSTA–FM to specify operation on Channel 272C3; and the substitution of Channel 296A for Channel 277A at Waco, Texas, and the modification of the license of Station KWBU to specify operation on Channel 277A. In order to allot Channel 277A at Waco, it substitutes Channel 277C3 for

Channel 281C3 at Clifton, Texas, and modifies the license of Station KWOW to specify operation on Channel 281C3. In order to allot Channel 281C3 to Clifton, it substitutes Channel 281C1 for Channel 245C1 at Brownwood, Texas, and modifies the license of Station KXYL–FM to specify operation on Channel 245C1. In order to allot Channel 245C1 to Brownwood, it substitutes Channel 246A for Channel 291A at San Saba, Texas, and modifies the license of Station KBAL–FM to specify operation on Channel 291A. It also substitutes Channel 277C3 for Channel 277C at Commerce, Texas, reallots Channel 277C to Allen, Texas, and modifies the license of Station KEMM to specify operation on Channel 277C at Allen. In order to allot Channel 277C to Allen, it substitutes Channel 277C1 for Channel 272C1 at Wichita Falls, Texas, and modifies the license of Station KWFS to specify operation on Channel 272C1; and substitutes Channel 276C2 for Channel 271A at Atoka, Oklahoma, and modifies the license of Station KHKC to specify operation on Channel 298A. In order to allot Channel 272C1 to Wichita Falls, it substitutes Channel 273A for Channel 280A at Wichita Falls, Texas, and modifies the license of Station KQXC to specify operation on Channel 280; substitutes Channel 272A for Channel 276A at Vernon, Texas, and modifies the license of Station KVWC to specify operation on Channel 276A; substitutes Channel 272A for Channel 246A at Duncan, Oklahoma, and modifies the license of Station KKEN to specify operation on Channel 246A. In order to allot Channel 246A to Duncan, it substitutes Channel 246A for Channel 287A at Comanche, Oklahoma, and modifies the license of Station KDDQ to specify operation on Channel 287A. In order to allot Channel 287A to Comanche, it substitutes Channel 284C for Channel 284C1 at Burkburnett, Texas, and modifies the license of Station KYYI to specify operation on Channel 284C1. In order to allot Channel 280A to Wichita Falls, it substitutes Channel 279C1 for Channel 278C at Anadarko, Oklahoma, and modifies the license of Station KPRT to specify operation on Channel 278C. In order to allot Channel 278C to Anadarko, it substitutes Channel 278C1 for Channel 248C2 at Alva, Oklahoma; and substitutes Channel 278C3 for Channel 224A at Dickson, Oklahoma. It also substitutes Channel 237A for Channel 238A at Jacksboro, TX, and modifies the construction permit of Station KJKB to specify operation on Channel 238A. In order to allot Channel 238A to Jacksboro, it substitutes Channel 238C for Channel 246C1 at Haskell, Texas, and modifies the license of Station KVRP to specify operation on Channel 246C1. In order to allot Channel 246C1 to Haskell, it substitutes Channel 246A for Channel 255A at Snyder, Texas, and substitutes Channel 246A for Channel 245A at Eldorado, Oklahoma. *See* 63 FR 63016, November 10, 1998. The reference coordinates for the Channel 296C1 allotment at Benbrook, Texas, are 32–26–17 and 97–49–06. The reference coordinates for the Channel 296A allotment at Campbell, Texas, are 33–12–41 and 95–51–39. The reference coordinates for the Channel 296C3 allotment at Lone Grove, Oklahoma, are 34–15–01 and 97–07–42. The reference coordinates for the Channel 292A allotment at Durant, Oklahoma, are 34–00–07 and 96–25–19. The reference coordinates for the Channel 297C2 allotment at Lawton, Oklahoma, are 34–37–35 and 98–19–05. The reference coordinates for the Channel 295A allotment at Kerens, Texas, are 32–08–15 and 96–19–10. The reference coordinates for the Channel 234C3 allotment at Graham, Texas, are 33–02–39 and 98–46–27. The reference coordinates for the Channel 272C3 allotment at Coleman, Texas, are 31–51–16 and 99–25–36. The reference coordinates for the Channel 277A allotment at Waco, Texas, are 31–31–51 and 97–09–10. The reference coordinates for the Channel 281C3 allotment at Clifton, Texas, are 31–47–40 and 97–27–17. The reference coordinates for the Channel 245C1 allotment at Brownwood, Texas, are 31–42–16 and 99–00–05. The reference coordinates for the Channel 291A allotment at San Saba, Texas, are 31–11–26 and 98–42–55. The reference coordinates for the Channel 277C allotment at Allen, Texas, are 33–33–36 and 96–57–35. The reference coordinates for the Channel 272C1 allotment at Wichita Falls, Texas, are 34–03–57 and 98–45–05. The reference coordinates for the Channel 271A allotment at Atoka, Oklahoma, are 34–29–22 and 96–08–07. The reference coordinates for the Channel 280A allotment at Wichita Falls, Texas, are 33–53–50 and 98–32–33. The reference coordinates for the Channel 276A allotment at Vernon, Texas, are 34–09–12 and 99–16–09. The reference coordinates for the Channel 246A allotment at Duncan, Oklahoma, are 34–03–43 and 97–58–05. The reference coordinates for the Channel 287A allotment at Comanche, Oklahoma, are 34–22–50 and 98–06–02. The reference coordinates for the Channel 284C1 allotment at Burkburnett, Texas, are 34–05–35 and 98–52–44. The reference coordinates for the Channel 278C allotment at Anadarko, Oklahoma, are 35–23–18 and 98–37–41. The reference coordinates for the Channel 248C2 allotment at Alva, Oklahoma, are 36–58–32 and 98–42–21. The reference coordinates for the Channel 298C3 allotment at Wellington, Texas, are 34–49–13 and 100–14–29. The reference coordinates for the Channel 224A allotment at Dickson, Oklahoma, are 34–07–17 and 96–58–49. The reference coordinates for the Channel 238A allotment at Jacksboro, Texas, are 33–19–53 and 98–10–54. The reference coordinates for the Channel 246C1 allotment at Haskell, Texas, are 33–09–40 and 99–48–57. The reference coordinates for the Channel 249A allotment at Snyder, Texas, are 32–43–04 and 100–55–02. The reference coordinates for the Channel 245A allotment at Eldorado, Oklahoma, are 34–28–24 and 99–38–54. The reference coordinates for the Channel 239C1 allotment at Ardmore, Oklahoma, are 34–09–42 and 97–09–11. The reference coordinates for the Channel 240C1 allotment at Mineral Wells, Texas, are 32–39–15 and 98–11–58. The reference coordinates for the Channel 237C2 allotment at Howe, Texas, are 33–31–09 and 96–47–05. The reference coordinates for the Channel 282C2 allotment at Detroit, Texas, are 33–47–21 and 95–33–07. The reference coordinates for the Channel 272A allotment at Antlers, Oklahoma, are 34–18–05 and 95–33–06.

List of Subjects in 47 CFR Part 73

Radio Broadcasting.

Part 73 of the Code of Federal Regulations is amended as follows:

PART 73—[AMENDED]

1. The authority citation for Part 73 continues to read as follows:

Authority: Sections 303, 48 Stat., as amended, 1082; 47 U.S.C. 154, as amended.

§ 73.202(b) [Amended]

2. Section 73.202(b), the Table of FM Allotments under Texas, is amended, as follows:

a. By removing Channel 293A and adding Channel 294C at Muenster.

b. By removing Granbury, Channel 294C and adding Benbrook, Channel 296C1.

c. By removing McKinney, Channel 295A and adding Campbell, Channel 296A.

d. By removing Terrell, Channel 296A and adding Kerens, Channel 295A.

e. By removing Channel 296C3 and adding Channel 234C3 at Graham.

f. By removing Channel 296C3 and adding Channel 272C3 at Coleman.
g. By removing Channel 296A and adding Channel 277A at Waco.
h. By removing Channel 277C3 and adding Channel 281C3 at Clifton.
i. By removing Channel 281C1 and adding Channel 245C1 at Brownwood.
j. By removing Channel 246A and adding Channel 291A at San Saba.
k. By removing Commerce, Channel 277C3 and adding Allen, Channel 277C.
l. By removing Channel 277C1 and Channel 273A and adding Channel 272C1 and Channel 280A at Wichita Falls.
m. By removing Channel 272A and adding Channel 276A at Vernon.
n. By removing Channel 284C and adding Channel 284C1 at Burkburnett.
o. By removing Channel 278C3 and adding Channel 298C3 at Wellington.
p. By removing Channel 237A and adding Channel 238A at Jacksboro.
q. By removing Channel 238C and adding Channel 246C1 at Haskell.
r. By removing Channel 246A and adding Channel 255A at Snyder.
s. By removing Channel 294C2 and adding Channel 282C2 at Detroit.

3. Section 73.202(b), The Table of FM Allotments under Oklahoma, is amended, as follows:
a. By removing Channel 294A and adding Channel 296C3 at Lone Grove.
b. By removing Channel 296C3 and adding Channel 292A at Durant.
c. By removing Channel 276C2 and adding Channel 271A at Atoka.
d. By removing Channel 272A and adding Channel 246A at Duncan.
e. By removing Channel 246A and adding Channel 287A at Comanche.
f. By removing Channel 279C1 and adding Channel 278C at Anadarko.
g. By removing Channel 278C1 and adding Channel 248C2 at Alva.
h. By removing Channel 278C3 and adding Channel 224A at Dickson.
i. By removing Channel 246A and adding Channel 245A at Eldorado.
j. By removing Channel 284A and adding Channel 272A at Antlers.

Federal Communications Commission.

John A. Karousos,

Chief, Allocations Branch, Policy and Rules Division, Mass Media Bureau.

[FR Doc. 00–8851 Filed 4–10–00; 8:45 am]

BILLING CODE 6712–01–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 679

[Docket No. 991228352–0012–02; I.D. 040500A]

Fisheries of the Exclusive Economic Zone Off Alaska; Rock Sole by Catcher Vessels Using Trawl Gear in the Bering Sea and Aleutian Islands

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Closure.

SUMMARY: NMFS is closing directed fishing for rock sole by catcher vessels that are non-exempt under the American Fisheries Act (AFA) in the Bering Sea and Aleutian Islands management area (BSAI). This action is necessary to prevent exceeding the interim 2000 BSAI AFA catcher vessel sideboard amount of rock sole.

DATES: Effective 1200 hrs, Alaska local time (A.l.t.), April 6, 2000, until 2400 hrs, A.l.t., December 31, 2000.

FOR FURTHER INFORMATION CONTACT: Andrew Smoker, 907–586–7228.

SUPPLEMENTARY INFORMATION: NMFS manages the groundfish fishery in the BSAI according to the Fishery Management Plan for the Groundfish Fishery of the Bering Sea and Aleutian Islands Area under authority of the Magnuson-Stevens Fishery Conservation and Management Act. Regulations governing fishing by U.S. vessels in accordance with the FMP appear at subpart H of 50 CFR part 600 and 50 CFR part 679.

The amount of the interim 2000 BSAI AFA catcher vessel rock sole sideboard harvest limit was established as 2,921 metric tons (mt) in accordance with § 679.63 (b)(1)(ii)(A) by the Emergency Interim Rule to Implement Major Provisions of the American Fisheries Act (65 FR 4520, January 28, 2000).

In accordance with § 679.20(d)(1)(iv), the Administrator, Alaska Region, NMFS (Regional Administrator), has determined that the sideboard harvest limit of rock sole for non-exempt AFA catcher vessels will be reached. Therefore, the Regional Administrator is establishing a directed fishing allowance of 2,500 mt, and is setting aside the remaining 421 mt as bycatch to support other anticipated groundfish fisheries. In accordance with § 679.20(d)(1)(iii), the Regional Administrator finds that this directed fishing allowance will soon be reached. Consequently, NMFS is closing directed fishing for rock sole by non-exempt AFA catcher vessels in the BSAI.

Maximum retainable bycatch amounts may be found in the regulations at § 679.20(e) and (f).

Classification

This action responds to the best available information recently obtained from the fishery. It must be implemented immediately in order to prevent exceeding the interim 2000 BSAI AFA catcher vessel sideboard of rock sole in the BSAI. A delay in the effective date is impracticable and contrary to the public interest. The rock sole AFA catcher vessel sideboard harvest limit directed fishing allowance will soon be reached. Further delay would only result in exceeding the harvest limitation. NMFS finds for good cause that the implementation of this action can not be delayed for 30 days. Accordingly, under 5 U.S.C. 553(d), a delay in the effective date is hereby waived.

This action is required by § 679.20 and is exempt from review under E.O. 12866.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: April 5, 2000.

George H. Darcy,

Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

Proposed Rules

Federal Register
Vol. 65, No. 70
Tuesday, April 11, 2000

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

FEDERAL ELECTION COMMISSION

11 CFR Parts 101, 102, 104, 109, 114, 9003, and 9033

[Notice 2000–7]

Electronic Filing of Reports by Political Committees

AGENCY: Federal Election Commission.

ACTION: Notice of proposed rulemaking.

SUMMARY: The Federal Election Commission is seeking comment on proposed rules to implement a mandatory electronic filing system for reports of campaign finance activity filed with the agency. Political committees and other persons would be required to file electronically when either their total contributions or total expenditures within a calendar year exceed $50,000. The Commission has had a voluntary electronic filing system in place since 1996. Voluntary electronic filing would still be an option for political committees and persons who do not exceed the $50,000 threshold. This mandatory system is designed to reflect recent changes in the Federal Election Campaign Act of 1971. Please note that the draft rules that follow do not represent a final decision by the Commission on the issues presented by this rulemaking. Further information is provided in the supplementary information that follows.

DATES: Comments must be received on or before May 11, 2000.

ADDRESSES: All comments should be addressed to Rosemary C. Smith, Assistant General Counsel, and must be submitted in either written or electronic form. Written comments should be sent to the Federal Election Commission, 999 E Street, NW, Washington, DC 20463. Faxed comments should be sent to (202) 219–3923, with printed copy follow-up to insure legibility. Electronic mail comments should be sent to Electronfile@fec.gov. Commenters sending comments by electronic mail should include their full name, electronic mail address and postal service address within the text of their comments. Comments that do not contain the full name, electronic mail address and postal service address of the commenter will not be considered. The Commission will make every effort to have public comments posted on its web site within ten business days of the close of the comment period.

FOR FURTHER INFORMATION CONTACT: Ms. Rosemary Smith, Assistant General Counsel, or Cheryl Fowle, Attorney, 999 E Street, NW, Washington, DC 20463, (202) 694–1650 or (800) 424–9530.

SUPPLEMENTARY INFORMATION: On September 29, 1999, Public Law 106–58 amended the Federal Election Campaign Act of 1971 ("the Act" or "FECA") to require, *inter alia*, that the Commission draft rules requiring persons who are required to file reports, designations or statements with the agency to "maintain and file a designation, statement or report for any calendar year in electronic form accessible by computers if the person has, or has reason to expect to have, aggregate contributions or expenditures in excess of a threshold amount determined by the Commission * * *" 113 Stat. 476 (1999). The new law requires this system to be in place for reports covering periods after December 31, 2000.

The new law also requires the Commission to amend its regulations to add a system of administrative fines for violations of reporting requirements and to require candidates and their authorized committees to aggregate and report data on an election cycle-to-date rather than a calendar year-to-date basis. These two topics are being addressed in two separate rulemakings.

Current Commission regulations at 11 CFR 104.18 invite committees to voluntarily file electronically regardless of their level of financial activity. The new law maintains the voluntary system for political committees or persons who do not exceed, or who do not have reason to expect to exceed, the threshold of financial activity.

The goals of the electronic filing system include more complete and rapid on-line access to reports on file with the Commission, reduced paper filing and manual processing, and more efficient and cost-effective methods of operation for filers and for the Commission. The amendment to the FECA requires that the Commission make electronically filed reports, designations or statements available on its web site not later than 24 hours after the Commission receives the filing. Currently, reports that are filed under the voluntary system of electronic filing are posted in viewable form on the Commission's web site within five minutes and detailed data are available in the Commission's databases within 24 to 48 hours (depending on the time of receipt). In contrast, under the current paper filing system, the time between receipt of a report and its appearance in viewable form on the Commission's web site is 48 hours. Additionally, while some summary data is available in the Commission's indexes within 48 hours, it can take as long as 30 days before the detailed data filed on paper is available in those databases. Thus, the greater the number of pages that are filed electronically, the greater the volume of data that is almost instantly available. Additionally, decreasing the volume of paper filed will decrease the processing time of the reports that are filed on paper, making them more rapidly available in the Commission's databases.

Before such a system for mandatory electronic filing can be successfully implemented, two main factors must be considered. First, what is the optimal threshold that maximizes the disclosure benefits of electronic filing yet does not encumber the regulated community? Second, what are the technical and formatting requirements for electronically filed reports? The Commission seeks comments on both of these concerns.

Threshold

Proposed paragraph (a) of 11 CFR 104.18 states that political committees and other persons who are required to file with the agency must file electronically if they have, or have reason to expect to have, aggregate contributions or expenditures exceeding $50,000 in a calendar year.

The Commission proposes $50,000 as the appropriate threshold for all political committees and other persons because, as discussed below, data from the 1996 and 1998 election cycles [1]

[1] Please note that the data used to calculate these percentages are approximated from the Commission's databases. For the purpose of determining the appropriate threshold, the following approximations were used: For authorized committees: Contributions are the total

Continued

indicate that at that threshold, the goals of the statutory amendment are optimized and the effect on the political committees and other persons is minimized.

A. Candidates and Authorized Committees

Under the proposed rules, candidates and their authorized committees who file with the agency would be required to file electronically if they have, or have reason to expect to have, aggregate contributions or expenditures exceeding $50,000 in a calendar year.

Data from the 1996 and 1998 election cycles show that this threshold would make 98% to 98% [2] of all financial activity reported by House and Presidential campaign committees almost immediately available on both the FEC's web site and in the agency's on-line databases. The historical information shows that of the 1,837 to 2,231 authorized committees filing with the Commission between 1995 and 1998, 31% to 44% of the committees (599 to 982 committees) had aggregate contributions or expenditures exceeding $50,000. These authorized committees filed 43% to 73% of the reports (2,162 to 12,646 reports), and 73% to 88% (66,569 to 282,339 pages) of the total number of pages filed by authorized committees. If 73% to 88% of the total number of pages filed by authorized committees is filed electronically, the Commission can manually process the remaining 12% to 29% of the pages more quickly to substantially reduce the amount of time before the information is available in Commission databases.

The amendments to the FECA require that those who meet the threshold must file "designations, statements or reports" electronically. Therefore, under the proposed regulations, any candidate who expects to have aggregate contributions or expenditures exceeding $50,000 would be required to electronically file his or her Statement of Candidacy (FEC Form 2), and his or her authorized committee would be required to file its Statement of Organization (FEC Form 1) electronically. Additionally, under the proposed rules, all committees that have Internet web sites would be required to provide the address of their web sites as part of their address on Form 1. Committees that are required to file electronically, and that have electronic mail addresses, would be required to include their electronic mail addresses as part of the address on Form 1.

Please note, however, that the mandatory electronic filing provisions of Public Law 106–58 and new paragraph (a) of 11 CFR 104.18 apply only to those candidates and authorized committees who are required to file reports, statements and designations with the FEC. Therefore, mandatory electronic filing does not apply to candidates for United States Senate because Senate candidates must file with the Secretary of the Senate. Senate candidates are, however, invited to electronically file an **unofficial** copy of their reports, designations and statements with the FEC for the purposes of faster disclosure.

Furthermore, under current Commission regulations, as a condition of receiving public funding Presidential candidates are required to agree to file electronically if their data is computerized. 11 CFR 9003.1(b)(11) and 9033.1(b)(13). In order for primary candidates to receive matching funds, they must raise $100,000 ($5,000 in each of 20 states). The Commission proposes removing electronic filing as a condition for receiving public funding because these federally financed Presidential candidates will already have exceeded the $50,000 threshold and will already be filing electronically. Consequently, 11 CFR 9003.1(b)(11) and 9033.1(b)(13) would be deleted.

If a $50,000 threshold is adopted, the effect on candidates and authorized committees would be minimal since, based on the 1996 and 1998 election cycle data, only the largest 30% to 40% of registered authorized committees would be required to file electronically.

B. Party Committees

The Commission is proposing that party committees be required to file electronically if they have, or have reason to expect to have, aggregate contributions or expenditures exceeding $50,000 in a calendar year.

At the $50,000 level, historical data from the 1996 and 1998 election cycles show that of the 373 to 451 party committees filing with the Commission, 36% to 41% of them (142 to 182 committees) consistently disclosed over 99% (between $213 million and $459 million) of party activity. Of the total number of pages filed by party committees, 93% to 96% (71,598 to 210,242 pages) would have been filed electronically, thereby greatly decreasing the amount of paper processing by the committees and the FEC and considerably increasing the amount of data that would be almost immediately available.

Based on the 1996 and 1998 election cycle data, the impact on party committees should be relatively small since only 36% to 41% of all party committees registered with the Commission during those election cycles would have been required to file electronically. Thus, the smallest 59% to 64% of party committees could continue to file paper reports.

C. Nonconnected Committees

The Commission is proposing that nonconnected committees be required to file electronically if they have, or have reason to expect to have, aggregate contributions or expenditures exceeding $50,000 in a calendar year.

At the $50,000 level, in the 1996 and 1998 election cycles, of the 840 to 933 nonconnected committees filing with the Commission, 15% to 22% of them (128 to 202 committees) disclosed 88% to 93% of the activity by nonconnected committees (representing approximately $29 million to $65 million of the total $33 million to $70 million disclosed by nonconnected committees). Additionally at that level, 59% to 68% (16,794 to 44,907 pages) of the total number of pages filed by nonconnected committees would have been filed electronically, causing a significant decrease in paper processing and a corresponding increase in the amount of data more rapidly disclosed.

The number of nonconnected committees affected should be relatively small since the historical data from the 1996 and 1998 election cycles show that only the largest 15% to 22% of the nonconnected committees registered with the Commission would have been required to file electronically.

D. Separate Segregated Funds

The Commission is proposing that the separate segregated funds (SSFs) of corporations and labor organizations be required to file electronically if they have, or have reason to expect to have, aggregate contributions or expenditures exceeding $50,000 in a calendar year.

At the $50,000 level, in the 1996 and 1998 election cycles, of the 2,938 to 2,976 SSFs registered with the Commission, 22% to 28% of them (632

---

of individual contributions plus party contributions plus other committee contributions plus candidate contributions plus candidate loans; and expenditures were considered to be operating expenditures. For unauthorized committees: Contributions consist of total receipts minus nonfederal transfers in; and expenditures are equal to total disbursements minus the nonfederal share of expenditures.

[2] Because the data was taken over a period of two election cycles that included a Presidential-election year (1996), a midterm election year (1998) and two non-election years (1995 and 1997), the number of committees, reports and pages filed and financial figures vary—increasing in election years, descreasing in non-election years. The percentages and numbers used in this document are the high and low figures of the four year span. Please note that the high or low percentage may have come from one year and the high or low actual number may have come from a different year.

to 825 committees) disclosed 85% to 89% ($138 million to $211 million) of the total SSF financial activity. This represents 63% to 68% (between 94,670 and 110,864 pages) of the total number of pages filed by SSFs. Based on historical data, the decrease in the amount of paper filed would represent approximately 100,000 pages of data and hundreds of millions of dollars available almost instantly on the Commission's web site and in the agency's databases.

The impact on SSFs should be small considering that, in the 1996 and 1998 election cycles, only 22% to 28% of all SSFs registered with the Commission would have been required to file electronically. Thus, the smallest 72% to 78% (approximately 2,300 committees) of SSFs would continue to have the option of filing paper reports.

E. Other Persons

The amendment to the FECA requires that "a person" who is required to file under the Act must file electronically if he or she exceeds, or has reason to expect to exceed, the threshold. Therefore, in addition to the committees discussed above, the Commission proposes to apply the $50,000 threshold to any other persons defined in 11 CFR 110.10 who are required to file a "designation, statement or report" with the Commission (e.g., individuals making independent expenditures in excess of $50,000, or corporations or labor organizations making communications to their restricted classes at a cost of more than $50,000). Thus, under the proposed rules, these other persons would be required to file electronically if they have, or have reason to expect to have, aggregate contributions or expenditures exceeding $50,000 in a calendar year.

Data from the 1996 and 1998 election cycles show that the between 7% and 19% (between 2 and 24 persons) of other persons filing with the Commission had aggregate contributions or aggregate expenditures exceeding $50,000 in a calendar year. During that four year period, those persons who exceeded the threshold accounted for 33% and 50% of all activity by other persons in the non-election years, and as high 94% of all activity by other persons in the Presidential election year and 91% in the midterm election year.

The effect of the proposed rule on this category of filer should be small because historical data show that the number of these other filings is very small. For example, in the 1995 and 1997 (the non-election years), only two of 28 and 23 filers (less than 10% in each case), respectively, would have been required to file electronically under the proposed rules. In 1996 and 1998 (1996 being a Presidential election year), the total numbers of filers who would have been affected were 24 of 128 filers (19%) and 13 of 75 filers (17%), respectively.

F. All Committees

The historical data for the 1996 and 1998 election cycles show that if a $50,000 mandatory electronic filing threshold had been in place at that time, hundreds of thousands of pages would have been filed electronically, dramatically decreasing the amount of paper processed by both committees and the Commission. Additionally, the amount of financial data that would have been almost instantly disclosed by electronic filing would have been between $544 million and $1.2 billion.

Please note that the amendments to the FECA require that those who meet the threshold must file "designations, statements or reports" electronically. Therefore, under the proposed regulations, committees that have reason to expect to have aggregate contributions or expenditures exceeding $50,000 would be required to electronically file their Statements of Organization (Form 1). Additionally, under the proposed rules, all committees that have official web sites would be required to include the Internet address of their web sites as part of their address on Form 1. Committees that are required to file electronically and that have electronic mail addresses would be required to provide their electronic mail addresses as part of the address on Form 1.

The Commission seeks comments on thresholds both lower and higher for all committees and other persons. For example, should there be different thresholds for different types of committees? Should there be only one threshold but at a level different than that proposed? Should separate segregated funds of corporations and labor organizations have a lower threshold because their administrative and solicitation costs may be paid by their connected organization?

G. Joint Fundraising Representatives

The Commission proposes that joint fundraising representatives (*see* 11 CFR 102.17) be required to file electronically if they have, or have reason to expect to have, total contributions or total expenditures exceeding the $50,000 threshold. Thus, if, for example, a joint fundraiser raises total contributions of $65,000 that it divides equally between the three participating committees, including itself, the joint fundraising representative would be required to file electronically.

H. "Have Reason To Expect To Have Aggregate Contributions or Expenditures" Above the Threshold

The Commission requests comments on how to implement the statutory requirement that persons file electronically if they "* * * have reason to expect to have * * *" aggregate contributions or expenditures above the threshold amount. Two tests that are included in the proposed rules at 11 CFR 104.18(a)(3) are—(1) a committee should expect to have financial activity above the $50,000 threshold if it exceeded this amount during the comparable year of the previous election cycle; or (2) a committee should expect to have financial activity exceeding the threshold if the committee's aggregate contributions or expenditures exceeded the threshold during the previous calendar year.

Comments are sought on three other possible approaches that are not included in the proposed rules—(1) Should the Commission base the expectation solely on the committee's or person's own projections during the year? If so, at what point during the year will political committees and other persons be expected to make the projection? Should it be a one-time forecast at the beginning of the year or a rolling projection that changes as necessary throughout the calendar year? (2) Should new committees having no historical data on which to base a projection, base their expectations of aggregate contributions and expenditures on historical data for similarly situated committees in the previous election cycle; or should such new committees be presumed to have no reason to expect to exceed the threshold until such time as they actually do so? (3) Should a committee have reason to expect to exceed the threshold if it raises or spends more than one quarter of the proposed yearly threshold in the first calendar quarter, or if it raises or spends more than half the threshold in the first half of the calendar year? For example, should a committee be required to file electronically if it raises $30,000 in the first calendar quarter on the grounds that it has reason to expect to exceed the $50,000 threshold within the calendar year?

I. Cash on Hand and Outstanding Debt

The Commission proposes that for purposes of the contribution and expenditure thresholds, cash on hand or debt that is outstanding at the beginning of the calendar year would not be

included. Thus, the calculation in the proposed rules that follow takes into account only those contributions received or expenditures made, or expected to be received or made, within the calendar year.

J. Filing for the Calendar Year

The statutory amendment to the Act requires that persons who are required to file with the Commission must "maintain and file a designation, statement or report for any calendar year in electronic form accessible by computers if the person has, or has reason to expect to have, aggregate contributions or expenditures in excess of a threshold amount determined by the Commission * * *" 113 Stat. 476 (1999). The Commission seeks comments on whether the threshold should be calculated on a "per election cycle basis" rather than on the proposed "per calendar year" basis. If so, should an election cycle threshold be used for authorized committees only or for all committees and other persons? Please note that for House candidates, the election cycle will generally cover approximately two years, while it may extend to over four years for Presidential candidates. *See* 11 CFR 100.3(b).

The proposed amendments to 11 CFR 104.18 would not require persons to electronically refile any reports, statements or designations that were properly filed on paper earlier in the calendar year or earlier in the election cycle. For example, if an authorized committee files its April quarterly report on paper because it has not exceeded and does not expect to exceed the appropriate threshold and, if in June it exceeds the $50,000 threshold, the committee would have to electronically file its July quarterly report, but would not be expected to go back and electronically refile the April report.

In the current voluntary electronic filing regulations at 11 CFR 104.18(a), electronic filers are required to continue filing electronically for the remainder of the calendar year unless the Commission determines that an extraordinary and unforeseen circumstance makes electronic filing impracticable. The Commission seeks comment on whether a similar provision allowing a committee or other person to stop filing electronically within the calendar year due to extraordinary and unforeseen circumstances should be included in the proposed rules for mandatory electronic filers.

Technical Issues

A. Computerization of Data and FECFile Software

The Commission's computer systems are capable of receiving all reports that might be required under the proposed regulations. However, the Commission's FECFile software, which is available from the agency at no cost, does not currently generate all required forms. For example, the FECFile software does not currently generate FEC Forms 1 and 2 (Statement of Organization and Statement of Candidacy, respectively), FEC Form 3P for Presidential candidates, FEC Form 4 for Convention and Host Committees to report their receipts and disbursements, FEC Form 5 for persons other than political committees reporting independent expenditures, or FEC Form 7 for reporting corporate and labor organization communications to their restricted classes. The Commission plans to update the FECFile software to generate FEC Forms 1 and 2 by January 1, 2001, and anticipates that FECFile will generate FEC Forms 3P, 4, 5 and 7 in the near future.

The Commission seeks comments as to whether those committees filing comments on this rulemaking currently use a computer to maintain records, prepare reports, and/or file reports. In particular, would the filing threshold established by the proposed rules necessitate the purchase of computer hardware?

B. Formatting and Standardization Requirements

The Commission proposes to maintain the standardization requirements that are present in the current voluntary electronic filing system. When the voluntary electronic filing system was designed, the Commission created "The Federal Election Commission's Electronic Filing Specifications Requirements" (EFSR) document and invited comment on that document at that time. The EFSR is available at no charge on the Commission's web site. The Commission is currently updating the EFSR and intends to use specifications embodied in the updated EFSR for this mandatory electronic filing program. The Commission again requests comment on the EFSR from software vendors and other interested parties based on their experience with the voluntary electronic filing system. Commenters should submit their comments on the EFSR in the manner requested in the **ADDRESSES** section of this notice. Technical comments on the EFSR will be forwarded to the Data Systems Development Division.

Please note that the validation program that checks incoming reports is also being updated. For example, upon completion of this update, the program will no longer accept forms on which the figures disclosed within the report do not add up to the figures reported on the detailed summary page and forms indicating the incorrect type of report.

Additional Issues

A. Filing by Letter

Proposed changes to the Commission's regulations would require that some statements required by the Act that can currently be filed by letter must be electronically filed using the proper FEC form when the threshold has been exceeded or is expected to be exceeded. The statements that would be affected are: (1) The Statement of Candidacy, FEC Form 2 (11 CFR 101.1(a)); (2) Amendments to the Statement of Organization, FEC Form 1 (11 CFR 102.2(a)(2)); (3) Individuals reporting independent expenditures,[3] FEC Form 5 (11 CFR 109.2); and (4) Qualified Nonprofit Corporations reporting independent expenditures,[4] FEC Form 5 (11 CFR 109.2 and 114.10(e)). The Commission proposes adding language to clarify that only those committees and other persons who are not required to file electronically under the proposed regulations may file these statements by letter. Currently, FEC Forms 1, 2 and 5 are not available on FECFile software. *But see* "Technical Issues," above. The Commission requests comments on this proposed change.

B. Non-filers

The statute makes electronic filing mandatory for those persons who exceed or who expect to exceed the threshold set by the Commission. Consequently, political committees and other persons who are required to file electronically, but who fail to do so, may be subject to the Commission's enforcement process for non-filers and may have their names published as non-filers. This includes those who are required to file electronically but who file paper reports instead. Additionally, in 1999, Congress amended 2 U.S.C. 437g(a)(4) and (6)(A) to authorize the Commission to impose an administrative fine on late and non-

[3] Note that, under 11 CFR 104.4(c) and 105.4, independent expenditures in favor or opposing candidates for the U.S. Senate must be filed with the Secretary of the Senate and, therefore, would not be subject to this proposed regulation.

[4] *Ibid.*

filers pursuant to a fine schedule. The Commission is in the process of developing a new program to implement the amendment.

C. Comments From Other Federal, State and Local Jurisdictions

Finally, the Commission is interested in the experience of other Federal, state and local jurisdictions that have implemented a financial threshold based mandatory electronic filing program. What issues were considered in setting the threshold amounts? What were the potential and real barriers to the committees affected?

D. Conclusion

The Commission welcomes comments on any other issues raised by the new statutory requirements regarding mandatory electronic filing.

Certification of No Effect Pursuant to 5 U.S.C. 605(b) (Regulatory Flexibility Act)

These proposed rules if promulgated, will not have a significant economic impact on a substantial number of small entities. The basis of this certification is that the Commission's proposed thresholds are set at a sufficiently high level that most, if not all, small political committees would not be required to file electronically, although they could continue to do so voluntarily. In the event any small committees do exceed the proposed threshold, the economic impact would not be significant because the committees may obtain the FECFile software from the Commission at no cost, and the Commission anticipates this software will generate all required forms.

List of Subjects

11 CFR Part 101

Political candidates, Reporting and recordkeeping requirements.

11 CFR Part 102

Political committees and parties, Reporting and recordkeeping requirements.

11 CFR Part 104

Campaign funds, Political committees and parties, Reporting and recordkeeping requirements.

11 CFR Part 109

Elections, Reporting and recordkeeping requirements.

11 CFR Part 114

Business and industry, Elections, Labor.

11 CFR Part 9003

Campaign funds, Reporting and recordkeeping requirements.

11 CFR Part 9033

Campaign funds, Reporting and recordkeeping requirements.

For the reasons set out in the preamble, subchapters A, E and F of chapter I of title 11 of the Code of Federal Regulations would be amended as follows:

PART 101—CANDIDATE STATUS AND DESIGNATIONS (2 U.S.C. 432(e))

1.The authority citation for part 101 would be revised to read as follows:

Authority: 2 U.S.C. 432(e), 434(a)(11), 438(a)(f).

2. Section 101.1 would be amended by revising paragraph (a) to read as follows:

§ 101.1 Candidate designations (2 U.S.C. 432(e)(1)).

(a) *Principal campaign committee.* Within 15 days after becoming a candidate under 11 CFR 100.3, each candidate, other than a nominee for the office of Vice President, shall designate in writing a principal campaign committee in accordance with 11 CFR 102.12. A candidate shall designate his or her principal campaign committee by filing a Statement of Candidacy on FEC Form 2, or, if the candidate is not required to file electronically under 11 CFR 104.18, by filing a letter containing the same information (that is, the individual's name and address, party affiliation and office sought, the District and State in which Federal office is sought, and the name and address of his or her principal campaign committee) at the place of filing specified at 11 CFR part 105. Each principal campaign committee shall register, designate a depository and report in accordance with 11 CFR parts 102, 103 and 104.

* * * * *

PART 102—REGISTRATION, ORGANIZATION AND RECORDKEEPING BY POLITICAL COMMITTEES (2 U.S.C. 433).

3. The authority citation for part 102 would be revised to read as follows:

Authority: 2 U.S.C. 432, 433, 434(a)(11), 438(a)(8), 441d.

4. Section 102.2 would be amended by revising paragraphs (a)(1)(vi) and (a)(2), and adding (a)(1)(vii) to read as follows:

§ 102.2 Statement of organization: Forms and committee identification number (2 U.S.C. 433(b), (c)).

(a)(1) * * *

(vi) A listing of all banks, safe deposit boxes, or other depositories used by the committee;

(vii) The Internet address of the committee's official web site, if such a web site exists. If the committee is required to file electronically under 11 CFR 104.18, its electronic mail address, if such an address exists.

(2) Any change or correction in the information previously filed in the Statement of Organization shall be reported no later than 10 days following the date of the change or correction by filing an amended Statement of Organization or, if the political committee is not required to file electronically under 11 CFR 104.18, by filing a letter noting the change(s). The amendment need list only the name of the political committee and the change or correction.

* * * * *

PART 104—REPORTS BY POLITICAL COMMITTEES (2 U.S.C. 434)

5. The authority citation for part 104 would be revised to read as follows:

Authority: 2 U.S.C. 431, 434, 438(a)(8) and (b) and 439a.

6. Section 104.18 would be revised to read as follows:

§ 104.18 Electronic filing of reports (2 U.S.C. 432(d) and 434(a)(11)).

(a) *Mandatory.* (1) Political committees and other persons required to file reports with the Commission, as provided in 11 CFR parts 105 and 107, must file reports in an electronic format that meets the requirements of this section if —

(i) The political committee or other person has received contributions or has reason to expect to receive contributions aggregating in excess of $50,000 in any calendar year; or (ii)The political committee or other person has made expenditures or has reason to expect to make expenditures aggregating in excess of $50,000 in any calendar year.

(2) Once any political committee or other person described in paragraph (a)(1) of this section exceeds or has reason to expect to exceed the appropriate threshold, the political committee or person must file electronically all subsequent reports covering financial activity for the remainder of the calendar year. All electronically filed reports must pass the Commission's validation program in accordance with paragraph (e) of this section.

(3) A political committee or other person has reason to expect to receive aggregate contributions or to make aggregate expenditures over the threshold amount in paragraph (a)(1) of this section if its aggregate contributions or aggregate expenditures exceeded the threshold in the comparable year in the previous election cycle, or its aggregate contributions or aggregate expenditures exceeded the threshold in the previous calendar year.

(b) *Voluntary.* A political committee or other person who files reports with the Commission, as provided in 11 CFR Part 105, and who is not required to file electronically under paragraph (a) of this section, may choose to file its reports in an electronic format that meets the requirements of this section. If a political committee or other person chooses to file its reports electronically, all electronically filed reports must pass the Commission's validation program in accordance with paragraph (e) of this section. The committee or other person must continue to file in an electronic format all reports covering financial activity for that calendar year, unless the Commission determines that extraordinary and unforeseeable circumstances have made it impracticable for the political committee or other person to continue filing electronically.

(c) *Definition.* For purposes of this section, report means any statement, designation or report filed with the Commission.

(d) *Format specifications.* Reports filed electronically shall conform to the technical specifications described in the Federal Election Commission's Electronic Filing Specifications Requirements. The data contained in the computerized magnetic media provided to the Commission shall be organized in the order specified by the Electronic Filing Specifications Requirements.

(e) *Acceptance of reports filed in electronic format; validation program.*

(1) Each political committee or other person who submits an electronic report shall check the report against the Commission's validation program before it is submitted, to ensure that the files submitted meet the Commission's format specifications and can be read by the Commission's computer system. Each report submitted in an electronic format under this section shall also be checked upon receipt against the Commission's validation program. The Commission's validation program and the Electronic Filing Specification Requirement are available on request and at no charge.

(2) A report that does not pass the validation program will not be accepted by the Commission and will not be considered filed. If a political committee or other person submits a report that does not pass the validation program, the Commission will notify the political committee or other person that the report has not been accepted.

(f) *Amended reports.* If a political committee or other person files an amendment to a report that was filed electronically, the political committee or other person shall also submit the amendment in an electronic format. The political committee or other person shall submit a complete version of the report as amended, rather than just those portions of the report that are being amended. In addition, the amended report shall contain electronic flags or markings that point to the portions of the report that are being amended.

(g) *Signature requirements.* The political committee's treasurer, or any other person having the responsibility to file a designation, report or statement under this subchapter, shall verify the report in one of the following ways: by submitting a signed certification on paper that is submitted with the computerized media; or by submitting a digitized copy of the signed certification as a separate file in the electronic submission. Each verification submitted under this section shall certify that the treasurer or other signatory has examined the report or statement and, to the best of the signatory's knowledge and belief, it is true, correct and complete. Any verification under this section shall be treated for all purposes (including penalties for perjury) in the same manner as a verification by signature on a report submitted in a paper format.

(h) *Schedules and forms with special requirements.* The following list of schedules, materials, and forms have special signature and other requirements and reports containing these documents shall include, in addition to providing the required data within the electronic report, either a paper copy submitted with the political committee's or other person's electronic report or a digitized version submitted as a separate file in the electronic submission: Schedule C–1 (Loans and Lines of Credit From Lending Institutions), including copies of loan agreements required to be filed with that Schedule, Schedule E (Itemized Independent Expenditures), Form 5 (Report of Independent Expenditures Made and Contributions Received), and Form 8 (Debt Settlement Plan). The political committee or other person shall submit any paper materials together with the electronic media containing the report.

(i) *Preservation of reports.* For any report filed in electronic format under this section, the treasurer or other person required to file any report under the Act shall retain a machine-readable copy of the report as the copy preserved under 11 CFR 104.14(b)(2). In addition, the treasurer or other person required to file any report under the Act shall retain the original signed version of any documents submitted in a digitized format under paragraphs (g) and (h) of this section.

PART 109—INDEPENDENT EXPENDITURES (2 U.S.C. 431(17), 434(c))

7. The authority for part 109 would be revised to read as follows:

Authority: 2 U.S.C. 431(17), 434(a)(11) and (c), 438(a)(8), 441d.

8. Section 109.2 would be amended by revising the introductory text of paragraph (a) to read as follows:

§ 109.2 Reporting of independent expenditures by persons other than a political committee (2 U.S.C. 434(c)).

(a) Every person other than a political committee, who makes independent expenditures aggregating in excess of $250 during a calendar year shall file a report on FEC Form 5 or, if the person is not required to file electronically under 11 CFR 104.18, a signed statement with the Commission or Secretary of the Senate in accordance with 11 CFR 104.4(c).

* * * * *

PART 114—CORPORATE AND LABOR ORGANIZATION ACTIVITY

9. The authority citation for part 114 would be revised to read as follows:

Authority: 2 U.S.C. 431(8)(B), 431(9)(B), 432, 434(a)(11), 437d(a)(8), 438(a)(8) and 441b.

10. Section 114.10 would be amended by revising paragraph (e)(1)(ii) to read as follows:

§ 114.10 Nonprofit corporations exempt from the prohibition on independent expenditures.

* * * * *

(e) * * *

(1) * * *

(ii) This certification may be made either as part of filing FEC Form 5 (independent expenditure form) or, if the corporation is not required to file electronically under 11 CFR 104.18, by submitting a letter in lieu of the form. The letter shall contain the name and address of the corporation and the

signature and printed name of the individual filing the qualifying statement. The letter shall also certify that the corporation has the characteristics set forth in paragraphs (c)(1) through (c)(5) of this section.

* * * * *

PART 9003—ELIGIBILITY FOR PAYMENTS

11. The authority citation for part 9003 would continue to read as follows:

Authority: 26 U.S.C. 9003 and 9009(b).

§ 9003.1 [Amended]

12. Section 9003.1 would be amended by removing paragraph (b)(11).

PART 9033—ELIGIBILITY FOR PAYMENTS

13. The authority citation for part 9033 would continue to read as follows:

Authority: 26 U.S.C. 9033 and 9039(b).

§ 9033.1 [Amended]

14. Section 9033.1 would be amended by removing paragraph (b)(13).

Dated: April 5, 2000.

Darryl R. Wold,

Chairman, Federal Election Commission.

14 CFR Part 39

[Docket No. 2000–NM–66–AD]

RIN 2120–AA64

Airworthiness Directives; Empresa Brasileira de Aeronautica S.A. (EMBRAER) Model EMB–120 Series Airplanes

AGENCY: Federal Aviation Administration, DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This document proposes the supersedure of an existing airworthiness directive (AD), applicable to all EMBRAER Model EMB–120 series airplanes, that currently requires repetitive visual checks or inspections to verify that the flight idle stop system circuit breakers are closed, and repetitive functional tests to determine if the backup flight idle stop system is operative. This action would require modification of the secondary flight idle stop system, which would terminate the repetitive actions. This proposal also would remove certain airplanes from the applicability. This proposal is prompted by issuance of mandatory continuing airworthiness information by a foreign civil airworthiness authority. The actions specified by the proposed AD are intended to prevent an inoperative backup flight idle stop system.

DATES: Comments must be received by May 11, 2000.

ADDRESSES: Submit comments in triplicate to the Federal Aviation Administration (FAA), Transport Airplane Directorate, ANM–114, Attention: Rules Docket No. 2000–NM–66–AD, 1601 Lind Avenue, SW., Renton, Washington 98055–4056. Comments may be inspected at this location between 9:00 a.m. and 3:00 p.m., Monday through Friday, except Federal holidays.

The service information referenced in the proposed rule may be obtained from Empresa Brasileira de Aeronautica S.A. (EMBRAER), P.O. Box 343—CEP 12.225, Sao Jose dos Campos—SP, Brazil. This information may be examined at the FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington; or at the FAA, Small Airplane Directorate, Atlanta Aircraft Certification Office, One Crown Center, 1895 Phoenix Boulevard, suite 450, Atlanta, Georgia.

FOR FURTHER INFORMATION CONTACT: Linda Haynes, Aerospace Engineer, Propulsion Branch, ACE–117A, FAA, Small Airplane Directorate, Atlanta Aircraft Certification Office, One Crown Center, 1895 Phoenix Boulevard, suite 450, Atlanta, Georgia 30349; telephone (770) 703–6091; fax (770) 703–6097.

SUPPLEMENTARY INFORMATION:

Comments Invited

Interested persons are invited to participate in the making of the proposed rule by submitting such written data, views, or arguments as they may desire. Communications shall identify the Rules Docket number and be submitted in triplicate to the address specified above. All communications received on or before the closing date for comments, specified above, will be considered before taking action on the proposed rule. The proposals contained in this notice may be changed in light of the comments received.

Comments are specifically invited on the overall regulatory, economic, environmental, and energy aspects of the proposed rule. All comments submitted will be available, both before and after the closing date for comments, in the Rules Docket for examination by interested persons. A report summarizing each FAA-public contact concerned with the substance of this proposal will be filed in the Rules Docket.

Commenters wishing the FAA to acknowledge receipt of their comments submitted in response to this notice must submit a self-addressed, stamped postcard on which the following statement is made: "Comments to Docket Number 2000–NM–66–AD." The postcard will be date stamped and returned to the commenter.

Availability of NPRMs

Any person may obtain a copy of this NPRM by submitting a request to the FAA, Transport Airplane Directorate, ANM–114, Attention: Rules Docket No. 2000–NM–66–AD, 1601 Lind Avenue, SW., Renton, Washington 98055–4056.

Discussion

On August 12, 1992, the FAA issued AD 92–16–51, amendment 39–8355 (57 FR 40838, September 8, 1992), applicable to all EMBRAER Model EMB–120 series airplanes, to require repetitive visual checks or inspections to verify that the flight idle stop system circuit breakers are closed, and functional tests to determine if the backup flight idle stop system is operative. That action was prompted by a report of an overspeed condition that occurred on both engines of one airplane during flight; both of the circuit breakers in the backup flight idle stop system circuit were open, which may have contributed to this condition. The requirements of that AD are intended to prevent an inoperative backup flight idle stop system and potential engine failure.

Related Rulemaking

A related AD [AD 90–17–12, amendment 39–6696 (55 FR 33107, August 14, 1990)], applicable to certain EMBRAER Model EMB–120 series airplanes, was issued to require installation of an electromechanical lockout device to prevent movement of the power control levers below the flight idle position while the airplane is in flight. Operators should note that issuance of this proposed AD would not remove or alter the requirements of AD 90–17–12.

Actions Since Issuance of AD 92–16–51

In the preamble to AD 92–16–51, the FAA indicated that the actions required by that AD were considered "interim action" and that further rulemaking action was being considered. Additionally, since issuance of AD 92–16–51, the Departmento de Aviacao Civil (DAC), which is the airworthiness

authority for Brazil, has advised the FAA that the reliability of the secondary flight idle stop system (SFISS) has been low, and that the SFISS has been shown to be vulnerable to certain maintenance-originated failure modes. The manufacturer has developed a modification that adequately addresses the unsafe condition identified by this AD, and the FAA has determined that further rulemaking action is indeed necessary; this proposed AD follows from that determination.

The actions specified by the proposed AD are intended to increase the SFISS reliability and add a failure annunciation. These actions are intended to prevent an inoperative backup flight idle stop system, and will terminate the requirements of AD 92–16–51.

Explanation of Relevant Service Information

EMBRAER has issued three service bulletins that affect different groups of airplanes and describe procedures for modification of the SFISS for EMBRAER Model EMB–120 series airplanes.

Service Bulletin 120–76–0015, Change No. 05, dated September 9, 1999, describes procedures for replacing the single-coil solenoid, the back-lighted cockpit indicators, and the resistor dimmer with new parts; installing two new relays in the SFISS; and replacing the existing solenoid assembly (comprising a solenoid and stop mechanism) and power control bellcrank with new parts.

Service Bulletin 120–76–0018, Change No. 01, dated September 9, 1999, describes procedures for replacing the solenoid assemblies, certain circuit breakers, and lighted indicators with new, improved parts; installing a terminal board, resistors, wiring, and relays; and changing the power sources.

Service Bulletin 120–76–0022, dated September 9, 1999, describes procedures for replacing the solenoid assemblies and the power control bellcrank with new parts; reidentifying the solenoid assemblies; and installing two new cover/clamp-supports.

Accomplishment of the actions specified in the service bulletins is intended to adequately address the identified unsafe condition. The DAC classified these service bulletins as mandatory and issued Brazilian airworthiness directive 90–07–04R4, dated October 4, 1999, in order to assure the continued airworthiness of these airplanes in Brazil.

FAA's Conclusions

This airplane model is manufactured in Brazil and is type certificated for operation in the United States under the provisions of section 21.29 of the Federal Aviation Regulations (14 CFR 21.29) and the applicable bilateral airworthiness agreement. Pursuant to this bilateral airworthiness agreement, the DAC has kept the FAA informed of the situation described above. The FAA has examined the findings of the DAC, reviewed all available information, and determined that AD action is necessary for products of this type design that are certificated for operation in the United States.

Explanation of Requirements of Proposed Rule

Since an unsafe condition has been identified that is likely to exist or develop on other airplanes of the same type design registered in the United States, the proposed AD would supersede AD 92–16–51 to continue to require repetitive visual checks or inspections to verify that the flight idle stop system circuit breakers are closed, and repetitive functional tests to determine if the backup flight idle stop system is operative. This proposed AD would require modification of the SFISS, which would terminate the requirements for the repetitive actions. The actions of the proposed AD would be required to be accomplished in accordance with the service bulletins described previously.

Revised Applicability

This proposed AD would revise the applicability of AD 92–16–51 to remove airplanes on which an equivalent modification, which adequately addresses the identified unsafe condition, is installed during production.

Cost Impact

There are approximately 230 airplanes of U.S. registry that would be affected by this proposed AD.

The actions that are currently required by AD 92–16–51 take approximately 5 work hours per airplane to accomplish, at an average labor rate of $60 per work hour. Based on these figures, the cost impact of the currently required actions on U.S. operators is estimated to be $69,000, or $300 per airplane, per inspection cycle.

The approximate cost, at an average labor rate of $60 per work hour, for the modifications proposed by this AD are listed below.

Service Bulletin	Work hours	Parts cost	Cost per airplane
120–76–0015:			
Part I	4	$4,376	$4,616
Part II	2	14,331	14,451
120–76–0018	50	20,000—(varies with config.)	23,000
120–76–022:			
Part I	2	14,150	14,270
Part II	2	2,429	2,549
Part III	2	14,229	14,349

Therefore, based on these figures, the cost impact of the modification proposed by this AD on U.S. operators is estimated to range from $2,549 to $23,000 per airplane.

The cost impact figures discussed above are based on assumptions that no operator has yet accomplished any of the current or proposed requirements of this AD action, and that no operator would accomplish those actions in the future if this AD were not adopted.

Regulatory Impact

The regulations proposed herein would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, it is determined that this proposal would not have federalism implications under Executive Order 13132.

For the reasons discussed above, I certify that this proposed regulation (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under the DOT Regulatory Policies and Procedures (44

FR 11034, February 26, 1979); and (3) if promulgated, will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A copy of the draft regulatory evaluation prepared for this action is contained in the Rules Docket. A copy of it may be obtained by contacting the Rules Docket at the location provided under the caption **ADDRESSES**.

List of Subjects 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Safety.

The Proposed Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration proposes to amend part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. Section 39.13 is amended by removing amendment 39–8355 (57 FR 40838, September 8, 1992), and by adding a new airworthiness directive (AD), to read as follows:

EMPRESA BRASILEIRA DE AERONAUTICA S.A. (EMBRAER): Docket 2000–NM–66–AD. Supersedes AD 92–16–51, Amendment 39–8355.

Applicability: Model EMB–120 series airplanes, certificated in any category; serial numbers 120004 through 120354 inclusive.

Note 1: This AD applies to each airplane identified in the preceding applicability provision, regardless of whether it has been modified, altered, or repaired in the area subject to the requirements of this AD. For airplanes that have been modified, altered, or repaired so that the performance of the requirements of this AD is affected, the owner/operator must request approval for an alternative method of compliance in accordance with paragraph (e)(1) of this AD. The request should include an assessment of the effect of the modification, alteration, or repair on the unsafe condition addressed by this AD; and, if the unsafe condition has not been eliminated, the request should include specific proposed actions to address it.

Compliance: Required as indicated, unless accomplished previously.

To prevent an inoperative backup flight idle stop system, accomplish the following:

Restatement of Certain Requirements of AD 92–16–51:

(a) For all airplanes: Within 5 days after September 23, 1992 (the effective date of AD 92–16–51, amendment 39–8355), and thereafter prior to the first flight of each day until the requirements of paragraph (d) of this AD have been accomplished, accomplish paragraph (a)(1) or (a)(2) of this AD, as applicable:

(1) For airplanes on which an inspection window has been installed on the left lateral console panel that permits visibility of the flight idle stop solenoid circuit breakers: Using an appropriate light source, perform a visual check to verify that both "FLT IDLE STOP SOL" circuit breakers CB0582 and CB0583 for engine 1 and engine 2 are closed.

Note 2: This check may be performed by a flight crew member.

Note 3: Instructions for installation of an inspection window can be found in EMBRAER Information Bulletin 120–076–0003, dated November 19, 1991; or EMBRAER Service Bulletin 120–076–0014, dated July 29, 1992.

(2) For airplanes on which an inspection window has not been installed on the left lateral console panel: Perform a visual inspection to verify that both "FLT IDLE STOP SOL" circuit breakers CB0582 and CB0583 for engine 1 and engine 2 are closed.

(b) As a result of the check or inspection performed in accordance with paragraph (a) of this AD: If circuit breakers CB0582 and CB0583 are not closed, prior to further flight, reset them and perform the functional test specified in paragraph (c) of this AD.

(c) Within 5 days after September 23, 1992, and thereafter at intervals not to exceed 75 hours time-in-service, or immediately following any maintenance action where the power levers are moved with the airplane on jacks, until the requirements of paragraph (d) of this AD have been accomplished, conduct a functional test of the backup flight idle stop system for engine 1 and engine 2 by performing the following steps:

(1) Move both power levers to the "MAX" position.

(2) Turn the aircraft power select switch on.

(3) Open both "AIR/GROUND SYSTEM" circuit breakers CB0283 and CB0286 to simulate in-flight conditions with weight-off-wheels. Wait for at least 15 seconds, then move both power levers back toward the propeller reverse position with the flight idle gate triggers raised. Verify that the power lever for each engine cannot be moved below the flight idle position, even though the flight idle gate trigger on each power lever is raised.

(4) If the power lever can be moved below the flight idle position, prior to further flight, restore the backup flight idle stop system to the configuration specified in EMBRAER Service Bulletin 120–076–0009, Change No. 4, dated November 1, 1990, and perform a functional test.

Note 4: If the power lever can be moved below flight idle, this indicates that the backup flight idle stop system is inoperative.

(5) Move both power levers to the "MAX" position.

(6) Close both "AIR/GROUND SYSTEM" circuit breakers CB0283 and CB0286. Wait for at least 15 seconds, then move both power levers back toward the propeller reverse position with the flight idle gate triggers raised. Verify that the power lever for each engine can be moved below the flight idle position.

(7) If either or both power levers cannot be moved below the flight idle position, prior to further flight, inspect the backup flight idle stop system and the flight idle gate system, and accomplish either paragraph (c)(7)(i) or (c)(7)(ii) of this AD, as applicable:

(i) If the backup flight idle stop system is failing to disengage with weight-on-wheels, prior to further flight, restore the system to the configuration specified in EMBRAER Service Bulletin 120–076–0009, Change No. 4, dated November 1, 1990.

(ii) If the flight idle gate system is failing to open even though the trigger is raised, prior to further flight, repair in accordance with the EMBRAER Model EMB–120 maintenance manual.

(8) Turn the power select switch off. The functional test is completed.

New Requirements of This AD:

(d) Within 18 months after the effective date of this AD, modify the secondary flight idle stop system (SFISS), as specified by paragraph (d)(1), (d)(2), or (d)(3), as applicable, of this AD. Accomplishment of the modification constitutes terminating action for the requirements of this AD.

(1) For airplane serial number 120068: Modify the SFISS in accordance with Parts I and II of EMBRAER Service Bulletin 120–76–0015, Change No. 05, dated September 9, 1999.

(2) For airplanes having serial numbers 120004 through 120067 inclusive and 120069 through 120344 inclusive, on which the actions specified by the original issue of EMBRAER Service Bulletin 120–76–0018, dated September 17, 1998, have not been accomplished: Modify the SFISS in accordance with EMBRAER Service Bulletin 120–76–0018, Change No. 01, dated September 9, 1999.

(3) For airplanes having serial numbers 120345 through 120354 inclusive; and for airplanes having serial numbers 120004 through 120345 inclusive, on which the actions specified by the original issue of EMBRAER Service Bulletin 120–76–0018, dated September 17, 1998, have been incorporated: Modify the SFISS in accordance with Part I, II, or III, as applicable, of EMBRAER Service Bulletin 120–76–0022, dated September 9, 1999.

Note 5: Accomplishment of the requirements of paragraph (d) of this AD does not remove or otherwise alter the requirement to perform the repetitive (400-flight-hour) CAT 8 task checks specified by the Maintenance Review Board (MRB).

Alternative Methods of Compliance

(e)(1) An alternative method of compliance or adjustment of the compliance time that provides an acceptable level of safety may be used if approved by the Manager, Atlanta Aircraft Certification Office (ACO), FAA, Small Airplane Directorate. Operators shall submit their requests through an appropriate FAA Principal Maintenance Inspector, who may add comments and then send it to the Manager, Atlanta ACO.

(2) Alternative methods of compliance, approved previously for paragraphs (a), (b), and (c) of AD 92–16–51, are considered to be approved as alternative methods of compliance with the inspection requirements of paragraphs (a), (b), and (c) of this AD. No alternative methods of compliance have been approved in accordance with AD 92–16–51 as terminating action for this AD.

Note 6: Information concerning the existence of approved alternative methods of compliance with this AD, if any, may be obtained from the Atlanta ACO.

Special Flight Permits

(f) Special flight permits may be issued in accordance with sections 21.197 and 21.199 of the Federal Aviation Regulations (14 CFR 21.197 and 21.199) to operate the airplane to a location where the requirements of this AD can be accomplished.

Note 7: The subject of this AD is addressed in Brazilian airworthiness directive 90–07–04R4, dated October 4, 1999.

Issued in Renton, Washington, on April 5, 2000.

Donald L. Riggin,

Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

14 CFR Part 39

[Docket No. 2000–NM–64–AD]

RIN 2120–AA64

Airworthiness Directives; Airbus Model A330 and A340 Series Airplanes

AGENCY: Federal Aviation Administration, DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This document proposes the adoption of a new airworthiness directive (AD) that is applicable to certain Airbus Model A330 and A340 series airplanes. This proposal would require repetitive inspections to check the play of the eye-end of the piston rod of the elevator servo-controls, and follow-on corrective actions, if necessary. This proposal is prompted by issuance of mandatory continuing airworthiness information by a foreign civil airworthiness authority. The actions specified by the proposed AD are intended to detect and correct excessive play of the eye-end of the piston rod of the elevator servo-control, which could result in failure of the elevator servo-control.

DATES: Comments must be received by May 11, 2000.

ADDRESSES: Submit comments in triplicate to the Federal Aviation Administration (FAA), Transport Airplane Directorate, ANM–114, Attention: Rules Docket No. 2000–NM–64–AD, 1601 Lind Avenue, SW., Renton, Washington 98055–4056. Comments may be inspected at this location between 9:00 a.m. and 3:00 p.m., Monday through Friday, except Federal holidays.

The service information referenced in the proposed rule may be obtained from Airbus Industrie, 1 Rond Point Maurice Bellonte, 31707 Blagnac Cedex, France. This information may be examined at the FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington.

FOR FURTHER INFORMATION CONTACT: Norman B. Martenson, Manager, International Branch, ANM–116, FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington 98055–4056; telephone (425) 227–2110; fax (425) 227–1149.

SUPPLEMENTARY INFORMATION:

Comments Invited

Interested persons are invited to participate in the making of the proposed rule by submitting such written data, views, or arguments as they may desire. Communications shall identify the Rules Docket number and be submitted in triplicate to the address specified above. All communications received on or before the closing date for comments, specified above, will be considered before taking action on the proposed rule. The proposals contained in this notice may be changed in light of the comments received.

Comments are specifically invited on the overall regulatory, economic, environmental, and energy aspects of the proposed rule. All comments submitted will be available, both before and after the closing date for comments, in the Rules Docket for examination by interested persons. A report summarizing each FAA-public contact concerned with the substance of this proposal will be filed in the Rules Docket.

Commenters wishing the FAA to acknowledge receipt of their comments submitted in response to this notice must submit a self-addressed, stamped postcard on which the following statement is made: "Comments to Docket Number 2000–NM–64–AD." The postcard will be date stamped and returned to the commenter.

Availability of NPRMs

Any person may obtain a copy of this NPRM by submitting a request to the FAA, Transport Airplane Directorate, ANM–114, Attention: Rules Docket No. 2000–NM–64–AD, 1601 Lind Avenue, SW., Renton, Washington 98055–4056.

Discussion

The Direction Générale de l'Aviation Civile (DGAC), which is the airworthiness authority for France, notified the FAA that an unsafe condition may exist on certain Airbus Model A330 and A340 series airplanes. The DGAC advises that it has received a report of a broken piston rod of an elevator servo-control. The failure has been attributed to the degradation of the Teflon liner from the eye-end spherical bearing of the piston rod. This condition, if not corrected, could result in failure of the elevator servo-control.

Explanation of Relevant Service Information

Airbus has issued Service Bulletins A330–27–3062 (for Model A330 series airplanes) and A340–27–4072 (for Model A340 series airplanes), both Revision 01, dated July 21, 1999. These service bulletins describe procedures for repetitive inspections to check the play of the piston rod eye-end of the elevator servo-controls. Corrective actions for small amounts of play involve replacing the rod eye-end with a new SARMA or NMB rod eye-end. Corrective actions for greater amounts of play involve performing a dye penetrant inspection of the servo-control to detect cracking, and replacing the rod eye-end of a crack-free servo-control with a new SARMA or NMB rod eye-end or replacing a cracked servo-control with a new servo-control.

The DGAC classified these service bulletins as mandatory and issued French airworthiness directives 2000–025–109(B) R1 (for Model A330 series airplanes) and 2000–024–135(B) R1 (for Model A340 series airplanes), both dated March 8, 2000, in order to ensure the continued airworthiness of these airplanes in France.

The Airbus service bulletins refer to SAMM Service Bulletin SC4800–27–34–06, dated January 2, 1999, as an additional source of service information for accomplishment of the dye penetrant inspection.

FAA's Conclusions

These airplane models are manufactured in France and are type certificated for operation in the United States under the provisions of section 21.29 of the Federal Aviation Regulations (14 CFR 21.29) and the applicable bilateral airworthiness agreement. Pursuant to this bilateral airworthiness agreement, the DGAC has

kept the FAA informed of the situation described above. The FAA has examined the findings of the DGAC, reviewed all available information, and determined that AD action is necessary for products of this type design that are certificated for operation in the United States.

Explanation of Requirements of Proposed Rule

Since an unsafe condition has been identified that is likely to exist or develop on other airplanes of the same type design registered in the United States, the proposed AD would require accomplishment of the actions specified in the service bulletins described previously, except as discussed below.

Differences Between Proposed AD and Relevant Service Information

The service bulletins identify various compliance times for replacement of the rod eye-end, depending on the amount of play detected; the French airworthiness directives support those criteria. However, this proposed AD would require that all corrective actions be accomplished prior to further flight, regardless of the findings. The FAA has determined that, because of the safety implications and consequences associated with such a discrepancy, any subject rod eye-end that is found to have an amount of play exceeding specified limits must be replaced or further inspected prior to further flight.

In addition, the service bulletins recommend that the repetitive inspections specified therein be accomplished at the operators' respective C-checks. However, this proposed AD would require that the repetitive inspections be performed at 15-month intervals, in consonance with the DGAC's recommendations. Maintenance schedules including C-checks may vary from operator to operator; therefore, the FAA finds it necessary to specify a time limit for accomplishment of the inspections. The proposed repetitive interval corresponds to a normal C-check for the majority of affected operators.

Cost Impact

None of the airplanes affected by this action are on the U.S. Register. All airplanes included in the applicability of this rule currently are operated by non-U.S. operators under foreign registry; therefore, they are not directly affected by this proposed AD action. However, the FAA considers that this rule is necessary to ensure that the unsafe condition is addressed in the event that any of these subject airplanes are imported and placed on the U.S. Register in the future.

Should an affected airplane be imported and placed on the U.S. Register in the future, it would require approximately 2 work hours to accomplish the required actions, at an average labor rate of $60 per work hour. Based on these figures, the cost impact of this proposed AD would be $120 per airplane, per inspection cycle.

Regulatory Impact

The regulations proposed herein would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, it is determined that this proposal would not have federalism implications under Executive Order 13132.

For the reasons discussed above, I certify that this proposed regulation (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under the DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) if promulgated, will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A copy of the draft regulatory evaluation prepared for this action is contained in the Rules Docket. A copy of it may be obtained by contacting the Rules Docket at the location provided under the caption **ADDRESSES.**

Air transportation, Aircraft, Aviation safety, Safety.

The Proposed Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration proposes to amend part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. Section 39.13 is amended by adding the following new airworthiness directive:

Airbus Industrie: Docket 2000–NM–64–AD.

Applicability: Model A330 and A340 series airplanes, certificated in any category, equipped with any "SAMM" elevator servo-control having any part number SC4800–2 through SC4800–8 inclusive.

Note 1: This AD applies to each airplane identified in the preceding applicability provision, regardless of whether it has been modified, altered, or repaired in the area subject to the requirements of this AD. For airplanes that have been modified, altered, or repaired so that the performance of the requirements of this AD is affected, the owner/operator must request approval for an alternative method of compliance in accordance with paragraph (b) of this AD. The request should include an assessment of the effect of the modification, alteration, or repair on the unsafe condition addressed by this AD; and, if the unsafe condition has not been eliminated, the request should include specific proposed actions to address it.

Compliance: Required as indicated, unless accomplished previously.

To detect and correct excessive play of the eye-end of the piston rod of the elevator servo-controls, which could result in failure of the elevator servo-control, accomplish the following:

(a) Within 30 months since date of manufacture of the airplane, or within 500 flight hours after the effective date of this AD, whichever occurs later, perform an inspection to check the play of the piston rod eye-ends of the elevator servo-controls, in accordance with Airbus Service Bulletin A330–27–3062 (for Model A330 series airplanes) or A340–27–4072 (for Model A340 series airplanes), both Revision 01, both dated July 21, 1999. Thereafter, repeat the inspection at intervals not to exceed 15 months.

(1) If any play that is 0.0059 inch (0.15 mm) or greater and less than 0.0118 inch (0.30 mm) is detected: Prior to further flight, replace the rod eye-end with a new SARMA or NMB rod eye-end, in accordance with the applicable service bulletin.

(2) If any play that is 0.0118 inch (0.30 mm) or greater is detected: Prior to further flight, perform a dye penetrant inspection to detect cracking of the servo-control, in accordance with the applicable service bulletin.

(i) If no crack is detected: Prior to further flight, replace the rod eye-end with a new SARMA or NMB rod eye-end, in accordance with the applicable service bulletin.

(ii) If any crack is detected: Prior to further flight, replace the servo-control with a new servo-control, in accordance with the applicable service bulletin.

Note 2: Accomplishment of an inspection in accordance with Airbus Service Bulletin A330–27–3062 (for Model A330 series airplanes) or A340–27–4072 (for Model A340 series airplanes), both dated February 5, 1999; is considered acceptable for compliance with the initial inspection requirements of paragraph (a) of this AD.

Note 3: The Airbus service bulletins reference SAMM Service Bulletin SC4800–27–34–06, dated January 2, 1999, as an additional source of service information for accomplishment of the dye penetrant inspection specified by paragraph (a)(2) of this AD.

Alternative Methods of Compliance

(b) An alternative method of compliance or adjustment of the compliance time that provides an acceptable level of safety may be used if approved by the Manager, International Branch, ANM–116, FAA, Transport Airplane Directorate. Operators shall submit their requests through an appropriate FAA Principal Maintenance Inspector, who may add comments and then send it to the Manager, International Branch, ANM–116.

Note 4: Information concerning the existence of approved alternative methods of compliance with this AD, if any, may be obtained from the International Branch, ANM–116.

Special Flight Permits

(c) Special flight permits may be issued in accordance with sections 21.197 and 21.199 of the Federal Aviation Regulations (14 CFR 21.197 and 21.199) to operate the airplane to a location where the requirements of this AD can be accomplished.

Note 5: The subject of this AD is addressed in French airworthiness directives 2000–025–109(B) R1 (for Model A330 series airplanes) and 2000–024–135(B) R1 (for Model A340 series airplanes), both dated March 8, 2000.

Issued in Renton, Washington, on April 5, 2000.

Donald L. Riggin,

Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

[Docket No. 98–NM–228–AD]

RIN 2120–AA64

Airworthiness Directives; McDonnell Douglas Model DC–10–10, –15, –30, and –40 Series Airplanes, and KC–10A (Military) Airplanes

AGENCY: Federal Aviation Administration, DOT.

ACTION: Supplemental notice of proposed rulemaking; reopening of comment period.

SUMMARY: This document revises an earlier proposed airworthiness directive (AD) applicable to certain McDonnell Douglas Model DC–10 series airplanes, and KC–10A (military) airplanes, that would have required repetitive inspections to detect failure of the attachment fasteners located in the banjo No. 4 fitting of the vertical stabilizer. That proposed AD also would have required a one-time inspection to detect cracking of the flanges and bolt holes of the banjo No. 4 fitting, and repair or replacement of the attachment fasteners with new, improved fasteners. In addition, the proposed AD would have required a one-time inspection to determine whether certain fasteners are installed in the banjo No. 4 fitting of the vertical stabilizer, and follow-on actions, if necessary. That proposal was prompted by reports of failure of certain fasteners installed in the banjo No. 4 fitting of the vertical stabilizer. This new action revises, among other actions, the proposed rule by amending certain corrective actions. The actions specified by this new proposed AD are intended to prevent cracking of the attachment fasteners of the vertical stabilizer, which could result in loss of fail-safe capability of the vertical stabilizer and reduced controllability of the airplane.

DATES: Comments must be received by May 8, 2000.

ADDRESSES: Submit comments in triplicate to the Federal Aviation Administration (FAA), Transport Airplane Directorate, ANM–114, Attention: Rules Docket No. 98–NM–228–AD, 1601 Lind Avenue, SW., Renton, Washington 98055–4056. Comments may be inspected at this location between 9:00 a.m. and 3:00 p.m., Monday through Friday, except Federal holidays.

The service information referenced in the proposed rule may be obtained from The Boeing Company, Douglas Products Division, 3855 Lakewood Boulevard, Long Beach, California 90846, Attention: Technical Publications Business Administration, Dept. C1–L51 (2–60). This information may be examined at the Federal Aviation Administration (FAA), Transport Airplane Directorate, Rules Docket, 1601 Lind Avenue, SW., Renton, Washington; or at the FAA, Transport Airplane Directorate, Los Angeles Aircraft Certification Office, 3960 Paramount Boulevard, Lakewood, California.

FOR FURTHER INFORMATION CONTACT: Ron Atmur, Aerospace Engineer, Airframe Branch, ANM–120L, FAA, Transport Airplane Directorate, Los Angeles Aircraft Certification Office, 3960 Paramount Boulevard, Lakewood, California 90712–4137; telephone (562) 627–5224; fax (562) 627–5210.

SUPPLEMENTARY INFORMATION:

Comments Invited

Interested persons are invited to participate in the making of the proposed rule by submitting such written data, views, or arguments as they may desire. Communications shall identify the Rules Docket number and be submitted in triplicate to the address specified above. All communications received on or before the closing date for comments, specified above, will be considered before taking action on the proposed rule. The proposals contained in this notice may be changed in light of the comments received.

Comments are specifically invited on the overall regulatory, economic, environmental, and energy aspects of the proposed rule. All comments submitted will be available, both before and after the closing date for comments, in the Rules Docket for examination by interested persons. A report summarizing each FAA-public contact concerned with the substance of this proposal will be filed in the Rules Docket.

Commenters wishing the FAA to acknowledge receipt of their comments submitted in response to this notice must submit a self-addressed, stamped postcard on which the following statement is made: "Comments to Docket Number 98–NM–228–AD." The postcard will be date stamped and returned to the commenter.

Availability of NPRMs

Any person may obtain a copy of this NPRM by submitting a request to the FAA, Transport Airplane Directorate, ANM–114, Attention: Rules Docket No. 98–NM–228–AD, 1601 Lind Avenue, SW., Renton, Washington 98055–4056.

Discussion

A proposal to amend part 39 of the Federal Aviation Regulations (14 CFR part 39) to add an airworthiness directive (AD), applicable to certain McDonnell Douglas Model DC–10 series airplanes, was published as a notice of proposed rulemaking (NPRM) in the **Federal Register** on November 23, 1998 (63 FR 64664). That NPRM would have required repetitive inspections to detect failure of the attachment fasteners located in the banjo No. 4 fitting of the vertical stabilizer. That NPRM also would have required a one-time inspection to detect cracking of the flanges and bolt holes of the banjo No. 4 fitting, and repair or replacement of the attachment fasteners with new, improved fasteners. In addition, that NPRM would have required a one-time inspection to determine whether certain fasteners are installed in the banjo No. 4 fitting of the vertical stabilizer, and follow-on actions, if necessary. That NPRM was prompted by reports of failure of certain fasteners installed in the banjo No. 4 fitting of the vertical stabilizer. That condition, if not corrected, could result in cracking of the

attachment fasteners of the vertical stabilizer, which could result in loss of fail-safe capability of the vertical stabilizer and reduced controllability of the airplane.

Comments Received That Result in a Change to the Proposal

Due consideration has been given to the following comments received in response to the NPRM.

Request to Limit Applicability of Paragraph (c) of the AD

One commenter requests that the visual inspection of the second oversize fasteners, part number (P/N) S4931917–8Y, as required by paragraph (c) of the proposed AD, apply only to airplanes that have not accomplished the requirements of AD 96–07–01, amendment 39–9549 (61 FR 12015, March 25, 1996) in accordance with McDonnell Douglas Service Bulletin DC10–55–023, Revision 03, dated March 25, 1998 [which also was referenced in the proposed AD as an appropriate source of service information for accomplishment of the actions specified in paragraph (b)].

The FAA concurs with the commenter's request. The FAA finds that second oversize fasteners, P/N S4931917–8Y, would not have been installed if the requirements of paragraph (b) of the AD had been accomplished in accordance with McDonnell Douglas Service Bulletin DC10–55–023, Revision 03, dated March 25, 1998, or if the requirements of AD 96–07–01 had been accomplished in accordance with Revision 03 of that service bulletin. Therefore, paragraph (c) of the final rule is revised accordingly.

Request for Clarification of Requirements

One commenter states that the proposed AD is not clear on what the terminating action requirements are if the second oversize fasteners, P/N S4931917–8Y, are found installed on previously modified airplanes. The commenter states that paragraphs (c)(3)(i) and (c)(3)(ii) of the proposed AD indicate that terminating action should be accomplished in accordance with paragraph (b) of the proposed AD. In the transmittal sheet of Revision 03 of McDonnell Douglas Service Bulletin DC10–55–023, it states that S4931917–8Y fasteners are to be repetitively inspected and finally replaced with HLT717B–8 fasteners if found on previously modified airplanes. It is understood that if the fasteners are found and there is no failure, they can be simply replaced. However, this statement does not indicate what must be done if failed fasteners are found during these repetitive inspections. The commenter contends that the current wording of the proposed rule implies that in the situation of a failed fastener found during a repetitive inspection, all twelve bolts must be removed and eddy current inspections must be accomplished before the new fasteners, P/N HLT717B–8, are installed. The commenter disagrees with this action due to the possibility of sustaining damage to the previously cold worked holes with correct fasteners installed, which would require additional oversize or repair. The commenter asserts that only the affected holes with failed fasteners should be eddy current bolt hole inspected, not all holes.

The FAA concurs that clarification is necessary. Paragraph (c)(3) of the AD provides corrective actions if second oversize fasteners P/N S4931917–8Y are installed. The FAA has determined that removal of fasteners and inspection of fastener holes is not necessary for holes that do not have second oversize fasteners P/N S4931917–8Y installed. The FAA's intent in paragraph (c)(3)(i) of the AD was to require repetitive external inspections thereafter at intervals not to exceed 1,500 landings until the requirements of paragraph (b) of this AD are accomplished, and eventually require accomplishment of the requirements of paragraph (b) of the AD again. The FAA's intent in paragraph (c)(3)(ii) of the AD was to require accomplishment of the requirements of paragraph (b) of this AD for the failed fastener and its associated fastener hole only. Therefore, the FAA has revised paragraphs (c)(3)(i) and (c)(3)(ii) of the AD to reflect this clarification.

Another commenter requests that the wording of paragraph (c)(3)(i) of the proposed AD be clarified as to when the second oversize fasteners, P/N S4931917–8Y, must be replaced. The commenter contends that it is possible to interpret the proposed AD in a way that would require replacement of all the fasteners by April 24, 2001, which is the date for compliance to paragraph (b) of the proposed AD. However, the 1,500 landing compliance time required by paragraph (c) of the proposed AD for the initial inspection could occur after April 24, 2001, for operators that have accomplished the modification in accordance with McDonnell Douglas Service Bulletin DC10–55–023, Revision 02, dated October 30, 1996.

The FAA agrees that clarification is necessary. As discussed previously, the requirements of paragraph (c)(3)(i) of the AD are intended to provide an acceptable level of safety through the use of repetitive external visual inspections until the requirements of paragraph (b) of the proposed AD are accomplished. The FAA acknowledges that maintenance scheduling conflicts may arise because of the compliance times associated with the new actions required by the proposed AD and the actions retained from the superseded AD. Therefore, paragraph (c)(3)(i) has been revised to allow a minimum of 1,500 landings, from the initial inspection, to accomplish the replacement of second oversize fasteners, P/N S4931917–8Y.

Explanation of Change to Proposal

The FAA has added a note to the final rule to clarify the definition of a detailed visual inspection.

Conclusion

Since these changes expand the scope of the originally proposed rule, the FAA has determined that it is necessary to reopen the comment period to provide additional opportunity for public comment.

Cost Impact

There are approximately 420 airplanes of the affected design in the worldwide fleet. The FAA estimates that 242 airplanes of U.S. registry will be affected by this AD.

Since the issuance of AD 96–07–01, the manufacturer has revised its estimate of the work hours necessary to perform the actions that are currently required by that AD. McDonnell Douglas Service Bulletin DC10–55–023, Revision 03, reflects the manufacturer's revised estimates; and the cost information, below, also has been revised to refer to the new estimates.

The visual inspection that is currently required by AD 96–07–01, and retained in this AD, takes approximately 1 work hour per airplane to accomplish, at an average labor rate of $60 per work hour. Based on these figures, the cost impact of the visual inspection currently required by that AD on U.S. operators is estimated to be $14,520, or $60 per airplane, per inspection cycle.

The eddy current inspection that is currently required by AD 96–07–01, and retained in this AD, takes approximately 4 work hours per airplane to accomplish, at an average labor rate of $60 per work hour. Based on these figures, the cost impact of the eddy current inspection currently required by that AD on U.S. operators is estimated to be $58,080, or $240 per airplane.

The replacement of the 12 attachment fasteners of the banjo No. 4 fitting that is currently required by AD 96–07–01,

and retained in this AD, takes approximately 14 work hours per airplane to accomplish, at an average labor rate of $60 per work hour. Required parts cost approximately $250 per airplane. Based on these figures, the cost impact of the replacement currently required by that AD on U.S. operators is estimated to be $263,780, or $1,090 per airplane.

The new inspection that is proposed in this AD action would take approximately 1 work hour per airplane to accomplish, at an average labor rate of $60 per work hour. Based on these figures, the cost impact of the inspection proposed by this AD on U.S. operators is estimated to be $14,520, or $60 per airplane.

The cost impact figures discussed above are based on assumptions that no operator has yet accomplished any of the current or proposed requirements of this AD action, and that no operator would accomplish those actions in the future if this AD were not adopted.

Should an operator that has already completed the replacement of the attachment fasteners of the banjo No. 4 fitting in accordance with AD 96–07–01 be required to repeat the replacement, it would take approximately 14 additional work hours, at an average labor rate of $60 per work hour. Additional parts would cost $150 per airplane. Based on these figures, the cost impact of any necessary repetition of the replacement is estimated to be $990 per airplane.

Regulatory Impact

The regulations proposed herein would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, it is determined that this proposal would not have federalism implications under Executive Order 13132.

For the reasons discussed above, I certify that this proposed regulation (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under the DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) if promulgated, will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A copy of the draft regulatory evaluation prepared for this action is contained in the Rules Docket. A copy of it may be obtained by contacting the Rules Docket at the location provided under the caption **ADDRESSES**.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Safety.

The Proposed Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration proposes to amend part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. Section 39.13 is amended by removing amendment 39–9549 (61 FR 12015, March 25, 1996), and by adding a new airworthiness directive (AD) to read as follows:

McDonnell Douglas: Docket 98–NM–228–AD. Supersedes AD–96–07–01, Amendment 39–9549.

Applicability: Model DC–10–10, –15, –30, and –40 series airplanes, and KC–10A (military) airplanes; as listed in McDonnell Douglas DC–10 Service Bulletin 55–23, Revision 1, dated December 17, 1993; certificated in any category.

Note 1: This AD applies to each airplane identified in the preceding applicability provision, regardless of whether it has been modified, altered, or repaired in the area subject to the requirements of this AD. For airplanes that have been modified, altered, or repaired so that the performance of the requirements of this AD is affected, the owner/operator must request approval for an alternative method of compliance in accordance with paragraph (e) of this AD. The request should include an assessment of the effect of the modification, alteration, or repair on the unsafe condition addressed by this AD; and, if the unsafe condition has not been eliminated, the request should include specific proposed actions to address it.

Compliance: Required as indicated, unless accomplished previously.

To prevent cracking of the attachment fasteners of the vertical stabilizer, which could result in loss of fail-safe capability of the vertical stabilizer and reduced controllability of the airplane, accomplish the following:

(a) Except as required by paragraph (c)(3) of this AD, within 1,500 landings after April 24, 1996 (the effective date of AD 96–07–01, amendment 39–9549): Perform an external visual inspection, using a minimum 5X power magnifying glass, to detect any failure of the 12 attachment fasteners located in the banjo No. 4 fitting of the vertical stabilizer (as specified in McDonnell Douglas DC–10 Service Bulletin 55–23, Revision 1, dated December 17, 1993; or McDonnell Douglas Service Bulletin DC10–55–023, Revision 02, dated October 30, 1996, or Revision 03, dated March 25, 1998). Perform this inspection in accordance with procedures specified in McDonnell Douglas Nondestructive Testing Manual, Chapter 20–10–00, or McDonnell Douglas Nondestructive Testing Standard Practice Manual, Part 09.

(1) If no failure is detected, repeat the external visual inspection thereafter at intervals not to exceed 1,500 landings until the requirements of paragraph (b) of this AD are accomplished.

(2) If any failure is detected, prior to further flight, accomplish the requirements of paragraph (b) of this AD.

(b) Except as required by paragraphs (a)(2) and (c)(3)(ii) of this AD, within 5 years after April 24, 1996: Perform an eddy current surface inspection to detect cracking of the forward and aft flanges; and an eddy current bolt hole inspection of the bolt holes of the banjo No. 4 fitting; in accordance with McDonnell Douglas DC–10 Service Bulletin 55–23, Revision 1, dated December 17, 1993; or McDonnell Douglas Service Bulletin DC10–55–023, Revision 02, dated October 30, 1996, or Revision 03, dated March 25, 1998.

Note 2: Paragraph (b) of this AD does not require that eddy current bolt hole inspections be accomplished for the bolt holes of the banjo No. 4 fitting if the attachment fasteners were replaced prior to April 24, 1996, in accordance with McDonnell Douglas DC–10 Service Bulletin 55–23, dated December 17, 1992.

(1) If no cracking is detected, prior to further flight, replace the 12 attachment fasteners located on the banjo No. 4 fitting with new, improved attachment fasteners, in accordance with McDonnell Douglas DC–10 Service Bulletin 55–23, dated December 17, 1992, or Revision 1, dated December 17, 1993; or McDonnell Douglas Service Bulletin DC10–55–023, Revision 02, dated October 30, 1996, or Revision 03, dated March 25, 1998. After the effective date of this AD, only Revision 03 of the service bulletin shall be used.

(i) Accomplishment of the replacement in accordance with the original issue of the service bulletin constitutes terminating action for the requirements of paragraph (a) of this AD, provided that the eddy current surface inspection of the forward and aft flanges is accomplished in accordance with McDonnell Douglas DC–10 Service Bulletin 55–23, Revision 1, dated December 17, 1993; or McDonnell Douglas Service Bulletin DC10–55–023, Revision 02, dated October 30, 1996, or Revision 03, dated March 25, 1998.

(ii) Accomplishment of the replacement in accordance with McDonnell Douglas DC–10 Service Bulletin 55–23, Revision 1, dated December 17, 1993; or McDonnell Douglas Service Bulletin DC10–55–023, Revision 02, dated October 30, 1996, or Revision 03, dated March 25, 1998; constitutes terminating action for the requirements of paragraph (a) of this AD, provided that the eddy current surface inspection of the forward and aft flanges, and the eddy current bolt hole inspection of the bolt holes of the banjo No. 4 fitting, are accomplished in accordance with Revision 1, Revision 02, or Revision 03 of the service bulletin.

(2) If any cracking is detected, prior to further flight, repair either in accordance with Figure 6 or Figure 7, as applicable, of

Chapter 55–20–00, Volume 1, of the DC–10 Structural Repair Manual; or in accordance with a method approved by the Manager, Los Angeles Aircraft Certification Office (ACO), FAA, Transport Airplane Directorate.

(c) For airplanes that have not accomplished the requirements of paragraph (b) in accordance with McDonnell Douglas Service Bulletin DC–55–023, Revision 3, dated March 25, 1998: Within 1,500 landings after the effective date of this AD, perform a one-time detailed visual inspection to determine whether second oversize fasteners having part number (P/N) S4931917–8Y are installed in the banjo No. 4 fitting of the vertical stabilizer.

Note 3: For the purposes of this AD, a detailed inspection is defined as: "An intensive visual examination of a specific structural area, system, installation, or assembly to detect damage, failure, or irregularity. Available lighting is normally supplemented with a direct source of good lighting at intensity deemed appropriate by the inspector. Inspection aids such as mirror, magnifying lenses, etc., may be used. Surface cleaning and elaborate access procedures may be required."

(1) If second oversize fasteners having P/N S4931917–8Y are *not* installed, and the actions required by paragraph (b) of this AD have been accomplished, no further action is required by this AD.

(2) If second oversize fasteners having P/N S4931917– 8Y are *not* installed, and the actions required by paragraph (b) of this AD have *not* been accomplished: Within 1,500 landings after the last inspection performed in accordance with paragraph (a) of this AD, repeat that inspection, and perform the follow-on actions specified by paragraph (a) of this AD.

(3) If second oversize fasteners having P/N S4931917– 8Y *are* installed, prior to further flight, perform an external visual inspection to detect any failure of the 12 attachment fasteners located in the banjo No. 4 fitting of the vertical stabilizer in accordance with paragraph (a) of this AD.

(i) If no failure is detected, accomplish the actions specified in paragraph (c)(3)(i)(A) and (c)(3)(i)(B) of this AD.

(A) For any hole that has a P/N S4931917–8Y fastener installed: Repeat the external visual inspection thereafter at intervals not to exceed 1,500 landings until the requirements of paragraph (b) of this AD are accomplished.

(B) For any hole that has a P/N S4931917–8Y fastener installed: Within 5 years after April 24, 1996, or within 1,500 landings from the inspection required by paragraph (c)(3) of this AD, whichever occurs later, accomplish the requirements of paragraph (b) of this AD.

(ii) If any failure is detected, prior to further flight, accomplish the requirements of paragraph (b) of this AD for the failed fastener and its associated fastener hole only.

(d) As of the effective date of this AD, no person shall install a second oversize fastener having part number (P/N) S4931917–8Y in the banjo No. 4 fitting of the vertical stabilizer on any airplane.

Alternative Methods of Compliance

(e) An alternative method of compliance or adjustment of the compliance time that provides an acceptable level of safety may be used if approved by the Manager, Los Angeles ACO. Operators shall submit their requests through an appropriate FAA Principal Maintenance Inspector, who may add comments and then send it to the Manager, Los Angeles ACO.

Note 4: Information concerning the existence of approved alternative methods of compliance with this AD, if any, may be obtained from the Los Angeles ACO.

Special Flight Permits

(f) Special flight permits may be issued in accordance with sections 21.197 and 21.199 of the Federal Aviation Regulations (14 CFR 21.197 and 21.199) to operate the airplane to a location where the requirements of this AD can be accomplished.

Issued in Renton, Washington, on April 5, 2000.

Donald L. Riggin,

Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

Approval and Promulgation of Implementation Plan; Indiana Particulate Matter Rule

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: EPA is proposing to approve Indiana's State Plan revision to control particulate matter emissions from selected facilities at Central Soya Company, Incorporated in Marion County Indiana, submitted on February 3, 1999. The revision to the State Plan eliminates nine sources of particulate matter and adds 5 new sources. The emissions from the new sources do not exceed 25 tons per year and represents a net overall reduction in annual emissions.

DATES: Written comments must be received on May 11, 2000.

ADDRESSES: Written comments should be mailed to: J. Elmer Bortzer, Chief, Regulation Development Section, Air Programs Branch (AR–18J), Environmental Protection Agency, Region 5, 77 West Jackson Boulevard, Chicago, Illinois 60604.

Copies of the State submittal are available for inspection at: Regulation Development Section, Air Programs Branch (AR–18J), Environmental Protection Agency, Region 5, 77 West Jackson Boulevard, Chicago, Illinois 60604.

FOR FURTHER INFORMATION CONTACT: John Paskevicz, Environmental Engineer, Regulation Development Section, Air Programs Branch (AR–18J), Environmental Protection Agency, Region 5, 77 West Jackson Boulevard, Chicago, Illinois 60604, (312) 886–6084.

SUPPLEMENTARY INFORMATION: For additional information see the direct final rule published in the final rules section of this **Federal Register**.

Dated: March 28, 2000.

Approval and Promulgation of Air Quality Implementation Plans; Massachusetts; Revised VOC Rules

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: The EPA is proposing to approve two State Implementation Plan (SIP) revisions submitted by the Commonwealth of Massachusetts. These SIP submittals include revisions to regulations for controlling volatile organic compound (VOC) emissions, including emissions from marine vessel loading and consumer products. In the Final Rules section of this **Federal Register**, EPA is approving Massachusetts' SIP submittals as a direct final rule without prior proposal because the Agency views this as a noncontroversial submittal and anticipates no adverse comments. A detailed rationale for the approval is set forth in the direct final rule. If no adverse comments are received in response to this action rule, no further activity is contemplated. If EPA receives adverse comments, the direct final rule will be withdrawn and all public comments received will be addressed in a subsequent final rule based on this proposed rule. EPA will not institute a second comment period. Any parties interested in commenting on this action should do so at this time.

DATES: Written comments must be received on or before May 11, 2000.

ADDRESSES: Comments may be mailed to David Conroy, Unit Manager, Air

Quality Planning Unit (mail code CAQ), U.S. Environmental Protection Agency, Region I, One Congress Street, Suite 1100, Boston, MA 02114–2023. Copies of the State submittal and EPA's technical support document are available for public inspection during normal business hours, by appointment at the Office of Ecosystem Protection, U.S. Environmental Protection Agency, Region I, One Congress Street, 11th floor, Boston, MA and the Division of Air Quality Control, Department of Environmental Protection, One Winter Street, 8th Floor, Boston, MA 02108.

FOR FURTHER INFORMATION CONTACT: Anne E. Arnold, (617) 918–1047.

SUPPLEMENTARY INFORMATION: For additional information, see the direct final rule which is located in the Rules section of this **Federal Register**.

Dated: March 29, 2000.

RIN 0648–AN25

Fisheries of the Exclusive Economic Zone Off Alaska; Allocation of Pacific Cod among Vessels Using Hook-and-line or Pot Gear in the Bering Sea and Aleutian Islands

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of availability; request for comments.

SUMMARY: The North Pacific Fishery Management Council (Council) has submitted Amendment 64 to the Fishery Management Plan for the Groundfish Fishery of the Bering Sea and Aleutian Islands Area (FMP). This amendment would apportion the hook-and-line or pot gear (fixed gear) allocation of total allowable catch (TAC) of Pacific cod in the Bering Sea and Aleutian Islands management area (BSAI) among hook-and-line catcher-processor vessels, hook-and-line catcher vessels, and pot gear vessels. This action responds to socio-economic needs of the fishing industry that have been identified by the Council and intends to promote the goals and objectives of the FMP.

NMFS is requesting comments from the public on the proposed amendment, copies of which may be obtained from the Council (see **ADDRESSES**).

DATES: Comments on Amendment 64 must be submitted by June 12, 2000.

ADDRESSES: Comments must be sent to Sue Salveson, Assistant Regional Administrator for Sustainable Fisheries, Alaska Region, NMFS, P.O. Box 21668, Juneau, AK 99802, Attn: Lori Gravel. Hand- or courier-delivered comments may be sent to the Federal Building, 709 West 9th Street, Room 453, Juneau, AK 99801. Comments may also be sent via facsimile (fax) to 907–586–7465. Comments will not be accepted if submitted via e-mail or the Internet. Copies of Amendment 64 and the Environmental Assessment/Regulatory Impact Review/Initial Regulatory Flexibility Analysis (EA/RIR/IRFA) prepared for the amendments are available from the North Pacific Fishery Management Council at 605 West 4th Ave. Suite 306, Anchorage, AK 99501, telephone 907–271–2809.

FOR FURTHER INFORMATION CONTACT: James Hale, 907–586–7228.

SUPPLEMENTARY INFORMATION:

Background

The Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act) requires that each regional fishery management council submit any fishery management plan or plan amendment it prepares to NMFS for review and approval, disapproval, or partial approval. The Magnuson-Stevens Act also requires that NMFS, after receiving a fishery management plan or amendment, immediately publish a notice in the **Federal Register** that the fishery management plan or amendment is available for public review and comment. This action constitutes such notice for Amendment 64 to the BSAI FMP. NMFS will consider the public comments received during the comment period in determining whether to approve this amendment.

The groundfish fisheries in the Exclusive Economic Zone (3 to 200 miles offshore) of the BSAI are managed by NMFS under the BSAI groundfish FMP, which was prepared by the Council under the Magnuson-Stevens Act, Pub. L. 94–265, 16 U.S.C. 1801, and approved and implemented by NMFS in 1981.

Amendment 64, if approved, would establish separate Pacific cod directed fishing allowances for different sectors of vessels using hook-and-line or pot gear. These allowances are intended to reflect relative Pacific cod harvest shares since the mid 1990s. Under the proposed amendment, the Regional Administrator, NMFS, Alaska Region, annually would estimate the amount of Pacific cod taken as incidental catch in directed fisheries for groundfish other than Pacific cod by vessels using hook-and-line or pot gear and deduct that amount from the portion of Pacific cod TAC annually allocated to hook-and-line or pot gear (51 percent of the TAC). The remainder would be further allocated as directed fishing allowances for the different hook-and-line and pot gear users (sectors) as follows:

(a) Catcher/processor vessels using hook-and-line gear–80 percent;

(b) Catcher vessels using hook-and-line gear–0.3 percent;

(c) Vessels using pot gear–18.3 percent; and

(d) Catcher vessels less than 60 ft (18.3 meters) length overall (LOA) that use either hook-and-line or pot gear–1.4 percent.

Specific provisions for the accounting of these directed fishing allowances and the transfer of unharvested amounts of these allowances to other vessels using hook-and-line or pot gear would be set forth in regulations implementing the proposed amendment.

Amendment 64 would expire December 31, 2003. Continuing the proposed allocations of Pacific cod or selecting new allocation percentages after this date would require Council adoption and NMFS' approval of a new FMP amendment. In adopting an expiration date for the proposed amendment, the Council reasoned that 3 years would be sufficient time for the hook-and-line or pot gear sector allocations of Pacific cod to address the issue of increasing competition for BSAI Pacific cod before reconsidering the issue in light of other proposed changes impending for the BSAI Pacific cod groundfish fisheries, including proposed gear or species endorsements on permits issued under the license limitation program.

Public comments are being solicited on this proposed amendment through the end of the comment period specified in this notice. A proposed rule that would implement the amendment may be published in the **Federal Register** for public comment following NMFS' evaluation under the Magnuson-Stevens Act procedures. Public comments on the proposed rule must be received by close of business on the last day of the comment period of the amendment to be considered in the decision to approve or disapprove the amendment. All comments received by the end of the comment period, whether specifically directed to the amendment or to the

proposed rule, will be considered in the decision.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: April 4, 2000.

Bruce C. Morehead,

Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

DEPARTMENT OF AGRICULTURE

Food and Nutrition Service

Agency Information Collection Activities: Proposed Collection, Comment Request—Food Stamp Program: State Issuance and Participation Estimates—Form FNS–388

AGENCY: Food and Nutrition Service, USDA.

ACTION: Notice.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, the Food and Nutrition Service (FNS) is publishing for public comment a summary of a proposed information collection. The proposed collection is to reinstate a previously approved collection under OMB No. 0584–0081 for the Food Stamp Program for the form FNS–388, State Issuance and Participation Estimates.

DATES: Comments on this notice must be received by June 12, 2000 to be assured of consideration.

ADDRESSES: Send comments and requests for copies of this information collection to Barbara Hallman, Chief, State Administration Branch, Food Stamp Program, Food and Nutrition Service, USDA, 3101 Park Center Drive, Alexandria, VA 22302. Copies of the estimate of the information collection can be obtained by contacting Ms. Hallman.

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the Agency, including whether the information will have practical utility; (b) the accuracy of the Agency's estimate of the burden of the proposed collection of information including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

All comments will be summarized and included in the request for Office of Management and Budget approval of the information collection. All comments will become a matter of public record.

FOR FURTHER INFORMATION CONTACT: Barbara Hallman, telephone number (703) 305–2383.

SUPPLEMENTARY INFORMATION:

Title: Form FNS–388, State Issuance and Participation Estimates.

OMB Number: 0584–0081.

Expiration Date: Expired.

Type of Request: Reinstatement of a previously approved collection.

Abstract: Section 18(b) of the Food Stamp Act limits the value of allotments paid to food stamp households to an amount not in excess of the appropriation for the fiscal year. If allotments in any fiscal year would exceed the appropriation, the Secretary of Agriculture is required to direct State agencies to reduce the value of food stamp allotments to the extent necessary to stay within appropriated funding limits.

Section 18(a) of the Food Stamp Act requires the Secretary of Agriculture to submit a monthly report to Congress setting forth the Secretary's best estimate of the second preceding month's expenditures for the Food Stamp Program as well as the cumulative total for the fiscal year. In each monthly report the Secretary is required to also state whether supplemental appropriations will be needed to support the operation of the program through the end of the fiscal year. The timeliness and accuracy of the data available to the Secretary prior to submitting this report will have a direct effect upon any request for supplemental appropriations that may be submitted and the manner in which allotments will be reduced if the supplemental appropriation is not provided. While benefit reductions have never been ordered in the past under Section 18(b) nor are they anticipated based on current data, the Department must continue to monitor actual program costs against the appropriation.

Section 11(e)(12) of the Food Stamp Act requires that the State Plan of Operations shall provide for the submission of reports required by the Secretary of Agriculture. State agencies are required to report on a monthly basis on the FNS–388, State Issuance and Participation Estimates, estimated or actual issuance and participation data for the current month and previous month, and actual participation data for the second preceding month. The FNS–388 report provides the necessary data for an early warning system to enable the Department to fulfill its reporting requirements to Congress.

State agencies in general only submit one Statewide FNS–388 per month. The exception is that State agencies which choose to operate both a coupon system and an electronic benefit transfer (EBT) system or which choose to operate an approved alternative issuance demonstration project such as a cash-out system submit a separate report for each type of issuance system. State agencies are converting from coupons to EBT. In July 1999, 39 States and the District of Columbia operated an EBT system and 31 operated EBT statewide. With additional States moving from paper coupons to EBT in the next few months, few States will be expected to temporarily submit more than one FNS–388 report per month at any one time. With State agency automated information systems, the separate report for a secondary issuance system or an alternative issuance demonstration project should have a negligible impact on the burden.

In addition, State agencies are required to submit a project area breakdown on the FNS–388 of issuance and participation data twice a year. This data is useful in identifying project areas that are required to do photo identification of heads of households or to operate fraud detection units in accordance with the Act.

Beginning July 1993, State agencies were allowed to submit the FNS–388 data electronically to the national database files stored in FNS' Food Stamp Program Integrated Information System in lieu of a paper report. The voluntary changeover from paper to electronic reporting of FNS–388 data by States was done as part of FNS' State Cooperative Data Exchange Project. This project is being expanded over time as more FNS forms are transferred to

electronic formats for State data entry. As of July 1999, 45 State agencies submit the FNS–388 data electronically and 8 State agencies submit paper reports.

Respondents: State agencies that administer the Food Stamp Program.

Estimated Number of Respondents: 53.

Estimated Number of Responses per Respondent:

Form FNS–388: 53 State agencies 12 times a year.

Form FNS–388A: 53 State agencies twice a year.

Estimate of Burden:

Form FNS–388: The State agencies submit Form FNS–388 10 times per year at an estimate of 5.60 hours per respondent, or 2,970 hours annually for all respondents. The remaining two FNS–388 submissions with a public assistance (PA) and non-public assistance (NA) caseload breakout are covered under the FNS–388A twice a year submissions (see below).

Form FNS–388A: The State agencies submit a more detailed FNS–388 (with PA and NA breakout) twice a year and FNS–388A project area breakdown twice a year at an estimate of 14.8 hours per respondent, or 1,572 hours annually for all respondents.

Estimated Total Annual Burden on Respondents: The annual reporting and recordkeeping burden for OMB No. 0584–0081 is estimated to be 4,542 hours.

Dated: March 22, 2000.

Samuel Chambers, Jr.,

Administrator.

DEPARTMENT OF AGRICULTURE

Forest Service

Willamette Provincial Advisory Committee (PAC); Meeting

AGENCY: Forest Service.

SUMMARY: The Willamette Province Advisory Committee (PAC) will meet on Thursday, April 20, 2000. The meeting is scheduled to begin at 9 a.m., and will conclude at approximately 2 p.m. The meeting will be held at the Salem Office of the Bureau of Land Management; 1717 Fabry Road, SE., Salem, Oregon; (503) 375–5646. The tentative agenda includes:

(1) REO update, (2) Information sharing, (3) Public forum; (4) Update on FS Roadless Area Initiative and Roads Strategy, (5) Panel discussion, Fish management in the Willamette Basin.

The Public Forum is tentatively scheduled to begin at 10:30 a.m. Time allotted for individual presentations will be limited to 3–4 minutes. Written comments are encouraged, particularly if the material cannot be presented within the time limits for the Public Forum. Written comments may be submitted prior to the April 20 meeting by sending them to Designated Federal Official Neal Forrester at the address given below.

FOR FURTHER INFORMATION CONTACT: For more information regarding this meeting, contact Designated Federal Official Neal Forrester; Willamette National Forest; 211 East Seventh Avenue; Eugene, Oregon 97401; (541) 465–6924.

Dated: April 4, 2000.

Y. Robert Iwamoto,

Deputy Forest Supervisor.

BILLING CODE 3410–11–M

DEPARTMENT OF AGRICULTURE

Natural Resources Conservation Service

Notice of Proposed Changes in the National Handbook of Conservation Practices

AGENCY: Natural Resources Conservation Service, USDA.

ACTION: Notice and request for comments.

SUMMARY: Notice is hereby given of the intention of the Natural Resources Conservation Service (NRCS) to issue a series of new or revised conservation practice standards in its National Handbook of Conservation Practices. These standards include Heavy Use Area Protection; Irrigation System, Tailwater Recovery; Pest Management; Pipeline; and Watering Facility. These standards are used to convey national guidance when developing Field Office Technical Guide Standards used in the States. NRCS State conservationists who choose to adopt these practices for use within their States will incorporate them into Section IV of their Field Office Technical Guide. These practices may be used in conservation systems that treat highly erodible land or on land determined to be wetland.

DATES: Comments will be received for a 60-day period commencing with the date of publication. This series of new or revised conservation practice standards will be adopted after the close of the 60-day period.

FOR FURTHER INFORMATION CONTACT: Single copies of these standards are available from NRCS–CED in Washington, DC. Submit individual inquiries and return any comments in writing to William Hughey, National Agricultural Engineer, Natural Resources Conservation Service, Post Office Box 2890, Room 6139–S, Washington, DC 20013–2890. Telephone Number 202–720–5023. The standards are also available and can be downloaded from the Internet at: http://www.ftw.nrcs.usda.gov/practice__stds.html.

SUPPLEMENTARY INFORMATION: Section 343 of the Federal Agriculture Improvement and Reform Act of 1996 requires NRCS to make available for public review and comment proposed revisions to conservation practice standards used to carry out the highly erodible land and wetland provisions of the law. For the next 60 days, NRCS will receive comments relative to the proposed changes. Following that period, a determination will be made by NRCS regarding disposition of those comments, and a final determination of change will be made.

Signed at Washington, D.C., on March 31, 2000.

Pearlie S. Reed,

Chief, Natural Resources Conservation Service.

[FR Doc. 00–8974 Filed 4–10–00; 8:45 am]

BILLING CODE 3410–16–P

DEPARTMENT OF COMMERCE

Submission for OMB Review; Comment Request

The Department of Commerce (DoC) has submitted to the Office of Management and Budget (OMB) for clearance the following proposal for collection of information under the provisions of the Paperwork Reduction Act (44 U.S.C. chapter 35).

Agency: Patent and Trademark Office (PTO).

Title: Requirements for Patent Applications Containing Nucleotide Sequence and/or Amino Acid Sequence Disclosures.

Form Numbers: N/A.

Agency Approval Number: 0651–0024.

Type of Request: Reinstatement, with change, of a previously approved collection for which approval has expired.

Burden: 5,283 hours annually.

Number of Respondents: 5,601 responses annually.

Avg. Hours Per Response: Based on PTO time and motion studies, the agency estimates that it will take the

public 80 minutes to create a nucleotide/amino acid sequence listing in an application. In the electronic version of the sequence listing, EFS BIO, it is estimated that it will take 10 minutes to create and submit a sequence listing in an application.

Needs and Uses: Nucleotide and amino acid sequence disclosure information is used by the PTO during the examination process to determine the patentability of an application by effectively examining the sequences in order to process the data more efficiently. The PTO also uses the data after examination to support publication of issued patents. In addition, the sequences are used by the PTO during participation with the European and Japanese Patent Offices in a Trilateral Sequence Exchange project, thereby facilitating the international exchange of published sequence data. After patent publication, the public and the bar associations can search the nucleotide/amino acid sequence listings. Applicants use the sequence data when preparing both national and international patent applications.

Affected Public: Individuals or households, business or other for-profit institutions, not-for-profit institutions, farms, the Federal government, and state, local, or tribal governments.

Frequency: As applied for when patent applicants submit a patent application (both national and international applications) containing nucleotide and/or amino acid sequence disclosure data within their patent applications.

Respondent's Obligation: Required to obtain or retain benefits.

OMB Desk Officer: David Rostker, (202) 395–3897.

Copies of the above information collection proposal can be obtained by calling or writing Linda Engelmeier, Departmental Forms Clearance Officer, Office of the Chief Information Officer, (202) 482–3272, Department of Commerce, Room 5027, 14th and Constitution Avenue, NW, Washington, DC 20230 or via e-mail at LEngelme@doc.gov).

Written comments and recommendations for the proposed information collection should be sent within 30 days of publication to David Rostker, OMB Desk Officer, Room 10202, New Executive Office Building, Washington, DC 20503.

Dated: April 4, 2000.

Linda Engelmeier,

Departmental Forms Clearance Officer, Office of the Chief Information Officer.

Bureau of Export Administration

Materials Processing Equipment Technical Advisory Committee; Notice of Partially Closed Meeting

The Materials Processing Equipment Technical Advisory Committee will meet on May 11, 2000, 9:00 a.m., Room 3884, in the Herbert C. Hoover Building, 14th Street between Pennsylvania and Constitution Avenues, NW, Washington, DC. The Committee advises the Office of the Assistant Secretary for Export Administration with respect to technical questions that affect the level of export controls applicable to materials processing equipment and related technology.

Agenda

Open Session

1. Opening remarks by the Chairman
2. Presentation of papers or comments by the public
3. Update of Wassenaar Arrangement negotiations
4. Status of Computerized Numerical Controller (CNC) software
5. Status of definition for "specially designed"
6. Recommendations from the Committee

Closed Session

7. Discussion of matters properly classified under Executive Order 12958, dealing with the U.S. export control program and strategic criteria related thereto.

A limited number of seats will be available for the open session of the meeting. Reservations are not accepted. To the extent that time permits, members of the public may present oral statements of the Committee. The public may submit written statements at any time before or after the meeting. However, to facilitate distribution of public presentation materials, the Committee suggests that presenters forward the materials prior to the meeting date to the following address: Ms. Lee Ann Carpenter, OSIES/EA/BXA MS:3876, U.S. Department of Commerce, 14th St. & Constitution Ave., NW, Washington, DC 20230.

The Assistant Secretary for Administration, with the concurrence of the General Counsel, formally determined on December 11, 1999, pursuant to section 10(d) of the Federal Advisory Committee Act, as amended, that the series of meetings of the Committee and of any Subcommittees thereof, dealing with the classified materials listed in 5 U.S.C. 552b(c)(1) shall be exempt from the provisions relating to public meetings found in section 10(a)(1) and (a)(3), of the Federal Advisory Committee Act. The remaining series of meetings or portions thereof will be open to the public.

A copy of the Notice of Determination to close meetings or portions of meetings of the Committee is available for public inspection and copying in the Central Reference and Records Inspection Facility, Room 6020, U.S. Department of Commerce, Washington, DC 20230. For more information, contact Lee Ann Carpenter on (202) 482–2583.

Dated: April 6, 2000.

Lee Ann Carpenter,

Committee Liaison Officer.

Bureau of Export Administration

Critical Infrastructure Assurance Office; Announcement of a Workshop on Public Key Infrastructure for Advanced Network Technologies

AGENCY: Bureau of Export Administration, Critical Infrastructure Assurance Office.

ACTION: Notice of Public Meeting/Workshop.

SUMMARY: The Critical Infrastructure Assurance Office (CIAO) invites interested parties to attend a workshop on April 27–28, 2000, on Public Key Infrastructures for Advanced Network Technologies. The workshop is designed to promote the deployment and use of a high confidence public key infrastructure and related security technologies for advanced networks and distributed government applications in E-commerce and related critical systems.

DATES: The workshop will be held on April 27–28, 2000, starting at 8:30 am until 5:00 pm.

ADDRESSES: The workshop will be held at the National Institute of Standards and Technology (NIST), Building 101, Lecture Room A. Gaithersburg, MD, 20899. Attendance is open to all interested persons, but seating is limited. Therefore, registration for attendance will be accepted on a first-come basis. To register please contact Wanda Rose at (202) 589–3241 or by E-mail: *Wanda.Rose@ciao.gov*.

FOR FURTHER TECHNICAL INFORMATION CONTACT: Robert Rosenthal, Critical Infrastructure Assurance Office, 1800 G St., NW, 8th floor, Washington, D.C. 20006; Phone number: (202) 589–3231; E-mail: *Robert.Rosenthal@ciao.gov*.

SUPPLEMENTARY INFORMATION:

● The workshop is designed to promote the deployment and use of a high confidence public key infrastructure and related security technologies for advanced networks and distributed government applications in E-commerce and related critical systems in banking and finance, energy, transportation, and telecommunications sectors.

- The workshop is intended to contribute to the development of collaborative interagency research and development agenda executed under the High Confidence Systems and Software, Large Scale Networking, and Critical Infrastructure Protection Research and Development Programs.
- The workshop is designed to identify opportunities for U.S. government agencies to develop collaborative experiments and test beds that address issues related to scalability, interoperability, testing and robustness in the face of attacks on public key infrastructure systems; and to facilitate discussion between people who understand public key infrastructure technology and those who might propose policies and legal frameworks.
- In addition, the workshop will explore technology transfer opportunities that enable new markets for next generation public key infrastructures for the Internet and will facilitate movement of public key infrastructure towards becoming a high confidence assured Internet service.

Copies of the agenda for the workshop will be available on CIAO's web site: www.CIAO.gov.

William A. Reinsch,

Under Secretary for Export Administration.

Brake Rotors From the People's Republic of China: Postponement of Final Results of Second Antidumping Duty Administrative Review and Third New Shipper Review

AGENCY: Import Administration, International Trade Administration, Department of Commerce.

ACTION: Notice of extension of the time limit for the final results in the second antidumping duty administrative review and third new shipper review of the antidumping duty order on brake rotors from the People's Republic of China.

SUMMARY: The Department of Commerce is extending the time limit for the final results of the second antidumping duty administrative review and third new shipper review of the antidumping duty order on brake rotors from the People's Republic of China. This review covers the period April 1, 1998, through March 31, 1999.

EFFECTIVE DATE: April 11, 2000.

FOR FURTHER INFORMATION CONTACT: Brian Smith or Terre Keaton, Import Administration, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue, NW, Washington, DC 20230; telephone: (202) 482–1766 or (202) 482–1280, respectively.

Postponement of Final Results of Review

The Department of Commerce ("the Department") published the preliminary results of the second antidumping administrative review and third new shipper review on brake rotors from the People's Republic of China ("PRC") on December 29, 1999 (64 FR 73007). The current deadline for the final results in these reviews is April 27, 2000. In accordance with section 751(a)(3)(A) of the Tariff Act of 1930 ("the Act"), as amended, we determine that it is not practicable to complete these reviews within the original time frame because of the Department's decision to verify certain respondents in these reviews (*see* March 29, 2000, letter from Deputy Assistant Secretary Richard W. Moreland to Mr. Leslie Glick, counsel for the petitioner in these reviews). We are currently unable to conduct verification and allow sufficient opportunity for the submission of interested party comments, prior to the current final results deadline. Thus, in accordance with section 751(a)(3)(A) of the Act and section 351.213(h)(2) of the Department's regulations, the Department is extending the time limit for completion of the final results of these reviews until October 24, 2000, which is 300 days after the date on which the notice of the preliminary results was published in the **Federal Register**.

Dated: April 4, 2000.

Richard W. Moreland,

Deputy Assistant Secretary for Import Administration.

Certain Cut-to-Length Carbon Steel Plate From Mexico: Extension of Time Limit for Preliminary Results of Countervailing Duty Administrative Review

AGENCY: Import Administration, International Trade Administration, Department of Commerce.

EFFECTIVE DATE: April 11, 2000.

FOR FURTHER INFORMATION CONTACT: Eric Greynolds or Michael Grossman, at (202) 482–6071 or (202) 482–3146, respectively, AD/CVD Enforcement, Office VI, Group II, Import Administration, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Ave, NW, Washington, DC 20230.

Time Limits

Statutory Time Limits

Section 751(a)(3)(A) of the Tariff Act of 1930, as amended (the Act), requires the Department of Commerce ("the Department") to make a preliminary determination within 245 days after the last day of the anniversary month of an order/finding for which a review is requested. However, if it is not practicable to complete the preliminary results of review within this time period, section 751(a)(3)(A) of the Act allows the Department to extend the time limit for the preliminary determination to a maximum of 365 days.

Background

On October 1, 1999, the Department published a notice of initiation of administrative review of the countervailing duty order on certain cut-to-length carbon steel plate from Mexico, covering the period January 1, 1998 through December 31, 1998 (64 FR 53318). The preliminary results are currently due no later than May 2, 2000.

Extension of Time Limit for Preliminary Results of Review

We determine that it is not practicable to complete the preliminary results of this review within the original time limit. Therefore the Department is extending the time limit for completion of the preliminary results until no later than August 30, 2000. See Decision Memorandum from John Brinkmann, Acting Director, AD/CVD Enforcement, Office VI, to Holly Kuga, Acting Deputy Assistant Secretary for Import Administration, Group II, which is on file in the Central Records Unit, Room B–099 of the main Commerce building. We intend to issue the final results no later than 120 days after the publication of the preliminary results notice.

This extension is in accordance with section 751(a)(3)(A) of the Act.

Dated: April 5, 2000.

Holly Kuga,

Acting Deputy Assistant Secretary for Import Administration, Group II.

International Trade Administration

[A–588–817]

Continuation of Antidumping Duty Order: Electroluminescent Flat Panel Displays and Display Glass From Japan

AGENCY: Import Administration, International Trade Administration, Department of Commerce.

ACTION: Notice of Continuation of Antidumping Duty Order: Electroluminescent Flat Panel Displays and Display Glass from Japan.

SUMMARY: On August 2, 1999, the Department of Commerce ("the Department"), pursuant to sections 751(c) and 752 of the Tariff Act of 1930, as amended ("the Act"), determined that revocation of the antidumping duty order on electroluminescent flat panel displays and display glass ("EL FPD") from Japan is likely to lead to continuation or recurrence of dumping (64 FR 41915). On March 30, 2000, the International Trade Commission ("the Commission"), pursuant to section 751(c) of the Act, determined that revocation of the antidumping duty order on EL FPD from Japan would be likely to lead to continuation or recurrence of material injury to an industry in the United States within a reasonably foreseeable time (65 FR 16962). Therefore, pursuant to 19 CFR 351.218(f)(4), the Department is publishing notice of the continuation of the antidumping duty order on EL FPD from Japan.

EFFECTIVE DATE: April 11, 2000.

FOR FURTHER INFORMATION CONTACT: Martha V. Douthit or Carole A. Showers, Office of Policy for Import Administration, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Ave., NW, Washington, DC 20230; telephone: (202) 482–5050 or (202) 482–3217, respectively.

SUPPLEMENTARY INFORMATION:

Background

On August 2, 1999, the Department initiated, and the Commission instituted, a sunset review (64 FR 41915 and 64 FR 41951, respectively) of the antidumping duty order on electroluminescent flat panel displays and display glass from Japan pursuant to section 751(c) of the Act. As a result of its review, the Department found that revocation of the antidumping duty order would likely lead to continuation or recurrence of dumping and notified the Commission of the magnitude of the margin likely to prevail were the order to be revoked (*see Electroluminescent Flat Panel Displays and Display Glass From Japan; Final Results of Antidumping Duty Sunset Review*, 65 FR 11979 (March 7, 2000)).

On March 30, 2000, the Commission determined, pursuant to section 751(c) of the Act, that revocation of the antidumping duty order on electroluminescent flat panel displays and display glass from Japan would be likely to lead to continuation or recurrence of material injury to an industry in the United States within a reasonably foreseeable time (*see Electroluminescent Flat Panel Displays From Japan*, 65 FR 16962 (March 30, 2000) and USITC Publication 3285, Investigation No. 731–TA–469 (Review) (March 2000)).

Scope

The product covered by this antidumping duty order covers EL FPDs from Japan. EL FPDs are large area, matrix addressed displays, no greater than four inches in depth, with a pixel count of 120,000 or greater, whether complete or incomplete, assembled or unassembled. EL FPDs incorporate a matrix of electrodes that, when activated, apply an electrical current to a solid compound of electroluminescent material (*e.g.*, zinc sulfide) causing it to emit light. Included are monochromatic, limited color, and full color displays used to display text, graphics, and video. EL FPDs, whether or not integrated with additional components, exclusively dedicated to and designed for use in EL FPDs, is defined as processed glass substrates that incorporate patterned row, column, or both types of electrodes and, also, typically incorporate a material that reacts to a change in voltage (*e.g.*, phosphor) and contact pads for interconnecting drive electronics.

All types of FPDs are currently classifiable under subheadings 8543, 8803, 9013, 9014, 9017.90.00, 9018, 9022, 9026, 9027, 9030, 9031, 8471.92.30, 8471.92.40, 8473.10.00, 8473.21.00, 8473.30.40, 8442.40.00, 8466, 8517.90.00, 8528.10.80, 8529.90.00, 8531.20.00, 8531.90.00, and 8541 of the Harmonized Tariff Schedule ("HTS"). Although the HTS subheadings are provided for convenience and customs purposes, our written description of the scope of this proceeding is dispositive.

Determination

As a result of the determinations by the Department and the Commission that revocation of the antidumping duty order on EL FPDs would be likely to lead to continuation or recurrence of dumping and material injury to an industry in the United States, pursuant to section 751(d)(2) of the Act, the Department hereby orders the continuation of the antidumping duty order on EL FPDs from Japan. The Department will instruct the U.S. Customs Service to continue to collect antidumping duty deposits at the rates in effect at the time of entry for all imports of subject merchandise. The effective date of continuation of this order will be the date of publication in the **Federal Register** of this Notice of Continuation. Pursuant to section 751(c)(2) and 751 (c)(6)(A) of the Act, the Department intends to initiate the next five-year review of this orders not later than March 2005.

Dated: April 5, 2000.

Joseph A. Spetrini,

Acting Assistant Secretary for Import Administration.

Industrial Phosphoric Acid From Israel: Notice of Extension of Time Limit for Countervailing Duty Administrative Review

AGENCY: Import Administration, International Trade Administration, Department of Commerce.

EFFECTIVE DATE: April 11, 2000.

SUMMARY: The Department of Commerce (the Department) is extending the time limit for the preliminary results of the administrative review of the countervailing duty order on industrial phosphoric acid from Israel. The review covers the period January 1, 1998 through December 31, 1998.

FOR FURTHER INFORMATION CONTACT: Sean Carey or Jonathan Lyons, AD/CVD Enforcement Office 7, Import Administration, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue, NW, Washington, DC 20230, telephone: (202) 482–3964 or (202) 482–0374, respectively.

Postponement of Preliminary Results of Review

On October 1, 1999, the Department published a notice of initiation of an administrative review of the countervailing duty order on industrial phosphoric acid from Israel, covering

the period January 1, 1998 through December 31, 1998 (64 FR 53318). The preliminary results are currently due no later than May 2, 2000.

Section 751(a)(3)(A) of the Tariff Act, as amended (the Act), requires the Department to make a preliminary determination within 245 days after the last day of the anniversary month of an order/finding for which a review is requested. However, if it is not practicable to complete the preliminary results within this time period, section 751(a)(3)(A) of the Act allows the Department to extend the time limit for a preliminary determination to a maximum of 365 days.

We determine that it is not practicable to complete the preliminary results of this review within the original time limit. Therefore, the Department is extending the time limit for completion of the preliminary results to no later than August 30, 2000. *See* Memorandum from Richard O. Weible to Joseph A. Spetrini, dated April 5, 2000, which is on file in the Central Records Unit, Room B–099 of the main Commerce Building. This extension is in accordance with section 751(a)(3)(A) of the Act.

Dated: April 5, 2000.

Joseph A. Spetrini,

Deputy Assistant Secretary Enforcement Group III,

Atlantic Highly Migratory Species (HMS) Fishery Management Plan; Second Errata Sheet

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of availability.

SUMMARY: NMFS announces the availability of a second errata sheet for the Fishery Management Plan for Atlantic Tunas, Swordfish, and Sharks (HMS FMP) published in April, 1999.

ADDRESSES: Copies of the HMS FMP, both errata sheets, the final rule, and supporting documents can be obtained from Rebecca Lent, Chief, Highly Migratory Species Management Division, Office of Sustainable Fisheries, NMFS, 1315 East-West Highway, Silver Spring, MD 20910.

FOR FURTHER INFORMATION CONTACT: Karyl Brewster-Geisz, (301) 713–2347.

SUPPLEMENTARY INFORMATION: In a September 1997 Report to Congress, NMFS identified north Atlantic swordfish, west Atlantic Bluefin tuna, and large coastal sharks as overfished. The HMS FMP, including a final environmental impact statement, was published in April, 1999, to comply with provisions of the Magnuson-Stevens Fishery Conservation and Management Act for fisheries identified as overfished, and the final rule implementing actions included in the HMS FMP and Amendment 1 to the Atlantic Billfish Fishery Management Plan was published on May 28, 1999 (64 FR 29090). Since the publication of the HMS FMP, a number of typographical mistakes and other errors have been noted throughout its three volumes. The first errata sheet was announced on December 14, 1999 (64 FR 69742). The second errata sheet corrects errors that were noted since then.

Dated: April 5, 2000

Gary C. Matlock,

Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

[I.D. 033000A]

Pacific Fishery Management Council; Public Meeting

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of public meeting.

SUMMARY: The Pacific Fishery Management Council's (Council) Highly Migratory Species Plan Development Team (HMSPDT) will hold a video conference work session.

DATES: The work session will be held on Wednesday, April 26, 2000, from 8:30 a.m. to 4:30 p.m.

ADDRESSES: The video conference will be accessible to the public via viewing stations at the NMFS offices in La Jolla, CA; Long Beach, CA; Portland, OR; and Seattle WA. See **SUPPLEMENTARY INFORMATION** for the addresses.

Council address: Pacific Fishery Management Council, 2130 SW Fifth Avenue, Suite 224, Portland, OR 97201.

FOR FURTHER INFORMATION CONTACT: Dan Waldeck, Pacific Fishery Management Council; 503–326–6352.

SUPPLEMENTARY INFORMATION: The addresses of the locations are:

NMFS, Southwest Fisheries Science Center, Large Conference Room, 8604 La Jolla Shores Drive, La Jolla, CA 92038;

NMFS Southwest Region, Conference Room, 501 W. Ocean Blvd., Long Beach, CA 90802;

NMFS Pacific Conference Room, 525 NE. Oregon, Portland, OR 97232;

NMFS Northwest Region, Regional Directors Conference Room, 7600 Sand Point Way NE., Bldg. 1, Seattle, WA 98115.

The primary purposes of the work session are to: (1) discuss organization and outline of the Fisheries Management Plan (FMP) for Highly Migratory Species (HMS); and (2) for HMSPDT members to report progress on draft sections of the FMP.

Management measures that may be adopted in the FMP for HMS Fisheries off the West Coast include permit and reporting requirements for commercial and recreational harvest of HMS resources, time and/or area closures to minimize gear conflicts or bycatch, adoption or confirmation of state regulations for HMS fisheries, and allocations of some species to non-commercial use. The FMP is likely to include a framework management process to add future new measures, including the potential for collaborative management efforts with other regional fishery management councils with interests in HMS resources. It would also include essential fish habitat and habitat areas of particular concern, including fishing and non-fishing threats, as well as other components of FMPs required under the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act).

The proposed FMP, and its associated regulatory analyses, would be the Council's fourth FMP for the exclusive economic zone off the West Coast. Development of the FMP is timely, considering the new mandates under the Magnuson-Stevens Act, efforts by the United Nations to promote conservation and management of HMS resources through domestic and international programs, and the increased scope of activity of the Inter-American Tropical Tuna Commission in HMS fisheries in the eastern Pacific Ocean.

Although non-emergency issues not contained in the HSMPDT meeting agenda may come before the HMSPDT for discussion, those issues may not be

the subject of formal HMSPDT action during these meetings. HMSPDT action will be restricted to those issues specifically listed in this document and any issues arising after publication of this document that require emergency action under section 305(c) of the Magnuson-Stevens Act, provided the public has been notified of the HMSPDT's intent to take final action to address the emergency.

Special Accommodations

The meeting is physically accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aids should be directed to Mr. John Rhoton at 503–326–6352 at least 5 days prior to the meeting date.

Dated: April 5, 2000.

Richard W. Surdi,

Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

Western Pacific Fishery Management Council; Public Meeting

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of public meeting.

SUMMARY: The Western Pacific Fishery Management Council's (Council) Pelagics Plan Team (PPT) members will hold a meeting.

DATES: The meeting will be held May 2, 2000 through May 4, 2000, from 8:30 a.m. to 5:00 p.m. each day.

ADDRESSES: The meeting will be held at the Council office, 1164 Bishop St., Suite 1400, Honolulu, HI 96813.

FOR FURTHER INFORMATION CONTACT: Kitty M. Simonds, Executive Director; telephone: 808–522–8220.

SUPPLEMENTARY INFORMATION: The PPT meeting will discuss and may make recommendations to the Council on the following agenda items:

1. Pelagic fisheries annual report modules;
2. 1st quarter 2000 Hawaii and American Samoa longline fishery report;
3. Results of tagging of yellowfin and bigeye in Hawaii;
4. Shark fishery management;
5. Report of Recreational Fisheries Data Task Force;
6. Turtle management and recent litigation;
7. Bycatch categories;
8. National Plan of Action-Fishing Capacity;
9. Marine debris;
10. Area closure for large pelagic fishing vessels around the islands of American Samoa;
11. Managing seabird-longline fishery interactions;
12. 6th Multi-lateral High Level Conference;
13. Other international fishery issues;
14. Review of Pelagics Advisory Panel recommendations; and
15. Other business as required.

Although non-emergency issues not contained in this agenda may come before this Council for discussion, those issues may not be the subject of formal Council action during this meeting. Council action will be restricted to those issues specifically listed in this notice and any issues arising after publication of this notice that require emergency action under section 305(c) of the Magnuson-Stevens Fishery Conservation and Management Act, provided the public has been notified of the Council's intent to take final action to address the emergency.

Special Accommodations

This meeting is physically accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aids should be directed to Kitty M. Simonds, 808–522–8220 (voice) or 808–522–8226 (fax), at least 5 days prior to meeting date.

SUPPLEMENTARY INFORMATION:

Meeting Dates, Times, Locations and Agendas

The joint advisory bodies will discuss and may make recommendations to the Council on the agenda items listed here. The order in which agenda items will be addressed is tentative.

Tuesday, April 25, 2000, from 9:00–5:00 p.m.—BPT meeting jointly with CPT/AP

Location: Western Pacific Fishery Management Council office conference rooms, 1164 Bishop Street, Honolulu, Hawaii, 96813 (808) 522–0220.

1. Environmental Impact Statements (EISs) for Bottomfish and Crustaceans Fishery Management Plans (FMPs)
2. Addition of Commonwealth of the Northern Mariana Islands and Pacific Remote Island Areas to Crustaceans FMP.
   A. Management Unit Species (MUS) to be included
   B. Initial management measures
   C. Other issues
3. Bycatch reporting (Sustainable Fisheries Act (SFA) requirement).

Tuesday, April 25, 2000, at 10:30 a.m.—CPT/AP and BPT meet separately

Location: Western Pacific Fishery Management Council office conference rooms, 1164 Bishop Street, Honolulu, Hawaii, 96813 (808) 522–0220.

BPT

1. Amendments and framework actions

A. Mau zone new entry criteria
B. Coral Reef Plan permitting measures
(i) Non-managed species in Northwestern Hawaiian Islands (NWHI) caught in bottomfish fishery
(ii) Non-managed species in main Hawaiian Islands caught in bottomfish fishery
2. Annual Report review and development of research plan for bottomfish fisheries
A. Review Status of 1998 Annual Report Recommendations
B. Identify problems and possible solutions for uncompleted recommendations
C. Review 1999 Annual Report modules and recommendations
(i) American Samoa
(ii) Guam
(iii) Hawaii
(iv) Northern Mariana Island
D. 1999 Annual Report region-wide recommendations
E. Research plan for Western Pacific Region bottomfish fisheries
(i) Review other bottomfish research needs (annual report recommendations, program planning, NMFS, etc.)
(ii) Consider new information needs and develop recommendations
(iii) Prioritize research needs and recommendations
3. Other business

CPT/AP

1. Stock Assessment and Fishery Economics Report
A. 1999 Annual Report
B. Strategy for future stock assessments
2. 2000 lobster harvest guideline
3. Research plans
A. Industry-NMFS cooperative research agreement
B. NMFS plan for lobster tagging
C. Other comprehensive research needed
4. Consideration of amendment to replace NWHI lobster assessment model
A. Review of Council action
B. Aspects for developing a fully integrated dynamic model
C. Proposed amendment options/ schedule
D. Five-year review (due June 2001)
5. Possible additions to Crustaceans MUS (e.g., shrimp, red crab)
6. Revision to address SFA overfishing requirements
7. Other business
8. Summary of recommendations

Wednesday, April 26, 2000, from 9:00 a.m.–5:00 p.m.—Joint advisory body meeting

Location: Pagoda Hotel International Ballroom, 1525 Rycroft Street, Honolulu, Hawaii; (808) 941–6611.

1. Summary of Council's modified preferred alternative for draft Coral Reef Ecosystem FMP/preliminary draft environmental impact statement
A. Fishing permit and reporting requirements
B. Allowable fishing gear and methods
C. Marine Protected Areas (MPAs)
D. Framework actions
E. Formal process for PT coordination
2. Review of impacts or concerns regarding existing FMP fisheries and coral reefs (habitat, protected species, ecosystem, other)
A. Bottomfish
B. Crustaceans
C. Precious Corals
D. Indigenous rights
3. Review of previous advisory body recommendations on draft FMP
A. MPAs (location, size, restrictions)
B. Allowable gear/use
C. Permit and reporting requirements
D. Framework actions
E. MUS
F. SFA/Essential Fish Habitat(EFH)
G. Other
4. Discussion toward consensus on preferred measures
A. Permit & reporting/report form/ MUS
B. Gear/methods
C. MPAs: location/boundaries/ restrictions
D. Framework actions/additions
E. SFA/EFH/Habitat Areas of Particular Concern
F. Research plans
G. Process for PT coordination

Thursday, April 27, 2000, from 8:30 a.m.–12:00 noon—joint advisory body meeting

Location: Pagoda Hotel East Ballroom, 1525 Rycroft Street, Honolulu, Hawaii; (808) 941–6611.

Continue discussion toward consensus on preferred measures

Thursday, April 27, 2000, from 1:30–5:00 p.m.—Coral Reef Plan Team and Ecosystems & Habitat Advisory Panel, BPT and Advisory Panel, CPT/AP, Precious Corals Plan Team and Advisory Panel, and Native and Indigenous Rights Advisory Panel, meeting separately

Location: Western Pacific Fishery Management Council office conference rooms, 1164 Bishop Street, Honolulu, Hawaii, 96813 (808) 522–0220.

Further discussion of issues from above

Friday, April 28, 2000, from 8:30–5:00 p.m.—Separate meetings: each advisory body meets separately (or joint Plan Team and Advisory Panel)

Location: Western Pacific Fishery Management Council office conference rooms, 1164 Bishop Street, Honolulu, Hawaii, 96813 (808) 522–0220.

1. Final discussion and recommendations to Council on above issues
2. Other business

Although non-emergency issues not contained in this agenda may come before this Council for discussion, those issues may not be the subject of formal Council action during this meeting. Council action will be restricted to those issues specifically listed in this notice and any issues arising after publication of this notice that require emergency action under section 305(c) of the Magnuson-Stevens Fishery Conservation and Management Act, provided the public has been notified of the Council's intent to take final action to address the emergency.

Special Accommodations

This meeting is physically accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aids should be directed to Kitty M. Simonds (see **FOR FURTHER INFORMATION CONTACT**) at least 5 days prior to the meeting dates.

Dated: April 5, 2000.

National Oceanic and Atmospheric Administration

[I.D. 032800C]

Fisheries of the Exclusive Economic Zone Off Alaska; Application for an Exempted Fishing Permit

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of receipt of an application for an exempted fishing permit.

SUMMARY: This notice announces receipt of a joint application for an exempted fishing permit (EFP) from Groundfish Forum Inc. and At-Sea Processors Association. If awarded, this permit would be used for limited testing of a device for the Pacific cod fisheries in the Bering Sea and Gulf of Alaska that would lower halibut bycatch rates without significantly lowering catch rates of Pacific cod. It is intended to promote the objectives of the Fishery Management Plan for Groundfish of the Gulf of Alaska and the Fishery Management Plan for the Groundfish

Fishery of the Bering Sea and Aleutian Islands Area (FMPs).

ADDRESSES: Copies of the EFP application are available by writing to Sue Salveson, Assistant Regional Administrator for Sustainable Fisheries, Alaska Region, NMFS, P.O. Box 21668, Juneau, AK 99802, Attn: Lori Gravel.

FOR FURTHER INFORMATION CONTACT: Sue Salveson, 907–586–7228.

SUPPLEMENTARY INFORMATION: The FMPs and the implementing regulations at 50 CFR parts 679.6 and 600.745(b) authorize issuance of EFPs to allow fishing that would otherwise be prohibited. Procedures for issuing EFPs are contained in the implementing regulations.

NMFS received a joint application for an EFP from Mr. John Gauvin, Groundfish Forum Inc. and Mr. Trevor McCabe, At-Sea Processors Association. The purpose of the EFP would be to conduct limited testing of a device for the Pacific cod fisheries in the Bering Sea and Gulf of Alaska that would lower Pacific halibut bycatch rates without significantly lowering catch rates of cod. The project would be conducted in coordination with gear development scientists at the Alaska Fisheries Science Center, NMFS, who would help the applicants select the most promising Pacific halibut excluder design for testing using criteria set out in the EFP application. Results from the EFP could be used by the groundfish trawl industry, the North Pacific Fishery Management Council (Council), and NMFS to develop fishing methods or effective regulatory measures to reduce halibut bycatch in the Pacific cod trawl fisheries.

In accordance with regulations, NMFS has determined that the proposal warrants further consideration and has initiated consultation with the Council by forwarding the application to the Council. The Council will consider the EFP application during its April 12 - 17, 2000, meeting, which will be held at the Hilton Hotel, Anchorage, AK. The applicants have been invited to appear in support of the application if the applicant desires.

A copy of the application is available for review from NMFS (see **ADDRESSES**).

Authority: 16 U.S.C. 1801 *et seq.*

Dated: April 5, 2000.

George H. Darcy,

Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

Department of the Air Force

Notice of Availability (NOA) of Record of Decision (ROD) on the Realistic Bomber Training Initiative (RBTI) Final Environmental Impact Statement (FEIS)

On March 24, 2000, the United States Air Force signed the Record of Decision (ROD) for the RBTI training proposal, and has selected Alternative B (Lancer Military Operations Area (MOA) and Instrument Route 178) for implementation. RBTI is designed to more effectively and efficiently train B–1 and B–52 aircrews assigned to Dyess and Barksdale Air Force Bases (AFBs). RBTI proposes linking existing military training routes (with minor modifications) to the proposed Lancer MOA, and an electronic scoring site system. RBTI will provide realistic combat training by providing sequenced training scenarios closely resembling combat situations that require every crewmember working together to successfully complete. Lastly, RBTI will also make more efficient use of limited flight hours by reducing low-value transit time to current training ranges.

Based on the analysis presented in the FEIS released in February, agency input, and public comments, the Air Force has selected the alternative that will best achieve their goal of balancing readiness training with environmental and community concerns. Where feasible, the Air Force developed mitigation measures and/or management actions to minimize the environmental impact and address concerns and comments of agencies and the public. Additionally, the Federal Aviation Administration (FAA) was a cooperating agency in the preparation of the FEIS. The Air Force will continue to work with the FAA, other federal and state agencies, and local communities to solicit their inputs during and after the establishment of the RBTI.

Any questions regarding this matter should be directed to the Dyess AFB Public Affairs Office, 466 5th Street, Dyess AFB, TX 79607 or call 915–696–2861.

Janet A. Long,

Air Force Federal Register Liaison Officer.

DEPARTMENT OF DEFENSE

Department of the Air Force

Notice of Intent To Grant Exclusive Patent Licenses

Pursuant to the provisions of Part 404 of Title 37, Code of Federal Regulations (CFRs), which implements Public Law 96–517, the Department of the Air Force announces its intention to grant PDR, Inc., a company doing business in Foxboro, MA, exclusive licenses in any right, title and interest the Air Force has in U.S. Patent Application Nos. 09/299,928 and 09/300,053, respectively. The first listed invention is entitled "Method and Apparatus for Depositing Thin Films of Group III Nitrides and Other Films and Devices Made Therefrom" with the second invention entitled "Process for the Manufacture of Group III Nitride Targets for Use in Sputtering and Similar Equipment." Each invention is related to making GaN films and products and both applications were filed in the U.S. Patent and Trademark Office on April 27, 1999.

Each license described above will be granted unless an objection thereto, together with a request for an opportunity to be heard, if desired, is received in writing by the addressee set forth below within 60 days from the date of publication of this Notice. Information concerning the application may be obtained, on request, from the same addressee.

All communications concerning this Notice should be sent to Mr. Randy Heald, Associate General Counsel (Acquisition), SAF/GCQ, 1500 Wilson Blvd., Suite 304, Arlington, VA 22209–2310. Mr. Heald can be reached at 703–588–5091 or by fax at 703–588–8037.

Janet A. Long,

Air Force Federal Register Liaison Officer.

BILLING CODE 5001–05–P

DEPARTMENT OF ENERGY

Notice of Availability of a Financial Assistance Solicitation

AGENCY: U.S. Department of Energy (DOE), National Energy Technology Laboratory (NETL).

ACTION: Notice of Availability of a Financial Assistance Solicitation.

SUMMARY: The Department of Energy announces that it intends to conduct a competitive Program Solicitation (DE–PS26–00BC15304) and award financial assistance (cooperative agreements) for

the program entitled "Identification and Demonstration of Preferred Upstream Management Practices (PUMP) for the Oil Industry." The Department of Energy (DOE) National Energy Technology Laboratory (NETL), on behalf of the National Petroleum Technology Office (NTPO), seeks cost-shared research and development applications for identification of preferred management practices (PMP) addressing a production barrier in a region and the documentation of these practices for use by the oil industry. The near-term goal is to increase current domestic oil production quickly.

Awards will be made to a limited number of applicants based on the economic and technical merit of the application, the integrated approach and technical understanding, the technical and management capabilities of the applicant organization(s), the planned technology transfer activities, and availability of DOE funding.

FOR FURTHER INFORMATION CONTACT: Keith R. Miles, U.S. Department of Energy, National Energy Technology Laboratory, Acquisition and Assistance Division, P.O. Box 10940, MS 921–143, Pittsburgh PA 15236–0940, Telephone: (412) 386–5984, FAX: (412) 386–6137, E-mail: miles@netl.doe.gov.

SUPPLEMENTARY INFORMATION:

Solicitation Number: DE–PS26–00BC15304.

Awards: DOE anticipates issuing financial assistance (cooperative agreements) for each project selected. DOE reserves the right to support or not support, with or without discussions, any or all applications received in whole or in part, and to determine how many awards will be made. Subject to availability of funding, DOE expects to provide funds totaling $4.8 million. The program seeks to sponsor projects for a single budget/project period of 24 months or less. Due to the low risk and near-term nature of the PUMP program and the potential for a process or technology demonstration, all applicants are required to cost share at a minimum of 50% of the project total. Details of the cost sharing requirement, and the specific funding levels are contained in the solicitation.

Solicitation Release Date: This Program Solicitation (available in both WordPerfect 6.1 and Portable Document Format (PDF)) is expected to be ready for release on or about April 15, 2000 and will be available from NETL's World Wide Web Server Internet System at *http://www.netl.doe.gov/business.* Telephone requests, written requests, E-mail requests, or facsimile requests for a copy of the solicitation package will not be accepted and/or honored. Applications must be prepared and submitted in accordance with the instructions and forms contained in the solicitation. The actual solicitation document will allow for requests for explanation and/or interpretation.

Background: The National Petroleum Technology Office of the Department of Energy (DOE) Office of Fossil Energy (FE) has authorized DOE's National Energy Technology Lab (NETL) to act on its behalf and solicit cost-shared applications for identification of preferred management practices (PMP) addressing a production barrier in a region and the documentation of these practices for use by the industry. The near-term goal is to increase current domestic oil production quickly.

The mission of the Department of Energy's Fossil Energy Oil Program is driven by the needs of the oil producers. The overall program is designed to develop unique technologies and processes to locate untapped resources; to extend the life of domestic energy resources; and to reduce well abandonment—all essential to maximizing the production of domestic resources while protecting our environment. The National Petroleum Technology Office's Preferred Upstream Management Practices (PUMP) program as a part of this overall goal is designed to facilitate production of existing oil reserves more quickly without sacrificing efficiency or environmental protection.

Based on prior successful results from demonstrations of under-utilized or advanced technology coupled with reservoir characterization, the DOE Oil Program seeks to demonstrate that the identification and use of PMP can overcome regional constraints to increased production. The program will accept proposals that combine the identification of preferred management practices (PMP) to overcome regional production constraints and aggressive technology transfer that will promote the use of those practices. Barriers can be identified as technical, physical, regulatory, environmental, or economic. The selected projects are expected to employ the following four (4) strategies in order to have a rapid impact on production: (1) focus on regions that present the biggest potential for additional oil production quickly, (2) integrate solutions to technological, economic, regulatory, and data constraints, (3) demonstrate the validity of these practices either through field demonstration during the project or documentation of well-run successful past demonstration, and (4) use known technology transfer mechanisms.

Using a regional approach where the projects will have a wide applicability, an integrated approach scheduling tasks along parallel paths to facilitate a quicker response, and operating with existing networks, the production results in the field should be accelerated. The documentation and evaluation of the PMP will be a valuable resource to all producers in the applicable area and possibly other regions as well.

This program expects near-term results and actions that will create data or technological resources suitable for long-term use. Teaming is encouraged and the proposal partners could include, but not be limited to, producers, producer organizations, universities, service companies, State agencies or organizations, non-Federal research laboratories, and Native American Tribes or Corporations. They will demonstrate practices and/or technologies that can increase production, increase cost savings, or rapid returns on the capital investments of the operators. New technologies/processes or under-used but effective applications of existing technologies/processes critical to a region will be demonstrated.

The DOE will make publicly available over the Internet the data on preferred practices resulting from this program. The resulting publicly available databases of the preferred practices will be interactive, Internet accessible, should include both technologies and practices, and address constraints in the exploration, production, or environmental areas.

Issued in Pittsburgh, PA on April 4, 2000.

Dale A. Siciliano,

Deputy Director, Acquisition and Assistance Division.

BILLING CODE 6450–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. CP00–142–000]

Columbia Gas Transmission Corporation; Notice of Request Under Blanket Authorization

April 5, 2000.

Take notice that on March 29, 2000, Columbia Gas Transmission Corporation (Columbia), 12801 Fair Lakes Parkway, Fairfax, Virginia 22030–1046, filed a request with the Commission in Docket No. CP00–142–000, pursuant to section 157.205 and 157.21(b) of the

Commission's Regulations under the Natural Gas Act (NGA) for authorization to abandon approximately 410 feet of 2-inch pipeline, appurtenances, and a point of delivery to Columbia Gas of Virginia, Inc. (CGV), all located in Fauquier County, Virginia authorized in blanket certificate issued in Docket No. CP83–76–000, all as more fully set forth in the request on file with the Commission and open to public inspection. This filing may be viewed on the web at http://www.ferc.fed.us/online/rims.htm (call 202–208–2222 for assistance).

There are no other points of delivery associated with this section of pipeline. The proposed abandonment will not result in any loss or reduction in service to any customers.

Any person or the Commission's staff may, within 45 days after the Commission has issued this notice, file pursuant to Rule 214 of the Commission's Procedural Rules (18 CFR 385.214) a motion to intervene or notice of intervention and pursuant to Section 157.205 of the Regulations under the NGA (18 CFR 157.205) a protest to the request. If no protest is filed within the allowed time, the proposed activity shall be deemed to be authorized effective the day after the time allowed for filing a protest. If a protest is filed and not withdrawn within 30 days after the time allowed for filing a protest, the instant request shall be treated as an application for authorization pursuant to Section 7 of the NGA.

Linwood A. Watson, Jr.,

Acting Secretary.

[Docket No. RP97–287–048]

El Paso Natural Gas Company; Notice of Proposed Changes in FERC Gas Tariff

April 5, 2000.

Take notice that on March 31, 2000, El Paso Natural Gas Company (El Paso) tendered for filing to become part of its FERC Gas Tariff, Second Revised Volume No. 1–A, the following tariff sheets, to become effective April 1, 2000:

Twenty-Eighth Revised Sheet No. 30
Twenty-Third Revised Sheet No. 31
Fifth Revised Sheet No. 31A

El Paso states that the above tariff sheets are being filed to implement a specific negotiated rate transaction in accordance with the Commission's Statement of Policy on Alternatives to Traditional Cost-of-Service Ratemaking for Natural Gas Pipelines.

Any person desiring to be heard or to protest said filing should file a motion to intervene or a protest with the Federal Energy Regulatory Commission, 888 First Street, NE, Washington, DC 20426, in accordance with sections 385.214 or 385.211 of the Commission's Rules and Regulations. All such motions or protests must be filed in accordance with section 154.210 of the Commission's Regulations. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceedings. Any person wishing to become a party must file a motion to intervene. Copies of this filing are on file with the Commission and are available for public inspection in the Public Reference Room. This filing may be viewed on the web at http://www.ferc.fed.us/online/rims.htm (call 202–208–2222 for assistance).

Granite State Gas Transmission, Inc; Notice of Compliance Filing

April 5, 2000

Take notice that on March 31, 2000, Granite State Gas Transmission, Inc. (Granite State) tendered for filing as part of its FERC Gas Tariff, Third Revised Volume No. 1, the revised tariff sheets listed below for effectiveness on April 1, 2000.

Substitute First Revised Sheet No. 10
Substitute Fourth Revised Sheet No. 24
Substitute Second Revised Sheet No. 141
Substitute Second Revised Sheet No. 142
Substitute Third Revised Sheet No. 144
Substitute First Revised Sheet No. 145
Substitute First Revised Sheet No. 146
Substitute First Revised Sheet No. 147
Substitute First Revised Sheet No. 148
Substitute First Revised Sheet No. 149
Substitute First Revised Sheet No. 150
Substitute First Revised Sheet No. 441

Granite State explains that the purpose of this filing is to comply with the March 17, 2000, order issued in this proceeding.

Any person desiring to protest this filing should file a protest with the Federal Energy Regulatory Commission, 888 First Street, NE, Washington, DC 20426, in accordance with section 385.211 of the Commission's Rules and Regulations. All such protests must be filed as provided in section 154.210 of the Commission's Regulations. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceedings. Copies of this filing are on file with the Commission and are available for public inspection in the Public Reference Room. Midwestern Gas Transmission Company; Notice of Tariff Filing

April 5, 2000.

Take notice that on March 31, 2000, Midwestern Gas Transmission Company (Midwestern), tendered for filing as part of its FERC Gas Tariff, Second Revised Volume No. 1, the revised Tariff sheets identified in Appendix A to the filing. Midwestern proposes that the tariff sheets be made effective on May 1, 2000.

Midwestern states that as part of its transition to interactive Internet communications in compliance with the Commission's Order No. 587–I it has undertaken a major rewrite of its critical computer system functions. In conjunction with the rewrite, Midwestern further states that it is taking the opportunity to initiate additional modifications to its computer systems in order to streamline certain of Midwestern's processes and to provide additional service flexibilities (collectively, hereinafter referred to as Service Upgrades). In order to provide the Service Upgrades by completion and implementation of the rewrite, Midwestern is seeking approval for certain modifications to its existing tariff and pro forma service agreements.

Any person desiring to be heard or to protest said filing should file a motion to intervene or a protest with the

Federal Energy Regulatory Commission, 888 First Street, NE, Washington, DC 20426, in accordance with Sections 385.214 or 385.211 of the Commission's Rules and Regulations. All such motions or protests must be filed in accordance with Section 154.210 of the Commissions's Regulations. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceedings. Any person wishing to become a party must file a motion to intervene. Copies of this filing are on file with the Commission and are available for public inspection in the Public Reference Room. Natural Gas Pipeline Company of America; Notice of Proposed Change in FERC Gas Tariff

April 5, 2000.

Take notice that on March 31, 2000, Natural Gas Pipeline Company of America (Natural) tendered for filing to be a part of its FERC Gas Tariff, Sixth Revised Volume No. 1, Original Sheet Nos. 26E, 26F, 26G and 26H, to be effective April 1, 2000.

Natural states that the purpose of this filing is to implement negotiated rate transactions with Central Illinois Light Company, Ameren Intermediate Holding Co., Inc and The Peoples Gas Light and Coke Company under Rate Schedule FTS pursuant to Section 49 of the General Terms and Conditions of Natural's Tariff. Natural further states that these transactions are being filed in accordance with the Commission's ruling that a transportation rate inclusive of surcharges would be considered a negotiated rate transaction.

Natural requests waiver of the Commission's Regulations to the extent necessary to permit Original Sheet Nos. 26E, 26F, 26G and 26H to become effective April 1, 2000.

Natural states that copies of the filing are being mailed to its customers, interested state commissions and all parties set out on the Commission's official service list in Docket No. RP99–176.

Any person desiring to be heard or to protest said filing should file a motion to intervene or a protest with the Federal Energy Regulatory Commission, 888 First Street, NE, Washington, DC 20426, in accordance with sections 385.214 or 385.211 of the Commission's Rules and Regulations. All such motions or protests must be filed in accordance with section 154.210 of the Commission's Regulations. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceedings. BILLING CODE 6717–01–M

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

Docket No. CP00–137–000

Reliant Energy Gas Transmission Company; Notice of Application

April 5, 2000.

Take notice that on March 27, 2000, Reliant Energy Gas Transmission Company (REGT), 1111 Louisiana Street, Houston, Texas 77210, filed in Docket No. CP00–137–000 an application pursuant to section 7(c) of the Natural Gas Act and part 157 of the Federal Energy Regulatory Commission's (Commission) Regulations for a certificate of public convenience and necessity authorizing REGT to construct certain facilities in Hot Spring County, Arkansas to reconfigure its system to enable deliveries to be diverted from its Line AC to other portions of its system in Arkansas, all as more fully set forth in the application which is on file with the Commission and open to public inspection. This filing may be viewed on the Internet at http://www.ferc.fed.us/online/rims.htm (call 202–208–2222 for assistance).

Specifically, REGT proposes to construct: (1) Approximately 2.2 miles of 20-inch pipeline, to be designated as Line ACT–4 and paralleling its Line AC; (2) one 20–inch main line valve with bypass on its Line S–3–S; and (3) one 20–inch mainline valve between Line S–3–S and its Line T at the existing Perla Junction. REGT states that the proposed facilities will allow up to 158,500 Dth/d of natural gas to be diverted from Line AC into Line T and other portions of REGT's system in Arkansas. Total cost is estimated to be $1.5 million, for which REGT requests rolled-in rate treatment.

REGT has executed a firm transportation contract with Pine Bluff Energy LLC (Pine Bluff), for no less than 10 years, with a contract demand of 40,000 Dth/d. Pine Bluff is currently constructing an electric power cogeneration plant adjacent to facilities owned by International Paper in Jefferson County, Arkansas. Pine Bluff is said to have leased capacity in International Paper's existing plant line. Upon completion of Pine Bluff's power plant, REGT, under its blanket authority, will install a delivery tap on REGT's Line T, in Grant County, Arkansas, to provide transportation service to Pine Bluff.

Pine Bluff has requested that firm service commence by October 1, 2000, and REGT request that Commission authorization be granted no later than July 31, 2000.

Any question regarding this amendment should be directed to Kevin P. Erwin, Senior Counsel, Reliant Energy Gas Transmission Company, P.O. Box 61867, Houston, Texas 77208–1867, at (713) 207–5232.

Any person desiring to be heard or to make any protest with reference to said application should on or before April 26, 2000, file with the Federal Energy Regulatory Commission, 888 First Street, N.E., Washington, DC 20426, a motion to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214) and the regulations under the Natural Gas Act (18 CFR 157.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. The Commission's rules require that protestors provide copies of their protests to the party or parties directly involved. Any person wishing to become a party in any proceeding herein must file a motion to intervene in accordance with the Commission's rules.

A person obtaining intervenor status will be placed on the service list maintained by the Secretary of the Commission and will receive copies of all documents filed by the applicant and by every one of the intervenors. An intervenor can file for rehearing of any Commission order and can petition for court review of any such order. However, an intervenor must submit copies of comments or any other filing it makes with the Commission to every other intervenor in the proceeding, as well as 14 copies with the Commission.

A persons does not have to intervene, however, in order to have comments considered. A person, instead, may submit two copies of comments to the Secretary of the Commission. Commenters will be placed on the Commission's environmental mailing list, will receive copies of environmental documents and will be able to participate in meetings associated with the Commission's environmental review process. Commenters will not be required to serve copies of filed documents on all other parties. However, commenters will not receive copies of all documents filed by other parties or issued by the Commission and will not have the right to seek rehearing or appeal the Commission's final order to a Federal court.

The Commission will consider all comments and concerns equally, whether filed by commenters or those requesting intervenor status.

Take further notice that, pursuant to the authority contained in and subject to the jurisdiction conferred upon the Commission by Sections 7 and 15 of the Natural Gas Act and the Commission's Rules of Practice and Procedure, a hearing will be held without further notice before the Commission or its designee on this application if no motion to intervene is filed within the time required herein, if the Commission on its own review of the matter finds that a grant of the certificate is required by the public convenience and necessity. If a motion for leave to intervene is timely filed, or if the Commission on its own motion believes that formal hearing is required, further notice of such hearing will be duly given.

Under the procedure herein provided for, unless otherwise advised, it will be unnecessary for REGT to appear or to be represented at the hearing.

Linwood A. Watson, Jr.,

Acting Secretary.

Reliant Energy Gas Transmission Company; Notice of Revenue Credit Report

April 5, 2000.

Take notice that on March 31, 2000, Reliant Energy Gas Transmission Company (REGT) submitted its Annual Revenue Crediting Filing pursuant to its FERC Gas Tariff, Fifth Revised Volume No. 1, Section 5.7(c)(ii)(2)(B) (Imbalance Cash Out), Section 23.2(b)(iv) (IT and SBS Revenue Crediting) and Section 23.7 (IT Revenue Credit), together with supporting workpapers.

REGT states that its filing addresses the period from February 1, 1999 through January 31, 2000. The IT and FT Cash Balancing Revenue Credits and the IT Revenue Credit for the period reflected in this filing are zero. REGT states that since REGT's current tariff sheets already reflect zero Cash Balancing and IT Revenue Credits, no tariff revisions are necessary.

Any person desiring to be heard or to protest said filing should file a motion to intervene or a protest with the Federal Energy Regulatory Commission, 888 First Street, NE, Washington, DC 20426, in accordance with sections 385.214 or 385.211 of the Commission's Rules and Regulations. All such motions or protests must be filed on or before April 11, 2000. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceedings. Any person wishing to become a party must file a motion to intervene. Copies of this filing are on file with the Commission and are available for public inspection in the Public Reference Room. This filing may be viewed on the web at http://www.ferc.fed.us/online/rims.htm (call 202–208–2222 for assistance).

Linwood A. Watson, Jr.,
Acting Secretary.

Federal Energy Regulatory Commission

[Docket No. TM99–1–8–002]

South Georgia Natural Gas Company; Notice of Fuel Adjustment Filing

April 5, 2000.

Take notice that on March 31, 2000, South Georgia Natural Gas Company (South Georgia) made a filing to reconcile its fuel retention volumes for a metering anomaly that resulted in negative Lost and Unaccounted For volumes for the period May 1998 to September 1998. South Georgia proposes to make refunds to its customers to resolve this metering anomaly.

South Georgia states that copies of the filing were served upon all parties listed on the official service list compiled by the Secretary in this proceeding, other interested parties and affected state commissions.

Any person desiring to protest said filing should file a protest with the Federal Energy Regulatory Commission, 888 First Street, NE, Washington, DC 20426, in accordance with Section 385.211 of the Commission's Rules and Regulations. All such protests must be filed on or before April 12, 2000. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceedings. Copies of this filing are on file with the Commission and are available for public inspection in the Public Reference Room. This filing may be viewed on the web at http://www.ferc.fed.us/online/rims.htm (call 202–208–2222 for assistance).

[Docket No. RP00–97–001]

Southern Natural Gas Company; Notice of GSR Filing

April 5, 2000.

Take notice that on March 31, 2000, Southern Natural Gas Company (Southern) made a filing in accordance with Article VII of the Stipulation and Agreement in Docket Nos. RP89–224–012, et al. (Settlement) approved by Commission order on September 29, 1995 to update its GSR surcharge. Under Article VII, Southern is required to adjust the GSR volumetric surcharge that was placed into effect January 1, 2000, based on actual GSR costs incurred and the actual GSR revenues collected in 1999 from parties supporting the Settlement. As a result of updating the information through the end of 1999 Southern proposes to retain the $.0004/Dth GSR volumetric surcharge which was placed in effect on January 1, 2000.

Southern states that copies of the filing were served upon all parties listed on the official service list compiled by the Secretary in these proceedings.

Any person desiring to protest this filing should file a protest with the Federal Energy Regulatory Commission, 888 First Street, NE, Washington, DC 20426, in accordance with section 385.211 of the Commission's Rules and Regulations. All such proteststs must be filed as provided in section 154.210 of the Commission's Regulations. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceedings. Copies of this filing are on file with the Commission and are available for public inspection in the Public Reference Room. This filing may be viewed on the web at http://www.ferc.fed.us/online/rims.htm (call 202–208–2222 for assistance).

[Docket No. RP97–288–003]

Transwestern Pipeline Company; Notice of Proposed Changes in FERC Gas Tariff

April 5, 2000.

Take notice that on March 31, 2000, Transwestern Pipeline Company (Transwestern) tendered for filing to become part of its FERC Gas Tariff, Second Revised Volume No. 1, the following tariff sheets, proposed to become effective on April 1, 2000:

First Revised Sheet No. 5B.05
Original Sheet No. 5B.06

Transwestern states that the above sheets are being filed to implement a specific negotiated rate transaction in accordance with the Commission's Policy Statement on Alternatives to Traditional Cost-of-Service Ratemaking for Natural Gas Pipelines.

Transwestern further states that copies of the filing have been mailed to each of its customers and interested State Commissions.

Any person desiring to be heard or to protest said filing should file a motion to intervene or a protest with the Federal Energy Regulatory Commission, 888 First Street, NE, Washington, DC 20426, in accordance with sections 385.214 or 384.211 of the Commission's Rules and Regulations. All such motions or protests must be filed in accordance with section 154.210 of the Commission's Regulations. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceedings. Any person wishing to become a party must file a motion to intervene. Copies of this filing are on file with Commission and are available for public inspection in the Public Reference Room. This filing may be viewed on the web at http://www.ferc.fed.us/online/rims.htm (call 202–208–2222 for assistance).

BILLING CODE 6717–01–M

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. EF00–2011–000, et al.]

U.S. Department of Energy, et al.; Electric Rate and Corporate Regulation Filings

March 31, 2000.

Take notice that the following filings have been made with the Commission:

1. U.S. Department of Energy, Bonneville Power Administration

[Docket Nos. EF–2011–000]

Take notice that on March 21, 2000, the Bonneville Power Administration (BPA) tendered for filing a proposed rate adjustment to its rate schedule FPS–96 pursuant to section 7(a)(2) of the Pacific Northwest Electric Power Planning and Conservation Act, 16 U.S.C. 839e(a)(2). Pursuant to Section 300.20 of the Commission's regulations (18 CFR 300.20), BPA seeks interim approval of its proposed rates effective May 19, 2000 Pursuant to Section 300.21 of the Commission's regulations (18 CFR 300.21), BPA seeks interim approval and final confirmation of the proposed rates for the periods set forth in this notice.

BPA requests approval effective May 19, 2000, through September 30, 2006, for the FPS–96R Firm Power Products and Services Rate adjustment. BPA states that this approval is necessary for it to compete and assure cost recovery.

Comment date: April 20, 2000, in accordance with Standard Paragraph E at the end of this notice.

2. Nitrogen Limited

[Docket No. EG00–119–000]

Take notice that on March 28, 2000, Nitrogen Limited (Applicant), with its principal office at Windmill Hill Business Park, White Hill Way, Swindon, Wiltshire, England SW1A 1JT, filed with the Federal Energy Regulatory Commission an application for determination of exempt wholesale generator status pursuant to Part 365 of the Commission's regulations.

Applicant states that it will own a 680 megawatt natural gas-fired electric generating facility located in Lincolnshire, England (the Facility). Electric energy produced by the Facility will be sold at wholesale to the Power Pool of England and Wales. In no event will any electric energy be sold to consumers in the United States.

Comment date: April 21, 2000, in accordance with Standard Paragraph E at the end of this notice. The Commission will limit its consideration of comments to those that concern the adequacy or accuracy of the application.

3. Northeast Utilities Service Company

[Docket Nos. ER95–1686–007, ER96–496–009, ER97–1359–000, OA97–300–000, and ER98–4604–000]

Take notice that on March 27, 2000, Northeast Utilities Service Company (NUSCO), tendered for filing a refund report in compliance with the Commission's order in *Northeast Utilities Service Company*, 89 FERC ¶ 61,184 (1999).

Comment date: April 17, 2000, in accordance with Standard Paragraph E at the end of this notice.

4. Consolidated Edison Energy, Inc.

[Docket No. ER00–865–001]

Take notice that on March 27, 2000, Consolidated Edison Energy, Inc. (Con Edison Energy) tendered revisions to its market-based rate tariffs in compliance with the Commission's February 24, 2000 order in this proceeding.

Con Edison Energy states that a copy of this filing has been sent to all purchasers under the affected rate schedules and to all persons designated for service on the official service list.

5. Entergy Services, Inc.

[Docket No. ER00–1933–000]

Take notice that on March 27, 2000 Entergy Services, Inc. (Entergy Services), on behalf of Entergy Arkansas, Inc., Entergy Gulf States, Inc., Entergy Louisiana, Inc., Entergy Mississippi, Inc., and Entergy New Orleans, Inc. (collectively, the Entergy Operating Companies), tendered for filing a new Attachment M to its Open Access Transmission Tariff, designated as FERC Electric Tariff Original Volume No. 3, addressing transmission business practices related to source and sink information required for reserving and scheduling point-to-point transmission service.

Comment date: April 17, 2000, in accordance with Standard Paragraph E at the end of this notice.

6. Revelation Energy Resources Corporation

[Docket No. ER97–765–006]

Take notice that on March 22, 2000, Revelation Energy Resources Corporation filed a quarterly report for the quarter ended December 31, 1999 for information only.

7. City of Mishawaka, Indiana and Indiana Michigan Power Company

[Docket No. ER00–1968–000]

Take notice that on March 23, 2000, the City of Mishawaka, Indiana (City)

and Indiana Michigan Power Company filed, pursuant to Section 3.F of FERC Electric Tariff WS, a Notice to Terminate the System Sales Clause.

Comment date: April 13, 2000, in accordance with Standard Paragraph E at the end of this notice.

8. New York Independent System Operator, Inc.

[Docket No. ER00–1969–000]

Take notice that on March 27, 2000, the New York Independent System Operator, Inc. (NYISO) filed a Request for Suspension of Market-Based Pricing for 10-Minute Reserves and to Shorten Notice Period and proposed tariff changes related thereto.

A copy of this filing was served upon all persons on the Commission's official service list in Docket Nos. ER97–1523–000, OA97–470–000 and ER97–4234–000, not consolidated, and all parties who have executed Service Agreements under the ISO OATT and the ISO Services Tariff.

Comment date: April 17, 2000, in accordance with Standard Paragraph E at the end of this notice.

9. The Detroit Edison Company

[Docket No. ER00–1974–000]

Take notice that on March 27, 2000, The Detroit Edison Company (Detroit Edison) tendered for filing Service Agreements (the Service Agreement) for Short-term Firm Point-to-Point Transmission Service under the Joint Open Access Transmission Tariff of Consumers Energy Company and Detroit Edison, FERC Electric Tariff No. 1, between Detroit Edison and Nordic Electric, L.L.C., (Customer) dated as of March 15, 2000. The parties have not engaged in any transactions under the Service Agreements prior to thirty days to this filing.

Detroit Edison requests that the Service Agreements be made effective as rate schedules as of March 28, 2000.

Comment date: April 17, 2000, in accordance with Standard Paragraph E at the end of this notice.

10. Cleco Utility Group Inc.

[Docket No. ER00–1976–000]

Take notice that on March 27, 2000 Cleco Utility Group Inc., Transmission services (CLECO) filed their service agreement for non firm point-to-point transmission service under its Open Access Transmission Tariff with Conectiv Energy Supply, Inc.

CLECO requests an effective date of March 27, 2000.

Comment date: April 17, 2000, in accordance with Standard Paragraph E at the end of this notice.

11. Louisville Gas and Electric Company/Kentucky Utilities Company

[Docket No. ER00–1977–000]

Take notice that on March 27, 2000, Louisville Gas and Electric Company (LG&E)/Kentucky Utilities Company (KU) (hereinafter Companies) tendered for filing an executed unilateral Service Agreement between the Companies and PG&E Energy Trading—Power, L.P. under the Companies Rate Schedule MBSS.

Comment date: April 17, 2000, in accordance with Standard Paragraph E at the end of this notice.

12. Northern States Power Company (Minnesota) and Northern States Power Company (Wisconsin)

[Docket No. ER00–1978–000]

Take notice that on March 27, 2000, Northern States Power Company (Minnesota) and Northern States Power Company (Wisconsin) (jointly NSP) tendered for filing a Non-Firm and a Short-Term Firm Point-to-Point Transmission Service Agreement between NSP and FPL Energy Power Marketing, Inc.

NSP requests that the Commission accept the Agreement effective March 7, 2000, and requests waiver of the Commission's notice requirements in order for the agreements to be accepted for filing on the date requested.

Comment date: April 17, 2000, in accordance with Standard Paragraph E at the end of this notice.

13. Northern States Power Company (Minnesota) and Northern States Power Company (Wisconsin)

[Docket No. ER00–1979–000]

Take notice that on March 27, 2000, Northern States Power Company (Minnesota) and Northern States Power Company (Wisconsin) (jointly NSP) tendered for filing a Short-Term Firm Point-to-Point Transmission Service Agreement between NSP and El Paso Energy Marketing Company.

NSP requests that the Commission accept the agreement effective March 1, 2000, and requests waiver of the Commission's notice requirements in order for the agreement to be accepted for filing on the date requested.

Comment date: April 17, 2000, in accordance with Standard Paragraph E at the end of this notice.

14. Consumers Energy Company

[Docket No. ER00–1980–000]

Take notice that on March 27, 2000, Consumers Energy Company (Consumers) tendered for filing executed service agreements for Firm and Non-Firm Point-to-Point Transmission Service with Engage Energy US, L.P.

The agreements were pursuant to the Joint Open Access Transmission Service Tariff filed on December 31, 1996 by Consumers and The Detroit Edison Company (Detroit Edison) and have an effective date of March 21, 2000.

Copies of the filed agreements were served upon the Michigan Public Service Commission, Detroit Edison, and Engage Energy US, L.P.

Comment date: April 17, 2000, in accordance with Standard Paragraph E at the end of this notice.

15. Panda Gila River, L.P.

[Docket No. ER00–1981–000]

Take notice that on March 27, 2000, Panda Gila River, L.P. (Panda Gila River), tendered for filing pursuant to Section 205 of the Commission's Rules of Practice and Procedure, 18 CFR 385.205, a petition for waivers and blanket approvals under various regulations of the Commission and for an order accepting its FERC Electric Rate Schedule No. 1, and for the purpose of permitting Panda Gila River to assign transmission capacity and to resell Firm Transmission Rights, to be effective no later than sixty (60) days from the date of its filing.

Panda Gila River intends to engage in electric power and energy transactions as a marketer and a broker. In transactions where Panda Gila River sells electric energy, it proposes to make such sales on rates, terms, and conditions to be mutually agreed to with the purchasing party. Neither Panda Gila River nor any of its affiliates is in the business of transmitting or distributing electric power.

Rate Schedule No. 1 provides for the sale of energy and capacity at agreed prices.

Comment date: April 17, 2000, in accordance with Standard Paragraph E at the end of this notice.

16. Panda Oneta Power, L.P.

[Docket No. ER00–1982–000]

Take notice that on March 27, 2000, Panda Oneta Power, L.P. (Panda Oneta), tendered for filing pursuant to the Section 205 of the Commission's Rules of Practice and Procedures, 18 CFR 205, a petition for waivers and blanket approvals under various regulations of the Commission and for an order accepting its FERC Electric Rate Schedule No. 1, and for the purpose of permitting Panda Oneta to assign transmission capacity and to resell Firm Transmission Rights, to be effective no later than sixty (60) days from the date of its filing.

Panda Oneta intends to engage in electric power and energy transactions as a marketer and a broker. In transactions where Panda Oneta sells electric energy, it proposes to make such sales on rates, terms, and conditions to be mutually agreed to with the purchasing party. Neither Panda Oneta nor any of its affiliates is in the business of transmitting or distributing electric power.

Rate Schedule No. 1 provides for the sale of energy and capacity at agreed prices.

Comment date: April 17, 2000, in accordance with Standard Paragraph E at the end of this notice.

17. Illinois Power Company

[Docket No. ER00–1991–000]

Take notice that on March 27, 2000, Illinois Power Company filed their quarterly report for the quarter ending December 31, 1999.

Comment date: April 20, 2000, in accordance with Standard Paragraph E at the end of this notice.

18. The Montana Power Company

[Docket No. ER00–1992–000]

Take notice that on March 28, 2000, The Montana Power Company (Montana) tendered for filing with the Federal Energy Regulatory Commission pursuant to 18 CFR 35.13 an executed Network Integration Transmission Service Agreement and Network Operating Agreement with Central Montana Electric Power Cooperative Inc. under Montana's FERC Electric Tariff, Fourth Revised Volume No. 5 (Open Access Transmission Tariff).

A copy of the filing was served upon Central Montana Electric Power Cooperative Inc.

Comment date: April 18, 2000, in accordance with Standard Paragraph E at the end of this notice.

19. Cleco Utility Group Inc.

[Docket No. ER00–1993–000]

Take notice that on March 28, 2000 Cleco Utility Group Inc., Transmission services (CLECO), tendered for filing their service agreements for non-firm and short term firm point-to-point transmission services under its Open Access Transmission Tariff with British Columbia Power Exchange Corporation (Powerex).

CLECO requests an effective date of March 27, 2000.

Comment date: April 19, 2000, in accordance with Standard Paragraph E at the end of this notice.

20. Avista Corporation

[Docket No. ER00–1994–000]

Take notice that on March 28, 2000, Avista Corporation tendered for filing notice that Rate Schedule FERC No. 27, under the Commission's Docket No. ER92–824–000, previously filed with the Federal Energy Regulatory Commission by Avista Corporation, formerly known as The Washington Water Power Company, under its FERC Electric Rate Tariff Original Volume No. 4, with Public Service Company of New Mexico is to be terminated, effective March 23, 2000 by the request of Public Service Company of New Mexico per its letter dated March 16, 2000.

Notice of the cancellation has been served upon the Public Service Company of New Mexico.

Comment date: April 19, 2000, in accordance with Standard Paragraph E at the end of this notice.

21. New Century Services, Inc.

[Docket No. ER00–1995–000]

Take notice that on March 28, 2000, New Century Services, Inc., on behalf of Cheyenne Light, Fuel and Power Company, Public Service Company of Colorado, and Southwestern Public Service Company (collectively Companies), tendered for filing a Service Agreement under their Joint Open Access Transmission Service Tariff for Long-Term Firm Point-to-Point Transmission Service between the Companies and Southwestern Public Service Company—Wholesale Merchant Function.

Comment date: April 19, 2000, in accordance with Standard Paragraph E at the end of this notice.

22. New Century Services, Inc.

[Docket No. ER00–1996–000]

Take notice that on March 28, 2000, New Century Services, Inc., on behalf of Cheyenne Light, Fuel and Power Company, Public Service Company of Colorado, and Southwestern Public Service Company (collectively Companies), tendered for filing a Service Agreement under their Joint Open Access Transmission Service Tariff for Long-Term Firm Point-to-Point Transmission Service between the Companies and Public Service Company of Colorado—Bulk Power Sales Group.

Comment date: April 19, 2000, in accordance with Standard Paragraph E at the end of this notice.

23. Bradley G. Ritz

[Docket No. ID–3477–000]

Take notice that on March 28, 2000, the above-named individual filed with the Federal Energy Regulatory Commission an application for authority to hold an interlocking position in the Van Buren Revolving Loan Fund and Northern Maine Independent System Administrator, Inc.

Comment date: April 19, 2000, in accordance with Standard Paragraph E at the end of this notice.

Standard Paragraphs

E. Any person desiring to be heard or to protest such filing should file a motion to intervene or protest with the Federal Energy Regulatory Commission, 888 First Street, NE, Washington, DC 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214). All such motions or protests should be filed on or before the comment date. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a motion to intervene. Copies of these filings are on file with the Commission and are available for public inspection. This filing may also be viewed on the Internet at http://www.ferc.fed.us/online/rims.htm (call 202–208–2222 for assistance).

David P. Boergers,

Secretary.

[FR Doc. 00–8895 Filed 4–10–00; 8:45 am]

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. EC00–66–000, et al.];

Consolidated Water Power Company, et al.; Electric Rate and Corporate Regulation Filings

April 4, 2000.

Take notice that the following filings have been made with the Commission:

1. Consolidated Water Power Company

[Docket No. EC00–66–000]

Take notice that on March 23, 2000, Consolidated Water Power Company (CWPCo), a wholly-owned subsidiary of Consolidated Papers, Inc. (Consolidated Papers), on its own behalf and on behalf of Stora Enso Oyj (Stora Enso, and together with CWPCo, the Applicants), tendered for filing an application pursuant to section 203 of the Federal Power Act and Part 33 of the Regulations of the Commission for an order authorizing the merger of Consolidated Papers with Stora Enso

Acquisition, Inc., a subsidiary of Stora Enso. (the "Transaction"). The Transaction is being made pursuant to the terms of the Agreement and Plan of Merger dated as of February 22, 2000, between Stora Enso and Consolidated Papers.

Comment date: May 22, 2000, in accordance with Standard Paragraph E at the end of this notice.

2. Lakewood Cogeneration Limited Partnership

[Docket No. EC00–68–000]

Take notice that on March 29, 2000, Lakewood Cogeneration Limited Partnership (LCLP), a Delaware limited partnership, submitted an application, pursuant to 18 CFR 33, seeking authority under Section 203 of the Federal Power Act for a change in control of the ownership of LCLP. LCLP owns a 238 MW natural gas-fired exempt wholesale generating facility located in Lakewood Township, New Jersey.

HYDRA–CO Enterprises, Inc., an indirect subsidiary of CMS Energy Corporation, has agreed to sell its 80% direct or indirect ownership interests in LCLP to Consolidated Edison Development, Inc., a subsidiary of Consolidated Edison, Inc.

Comment date: April 28, 2000, in accordance with Standard Paragraph E at the end of this notice.

3. Riverside Generating Company, L.L.C.

[Docket No. EG00–99–000]

Take notice that on March 28, 2000, Riverside Generating Company, L.L.C., 1000 Louisiana, Suite 5800, Houston, Texas filed with the Federal Energy Regulatory Commission an amendment to its application in the above-referenced docket for determination of exempt wholesale generator status pursuant to Part 365 of the Commission's Regulations.

Comment date: April 25, 2000, in accordance with Standard Paragraph E at the end of this notice. The Commission will limit its consideration of comments to those that concern the adequacy or accuracy of the application.

4. Indeck Operations, Inc.

[Docket No. EG00–120–000]

Take notice that on March 29, 2000, Indeck Operations, Inc. filed with the Federal Energy Regulatory Commission an application for determination of exempt wholesale generator status pursuant to Part 365 of the Commission's regulations. Indeck Operations, Inc. is a privately held Illinois corporation, which will operate a gas-fired generation facility located in Rockford, Illinois (the Facility).

The Facility will consist of two simple-cycle gas-fired combustion turbine driven synchronous generators and associated accessories, with a maximum power production capacity of approximately 300 MW. The plant will be an "eligible facility" within the meaning of section 32(a)(2) of the Public Utility Holding Company Act of 1935 because it will be used for the generation of electric energy exclusively for sale at wholesale.

Comment date: April 25, 2000, in accordance with Standard Paragraph E at the end of this notice. The Commission will limit its consideration of comments to those that concern the adequacy or accuracy of the application.

5. Indeck-Rockford Equipment, L.L.C.

[Docket No. EG00–121–000]

Take notice that on March 29, 2000, Indeck-Rockford Equipment, L.L.C. filed with the Federal Energy Regulatory Commission an application for determination of exempt wholesale generator status pursuant to Part 365 of the Commission's regulations. Indeck-Rockford, L.L.C. is an Illinois limited liability company and the initial owner of the generating equipment to be used at a gas-fired facility located in Rockford, Illinois (the Facility).

The Facility will consist of two simple-cycle gas-fired combustion turbine driven synchronous generators and associated accessories, with a maximum power production capacity of approximately 300 MW. The plant will be an "eligible facility" within the meaning of section 32(a)(2) of the Public Utility Holding Company Act of 1935 because it will be used for the generation of electric energy exclusively for sale at wholesale.

Comment date: April 25, 2000, in accordance with Standard Paragraph E at the end of this notice. The Commission will limit its consideration of comments to those that concern the adequacy or accuracy of the application.

6. Indeck-Rockford, L.L.C.

[Docket No. EG00–122–000]

Take notice that on March 29, 2000, Indeck-Rockford, L.L.C. filed with the Federal Energy Regulatory Commission an application for determination of exempt wholesale generator status pursuant to Part 365 of the Commission's regulations. Indeck-Rockford, L.L.C. is an Illinois limited liability company created for the purpose of causing the construction and owning and/or operating a gas-fired facility located in Rockford, Illinois (the Facility).

The Facility will consist of two simple-cycle gas-fired combustion turbine driven synchronous generators and associated accessories, with a maximum power production capacity of approximately 300 MW. The plant will be an "eligible facility" within the meaning of section 32(a)(2) of the Public Utility Holding Company Act of 1935 because it will be used for the generation of electric energy exclusively for sale at wholesale.

Comment date: April 25, 2000, in accordance with Standard Paragraph E at the end of this notice. The Commission will limit its consideration of comments to those that concern the adequacy or accuracy of the application.

7. Williams Energy Marketing & Trading Company

[Docket No. ER00–2030–000]

Take notice that on March 29, 2000, Williams Energy Marketing & Trading Company (Williams EM&T) tendered for filing pursuant to section 205 of the Federal Power Act (FPA), 16 U.S.C. 824d (1994), and part 35 of the Commission's Regulations, 18 CFR part 35, its Third Revised FERC Electric Rate Schedule No. 1.

The primary purpose of the filing is to update Williams EM&T's existing FERC Electric Rate Schedule No. 1 to expand Williams EM&T's existing wholesale ancillary services authority. Specifically, in addition to Williams EM&T's current wholesale ancillary services authority in California, the Third Revised FERC Electric Rate Schedule No. 1 would provide wholesale ancillary services authority in the New England Power Pool, the New York Power Pool, the Pennsylvania-New Jersey-Maryland Inter-connection, and other markets. The revised Rate Schedule also makes other minor changes.

Williams EM&T requests waiver of the prior notice requirements of Section 35.3 of the Commission's regulations, 18 CFR 35.3, to permit its Third Revised FERC Electric Rate Schedule No. 1 to become effective as of May 1, 2000.

Comment date: April 19, 2000, in accordance with Standard Paragraph E at the end of this notice.

8. PPL Electric Utilities Corporation

[Docket No. ER00–2031–000]

Take notice that on March 29, 2000, PPL Electric Utilities Corporation filed a Notice stating that effective May 29, 2000, Rate Schedule FERC No. 111, effective on July 1, 1992 and filed with the Federal Energy Regulatory Commission by PPL Electric Utilities Corporation, formerly known as PP&L, Inc., is to be canceled.

Notice of the proposed cancellation has been served upon New York power Authority.

Comment date: April 19, 2000, in accordance with Standard Paragraph E at the end of this notice.

9. PPL Electric Utilities Corporation

[Docket No. ER00–2032–000]

Take notice that on March 29, 2000, PPL Electric Utilities Corporation filed a Notice stating that effective May 29, 2000, Rate Schedule FERC No. 76, effective on December 3, 1982 and filed with the Federal Energy Regulatory Commission by PPL Electric Utilities Corporation, formerly known as PP&L, Inc., is to be canceled.

Notice of the proposed cancellation has been served upon Consolidated Edison Company of New York, Inc.

Comment date: April 19, 2000, in accordance with Standard Paragraph E at the end of this notice.

10. PPL Electric Utilities Corporation

[Docket No. ER00–2033–000]

Take notice that on March 29, 2000, PPL Electric Utilities Corporation filed a Notice stating that effective May 29, 2000, Rate Schedule FERC No. 102 effective on February 15, 1991 and filed with the Federal Energy Regulatory Commission by PPL Electric Utilities Corporation, formerly known as PP&L, Inc., is to be canceled.

Notice of the proposed cancellation has been served upon GPU Service Corporation.

Comment date: April 19, 2000, in accordance with Standard Paragraph E at the end of this notice.

11. PPL Electric Utilities Corporation

[Docket No. ER00–2034–000]

Take notice that on March 29, 2000, PPL Electric Utilities Corporation file a Notice stating that effective May 29, 2000, Rate Schedule FERC No. 131, effective on June 1, 1994 and filed with the Federal Energy Regulatory Commission by PPL Electric Utilities Corporation, formerly known as PP&L, Inc., is to be canceled.

Notice of the proposed cancellation has been served upon Potomac Electric Power Company.

Comment date: April 19, 2000, in accordance with Standard Paragraph E at the end of this notice.

12. PPL Electric Utilities Corporation

[Docket No. ER00–2035–000]

Take notice that on March 29, 2000, PPL Electric Utilities Corporation filed a Notice stating that effective May 29, 2000, Rate Schedule FERC No. 142, effective on October 12, 1994 and filed with the Federal Energy Regulatory Commission by PPL Electric Utilities Corporation, formerly known as PP&L, Inc., is to be canceled.

Notice of the proposed cancellation has been served upon Consolidated Edison Company of New York, Inc.

Comment date: April 19, 2000, in accordance with Standard Paragraph E at the end of this notice.

13. PPL Electric Utilities Corporation

[Docket No. ER00–2036–000]

Take notice that on March 29, 2000, PPL Electric Utilities Corporation filed a Notice stating that effective May 29, 2000, Rate Schedule FERC No. 143, effective on October 12, 1994 and filed with the Federal Energy Regulatory Commission by PPL Electric Utilities Corporation, formerly known as PP&L, Inc., is to be canceled.

Notice of the proposed cancellation has been served upon Dynegy Inc.

Comment date: April 19, 2000, in accordance with Standard Paragraph E at the end of this notice.

Standard Paragraphs

E. Any person desiring to be heard or to protest such filing should file a motion to intervene or protest with the Federal Energy Regulatory Commission, 888 First Street, NE, Washington, DC 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214). All such motions or protests should be filed on or before the comment date. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a motion to intervene. Copies of these filings are on file with the Commission and are available for public inspection. This filing may also be viewed on the Internet at http://www.ferc.fed.us/ online/rims.htm (call 202–208–2222 for assistance).

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. EC00–67–000, et al.]

Louisville Gas and Electric Company, et al.; Electric Rate and Corporate Regulation Filings

March 30, 2000.

Take notice that the following filings have been made with the Commission:

1. Louisville Gas and Electric Company, and Merger Sub

[Docket No. EC00–67–000]

Take notice that on March 24, 2000, Louisville Gas and Electric Company (LG&E) and Kentucky Utilities Company (KU) on behalf of themselves and their affiliates holding jurisdictional assets (collectively, the LG&E Companies) and Merger Sub, submitted for filing an application under Section 203 of the Federal Power Act (16 U.S.C. 824b) and Part 33 of the Commission's Regulations (18 CFR 33.1) seeking the Commission's approval and related authorizations to effectuate the indirect change in control over jurisdictional assets of the LG&E companies that will occur as a result of the merger of an indirect, wholly-owned subsidiary of PowerGen plc (Merger Sub) with and into LG&E Energy Corp. (LEC), the parent holding company of the LG&E Companies. Through the merger, LEC, which will be the surviving entity, and the LG&E Companies will become indirect, wholly-owned subsidiaries of PowerGen plc ("PowerGen"), a public limited company organized under the laws of England and Wales.

The Application requests waiver of the requirements to file exhibits B, C, D, E, and F as specified in Section 33.3 of the Commission's regulations. The Application states that it includes all other information and exhibits required by Part 33 of the Commission's regulations and the Commission's Merger Policy Statement, and that the Merger Application easily satisfies the criteria set forth in the Commission's Merger Policy Statement. The Application requests that the Commission grant approval without condition, modification or an evidentiary, trial-type hearing. The Application states that the parties are seeking to close the transaction expeditiously and thus the Applicants have requested Commission approval by the end of July, 2000.

The Applicants have served copies of the filing on the state commissions of Kentucky, Virginia, and Tennessee and the parties of Docket No. EC98–2–000.

Comment date: May 23, 2000, in accordance with Standard Paragraph E at the end of this notice.

2. The FirstEnergy Operating Companies

[Docket Nos. ER97–412–004, ER97–413–003 and ER98–1932–001]

Take notice that on March 24, 2000, the FirstEnergy Operating Companies tendered for filing a compliance refund report pursuant to the Commission's February 9, 2000 Letter Order, 90 FERC ¶ 61,111.

The FirstEnergy Operating Companies state that a copy of the filing has been served on the customers receiving refunds and the public utilities commissions of Ohio and Pennsylvania.

Comment date: April 14, 2000, in accordance with Standard Paragraph E at the end of this notice.

3. Northern Indiana Public Service Company and NIPSCO Energy Services, Inc.

[Docket Nos. ER97–458–003 and ER96–1431–012]

Take notice that on March 23, 2000, Northern Indiana Public Service Company and NESI Power Marketing, Inc. submitted an updated market power analysis. The market power analysis is required by the orders granting authority to make power sales at market-based rates.

Comment date: April 13, 2000, in accordance with Standard Paragraph E at the end of this notice.

4. Select Energy, Inc.

[Docket No. ER00–952–001]

Take notice that on March 24, 2000, Select Energy, Inc. (Select) tendered revisions to its market-based rate tariffs in compliance with the Commission's February 23, 2000 order in this proceeding.

Select states that a copy of this filing has been sent to all purchasers under the affected rate schedules and to all persons designated for service on the official service list for this proceeding.

Comment date: April 14, 2000, in accordance with Standard Paragraph E at the end of this notice.

5. The Connecticut Light and Power Company

[Docket No. ER00–963–001]

Take notice that on March 24, 2000, The Connecticut Light and Power Company (CL&P) tendered revisions to its market-based rate tariff in compliance with the Commission's February 23, 2000 order in this proceeding.

CL&P states that a copy of this filing has been sent to all purchasers under the affected rate schedules and to all persons designated for service on the official service list in this proceeding.

Comment date: April 14, 2000, in accordance with Standard Paragraph E at the end of this notice.

6. North American Power Brokers, Inc.

[Docket No. ER00–1973–000]

Take notice that on March 24, 2000, North American Power Brokers, Inc. filed a Notice of Succession notifying the Commission that North American Power Brokers, Inc. has changed its name to Enermetrix.com.

Comment date: April 14, 2000, in accordance with Standard Paragraph E at the end of this notice.

7. Sarah M. Barpoulis, Anthony Chovanec, William A. Collier, Mark C. Cowan, Michael E. Flinn, J. Stephen Gilbert, Anthony G. Haramis, Lyndell E. Maddox, Leslie K. McNew, James M. Richter, Stanley A. Ross, Kyle B. Sherrington, Daniel A. Valenti and Deborah F. Witmer

[Docket Nos. ID–3467–000, ID–3468–000, ID–3469–000, ID–3141–003, ID–3470–000, ID–3147–002, ID–3471–000, ID–3137–003, ID–3472–000, ID–3144–002, ID–3473–000, ID–3474–000, ID–3475–000, and ID–3476–000]

Take notice that on March 21, 2000, PG&E Energy Trading—Power Holdings Corporation, with its principal place of business at 1100 Louisiana, Suite 1000, Houston, Texas 77002 filed with the Federal Energy Regulatory Commission an application for authority to hold interlocking positions on behalf of its directors and officers (Applicants), under Section 305(b) of the Federal Power Act, 16 U.S.C. 825(b).

Comment date: April 20, 2000, in accordance with Standard Paragraph E at the end of this notice.

Standard Paragraphs

E. Any person desiring to be heard or to protest such filing should file a motion to intervene or protest with the Federal Energy Regulatory Commission, 888 First Street, NE, Washington, DC 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214). All such motions or protests should be filed on or before the comment date. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a motion to intervene. Copies of these filings are on file with the Commission and are available for public inspection. This filing may also be viewed on the Internet at http://www.ferc.fed.us/online/rims.htm (call 202–208–2222 for assistance).

David P. Boergers,

Secretary.

[FR Doc. 00–8896 Filed 4–10–00; 8:45 am]

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. ES00–23–000, et al.]

Rochester Gas and Electric Corporation., et al. Electric Rate and Corporate Regulation Filings

March 29, 2000.

Take notice that the following filings have been made with the Commission:

1. Rochester Gas and Electric Corporation

[Docket No. ES00–23–000]

Take notice that on March 23, 2000, Rochester Gas and Electric Corporation tendered for filing an application pursuant to Section 204 of the Federal Power Act seeking authorization to issue short-term secured and unsecured promissory notes between June 1, 2000, and May 31, 2002, in an amount not to exceed $200,000,000.

Comment date: April 19, 2000, in accordance with Standard Paragraph E at the end of this notice.

2. Bonneville Power Administration

[Docket No. NJ00–2–000]

Take notice that on March 22, 2000, Bonneville Power Administration (Bonneville), tendered for filing a Petition for Declaratory Order Finding the Merchant Function May Have Access to Customer-Specific Hourly Metered Load Data under the Commission's Standards of Conduct.[1]

Comment date: April 13, 2000, in accordance with Standard Paragraph E at the end of this notice.

3. Citizens Utilities Company

[Docket No. ES98–23–001]

Take notice that on March 22, 2000, Citizens Utilities Company (Citizens) submitted a request under Section 204 of the Federal Power Act to extend the authorization granted under Docket No.

[1] Open Access Same-Time Information System (Formerly Real-Time Information network) and Standards of Conduct, 61 FR 21737 (May 10, 1996), FERC Stats. & Regs., Regulations Preambles January 1991–1996 ¶ 31,035 (April 24, 1996), Order No. 889–A, *order on rehearing*, 62 FR 12484 (March 14, 1997), III FERC Stats. & Regs. ¶ 31,049 (March 4, 1997); Order No. 889–B, *rehearing denied*, 62 FR 64715 (December 9, 1997), III FERC Stats. & Regs. ¶ 31,253 (November 25, 1997).

ES98–23–000 for 60-days. On April 23, 1998, the Commission authorized Citizens to issue no more than $294.5 million of securities in support of or to guarantee securities issued by various governmental or quasi-governmental bodies. The Commission also waived the competitive bidding and negotiated placement requirements in 18 CFR 34.2.

Comment date: April 12, 2000, in accordance with Standard Paragraph E at the end of this notice.

4. Alcoa Power Generation, Inc., Alcoa, Inc., Tapoco, Inc., Yadkin, Inc., Alcoa Generating Corporation, Long Sault, Inc., and Colockum Transmission Company, Inc.

[Docket No. OA99–3–000]

Take notice that on February 25, 2000, Alcoa Power Generating, Inc., tendered for filing revised standards of conduct Order Nos. 889 *et seq.*[2] on behalf of Alcoa, Inc., Tapoco, Inc., Yadkin, Inc., Alcoa Generating Corporation, Long Sault, Inc., and Colockum Transmission Company, Inc. (Alcoa).

Alcoa states that it served copies of the filing on the service list in this proceeding.

5. Green Mountain Power Corporation

[Docket No. ER00–1958–000]

Take notice that on March 24, 2000, Green Mountain Power Corporation (GMP), tendered for filing a service agreement for New Hampshire Electric Cooperative, Inc., to take service under its Network Integration Transmission Service tariff.

Copies of this filing have been served on each of the affected parties, the Vermont Public Service Board and the Vermont Department of Public Service.

Comment date: April 14, 2000, in accordance with Standard Paragraph E at the end of this notice.

6. New Century Services, Inc.

[Docket No. ER00–1959–000]

Take notice that on March 24, 2000, New Century Services, Inc., on behalf of Cheyenne Light, Fuel and Power Company, Public Service Company of Colorado, and Southwestern Public Service Company (collectively Companies), tendered for filing a Service Agreement under their Joint Open Access Transmission Service Tariff for Long Term Firm Point-to-Point Transmission Service between the Companies and Southwestern Public Service Company—Wholesale Merchant Function.

Comment date: April 14, 2000, in accordance with Standard Paragraph E at the end of this notice.

7. FirstEnergy System

[Docket No. ER00–1960–000]

Take notice that on March 24, 2000, FirstEnergy System tendered for filing a Service Agreement to provide Non-Firm Point-to-Point Transmission Service for Statoil Energy Services, Inc., (the Transmission Customer). Services are being provided under the FirstEnergy System Open Access Transmission Tariff submitted for filing by the Federal Energy Regulatory Commission in Docket No. ER97–412–000.

The proposed effective date under this Service Agreement is April 01, 2000, for the above mentioned Service Agreement in this filing.

Comment date: April 14, 2000, in accordance with Standard Paragraph E at the end of this notice.

8. UtiliCorp United Inc.

[Docket No. ER00–1961–000]

Take notice that on March 24, 2000, UtiliCorp United Inc. (UtiliCorp), tendered for filing service agreements with Conectiv Energy Supply, Inc., for service under its Short-Term Firm Point-to-Point open access service tariff for its operating divisions, Missouri Public Service, WestPlains Energy-Kansas and WestPlains Energy-Colorado.

Comment date: April 14, 2000, in accordance with Standard Paragraph E at the end of this notice.

9. UtiliCorp United Inc.

[Docket No. ER00–1962–000]

Take notice that on March 23, 2000, UtiliCorp United Inc. (UtiliCorp), tendered for filing Service agreements with Conectiv Energy Supply, Inc., for service under its Non-Firm Point-to-Point open access service tariff for its operating divisions, Missouri Public Service, WestPlains Energy-Kansas and WestPlains Energy-Colorado.

Comment date: April 14, 2000, in accordance with Standard Paragraph E at the end of this notice.

10. Southwest Power Pool, Inc.

[Docket No. ER00–1963–000]

Take notice that on March 24, 2000, Southwest Power Pool, Inc., tendered for filing notice that effective March 31, 2000, Rate Schedule Nos. 25 and 26, effective date June 1, 1998, and filed with the Federal Energy Regulatory Commission by Southwest Power Pool Inc., are to be canceled.

Notice of the proposed cancellation has been served upon Illinova Power Marketing, Inc., (formerly, Illinois Power Company).

Comment date: April 14, 2000, in accordance with Standard Paragraph E at the end of this notice.

11. Detroit Edison Company Docket and Consumers Energy Company

[Docket No. ER00–1964–000]

Take notice that on March 24, 2000, Consumers Energy Company (Consumers), on behalf of itself and Detroit Edison Company (Detroit Edison), tendered for filing an addendum to various coordination rate schedules that would permit the incremental cost of sulfur dioxide (SO2) emissions allowances to be included in the calculation of rates under those rate schedules. The rate schedules affected are: Consumers Energy Company Rate Schedules FERC No. 22, 23 and 45 and Detroit Edison Company Rate Schedules FERC No. 11, 12 and 26. The change is designed to conform the rate schedules to the Commission's rule regarding the ratemaking treatment of SO2 emissions allowances for Phase II units issued under the Clean Air Act Amendments of 1990.

Copies of the filing were served upon the other parties to the above-listed rate schedules as well as upon the Michigan Public Service Commission.

Comment date: April 14, 2000, in accordance with Standard Paragraph E at the end of this notice.

12. Southwest Power Pool, Inc.

[Docket No. ER00–1965–000]

Take notice that on March 24, 2000, Southwest Power Pool, Inc. (SPP), tendered for filing revised service agreements for Firm Point-to-Point Transmission Service, Non-Firm Point-to-Point Transmission Service and Loss Compensation Service with PPL Electric Utilities Corporation, d/b/a/ PPL Utilities. Earlier versions of these agreements identifying PP&L, Inc., as the Transmission Customer were filed by the Commission and accepted as Service Agreement Nos. 138, 139 and 186 to SPP's FERC Electric Tariff Volume No. 1, respectively.

SPP seeks an effective date of March 14, 2000, for these agreements.

Comment date: April 14, 2000, in accordance with Standard Paragraph E at the end of this notice.

13. Edison Sault Electric Company

[Docket No. ER00–1966–000]

Take notice that on March 24, 2000, Edison Sault Electric Company (Edison

[2] Open Access Same-Time Information System (Formerly Real-Time Information Network) and Standards of Conduct, 61 FR 21737 (May 10, 1996), FERC Stats. & Regs., Regulations Preambles January 1991–1996 ¶ 31,035 (April 24, 1996), Order No. 889–A, *order on rehearing*, 62 FR 12484 (March 14, 1997), III FERC Stats. & Regs. ¶ 31,049 (March 4, 1997); Order No. 889–B, *rehearing denied*, 62 FR 64715 (December 9, 1997), III FERC Stats. & Regs. ¶ 31,253 (November 25, 1997).

Sault), tendered for filing Amendment No. 1 to Supplemental Agreement No. 8 to the Contract for Electric Service between Edison Sault and Cloverland Electric Cooperative, Inc., (Cloverland) dated April 9, 1999.

Copies of the filing were served upon Cloverland.

Comment date: April 14, 2000, in accordance with Standard Paragraph E at the end of this notice.

14. Cordova Energy Company LLC

[Docket No. ER00–1967–000]

Take notice that on March 24, 2000, Cordova Energy Company LLC (Cordova), tendered for filing an agreement under which it will sell power to MidAmerican Energy Company.

Cordova requests an effective date of July 20, 2000.

Cordova states that is has served a copy of the filing on the Illinois Commerce Commission, the Iowa Utilities Board, and the South Dakota Public Utilities Commission.

Comment date: April 14, 2000, in accordance with Standard Paragraph E at the end of this notice.

15. Avista Corporation

[Docket No. ER00–1970–000]

Take notice that on March 20, 2000, Avista Corporation tendered for filing a Certificate of Concurrence for the 1999–2000 Operating Procedures under the Pacific Northwest Coordination Agreement (PNCA) filed by Puget Sound Energy, Inc., in Docket No. ER00–1583.

Comment date: April 10, 2000, in accordance with Standard Paragraph E at the end of this notice.

16. Northern Border Pipeline Company

[Docket No. MG00–5–001]

Take notice that on March 24, 2000, Northern Border Pipeline Company (Northern Border), tendered for filing revised standards of conduct in response to the Commission's February 29, 2000 Order (90 FERC ¶ 61,219 (2000)).

Northern Border states that it has served copies of this filing to all parties on the official service list in this proceeding.

Comment date: April 13, 2000, in accordance with Standard Paragraph E at the end of this notice.

Standard Paragraphs

E. Any person desiring to be heard or to protest such filing should file a motion to intervene or protest with the Federal Energy Regulatory Commission, 888 First Street, NE, Washington, DC 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214). All such motions or protests should be filed on or before the comment date. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a motion to intervene. Copies of these filings are on file with the Commission and are available for public inspection. This filing may also be viewed on the Internet at http://www.ferc.fed.us/ online/rims.htm (call 202–208–2222 for assistance).

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

Notice of Application to Amend License and Soliciting Comments, Motions To Intervene, and Protests

April 5, 2000.

a. *Application Type:* Application to Amend License for the Tapoco Project.

b. *Project No:* 2169–013.

c. *Date Filed:* February 24, 2000.

d. *Applicant:* Alcoa Power Generating Inc., Tapoco Division.

e. *Name of Project:* Tapoco Hydroelectric Project.

f. *Location:* On the Cheoah and Little Tennessee Rivers, in Graham and Swain Counties, North Carolina, and Blount and Monroe Counties, Tennessee. The project utilize approximately 370 acres Nanthahala National Forest lands.

g. *Filed Pursuant to:* Federal Power Act, 16 U.S.C. 791(a)–825(r).

h. *Applicant Contact:* B. Julian Polk, Alcoa Power Generating Inc., Tapoco Division, 300 North Hall Road, Alcoa, TN 37701–2516 (423) 977–3321.

i. *FERC Contact:* Any questions on this notice should be addressed to R. Feller at (202) 219–2796 or by e-mail at rainer.feller@ferc.fed.us.

j. *Deadline for filing comments and/or motions:* 30 days from the issuance date of this notice.

Please include the project number (2169–013) on any comments or motions filed.

k. *Description of Filing:* Alcoa Power Generating Inc., Tapoco Division proposes to perform upgrades of the hydroelectric generation units at two of the project's developments. The proposed activities consist of replacing the existing turbine runners and rewinding of the generators. The proposed upgrades would increase the net project capacity from 326.5 MW to 359.0 MW, and the net hydraulic capacity of the project would increase from 33,456 cfs to 35,132 cfs.

l. *Location of the Application:* A copy of the application is available for inspection and reproduction at the Commission's Public Reference Room, located at 888 First Street, NE, Room 2A, Washington, D.C. 20426, or by calling (202) 208–1371. This filing may be viewed on http://www.ferc.fed.us/online/rims.htm [call (202) 208–2222 for assistance]. A copy is also available for inspection and reproduction at the address in item h above.

m. Individuals desiring to be included on the Commission's mailing list should so indicate by writing to the Secretary of the Commission.

Comments, Protests, or Motions to Intervene—Anyone may submit comments, a protest, or motion to intervene in accordance with the requirements of Rules of Practice and Procedure,18 CFR 385.210, 385.211, 385.214. In determining the appropriate action to take, the Commission will consider all protests or other comments filed, but only those who file a motion to intervene in accordance with the Commission's Rules may become a party to the proceeding. Any comments, protests, or motions to intervene must be received on or before the specified comment date for the particular application.

Filing and Service or Responsive Documents—Any filing must bear in all capital letters the title "COMMENTS", "RECOMMENDATIONS FOR TERMS AND CONDITIONS", "PROTEST", OR "MOTION TO INTERVENE", as applicable, and the Project Number of the particular application to which the filing refers. Any of the above-named documents must be filed by providing the original and the number of copies provided by the Commission's regulations to: The Secretary, Federal Energy Regulatory Commission, 888 First Street, NE, Washington, DC 20426. A copy of any motion to intervene must also be served upon each representative of the Applicant specified in the particular application.

Agency Comments—Federal, state, and local agencies are invited to file comments on the described application. A copy of the application may be obtained by agencies directly from the Applicant. If an agency does not file comments within the time specified for filing comments, it will be presumed to have no comments. One copy of an

agency's comments must also be sent to the Applicant's representative.

Linwood A. Watson, Jr.,

Acting Secretary.

BILLING CODE 6717–01–M

ENVIRONMENTAL PROTECTION AGENCY

[FRL–6576–7]

Access to Confidential Business Information by Enrollees Under the Senior Environmental Employment Program

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: EPA has authorized grantee organizations under the Senior Environmental Employment (SEE) Program, and their enrollees; access to information which has been submitted to EPA under the environmental statutes administered by the Agency. Some of this information may be claimed or determined to be confidential business information (CBI).

DATES: Comments concerning CBI access will be accepted on or before April 17, 2000.

FOR FURTHER INFORMATION CONTACT: Susan Street, National Program Director, Senior Environmental Employment Program (3641), U.S. Environmental Protection Agency, 401 M St., S.W., Washington, DC 20460. Telephone (202) 260–2573.

SUPPLEMENTARY INFORMATION: The Senior Environmental Employment (SEE) program is authorized by the Environmental Programs Assistance Act of 1984 (Pub. L. 98–313), which provides that the Administrator may "make grants or enter into cooperative agreements" for the purpose of "providing technical assistance to: Federal, State, and local environmental agencies for projects of pollution prevention, abatement, and control." Cooperative agreements under the SEE program provide support for many functions in the Agency, including clerical support, staffing hot lines, providing support to Agency enforcement activities, providing library services, compiling data, and support in scientific, engineering, financial, and other areas.

In performing these tasks, grantees and cooperators under the SEE program and their enrollees may have access to potentially all documents submitted under the Resource Conservation and Recovery Act, Clean Air Act, Clean Water Act, Safe Drinking Water Act, Federal Insecticide, Fungicide and Rodenticide Act, and Comprehensive Environmental Response, Compensation, and Liability Act, to the extent that these statutes allow disclosure of confidential information to authorized representatives of the United States (or to "contractors" under the Federal Insecticide, Fungicide, and Rodenticide Act). Some of these documents may contain information claimed as confidential.

EPA provides confidential information to enrollees working under the following cooperative agreements:

Cooperative agreement number	Organization
CQ–827602	National Older Worker Career Center, Inc.

Among the procedures established by EPA confidentiality regulations for granting access is notification to the submitters of confidential data that SEE grantee organizations and their enrollees will have access. 40 CFR 2.201(h) (2) (iii). This document is intended to fulfill that requirement.

The grantee organizations are required by the cooperative agreements to protect confidential information. SEE enrollees are required to sign confidentiality agreements and to adhere to the same security procedures as Federal employees.

Dated: March 20, 2000.

Donald W. Sadler,

Director, Human Resources Staff #1.

FARM CREDIT ADMINISTRATION

Farm Credit Administration Board; Regular Meeting; Sunshine Act Notice

AGENCY: Farm Credit Administration.

SUMMARY: Notice is hereby given, pursuant to the Government in the Sunshine Act (5 U.S.C. 552b(e)(3)), of the forthcoming regular meeting of the Farm Credit Administration Board (Board).

DATE AND TIME: The regular meeting of the Board will be held at the offices of the Farm Credit Administration in McLean, Virginia, on April 13, 2000, from 9 a.m. until such time as the Board concludes its business.

FOR FURTHER INFORMATION CONTACT: Vivian L. Portis, Secretary to the Farm Credit Administration Board (703) 883–4025, TDD (703) 883–4444.

ADDRESSES: Farm Credit Administration, 1501 Farm Credit Drive, McLean, Virginia 22102–5090.

SUPPLEMENTARY INFORMATION: This meeting of the Board will be open to the public (limited space available). In order to increase the accessibility to Board

meetings, persons requiring assistance should make arrangements in advance. The matters to be considered at the meeting are:

OPEN SESSION

A. *Approval of Minutes*
—March 9, 2000 (Open)
B. *Reports*
—FCS Building Association's Quarterly Report
—Office of Examination's Annual Report on the Conditions of the System
C. *New Business*
1. *Regulations*
—OFI Lending [12 CFR Parts 614, 615, and 618] (ANPRM)
—Regulatory Burden-Phase II [12 CFR Chapter VI] (Notice)
—Participations [12 CFR Part 614] (Final)
2. *Other*
—Corporate Approvals Report
—Central Valley PCA Consolidation with Pacific Coast FCS, an ACA

Dated: April 6, 2000.

Vivian L. Portis,

Secretary, Farm Credit Administration Board.

FEDERAL COMMUNICATIONS COMMISSION

Notice of Public Information Collection(s) Being Reviewed by the Federal Communications Commission, Comments Requested

April 4, 2000.

SUMMARY: The Federal Communications Commission, as part of its continuing effort to reduce paperwork burden invites the general public and other Federal agencies to take this opportunity to comment on the following information collection, as required by the Paperwork Reduction Act of 1995, Public Law 104–13. An agency may not conduct or sponsor a collection of information unless it displays a currently valid control number. No person shall be subject to any penalty for failing to comply with a collection of information subject to the Paperwork Reduction Act (PRA) that does not display a valid control number. Comments are requested concerning (a) whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; (b) the accuracy of the Commission's burden estimate; (c) ways to enhance the quality, utility, and clarity of the information collected; and (d) ways to minimize the burden of the collection of information on the respondents, including the use of automated collection techniques or other forms of information technology.

DATES: Written comments should be submitted on or before June 12, 2000. If you anticipate that you will be submitting comments, but find it difficult to do so within the period of time allowed by this notice, you should advise the contact listed below as soon as possible.

ADDRESSES: Direct all comments to Les Smith, Federal Communications Commissions, 445 12th Street, S.W., Room 1–A804, Washington, DC 20554 or via the Internet to lesmith@fcc.gov.

FOR FURTHER INFORMATION CONTACT: For additional information or copies of the information collections contact Les Smith at (202) 418–0217 or via the Internet at lesmith@fcc.gov.

SUPPLEMENTARY INFORMATION:

OMB Control Number: 3060–0093.

Title: Application for Renewal of Radio Station License.

Form Number: FCC 405.

Type of Review: Revision of a currently approved collection.

Respondents: Businesses or other for-profit entities.

Number of Respondents: 2,500 filings in any given year.

Estimated Time per Response: 2.25 hours.

Frequency of Response: Every ten years.

Total Annual Burden: 5,625 hours.

Total Annual Costs: $337,500 in filing fees (2,500 filings x $135 = $337,500). Filing fee amounts vary depending upon the specific service for which application is made. Most Form 405 services are subject to a $135 filing fee.

Needs and Uses: FCC Form 405 is used by common carriers and Multipoint Distribution Service non-common carriers to apply for renewal of radio station licenses. Section 307(c) of the Communications Act limits the term of common carrier radio licenses to ten years and requires that written applications be submitted for renewal. FCC Form 405 is required by 47 CFR parts 5, 21, 23, and 25 of the Commission's rules. Form 405 is being revised to reflect the fact that respondents no longer file this form for applications for services in Parts 22 and 101 of the Commission's rules. Respondents now file FCC Form 601 for applications for those services.

Federal Communications Commission.

Magalie Roman Salas,

Secretary.

FEDERAL RESERVE SYSTEM

Sunshine Act Meeting

AGENCY HOLDING THE MEETING: Board of Governors of the Federal Reserve System.

TIME AND DATE: 11 a.m., Monday, April 17, 2000.

PLACE: Marriner S. Eccles Federal Reserve Board Building, 20th and C Streets, N.W., Washington, D.C. 20551.

STATUS: Closed.

MATTERS TO BE CONSIDERED:

1. Proposals concerning renovation of a Federal Reserve Bank building. (This item was originally announced for a closed meeting on April 3, 2000.)

2. Personnel actions (appointments, promotions, assignments, reassignments, and salary actions) involving individual Federal Reserve System employees.

3. Any items carried forward from a previously announced meeting.

CONTACT PERSON FOR MORE INFORMATION: Lynn S. Fox, Assistant to the Board; 202–452–3204.

SUPPLEMENTARY INFORMATION: You may call 202–452–3206 beginning at approximately 5 p.m. two business days before the meeting for a recorded announcement of bank and bank holding company applications scheduled for the meeting; or you may contact the Board's Web site at http://www.federalreserve.gov for an electronic announcement that not only lists applications, but also indicates procedural and other information about the meeting.

Dated: April 7, 2000.

Robert deV. Frierson,

Associate Secretary of the Board.

BILLING CODE 6210–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Office of the Secretary

Office for Civil Rights; Statement of Organization Functions and Delegations of Authority

Part A of the Office of the Secretary, Statement of Organization, Functions, and Delegation of Authority for the Department of Health and Human Services is being amended at, Chapter AT, Office for Civil Rights (OCR), as last amended at 57 FR 14723, 4/22/92. The changes are to streamline the OCR headquarters by establishing an Office of the Deputy Director, who will have day-to-day responsibility for OCR

functions, and realigning the headquarters program operations, policy, and resource management functions into the following components; Program, Policy and Training Division; Voluntary Compliance and Outreach Division; and a Resources Management Division. The changes are as follows:

I

Delete Section AT.00 Mission, At.10 Organization, and AT.20 Functions paragraph A through the first paragraph of C.4, and replace with the following:

Section AT.00 Mission

The Department of Health and Human Services, through the Office for Civil Rights, promotes and ensures that people have equal access to and opportunity to participate in and receive services in all HHS programs without facing unlawful discrimination. Through prevention and elimination of unlawful discrimination, the Office for Civil Rights helps HHS carry out its overall mission of improving the health and well-being of all people affected by its many programs. Ensuring the nondiscriminatory provision of services funded or provided directly by the Department is a continuing challenge to all of the Department's employees.

Section AT.10 Organization

The Office for Civil Rights is led by a Director who reports to the Secretary. The Director also serves as the Secretary's Special Assistant for Civil Rights and is responsible for overall coordination of the Department's civil rights compliance and enforcement activities. The Office is comprised of the following components:

Office of the Director (ATA)
Office of the Deputy Director (ATB)
- Program, Policy and Training Division (ATB1)
- Voluntary Compliance and Outreach Division (ATB2)
- Resource Management Division (ATB3)
- Regional Offices for Civil Rights (ATD1 through ATDX)

Section AT.20 Functions

A. Office of the Director (ATA). As the Department's chief officer for the enforcement of the nondiscrimination provisions of law and as adviser to the Secretary on civil rights, the Director is responsible for the overall leadership and operations of the Office for Civil Rights; establishes policy and serves as adviser to the Secretary on civil rights issues, including intra-departmental activities aimed at incorporating civil rights compliance into programs the Department administers and/or operates directly; sets overall direction and priorities of the Office through budget requests, strategic planning, and results-oriented operating and performance plans; maintains liaison with other Federal departments and agencies charged with civil rights enforcement responsibilities; coordinates with the White House on civil rights and related policies; maintains liaison with the Congress in coordination and consultation with the Assistant Secretary for Legislation, notifying appropriate Congressional committees of significant civil rights developments and informing members of compliance developments affecting recipients of Federal funds in their Congressional districts; determines policies and standards for civil rights investigations, enforcement and voluntary compliance and outreach programs in coordination with the Secretary and other Federal agencies; represents the Secretary before Congress and the Executive Office of the President on matters relating to civil rights; and solicits the participation of program beneficiaries and recipients of HHS funds in implementing the Department's civil rights enforcement, voluntary compliance and outreach programs.

A Principal Deputy Director serves as the alter ego of the Director and acts for the Director in his/her absence. The Office of the Director ensures that all documents requiring review or approval by the Director are assigned, cleared and/or monitored for timely action/responses to the Office's stakeholders and customers, including the Secretary, Departmental components, Congress, other government agencies, beneficiary and advocacy organizations, and the public. The Office of the Director includes an Executive Secretariat function and a central support services coordination function.

B. Office of the Deputy Director (ATB). This office is headed by a Deputy Director who reports to the Office of the Director, OCR. The Deputy Director coordinates the day-to-day operations of headquarters, overseeing program operations, policy development, and administrative, budget and human resources activities, including OCR's internal coordination responsibilities.

The Office of the Deputy Director includes three headquarters units that report to the Deputy Director: (1) the Program, Policy and Training Division; (2) the Voluntary Compliance and Outreach Division; and (3) the Resource Management Division. OCR Regional Managers also report to the Deputy Director.

1. Program, Policy and Training Division (ATB1). This Division develops policy and assists in implementation of OCR's compliance and enforcement program; plans and coordinates OCR's high priority civil rights program initiatives; assesses results of compliance activities, including, but not limited to, reviewing challenges; conducts policy and HHS program-related research; advises OCR staff nationwide on case development and quality; assists in developing negotiation, enforcement, and litigation strategies; identifies training needs and designs training programs for OCR staff; develops civil rights surveys; manages media and public relations; coordinates OCR's inter-governmental relations activities; and provides civil rights and program advice to OCR staff nationwide, other HHS components and external stakeholders.

2. Voluntary Compliance and Outreach Division (ATB2). This Division provides technical assistance to and conducts pre-grant reviews of providers/applicants seeking Medicare certification and other program participation funded by the Department to determine their ability to comply with civil rights requirements; provides guidance and assistance to OCR field offices, in coordination with the Program, Policy and Training Division, for ensuring uniform and efficient implementation of pre-grant processing policies and procedures; maintains civil rights assurance of compliance forms for permanent reference; maintains liaison with and provides civil rights technical assistance and advisory services to HHS Operating Divisions (OPDIVS), national advocacy, beneficiary, and provider groups, and to other Federal departments and agencies with respect to civil rights outreach programs, initiatives, and mandates.

3. Resource Management Division (ATB3). This Division implements OCR's administrative, financial, information resource management (IRM), data collection, and personnel functions. The Division formulates and executes OCR's budget; designs and maintains systems and data bases; administers OCR networks, including Internet and Intranet coordination; develops management, administrative and IRM policy; and manages personnel processing and performance management and employee recognition systems.

4. Regional Office for Civil Rights (ATD1 through ATDX). The Regional Managers, Office for Civil Rights report directly to the Deputy Director.

II. Delegations of Authority

All delegations and redelegations of authority to officials of the Office for Civil Rights that were in effect prior to the effective date of this reorganization shall continue in effect pending further redelegation.

Dated: March 22, 2000.

John J. Callahan,

Assistant Secretary for Management and Budget.

BILLING CODE 4153–01–M

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Administration for Children and Families

Privacy Act of 1974; Computer Matching Programs—Department Of Veterans Affairs

AGENCY: Administration for Children and Families, DHHS.

ACTION: Notice of a Computer Matching Program to Comply with Pub. L. 100–503, the Computer Matching and Privacy Protection Act of 1988.

SUMMARY: In compliance with Pub. L. 100–503, the Computer Matching and Privacy Protection Act of 1988, we are publishing a notice of a computer matching program that ACF will conduct on behalf of itself, the Health Care Financing Administration (HCFA), and the Food and Nutrition Service (FNS), utilizing Veterans Affairs pension and compensation information and State Public Assistance Agency records.

ADDRESSES: Interested parties may comment on this notice by writing to the Director, Office of State Systems Policy, Administration for Children and Families, Aerospace Building, 370 L'Enfant Promenade, SW, Washington, DC 20447. All comments received will be available for public inspection at this address.

FOR FURTHER INFORMATION CONTACT: Director, Office of State Systems Policy, Administration for Children and Families, Aerospace Building, 370 L'Enfant Promenade, SW, Washington, DC 20447, Telephone Number (202) 401–6959.

DATES: We filed a report of the subject ACF matching program with the Committee on Governmental Affairs of the Senate and the Committee on Government Reform and Oversight of the House of Representatives and the Office of Information and Regulatory Affairs, the Office of Management and Budget on March 31, 2000.

SUPPLEMENTARY INFORMATION:

A. General

Pub. L. 100–503, the Computer Matching and Privacy Protection Act of 1988, amended the Privacy Act (5 U.S.C. 552a) by adding certain protections for individuals applying for and receiving Federal benefits. The law regulates the use of computer matching by Federal agencies when records in a system of records are matched with other Federal, State and local government records.

The amendments require Federal agencies involved in computer matching programs to:

(1) Negotiate written agreements with source agencies;

(2) Provide notification to applicants and beneficiaries that their records are subject to matching;

(3) Verify match findings before reducing, suspending or terminating an individual's benefits or payments;

(4) Furnish detailed reports to Congress and OMB; and

(5) Establish a Data Integrity Board that must approve matching agreements.

B. ACF Computer Match Subject to Pub. L. 100–503

Below is a brief description followed by a detailed notice of a computer match that ACF will be conducting as of May 1, 2000 or later.

ACF computer match with Department of Veterans Affairs (VA). Purpose: To detect and determine the amount of benefit overpayment to public assistance recipients by verifying client VA pension and compensation circumstances using VA automated data files.

Notice of Computer Matching Program

State Public Assistance Agencies will match public assistance client records with VA compensation and pension records.

A. Participating Agencies

ACF, VA and State Public Assistance Agencies (SPAAs).

B. Purpose of the Matching Program

The purpose of this matching program is to provide the SPAAs listed in attachment A with data from the VA benefit and compensation file for the states to determine eligibility and insure fair and equitable treatment in the delivery of benefits attributable to funds provided by the Federal Government. The SPAAs, listed in attachment A, will provide ACF with a file of Medicaid, Temporary Assistance to Needy Families (TANF), general assistance and Food Stamp clients. VA will provide ACF with a file of individuals receiving VA compensation and pension benefits. The Defense Manpower Data Center (DMDC), in the role of a contractor providing computer support services to ACF, will match the SPAAs, listed in attachment A, files with the VA file and provide ACF with VA pension and compensation benefit information for all matched records. ACF will in turn provide the SPAAs with the appropriate VA information. The SPAAs listed in attachment A, will use the VA information to verify client circumstances for eligibility and for fair and equitable treatment, and to initiate adverse action when appropriate.

C. Authority for Conducting the Matching Program

The legal authority for this match is section 402 of the Social Security Act (42 U.S.C. 602) and section (b)(3) of the Privacy Act (5 U.S.C. 552a).

D. Categories of Records and Individuals Covered by the Match

VA will disclose information from the VA Compensation, Pension, and Education and Rehabilitation Records—VA (58 VA 21/22), contained in the Privacy Act Issuances, 1997 Compilation.

ACF will match this information with State Public Assistance Agencies Client Eligibility files.

E. Inclusive Dates of the Match

This computer match will begin no sooner than 30 days from the date HHS publishes a Computer Matching Notice in the **Federal Register** or 30 days from the date copies of the approved agreement and the notice of the matching program are sent to the Congressional committee of jurisdiction under subsections (0)(2)(B) and (r) of the Privacy Act, as amended, or 30 days from the date the approved agreement is sent to the Office of Management and Budget, whichever is later, provided no comments are received which result in a contrary determination.

F. Address for Receipt of Public Comments or Inquiries

Individuals wishing to comment on this matching program should submit comments to the Director, Office of State Systems Policy, Administration for Children and Families, Aerospace Building, 370 L'Enfant Promenade, SW, Washington, DC 20447.

Dated: April 5, 2000.

Olivia A. Golden,

Assistant Secretary for Children and Families.

Attachment A: ACF Public Assistance Reporting Information System (PARIS) Project

Participating State Public Assistance Agencies

1. Connecticut Department of Social Services
2. District of Columbia Department of Social Services
3. Florida Division of Public Assistance
4. Illinois Department of Public Aid
5. Kansas Department of Social and Rehabilitation Services
6. Louisiana Department of Social Services
7. Maryland Department of Human Resources
8. Massachusetts Department of Transitional Assistance

BILLING CODE 4184–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Health Care Financing Administration

[Document Identifier: HCFA–R–317]

Agency Information Collection Activities: Proposed Collection; Comment Request

AGENCY: Health Care Financing Administration.

In compliance with the requirement of section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995, the Health Care Financing Administration (HCFA), Department of Health and Human Services, is publishing the following summary of proposed collections for public comment. Interested persons are invited to send comments regarding this burden estimate or any other aspect of this collection of information, including any of the following subjects: (1) The necessity and utility of the proposed information collection for the proper performance of the agency's functions; (2) the accuracy of the estimated burden; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) the use of automated collection techniques or other forms of information technology to minimize the information collection burden.

Type of Information Collection Request: New Collection;

Title of Information Collection: Evaluation of Qualified Medicare Beneficiary (QMB) and Specified Low-Income Medicare Beneficiary (SLMB) Outreach Activities;

Form No.: HCFA–R–317 (OMB# 0938-NEW);

Use: State Medicaid and other State agencies that assist the Medicare population will be queried regarding specific outreach activities to Medicare beneficiaries that qualify for QMB-only and SLMB-only benefits. With this information, the effectiveness of specific outreach activities can then be evaluated. The results of the evaluation can be used to identify those outreach activities that are most cost effective. For effective outreach activities, the results can also be used to determine optimal levels of outreach efforts (*e.g.*, expenditures).;

Frequency: Annually;

Affected Public: State, Local or Tribal Government;

Number of Respondents: 51;

Total Annual Responses: 51;

Total Annual Hours: 102.

To obtain copies of the supporting statement and any related forms for the proposed paperwork collections referenced above, access HCFA's Web Site address at http://www.hcfa.gov/regs/prdact95.htm, or E-mail your request, including your address, phone number, OMB number, and HCFA document identifier, to Paperwork@hcfa.gov, or call the Reports Clearance Office on (410) 786–1326. Written comments and recommendations for the proposed information collections must be mailed within 60 days of this notice directly to the HCFA Paperwork Clearance Officer designated at the following address: HCFA, Office of Information Services, Security and Standards Group, Division of HCFA Enterprise Standards, Attention: Dawn Willinghan, Room N2–14–26, 7500 Security Boulevard, Baltimore, Maryland 21244–1850.

Dated: April 4, 2000.

John P. Burke III,

HCFA Reports Clearance Officer, HCFA Office of Information Services, Security and Standards Group, Division of HCFA Enterprise Standards.
